Repeal of Federal Antimargarine Legislation

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 3, 1949

Mr. POAGE. Mr. Speaker, today, the first day of the session, I have introduced a bill to repeal Federal antimargarine legislation.

Undoubtedly a number of other bills will or have been introduced to accomplish the same purpose.

I am hopeful that one of these measures will be acted on very soon by the House and that the Senate also will vote on this issue early in the session.

The subject has been thoroughly discussed by committees of both Houses and on the floors. Last session, as many of you will recall, the House approved a repeal bill by a 260 to 106 vote. The bill was not passed by the Senate only because it was blocked by the last-minute legislative jam and never reached a vote. The repeal bill had strong support from both sides of this Chamber. The issue is a bipartisan one.

Since Congress adjourned, spokesmen for the butter groups have come forward with a so-called compromise.

They say they are willing for the taxes and license fees on margarine to be repealed but in return they want legislation which would prevent the manufacture and sale of yellow margarine.

This proposal is unacceptable to me and I am certain it is unacceptable to almost everyone who opposes antimargarine legislation. I am ready to give butter every possible protection from anyone who might try to sell margarine as butter. I am willing and anxious that butter and margarine should compete on fair and equal terms, but I am not willing to concede that any food product has any monopoly on any color.

Today I propose to discuss in some detail the color phase of the margarine argument.

The butter interests assert that a ban on yellow margarine is necessary to prevent deception. Otherwise, they say, margarine will be sold as butter and the public and dairy industry injured.

What are the facts?

Most of the margarine sold in the United States is bought by the consumer in packaged form.

Even the butter interests admit there is little likelihood of fraud in these store sales. In the first place, the product, itself cannot be seen because of the package. No purchaser can be deceived by its appearance, no matter what the color. Under the Federal Food, Drug, and Cosmetic Act the packages are clearly and prominently labeled oleomargarine. Failure to so identify the product is a violation of that act.

Moreover, misrepresentation of oleomargarine as butter is an unfair method of competition or an unfair or deceptive act or practice under the Federal Trade Commission Act.

When backed into a corner the butter interests will concede that store sales to the average consumer present no problem so far as fraud is concerned and would present no problem after repeal of the Federal antimargarine laws.

But, they ask, how about the possibility of fraud in restaurants and other eating places?

Today, they assert, margarine is being sold in eating places as butter and point to this fact as a reason for preventing margarine from being colored yellow.

They disregard the fact that there is just as much opportunity for evading the law today as there would be after Federal antimargarine legislation is repealed. Now, for example, a restaurant proprietor can buy margarine already colored, take it out of the wrapper and serve it as butter. Or he can buy white margarine, color it himself, and serve it as butter. It is true that in so doing he violates the law but he stands to profit by such violations, even more than he might stand to profit by violations after the Federal antimargarine laws are repealed.

Forty-seven of the forty-eight States have pure food laws and the sale of margarine as butter would be a violation of these laws after repeal of the Federal antimargarine laws just as it is now. Also, at least two-thirds of the States have laws requiring public notice if margarine is served in public eating places. No real evidence has thus far been produced to support the charges of fraud with regard to margarine sales. At congressional hearings in 1948 the butter industry cited six instances where margarine has been sold as butter. These six instances extended all the way back to 1900—one about every 8 years. They amounted to nothing so far as quantity was concerned.

And insofar as the Federal pure food laws are concerned, butter's record is not nearly as good as margarine's. Total seizures of butter for violation of pure food laws from 1930 through 1947 totaled 2,910, of which 652 were for filth, decomposition, and the like. In 1947 alone, there were 127 seizures of butter.

For the 1937–47 period, margarine seizures totaled 32, of which two were for filth or decomposition. In 1947, there were no seizures of margarine.

Moreover—and this is very important—the measure proposing repeal of the Federal antimargarine laws actually would strengthen the laws against fraud and would make it much less likely that margarine would be sold as butter.

When the Senate Finance Committee reported H. R. 2245, which would completely repeal existing taxes and discriminations against margarine, it added an amendment aimed specifically at fraud in restaurants and other public eating places.

I have incorporated a similar provision in my bill. The provision, section 3 of the bill, provides (1) that each separate serving of margarine sold by a public eating place must bear labeling identifying it as oleomargarine, and (2) requires a public eating place serving colored oleomargarine to place a prominent and conspicuous notice in the establishment or to set forth on its menu a notice stating that oleomargarine is served there. This provision applies regardless of whether the margarine served is transported in interstate commerce or whether it is sold in the same State or Territory in which it is produced.

The forces which are seeking repeal of the antimargarine laws accepted the amendment without qualification and plan to give it full support.

Ninety percent or more of all the margarine sold is sold in stores to householders. The remainder of the business is with bakers and restaurants.

As has been stated, there is little danger of fraud in the store sales, the great bulk of the business. For example, if a grocer deliberately takes the wrapping off sticks of margarine and sells them as butter, he is liable to a 3-year prison term, or a

$10,000 fine, or both. Few grocers will risk such a penalty.

There is no danger of fraud in sales to bakers. They use margarine for mixing with other foods; they are not interested in color.

The great majority of the restaurants which serve margarine scrupulously observe the laws requiring public notice of that fact.

Passage of repeal legislation with an amendment aimed specifically at fraud would certainly sharply reduce the number of restaurants which may be serving margarine as butter.

Instead of supporting such a proposal, one which clearly would lessen the possibility of fraud, the butter interests want to continue to force the consumer to buy white margarine and color it at home. And to repeat, there is little or no danger of fraud in a store sale to the average consumer.

Because then there is the possibility of fraud in the sale of margarine as butter in public eating establishments, the butter bloc wants to force consumers to continue a burdensome task for which there is absolutely no reason.

The refusal of the butter interests to accept repeal legislation, even with additional protection against fraud, shows that they are not really concerned with fraud. They are concerned with the legitimate competition which margarine gives butter. They want to force margarine to use a color which people do not like in their table fats.

There is no valid reason for any ban or tax against margarine, yellow or white. There never has been.

The butter industry is trying to maintain an unfair advantage over margarine, an advantage it has had and maintained by legislation for more than 60 years.

The proposal to remove the taxes on uncolored margarine, on manufacturers of margarine, and on handlers of margarine is made only when the butter lobby is on the run. Legislation for complete repeal of the Federal antimargarine laws failed of passage in the Eightieth Congress by a narrow margin. In 1948, five States scrapped legislation which prohibited the manufacture and sale of colored margarine—the prohibition which the dairy industry now would make Nation-wide.

The butter lobby made no concession and offered no compromise on margarine until it realized that public opinion and the legislators no longer would stand for the un-American and outmoded antimargarine laws.

Now, butter comes forward with a claim that it has a monopoly on the color yellow, to the exclusion of margarine.

No other food, or product, in the United States makes a similar claim.

Butter uses artificial coloring freely. Butter uses artificial coloring for the same reason that margarine uses artificial coloring. Furthermore, the artificial coloring added to butter is not uniform. It is colored differently for different markets, depending on consumer preferences. For example, the butter sold in the New York market is lighter than butter sold in the Chicago market. Consumers prefer their table spreads, whether butter or margarine, yellow, just as they prefer their milk white, their oranges yellow, their watermelons red and cherries red, and so on through a long list of products.

Foods by the score are artificially colored to meet consumer tastes. This fact is recognized by the Federal Food, Drug, and Cosmetic Act, which merely requires that if color is added to food, the fact be noted on the label.

However, butter, by a special legislalative enactment, is exempted from the legislative requirement that the presence of artificial coloring be declared on the label.

The butter industry has no more right to prohibit margarine from being colored yellow than any other domestic product has to prevent its competitors from using a particular color.

Thousands of products imitate another product, look like it, and are used for the same purposes. The very essence of competition is to develop new products which are like the old and which may be better and cheaper.

Rayon closely resembles some cotton fabrics, is colored like cotton, and is used for the same purposes. Some fabrics closely resemble wool. Nylon stockings resemble silk stockings and have made great inroads upon the latter's market. Nylon resembles and substitutes for other silk fabrics and for cotton fabrics also, so far as that is concerned.

No one has seriously advanced the proposal that the synthetic fibers be prohibited from being colored like cotton, silk, or wool. Imitation leather looks very much like leather and it is used as leather is used. But leather has not asked that it have a monopoly on the color brown, to the exclusion of the imitation.

Hundreds and hundreds of plastic products resemble the original, are colored like the original product, and are used for the same purposes.

No one has proposed that they be prohibited from using any color associated with the original, or from imitating and competing with the original.

Mayonnaise is a special kind of salad dressing. It may not contain any added water, nor may it contain any starches, and it must contain at least 50 percent in vegetable oils. It is higher in quality and sells for a higher price than some other salad dressings which it closely resembles in color and taste. But no manufacturer of mayonnaise has come forth with the proposal that other salad dressings be prohibited from using the color yellow, which is the color of mayonnaise.

The relationship of lard to the vegetable cooking fats is very interesting in connection with this color argument.

Lard is white. White was the original color of lard. It was used long before the vegetable cooking fats were thought of, and unlike butter, lard uses no artificial coloring.

The vegetable cooking fats are white. They look like lard. They are used for the same purposes.

But lard has not asked for a tax on the vegetable cooking fats, nor have the manufacturers of lard proposed that the vegetable cooking fats be prohibited from using the color white.

Lard has the same justification for asking such a prohibition as butter has to ask that margarine be banned from using the color yellow to prevent fraud.

There are hundreds of instances where glass or some other comparatively valueless substance has been sold as a precious stone.

But no one seriously proposes that legislation be enacted prohibiting the coloring of imitation jewelry on the grounds that it might be sold as genuine gems.

One fur often is dyed to imitate another, and sometimes also is sold as another. But nobody insists that such imitation be prohibited because of the possibility of fraud.

If every product which looks like another product and is used for the same purposes is to be prohibited by law, our free-enterprise system will come to an end.

By insisting upon a ban against yellow margarine, butter is confessing its unwillingness to compete in the open market against another perfectly good domestic product.

When the first Federal antimargarine laws were enacted in 1886, the butter interests did not claim a preemptive right to the color yellow. That measure imposed a tax of 2 cents a pound on all margarine. It did not differentiate between the colored and uncolored product. It imposed license fees on manufacturers, wholesalers, and retailers, and there were various requirements for the labeling and packing of margarine and for the keeping of records. Butter was defined as the product of the cow and all other table spreads as oleomargarine.

Senator Miller, of New York, one of the proponents of the bill, frankly described the purpose of that first measure:

> I want no money from this bill in the Treasury. I want protection to the dairy industry of New York. I want it to go so far as to exterminate the rival industry, if necessary.

The destruction or crippling of the margarine industry has been the goal of every piece of Federal and State antimargarine legislation from 1886 to the present day.

The butter interests failed to kill the margarine industry with the 1886 law. In 1902, they were back again seeking legislation which imposed a heavy tax on yellow margarine. Representative Wadsworth, of Massachusetts, father of Representative JAMES W. WADSWORTH, was chairman of the House Agriculture Committee. This is what he said about the color proposal and his words are true today as they were then:

> It is claimed by the extreme butter men that yellow is the natural butter color and that practically no other food product has the right to use it. If that claim is true, what shade of yellow is it entitled to? * * * It is only in the months of May and June, and I speak as a practical butter maker myself when I make the assertion, that creamery butter, and that, of ccurse, is the butter of commerce, has a decided yellow color or tint and that color disappears entirely or almost

so when the fall and winter sets in. * * * Here are samples of butter purchased by me this morning and no two are alike. As a matter of fact, every sample is artificially colored.* * *

I deny that butter has the copyright, patent right, or any other right to any particular color, whether yellow or otherwise. * * * If coloring oleomargarine a shade of yellow helps to perpetrate a fraud, then the coloring of butter is actually a fraud because it makes the consumer believe, and necessarily, that fall or winter or white butter of any season of the year is June butter, which is generally considered the best.

The butter industry is not the only industry which has tried to kill off its competition by legislation.

History is full of such instances. In the end, all have failed.

In the seventeenth century, for example, the wool industry in England tried very hard to kill off calico and other cotton prints by law and even passed legislation forbidding the purchase of cotton goods.

Eventually, the laws prohibiting the manufacture and use of cotton goods were repealed. England became one of the great manufacturers of textiles.

There was room for both industries just as there is room in this country for both the margarine and butter industries.

The butter interests know very well that consumers like their table spread yellow. That is why butter is colored yellow when its natural color is not yellow enough to meet consumer preferences.

The butter makers are not acting in good faith when they say margarine should be sold without coloring, or with any other color save yellow.

They are well aware that consumers would not like either butter or margarine if it were colored pink, or red, or some color not associated with a table spread.

They know very well that white margarine, or white butter, would be associated in the consumer's mind with lard or the vegetable cooking fats which are white.

As has been stated, hundreds of food products, including butter, use artificial coloring. This coloring is permitted by the pure food laws when the colors used are certified or approved. Artificial coloring adds nothing to the direct nutritional value of foods but by satisfying consumer habits and preferences it makes the food more palatable, and consequently more digestible.

A University of Illinois study of margarine and butter developed an interesting point in connection with color preference in foods. Two hundred and seventeen children were used in the experiment. One group was fed margarine; another butter. The investigators reported that the younger children, who were not accustomed to a yellow table fat, ate uncolored margarine with the same relish that they ate colored margarine or butter. But the older children, already conditioned to want their table fat yellow, definitely preferred a colored product.

Legislation against fraud and misrepresentation are depended upon to protect the public in the case of all food products with the sole exception of butter. Butter alone can legally be artificially colored without notice to the public. Margarine asks no such special privilege.

Margarine manufacturers are proud of their product and want it sold as margarine, and they are willing to tell the public if and when it is colored.

They want their product sold on its merits and want it to compete fairly in the open market. They seek no special advantages and will seek none.

They feel that butter should be required to compete fairly also and to forego the special advantages it has insisted upon all these years.

The time has come to do away with all antimargarine legislation. The bill I have introduced does this and at the same time gives every protection against fraud or deception that any fair-minded man could ask.

John Heagney

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following address which I delivered at the dedication exercises, John J. Heagney Post, No. 27, AMVETS, on Wednesday, August 25, 1948, at Lee Hall, Lynn, Mass.:

To the parents who mourn the loss of his bright youth, to the many relatives and friends who cherish his memory, and to his comrades who have come to dedicate this post in his name, I convey the humble gratitude of the people for his gift of life to protect us.

In the reverent spirit in which we meet we recall all that was precious in the life of one young man.

We speak not of the crime that is war, caused by the evil of a few men, for which the many must pay so dearly.

We speak rather of the miracle of life in its coming and its going. We have come to honor John Heagney and to reach out with our hearts, reaching for that nobility in him that is beyond our understanding. And so we gather, drawing strength and comfort from each other, as if out of our accumulated awareness we can rise above our small selves to attain the clear vision that came to him.

Youth is the sweetest time of life.

In that last June, when he received his diploma from St. Mary's High School, John Heagney felt all the joy that comes with commencement.

In the prime of health and glowing with ambition he left the cloistered halls of study and faced the great adventure of experience. An only child, he was determined to make good, not only for his own fulfillment but to repay the sacrifices which his devoted parents had made for him during the tender years of his development.

And then it came, the urgent and terrible call of duty summoning him to leave the normal pursuits of life, to step aside from the door which he had just opened and take another one which led to the agony of war.

What irony it was that we, who were older and supposed to be wiser, should call upon these boys to do that which our failures had made so tragically necessary.

And while we worried they went forward. Perhaps they knew better.

Behind their smiles, perhaps they sensed that they were stronger in every way, leading us not to a hollow victory but to a finer way of life that must follow from their sacrifice.

And when it was over, some came back covered by a flag.

That John Heagney proved his manhood far better than many others who round out their full quota of three score years and ten we fittingly pay tribute to at this dedication.

We raise the name of John Heagney as an example for other youths to admire and imitate as they open the door and step out into the fuller life which he made possible for them.

At this ceremony of perpetuation, we christen this chapter for him, conscious that this new post of a new veterans' organization has a great future stretching before it. As the years unfold, the AMVETS will take an active part in the life of Lynn, and, in the many civic, charitable, and patriotic services they will perform, the name of John Heagney will always lead them, to his increasing honor and to theirs. Whether here or in the Great Beyond the comradeship of spirit which joins them in fellowship is immortal.

Not far from where we meet, the mortal remains of John Heagney rest in peace. The good earth which covers him is warmed by the sun and washed by the rains and the gentle wind which ripples through the grass whispers to us of hope beyond the grave.

For out of death there is resurrection and the life eternal.

He rests, but we cannot.

The burden of his sacrifice weighs heavily upon us.

Restlessly we search our minds and hearts, seeking ways and means of atonement to them.

They were too young to die—John and Bill and Harry—and all the others in that gallant company who went forth to save us from the errors of our ways.

To say that we are humbly grateful is not enough.

Keeping their courage ever fresh in our memories, we must drive ourselves to equal theirs and build a better world in which the door to life shall never be closed on youth again.

The way may be long and hard, but we pledge ourselves to this duty.

And we pray to our Heavenly Father that He, in His infinite wisdom and mercy, may grant to us the strength of spirit that was revealed in John Heagney so that we may find fulfillment in helping others.

May God bless the United States and all of her sons and daughters.

Rules Committee Change a Victory for Democratic Government

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. EBERHARTER. Mr. Speaker, a great step for representative government has been taken. The elimination of the veto powers of the Rules Committee will increase the responsibilities of the legislative committees of the House where

there is opportunity for full public hearings and ample time to obtain the necessary technical advice in drafting legislation.

The amendment of the rules is completely nonpartisan. It merely assures that a majority of the House, regardless of party, shall prevail on any issue. This is really democracy in action.

On December 10, 1948, I wrote each Member-elect of the Eighty-first Congress as follows:

DECEMBER 10, 1948.

DEAR COLLEAGUE: Implicit in the American form of democratic government is the proposition that a majority of the Congress shall enact the laws. Yet a practice has grown up in the House of Representatives which enables a few men sitting on the Rules Committee effectively to thwart the will of a majority of the House. This has happened time and again, and the Eighty-first and the succeeding Congresses will be no exception, if we can judge by the past.

In theory the Rules Committee is a traffic director on the legislative highway, determining the order of business on the floor of the House. In practice this committee has become an obstruction to orderly traffic. The committee often allows bills to come before the House only on its own terms. It frequently usurps the functions of the regular legislative committee of the House by holding hearings and reviewing the merits of bills that have already been carefully studied by the proper legislative committees.

A reform of this undemocratic system is long overdue. Congress is constantly engaged in a struggle for the respect of the people. The people never have and never will be able to understand how the will of a majority of the House of Representatives can be set aside by the judgment of a few men on a powerful committee.

The spectacle of a legislative committee unable to bring a bill to the floor after a favorable recommendation based on careful hearing and consideration, because members of the Rules Committee do not favor that bill on its merits, adds nothing to the luster of the democratic process. The cumbersome, time-consuming discharge petition procedure is, as a practical matter, fairly useless to cope with this problem.

This basic contradiction of democratic government has been studied by parliamentary experts and legislative draftsmen, and a draft of an amendment to the House rules will be ready for consideration when the Eighty-first Congress convenes on January 3, 1949.

It is at this time that proponents of majority rule must strike their blows against the dictatorship of the Rules Committee. They must be prepared to offer at precisely the right moment, after the election of officers and the notification of the Senate and the President that the House is ready for business, an amendment to the rules depriving the committee of its broad powers to block consideration of, or to demand changes in, legislation and limiting the committee to the task of scheduling legislative debate on the House floor.

This amendment would then become the pending business of the House, open to full debate on the floor and not subject to reference to the Rules Committee. The change would become effective if approved by a majority of the House.

This proposal is completely nonpartisan. Its adoption should still permit the Rules Committee to schedule the priority of debate in the House, but should enable the House membership, after a reasonable opportunity for the Rules Committee to act, to call up any measure for consideration by majority vote. Unless the amendment carries on opening day, its chances are slim, for it will be referred to the Committee on Rules, where it would doubtless be buried.

On the opening day, however, the House operates under general parliamentary law until it adopts the rules for the session, and a proposed amendment has a unique opportunity to reach the floor without benefit of the approval of the very Rules Committee whose powers it seeks to curtail. For a brief hour, we have a golden opportunity to strike a blow for democratic procedure and majority rule. We must not let it slip by. For this reason, I have undertaken to communicate these views to all Members of the House of Representatives.

No possible change in the personnel of the committee under present rules and precedents will obviate the difficulties experienced in the past. And a little thought will suggest that increasing the membership of the Rules Committee from 12 to 13, or even to 15, will not effect even a temporary cure. Indeed, the problem is not so much the composition of the committee as the function it has exercised in reviewing and vetoing the substance of bills reported by the other committees. The authority presently exercised by the Committee on Rules reflects adversely both upon the other committees and upon the general membership of the House. A committee must have responsibility for legislation favorably reported, if the committee system is to work. And any authority exercised by a few members that can be used to block the desire of a majority, even to bring a bill up for general debate, assumes that the membership of the House does not have the collective good judgment to pass or reject the legislation in question.

If you agree with the principle of majority responsibility and control over the legislative program of the House of Representatives, regardless of what political party may be in power, will you please share your conviction with other Members of the House. Change is always difficult, and careful advance thought, preparation, and organization will be required.

Will you also please give me the benefit of your views, and indicate your willingness to serve on an informal committee to sponsor this general proposition both in party caucuses and on the House floor.

With high personal regards, I am,

Sincerely yours,

HERMAN P. EBERHARTER.

Mr. Speaker, I was greatly encouraged by the initial response of nearly one-third of the membership of the House; most of them indicating support for my proposal to limit the powers of the Rules Committee to the scheduling of legislation on the floor. The plan received the support of some of the most responsible editorial writers of the country. From the editorial comment I have selected examples for insertion elsewhere in the Appendix. Although the leadership of the Democratic Party in the House found it advisable to modify slightly my original proposal, I am very pleased and gratified that they have seen fit to support in all essential respects my amendment to the rules.

Congress Can Reform

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 3, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor, of Friday, December 31, 1948, which is in agreement with my proposal to amend the House rules to limit the power of the Committee on Rules:

CONGRESS CAN REFORM

The record of the Eighty-first Congress will be decisively determined by its first day. Can it improve the legislative machinery which was so largely responsible for the major mistakes of the old Congress? The opening day, when the rules can be changed by majority vote, affords the best opportunity.

Reform should have two objectives: (1) To make congressional machinery more efficient; (2) to make it more representative of the people.

For these purposes the Congress meeting Monday will have before it three major opportunities: (1) Reform of the House Rules Committee; (2) curbing of filibusters in the Senate; (3) abandonment of the seniority system for choosing committee chairmen.

Prospects appear good for some reform of the Rules Committee. Annoyance with its arrogant abuse of power is widespread. The committee performs a useful function in directing legislative traffic, but it should have no power to pass on the wisdom of legislation. Even its decisions as to when and how a bill is to come up for debate should be subject to reversal by majority vote of the House.

Reform of the Rules Committee is complicated by the drive of President Truman to carry out his campaign pledges. A coalition of Republicans and conservative Democrats has controlled the committee. This coalition—unless it has changed its views—would veto most of the Truman program. One proposal is to break this control by enlarging the committee through addition of several Truman men. Such "packing" procedures usually tend too much to expediency. A change in the rules to prevent the committee bottling up legislation—a change badly needed in any case—offers a wiser method.

It is unlikely that filibusters will be completely abolished by the Senate. One proposal for curbing them would limit each Member to 2 hours for debating any bill—which would permit the talking to go on for 8 days. The most likely change is a rule revision—by vote or by interpretation of the new presiding officer—to facilitate a vote of the Senate to close debate.

This question also is complicated not only by tradition but by current politics. Many southern Senators see the filibuster as their last defense against Mr. Truman's civil-rights program. Apparently the President is willing to go slow. He does not wish to split his party more deeply. And he may recognize the value of an unwritten law of American politics which provides that the majority shall not force a minority to the point of desperation, particularly in matters of deep-seated feeling and custom. Given this attitude by Mr. Truman plus some Republican pressures for reform, the more moderate southern Democrats might join in a perceptible curbing of filibuster abuses.

The hopes for getting rid of the seniority system for committee chairman are slim. There is no rule requiring a committee to elect the member having the longest service as chairman. On a few occasions chairmen have actually been chosen for competence. But the seniority custom is almost iron-bound in normal circumstances.

The custom gives power into the hands of men of long experience but not necessarily any other qualifications for leadership. Usually their tenure depends not on any individual excellence but on the fixed political complexion of their constituencies. They may have been chosen originally on issues no longer in debate and their ideas may be

wholly out of joint with the times—and even with their party's national program.

Such committee chairmen, particularly in the House, were largely responsible for the actions which put the Eightieth Congress in bad with many voters. The shift of parties has not wholly altered that situation. The system may go far to balk Mr. Truman in carrying out his party's pledges, thus frustrating the fixing of party responsibility. Regardless of one's feelings about the Truman program the weakening of party responsibility must be considered a blow at responsive and effective representative government. But reform of the seniority system will require even more vigorous and vocal public demand than has yet arisen.

Electoral College

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the Evening Tribune, Lawrence, Mass., on November 9, 1948:

NEW ARGUMENT FOR CHANGE

The antiquated, outmoded features of the electoral college system of electing the President and Vice President of the United States were made more apparent to the American people than ever before in last week's election. Gov. J. Strom Thurmond, of South Carolina, and Gov. Fielding Wright, of Mississippi, the Dixiecrat candidates, gained the 88 electoral votes of 4 Southern States. The race between President Harry S. Truman, of Missouri, and United States Senator Alben W. Barkley, of Kentucky, and Gov. Thomas E. Dewey, of New York, and Gov. Earl Warren, of California, was so close that at times it seemed unlikely that either pair would get the required majority of 266 electoral votes.

If neither the Democratic nor the Republican candidates had attained the required majority, that would have thrown the election into the new United States House of Representatives taking office in January. It would have been obliged to select a President from the three top candidates under complicated rules. Thurmond and Wright would have held the balance of power under such conditions and could have dictated the choice of the President and Vice President. It might not have been in accord with the indicated will of the people. There have been several such elections in the country's history and not all of them have been satisfactory.

Fortunately, that irregular occurrence was averted when President Truman and Senator BARKLEY won by more than the necessary majority. Still, it was entirely too close for comfort for most Americans. As a consequence, when the Eighty-first Congress convenes in January no time should be lost in initiating steps to modernize the election of the President and Vice President.

United States Senator HENRY CABOT LODGE, JR., of Massachusetts, has a resolution pending before the Senate for a constitutional amendment to abolish the electoral college. Electoral votes would be retained, but those of each State would be divided among the candidates in proportion to their popular votes. No longer would one pair of candidates get the entire electoral vote. That is a big improvement over the present arrangement. It still is not as good as electing the President and Vice President by direct popular votes of the people, as is done in the case of all other elective offices below that level. The need for a change is great and Congress should not delay in sanctioning one or the other of those improved plans and in sending it along to the legislatures of the States for their required approval.

The Farmers' Side

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. GATHINGS. Mr. Speaker, rarely have I had the privilege of reading an article which is more interesting and instructive as The Farmers' Side, by Eva Conley, of McDougal, Ark. The problems confronting the farmers of this Nation are depicted in this article accurately, skillfully, and forcibly.

Mrs. Conley's timely comments reserve a broad coverage and careful reading. I include the complete article as an extension of my remarks:

THE FARMERS' SIDE

(By Eva Conley, McDougal, Ark.)

"And as a sheep before her shearers is dumb," so too is the farmer as he meekly takes the blame for the high cost of living.

Prices are too high, but we farmers are not to blame. We sincerely wish there was a better understanding between the producer and the consumer.

My father was a farmer. My husband is a farmer. I've spent my entire life on the farm. I feel that I understand the problems, hazards, and expense connected with farming.

Unless farmers present their side, we can scarcely blame city dwellers for thinking the farmer is wallowing in profits. Those who haven't tried it little realize the expense connected with farming.

There are 140,000,000 people in the United States. They all want three meals a day, and they need clothes. This makes the need for farm products stable, but the demand (desire plus purchasing power) is unstable. The demand varies from year to year in a manner that is difficult to predict accurately very far ahead of time.

The farmer does not know how his crops will be affected by such hazards as drought and flood, hail and wind, cold and heat, insects and disease—nor what sort of program the Government will clamp on him.

The one in this environment has a difficult job. He is like a man with imperfect eyesight, shooting an inaccurate rifle, through a fog, at a jumping jackrabbit.

Cyclic price movements result from unpredictable forces affecting the sizes of crops. As a result we do need a program stabilizing supplies and prices.

Since 1933 the Commodity Credit Corporation has been engaged in a commodity loan and storage program designed to stabilize the market supplies and prices of the so-called basic commodities—wheat, corn, rice, peanuts, cotton, and tobacco. Under this program excess over average production in good crop years is removed from the market supplies and put into storage to be taken out and added to supplies later in poor crop years.

With or without a price-stabilization program, individual farmers' incomes are still affected by variations in the crop yields on their individual farms.

The total food bill for the United States in 1944 was $30,400,000,000—exactly double the cost in the period between 1935–39. The bill was then $15,200,000,000.

The farmer's share of the food bill in 1939 was 40 percent. Most farmers believe the share the middleman takes out of the consumer's dollar is inordinately large. In this case it was 60 percent.

Seeds, feeds, fertilizers, machinery, fuel, sprays, labor—everything connected with farming—is extremely high. Labor is scarce, too. When spring and summer rains continue, the cost for hoeing a field of cotton doubles and trebles the price which the farmer was prepared to pay. When one good chopper can clean only two rows per day, and that not over a quarter mile in length, imagine the cost per acre. That happened this year. Fertilizer (March 19, 1948) was $70 per ton. This is all actual money costs. Nothing has been said about the long, hard hours the farmer and team or tractor worked.

This fall we got one bale of cotton picked for $3 per hundred pounds. Since then it has cost $3.50, and we have only two pickers. That means it is moving slowly and we are losing money as it dries out on the stalk. Some of our neighbors are paying $4 and $5 per hundred for pickers, but that does not make them more plentiful.

At present we are getting from 30 to 32 cents per pound for lint cotton. A 500-pound bale of cotton brings approximately $170. Sounds good, doesn't it? Suppose the producer is a renter, as thousands are; one-fourth goes to the landlord, there's $42.50. At $3.50 per hundred (1,500 pounds seed cotton to a bale), $52.50 goes for picking. There is already $95 gone. He has $75 left to begin paying on the loan he received in the spring to finance the making of the crop. One neighbor told us he would have about $7 per bale when all expenses are paid. That is better than some will do, who have a good crop, too. Some will not get out of debt on it.

During the war years when farmers received 20 cents per pound for lint cotton, seersucker dresses sold for prices ranging from $9 to $27. One pound of lint cotton make 4 yards of seersucker. Four yards of material will make a long dress for a large woman. The farmer received 20 cents for the cotton that went into that expensive cotton dress. Now who is charging exorbitant prices for what? Did it cost that much for the manufacturer to weave the cloth and make the dress? If it did, don't blame the farmer. He did not get those profits nor wages from the factory. He got 20 cents. A large percentage of farm women made and still make their dresses out of feed sacks. They cannot afford the chambrays and ginghams now. They are almost as high as seersucker was then.

The thing that is true of cotton is true of other things as well.

That chicken that you pay $2.75 to $3 for probably brought some farmer $1 to $1.50.

We get $2 for a bushel of sweetpotatoes (57 pounds). What do you pay per pound?

A bushel of cucumbers brings us $1. What do you pay for one cucumber? There is little waste to cucumbers. A bushel cans out a nice number of quarts, yet you pay 50 cents for a pint.

Cattle average about 20 cents per pound to the farmer. After it is dressed the cost of the beef is about 45 cents per pound. Yet steak sells from 80 cents to $1, and there is no part of the beef you can buy for 45 cents. If it were all sold at soup-bone prices, there would be a profit.

The farmer gets $1.50 to $2 a bushel for tomatoes. They weigh from 50 to 55 pounds per bushel. When you pay 20 cents a pound for them, the bushel brings $10 or more.

Who got that profit? Not the one who raised the tender plants, prepared the soil, carried water, transplanted, cultivated, sprayed for insects, and harvested them. He didn't get any profit out of the eye-catching package they are sold in, either.

I grew sweet peppers this year. For 1 week during an extremely dry time, I carried

water each evening and poured into punctured cans that had been buried near each plant to try to keep them alive until rain came. I received 10 cents per pound for the ones I sold. While I was yet in the store, the customers began carrying them out at 19 cents per pound—lacked only 1 cent doubling in price. The producer carried them in—the consumer carried them out.

For months egg producers have been receiving 35 cents a dozen for eggs. This winter you consumers will pay—well, you'll know what you'll pay when you dig down into your pocket for the money to hand over.

Sure we know it costs to keep them in cold storage, 3 cents a dozen for storage for 6 months. They are bulky for their value, but this old processing cry won't work, because they reach you in the same form they left the hens except for age.

I have paid $5 to $5.75 for every 100 pounds of laying mash I have bought. I also paid $5 per hundred for shelled corn during the 35-cents-a-dozen period.

Next year I will keep hens enough to supply home needs—no more. I plan to raise only enough young chickens for home use.

If the farmer's profits were cut 50 percent, it would not reduce the cost of living 10 percent. Less than one-fifth of the population of the United States produce food for the remainder of the population.

The agricultural people are in a minority. The 80 percent who need and want food we work to produce are objecting violently to prices being stabilized. I wonder if those objectors realize that most farmers have to borrow money each year with which to make a crop. The crop and other property as well are mortgaged as security before the ground is even broken in the spring. There is no need to start unless he knows he can finish. What he generally doesn't know is what the yield will be—he never knows that—nor the price he will get. He never sets a price on anything. When he has something to sell he asks, "What will you give?" The merchant, commission man, or whoever it happens to be, sets the price. When the farmer buys he asks, "What is the price?"

In 1937 we were on a 140-acre farm—our own. We had the best prospects for a good crop yield we had ever had. Our cotton and corn were almost all "laid by." Truck crops of all kinds were fine. On the morning of July 3 a hailstorm completely destroyed it all in a few minutes. The crop was made on borrowed money, too. There was no fruit or vegetables to can. We got one small bale of cotton, which brought us $61. There wasn't an ear of corn to harvest. The feed had to be bought to winter the stock; then more money borrowed to farm with in 1938. By selling the last milk cow we had, after the crop had been sold and all the money applied on debt of making those two crops, we did clear the loan in 1938. There was 2 years of hard work with nothing for ourselves.

You may ask, "How do people go on and on like that?"

They don't. That is one of the reasons people lose their homes. It's a reason for delinquent tax notices.

We are on a small place now. Early in 1947 my husband had meningitis. He wasn't able to make a crop. There certainly isn't enough profit to hire all the work done. We wouldn't have risked farming this year if the price on cotton hadn't been stabilized.

I am not bidding for anybody's sympathy—only understanding. These financial reverses that have happened to us are only typical of the same and similar things that have happened to thousands of farmers.

What we produce wouldn't be missed off the market if we never do sell another thing, but there are thousands upon thousands of small farmers just like us. Taken together, we are important in agricultural production. In spite of major calamities and adverse publicity, farmers keep plodding on.

The spread between farm product values and retail cost does seem to be too wide. I don't know the answers. Maybe it is bungling and inefficiency in distribution. There are so many costs that reflect in the retail price that farmers don't have anything to do with at all.

Consumers demand that their products be put up in more and more elaborate form. Our parents and grandparents bought supplies in large quantities and hauled them home themselves. Today we buy foods in small quantities, and they require very little processing in the home. We buy very little flour. Our bread is baked and sliced. Much food is bought in cans, ready-cooked, or frozen foods are used. Bacon is sliced and wrapped in cellophane. All this processing widens the margin between what the consumer pays, and what the consumer gets.

Advertising costs in 1937 were $2,000,000,000. Most of this was charged to distribution.

Retailing costs are high partly because consumers make them high. Many customers will pay higher prices in stores that have an atmosphere of quiet elegance and luxury.

Most customers want a large variety of brands to choose from, even though the real differences between them may not be great. Most customers patronize the stores and lines of goods that are advertised most. Each of these items may be small but they add up to a large item in retail costs. A good many costs of which consumers complain lie pretty close to home in the buying habits of consumers themselves.

We were promised stabilized prices through 1949. Because of the pressure of public opinion the program is rocking. If the public had to live on its opinion for a while it would find it far from filling the stomach.

If support prices are scaled down in 1949 the farmer will have very little faith left in anything promised by Congress.

The bankers don't intend to loan money to farmers unless they know there will be a market at reasonable prices for farm products. This isn't guesswork either. Ask the banker if you think it is.

We farmers take large financial risks every year. We only ask live-and-let-live prices (don't get them often) and a little understanding.

Unless somebody gets busy and helps to fight for the farmer, we may face a serious food shortage in 1949.

We need to be sure, too, that we know the difference in the high cost of living, and in the cost of high living.

We have three married children who, with their families, live in the cities of Detroit, and St. Louis, so we have a fair understanding of both sides of the question.

I don't pretend to be a writer, nor do I know very much, but I do know farmers are not to blame for the high cost of living.

If each of us would only praise God from whom all blessings flow and be more thankful for those same blessings there would be less misunderstanding.

I may wish I had picked up my pen and broke the point off instead of writing this, but I've tried honestly to present our side.

Amendment of House Rules

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Press of Saturday, December 18, 1948, which is in agreement with my proposal to amend the House rules to limit the power of the Committee on Rules:

MR. EBERHARTER'S IDEA

Among others, Congressman HERMAN P. EBERHARTER, Pittsburgh Democrat, will seek to strip down the all-too-powerful House Rules Committee.

The Rules Committee was set up, as Mr. EBERHARTER points out, as a sort of traffic director for House legislation.

With all the standing committees of the House pouring legislation onto the House floor, it was considered more efficient to funnel it through a single group so there would be some order in the proceedings.

On that basis, the Rules Committee served a useful purpose.

But the committee, in recent years, has not been content to serve as a traffic cop. It has set itself up as the final authority on all issues. If its handful of little dictators didn't like a bill, they shelved it.

The judgment of other Congressmen, serving on standing committees which had spent in many cases months studying a subject, was vetoed by the arbitrary action of the Rules Committee.

And, under legislative rules, apparently nothing could be done about it.

Mr. EBERHARTER proposes to keep the Rules Committee as a traffic cop. But he urges a new rule which will give the House, by a simple majority vote, the power to determine for itself what legislation should come to a vote on the floor.

As he points out, the spectacle of a standing committee being unable to bring a bill to the House floor—despite its careful hearings and considerations—because the Rules Committee didn't favor the bill "adds nothing to the luster of the democratic process."

In the last session, the Rules Committee—and the Rules Committee alone—blocked such important legislation as, for instance, universal military training.

Mr. EBERHARTER's plan is a modest attempt to eliminate the obstructive tactics of the House Rules Committee.

Congressman John W. McCormack

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the Lynn Telegram-News on Sunday, October 17, 1948:

MAN OF VISION

One of the most eminent statesmen of our day is Congressman JOHN W. MCCORMACK, who has carved a niche for himself in American history because of the erudition, foresight, and common sense he has exhibited during his years as a leader on the national scene.

The clear-thinking, straightforward legislator, who was the majority leader in Congress during the Rooseveltian era, and who is still a power on Capitol Hill, holds the respect and admiration of fellow lawmakers from all sections of the Nation. He has ever been a champion of the cause of the common people, and his long years of experience in Washington have brought him to the fore as a man whose opinion must be consulted

when issues concerning the well-being of the United States are under discussion in Congress.

A defender of the weak and oppressed, a vigorous foe of communism, and a courageous leader in the field of both government and religion, Congressman McCormack heard words of high praise bestowed upon him last week by Archbishop Richard J. Cushing at the National Conference of Catholic Charities in Boston. His Excellency spoke as follows:

"I want to make a public expression of gratitude to Congressman John W. McCormack, and I want to assure him that he has the abiding appreciation of the entire hierarchy of the Catholic Church."

First duty of government is to assure justice for its people, and that is the watchword of Congressman McCormack, whose every waking moment in Washington is devoted to the task of improving the lot of the common man. The defeat of communism is his aim, and, as he has said time and again, economic insecurity is the root of that evil force which seeks to dominate and enslave the world.

"Government should and must give special consideration to the weak, the poor, the sick, and the exploited," he contends.

Congressman McCormack is an outstanding Catholic layman, a pious, God-fearing statesman who is unafraid of facing the volleys of communistic calumny. He has often put forth the truth that national security will be forthcoming if family security is promoted throughout the Republic. His is a potent voice in the Halls of Congress.

Great honors which have come to the noted Congressman have been shared with him by his devoted wife, Mrs. Harriet Joyce McCormack, through the years in Washington. Congressman McCormack has frequently said that she has been his guiding light and sympathetic adviser in his endeavors as a barrister and legislator. A former singer of prominence, Mrs. McCormack relinquished an operatic career to become his helpmeet. It was an example of her selflessness, for she cherishes the wifely role.

Are We Biting Off More Than We Can Chew?

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 3, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Bruce Barton from the Reader's Digest for December 1948:

ARE WE BITING OFF MORE THAN WE CAN CHEW?

(By Bruce Barton)

When we hear ourselves called "the greatest and most powerful nation in the world" it should not fill us with pride, but with a deep and solemn apprehension. For who have been our predecessors in this very role? Greece, Rome, Portugal, Spain, Holland, France, England, Germany. And where are they now? Most of them are looking to us to keep them on our dole. Over all of them could be written the same epitaph: "They bit off more than they could chew."

No nation can play God to the world with any final result except its own self-destruction. The American President who has the courage to say this to his people—and implement it with a realistic foreign policy—will win their gratitude and with it the surprised respect of every other nation.

Let us not kid ourselves. One of the most unpopular nations in the world today is the United States. We make too many sweeping promises, when we have no program for fulfillment. In every country in the world are millions of people who have been led to believe that the United States is pledged to solve all their problems and wash away their worries.

Well, we just can't do all these things. We have not solved innumerable of our own domestic problems. Our streets are so glutted with traffic as to be well-nigh impassable; our schools are overcrowded; our railroads are outworn; millions of our people are half-homeless; inflation is destroying the purchasing power of the dollar. Yet we go on promising and promising and promising.

To nations and groups that approach us saying, "What do you propose to do about this or that?" we should answer: "Tell us first what you propose to do, and then we'll tell you where, if at all, we fit in."

And for goodness' sake, let's quit saying to other nations, "We don't want anything." Can you imagine what happens when the United States delegate steps into a conference of hard-bitten, cynical foreigners, each one fighting for his own political life and the survival of his own country, and gives forth that smug remark? Every man in the room regards it as a hypocritical lie. And it is.

There are lots of things we want. We want closer economic cooperation among nations in Europe, in order that they may become less dependent upon United States aid. We want stabilized currencies and fair business opportunities. We want our share of the oil in the middle east. We want many raw materials and products which we don't produce, or which can be produced more cheaply in other parts of the world.

I listened a few days ago to a private report of a man who had been to Europe under the highest governmental and journalistic auspices, conferring with the top people in England, France, and western Germany. He said: "Paul Hoffman is a good man and a smart one, but he has an almost impossible job. More and more the European nations take the attitude that their problems are our responsibility even more than theirs. Many Englishmen go further; they say frankly that, of course, the Marshall plan is not set up in the interests of Europe; that the United States simply must give away $10,000,000,000 worth of food, goods, and money a year to maintain full domestic employment and escape a destructive depression. They honestly feel they are doing us a favor in taking our goods and dollars. With steadily lessening embarrassment and self-consciousness, they let it be known that they expect to be on our relief rolls for many years to come."

Let our representatives open every conference by saying bluntly: "Gentlemen, make no mistake about it, I and my colleagues must first of all consider the welfare and security of the American people." That is language every foreign statesman understands.

Until we, the strongest nation, make up our minds what we want and state it honestly, other nations can make no constructive plans. And you can be sure they won't change their ways of doing things unless we insist.

Why should we, for instance, pour millions of dollars into France, without insisting that the French Government collect full income taxes from well-to-do citizens—something that it is not doing now? A banker loans money on terms; we could and should do at least as much when we give our money away.

It seems obvious that we could no more occupy Russia than Napoleon or Hitler could occupy it. Yet our Army wants universal conscription. It seems equally obvious that our great airplane carriers, attempting to operate anywhere near enemy shores or bases, would be as helpless as ducks in a swimming pool. The record of the last war proves with grim finality that only destruction awaits naval units which enter the range of superior land-based air power. Yet we continue to pour millions of dollars into carriers.

Once we accept the fact that we are living in an air age, that any future war will be an air war and that our one hope is to curtail expenditures on the Army and Navy and concentrate on a supreme Air Force, we'll begin to make sense.

If we do this we can save the American taxpayer four or five billion dollars a year. And that is an important item in foreign policy. For let it never be forgotten that a primary Soviet objective is to weaken and destroy the American economy—because it is the bastion of capitalism and hence of the freedom which springs from capitalism. To be profligate with our resources is a disservice not only to ourselves but to all nations on our side in the world-wide struggle for liberty.

Undeniably, the Soviets hope for world conquest. But no nation, let us remember, has ever made world conquest stick. Alexander tried it in his day, and he was hardly cold on his bier before the battle broke out between his successors, and his empire fell apart. An overextended Roman Empire went down before the onslaught of the relatively small forces of barbarians. Hitler might have beaten Russia and temporarily conquered Europe, but even before he died the seeds of his destruction were sprouting in the jealous and angry hearts of his own generals.

Consider, too, the trouble Moscow has been having with Tito in Yugoslavia and with its satellite regimes elsewhere. Tito is a traditional Russophile Slav who happens also to be a fanatical Communist. Yet Moscow cannot manage him. Consider also the police-state measures which the Kremlin has to rely on to remain in power in Russia and in the satellite states on her borders.

Another reassuring factor: Communism is nowhere in the world today winning a popularity contest. Peoples everywhere want liberty. No nation ever voted for communism in free elections, or ever succumbed to a Communist dictatorship except under the pressure of military might.

But suppose Russia should become more aggressive. Must we then fight a third full-fledged war on the Continent of Europe? That is an all-important question for the American people to decide. Can there ever again be a winner in a full-sized war? Two World Wars should have taught all peoples that when you destroy an enemy's country you must, as a matter of self-interest, build it up again; that when you shoot enemies you shoot customers; that when you take over a country you take over the feeding of tens of millions of people; that war today is a devastating set-back to civilization, creating more problems than it solves. Another war would result in universal chaos, for Russia, for the United States, and for any other nation involved.

Our best hope for peace is a realistic foreign policy, backed by an Air Force so overwhelmingly powerful that no nation will dare attack us. This we can do. The sooner we do it, the better it will be for every freedom-loving person in the world. Meanwhile, in making any further commitments to other nations, let us stop, look, and ask ourselves: Are we biting off more than we can chew?

Progress in the House

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of Monday, January 3, 1949, which is in agreement with my proposal to amend the House Rules to limit the power of the Committee on Rules:

PROGRESS IN THE HOUSE

The new Democratic majority in the House of Representatives has got off to a good start. Its caucus on Saturday voted to break the throttling powers of the Rules Committee and to prepare the way for organization of the House on the basis of party responsibility. Both moves suggest that the House and the President will be working in closer cooperation than at any time since the early days of the Roosevelt administration. Yet there is no reason to believe that Congress will this time become a mere rubber stamp for approval of any proposal that may have the President's blessing.

The checkrein that is to be applied to the Rules Committee should be much more effective, in our opinion, than the scheme to ease the dislodging of bills from that group by petition. It resembles the proposal recently offered by Representative EBERHARTER in a letter to all Members of the House. Under it all bills approved by standing committees will go to the Rules Committee as at present. So long as that committee performs its proper function of directing the flow of these bills to the House floor in orderly fashion, with appropriate limits on debate, it will encounter no interference. But if it attempts to bury a bill, as it has often done in the past, the chairman of the legislative committee reporting the bill out can take the issue directly to the House floor.

If this venture is approved by majority vote, the measure can then be called up for debate and passed as a matter of the highest privilege. The effect will obviously be to put the Rules Committee under pressure to cease obstructionist tactics, for if it fails to act for 3 weeks the House may grant a far more favorable rule than the committee itself would suggest. This is a reform of far-reaching significance. Its operation will depend, of course, upon recognition of protesting legislative committee chairmen by the Speaker on the discharge day, but that ought to be taken for granted.

The selection of Democratic members of the Ways and Means Committee, who will parcel out all other Democratic committee assignments, also reflects administration influence. The original slate of new Ways and Means committeemen, against which we protested a few days ago, was weighted to give disproportionate power to southern Congressmen. The slate approved by the caucus has only two southerners, Congressmen BOGGS of Louisiana and COMBS, of Texas. Since 6 of the 10 members on the committee in the Eightieth Congress were southerners, it was imperative to give the East and West a majority of the new seats if a balance were to be achieved; 11 of the 15 Democratic members of this powerful group are now said to be liberals. The committee thus promises to reflect the will of the majority with some degree of accuracy.

The chief disappointment comes in the retention at the head of all congressional committees of chairmen selected by the blind seniority system. The House Democratic caucus could have elected chairmen for the 19 standing committees as easily as it elected 6 Ways and Means Committee members to make the other committee assignments. The progressive steps taken will have the effect of centering criticism upon the unchanged "senility system."

Majority Leader

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following nominating speech in behalf of the gentleman from Massachusetts, the Honorable JOHN W. MCCORMACK, for majority leader, which I delivered on Saturday, January 1, 1949, at the Democratic caucus:

Friends and colleagues of the United States House of Representatives, today we meet to organize the team which must carry forward to victory that program which we have promised to the people.

Immediate, constant, and effective cooperation between the executive and legislative branches is necessary if our form of Government is to meet the urgent problems of this challenging age.

The key figure in carrying out a President's program is the majority leader of this House. For this position we require an alert, resourceful, and vigorous leader, who will not fumble the ball. We cannot entrust this responsibility to a substitute. The public demands the very best talent we can summon from our ranks.

The gentleman I am honored to place in nomination for this important post comes from the city of Boston, where a man has to be on his toes to prove his mettle for leadership. There is the environment which nurtures a man with the best in our tradition. There is the rich variety of racial origin which makes our party of today human, progressive, and alive.

From there comes a man who brings together in his character and personality a wealth of sturdy Americanism. Hard working and God fearing, he possesses a knowledge of the theory and practice of Government which is unexcelled, thoroughly seasoned by his service in the Massachusetts House of Representatives and in the Massachusetts Senate, of which he was majority leader.

He was promoted to the Congress of the United States, where he has been a distinguished Member for more than 20 years. His abilities were soon recognized by a President who governed during the most critical years of our history. That such faith was fully justified is a matter of record intimately known by many Members of this House and by the people of a grateful Nation. In the councils of our party he has worked with boundless zeal and loyalty. He has never spared himself but has ever fought with superb devotion to the Democratic Party, its leaders, and its policies.

He has been the trusted confidant of two Presidents, and his advice has had much to do with revision of executive programs so as to make them most readily acceptable to the majority views of this legislature.

Himself a veteran of World War I, he understands and speaks for that heightened awareness of our freedoms and responsibilities in a world where our Nation has assumed the burdens of leadership; an awareness that has been earned the hard way by the millions who have served in our armed forces. He enjoys the confidence of business and labor and is in a position to exert that balanced judgment which is necessary to reconcile the differences between the two.

Ever close to the people, he represents them with that sure grass-roots knowledge of their problems, which is the essence of democratic government. For the back-breaking task of majority leader, the Nation expects us to decide wisely and well. The burdens of this position demand that happy combination of experience and stamina which this man possesses.

Skilled in parliamentary procedure, forceful in debate, and fortified by a comprehensive knowledge of economic, social, and international problems, the candidate we offer is therefore fully qualified for leadership in this House.

As we well know, all the world loves a fighter who does not give up even against impossible odds. Such a man forces through and gets things done.

We have a fighter in the White House, and we need a fighter as a right-hand man to the President in this House to carry forward to enactment that program which we have pledged to the people. Honest, fearless, and dynamic, this legislative veteran inspires warm respect among those who have had occasion to work with him.

It is this faculty of setting a high example of selfish service that sets a pattern of extra effort for all of us.

The obligations facing the Eighty-first Congress make it imperative that we choose the finest executives for the administration of the legislative duties of this assembly. None but the very best will do. President, Vice President, Speaker, majority leader—these are the four highest honors in our National Government. If we approach the task of fulfilling the mandate granted to us by the American people, it is well that we work on a truly representative basis.

President Truman hails from west of the Mississippi; Vice President Barkley from a border State; Speaker Rayburn from Texas. Certainly the great industrial Northeast is deserving of the fourth honor to round out an organization that gives recognition and proportion to our team.

Our man has been and is a veritable work horse for the Nation and for the party, which has been consistently chosen to direct its destiny. In my humble opinion, subscribed to by many both in and out of this Congress, he is deserving of greater honors than it is within our present power to confer, but we are personally concerned at this moment with what we can and should do to show our gratitude to an exceptional public servant whose proven abilities we cannot afford to lose.

Ladies and gentlemen of the Congress, I offer for your unanimous approval as majority leader of this new Congress New England's favorite son, a legislator to whom the whole Nation is indebted for his untiring labors, our tried and true friend, the Honorable JOHN W. MCCORMACK.

Graveyard Committee

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following edi-

torial from the Washington Post of Friday, December 17, 1948, which is in agreement with my proposal to amend the House rules to limit the power of the Committee on Rules:

"The people never have been and never will be able to understand," says a letter by Representative EBERHARTER to all his fellow Congressmen, "how the will of a majority of the House * * * can be set aside by the judgment of a few men on a powerful committee." His letter is a sharp indictment of the dictatorial Rules Committee as it has operated in the past. We suspect that his criticism will find a sympathetic echo from a great majority of the legislators who have seen important measures having majority support defeated by the Rules Committee's silent veto.

What is most significant about Mr. EBERHARTER's letter, however, is that it offers a feasible and democratic way of ending this outrage. He would leave it to the committee sponsoring a bill to suggest the conditions for its consideration. All that the Rules Committee could then do would be to give each bill a priority number and suggest the time to be allowed for debating it. If the committee did not act within 2 or 3 weeks, the bill could then be called up on the floor and the entire House could decide whether or not to consider it. Several variations of this plan have been suggested by other Members of the House. It is possible that some abuse might arise from leaving the legislative committees free to fix rules for their own bills.

The important point, as Mr. EBERHARTER says, is to restore the Rules Committee to its proper function of legislative traffic director. It now functions as a sort of legislative gravedigger. If Mr. EBERHARTER can induce the House to adopt this reform on its opening day, so that the reform itself will not be buried in the Rules Committee, he will earn the applause of the entire country.

Religious Freedom Does Not Exist in Hungary

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. GORDON. Mr. Speaker, under unanimous consent, I include in the RECORD a most timely article that appeared in the Washington Sunday Star of January 2, 1949, concerning the religious persecutions existing behind the iron curtain.

Hungary, as well as Poland and the other satellite nations that are in the clutches of ruthless outside influences, are being constantly deprived of their God-given rights to the freedom to worship as they will, to the freedom of speech, and their rights to govern themselves in accordance with their background and traditions.

The article follows:

RELIGIOUS FREEDOM DOES NOT EXIST IN HUNGARY—ARRESTED CARDINAL SAYS REDS MAKE A MOCKERY OF THE CHURCH—SPIES REPORT SERMONS; NEWSPRINT DENIED CATHOLIC PRESS

(Gerhard Werkman, editor-at-large for the Netherlands Newspaper Syndicate (RDP), obtained one of the last interviews with Cardinal Mindszenty before his arrest by the Communist Government of Hungary. Mr. Werkman then obtained the Primate's permission to put the interview into a by-lined first-person appeal, which follows.)

(By Joszef Cardinal Mindszenty, Primate of Hungary)

BUDAPEST.—The Communists claim that there is freedom of worship and belief in Hungary. If freedom of religion stands for one's personal freedom to attend church without being molested, then that is true. But if, by religious freedom one means the absolute spiritual freedom of the church, then there is none in Hungary.

The church today is subject to a systematic government campaign of slander. Sermons are taken down in shorthand by Red spies, Catholic newspapers are denied newsprint, railway tickets are refused to would-be pilgrims and even wholesale arrests of priests are the order of the day. That is what the Communist government of Hungary means by freedom of religion. I call it a mockery.

PROTESTS ARE IGNORED

Our press is banned. Not officially—but in practice it amounts to the same thing. Thus the church stands powerless against the persistent slander campaign which the government has launched in ever-increasing violence in the Communist press and in Parliament. There is no hesitation about attacking the Pope, the priesthood, all Roman Catholic institutions, and even the morals of the church.

The Reds have prevented pilgrimages by instructing railway clerks not to sell tickets to well-known places of pilgrimage on certain days. They prevent our religious processions from taking place.

I have sent many written protests to the government. So far not a single reply has ever been received.

All church lands and properties have been requisitioned and shared out among the farmers. Our schools have been nationalized. Although the government subsidizes us to some extent, this sum is far below our former revenue.

Even our bishops have been "nationalized," as they are now on the state pay roll. Of our youth organizations, 1,500 have been officially forbidden; their club buildings have been requisitioned for Communist offices.

VOTED FOR FEAR OF JOBS

Nationalization of the schools was one of the first open government acts against the church. Until 1750, the only schools in Hungary were Roman Catholic schools. It was not until then that the state began to show some interest in educating the people. Even so, the church to this day has spent vast sums of money on schools to which our people contributed their hard-earned money.

Many of our teachers nevertheless voted in favor of nationalization. They did so for fear of their jobs. It was a matter of choosing between their convictions and their bread and butter. The over-all majority of the Hungarian people want to retain church schools.

NO VATICAN REPRESENTATIVE

I objected when the Communist government declared recently that religion would be a compulsory subject in the new state schools. I objected because a mere statement is insufficient. Besides, there have already been organized Communist demonstrations against compulsory religious teaching. What guaranty is there that in due course it will not be forbidden?

The government, in turn, has blamed the church for not supplying enough of the right sort of textbooks. But the government said it would be necessary to revise all schoolbooks. Now, Education Minister Gyuala Ortutay's censorship division has purposely delayed their delivery for such a time that the shortage of textbooks on every subject has become general. Is the church to be blamed for that?

There is no diplomatic representative of the Vatican in Hungary any longer. There is no longer a single Catholic daily in the country. There are 11 major daily newspapers in Budapest and 48 in the provinces. Just imagine that and then realize that there are 68.2 percent Catholics among Budapest's population of 1,162,800.

The President of the Republic promised to allow us to print one daily paper. We never received any newsprint allocation. Of the 81 political weeklies, there is only 1 Catholic weekly. In addition, we have exactly 1 purely religious weekly. Yet both our political and religious weeklies are subject to the most rigid censorship. Very often Communist compositors and printers refuse to handle certain of our articles. We have no presses of our own. So, to all intents and purposes, we are subject to a double censorship.

SPIES TAKE DOWN SERMONS

All sermons are taken down in shorthand by Communist spies. Even with the Russian occupation forces long departed, village priests are still frequently arrested. Education Minister Ortutay, who is also in charge of religious affairs, has never even tried to deny the arrests. Nor did he deny that vital newsprint was withheld from us.

As if to remove doubts about the Communist Party's good intentions, Ortutay is paying the nationalized bishops a cabinet minister's salary. He also had the Budapest Catholic Basilica repaired at state expense, on the initiative of Mattyas Rakosi, secretary general of the Communist Party.

But, as against these outward signs, our work is being hampered and destroyed. We continue to resist. And we raise our voice to be heard in a free world—west of the iron curtain.

Republican Responsibility

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. O'HARA of Minnesota. Mr. Speaker, my attention has been called to an article by our colleague, Hon. LAWRENCE H. SMITH, in the December 29, 1948, issue of Human Events. This article is indeed a thoughtful analysis of conditions in this country and the tendency toward socialism and statism, and will appeal to those who are concerned with the problem of the continuation or destruction of the basic American principles upon which our country was founded.

At the commencement of the Eighty-first Congress, Representative SMITH's article is most timely and appropriate, and under leave to extend my remarks I include the following:

REPUBLICAN RESPONSIBILITY

(By LAWRENCE H. SMITH)

The building of constructive political action on the principles of justice and freedom must now be the firm objective of the Republican Party. In the debacle of another stunning defeat this challenge is more imperative than ever. This last reversal may provide the urge for the development of a real opposition movement so necessary in the present political situation.

The Republican Party has faced crises in the past, and as it looks ahead it must realize that our domestic problems and foreign affairs are in a critical state, calling for prompt attention and revision. The party has had men of wisdom with the capacity to solve the problems which it has faced in previous national emergencies. There is no reason to conclude that comparable leadership cannot be found today.

Lincoln had to deal with a divided Nation, and had the common sense to meet the issues of that day by the application of sound principles. It was a Republican administration that passed the Sherman Anti-Trust Act, designed to curb greedy practices by large corporate combines. Wise income tax laws were enacted under the Republicans. When Theodore Roosevelt reached the Presidency, he struggled with those in his party who placed personal gain above the public interest. It is to his credit and that of the Republican Party that T. R. won his fight.

Today the party must demonstrate that it is forward looking and seeks to establish freedom and justice in a complex domestic economy and on a global basis in foreign affairs. The ability and willingness to lead in that direction exists, but whether there is the courage and honesty to follow through remains to be seen.

There is little doubt that the Republican Party, under the leadership of Governor Dewey, expected to coast to victory in November on the weaknesses of President Truman; it had no intention of meeting the fundamental issues. Now the Republicans in Congress must organize to meet the challenge of Truman's New Deal. As the drift toward state socialism is accelerated, the real political problem stands out ever more clearly as that of maintaining freedom. Republicans in and out of Congress can vigorously resist the industrious efforts of psuedoliberals to concentrate more and more administrative power in a small ruling oligarchy, which has as its ultimate objective to control and regulate the entire economic machinery of this country.

II

For 16 years, the Democrats have blacked out private-business initiative by restrictive legislation and confiscatory taxation. Their top policy makers have endorsed the principle that government can do more for the people than the people can do for themselves.

Mr. Truman went overboard for the socialistic state in his acceptance speech at Philadelphia. It was a historical statement in that he broke with the past completely. In effect he said to the people: "Don't worry about the future, the Government will take care of you." Just campaign oratory, of course, but serious when uttered by the President of the United States, and now it is his responsibility. It must be recognized that this appeal finds lodgment in the minds of many who honestly believe that government has some obligation to provide for them if they are in need. And there can be no doubt that this paternalistic assurance was an important factor in the last campaign.

The drift to socialism and statism in the United States has been constant for 16 years, and in the other parts of the world for a longer period. The Republicans in the Eightieth Congress tried to do something about it, but their Presidential candidate failed to stand by them and now the movement is to be accelerated.

Human Events, on November 17, 1948, pointed out the significance of President Truman's campaign speeches as they indicate Democratic Party policy for the future. It was said:

"The Chief Executive assured all elements of our society, with the single exception of big business, that under his continued direction their material benefits will increase. The Democratic Party has pledged itself to this accomplishment."

Is this the proper function of American government? Yet even the Republican majority, in the Eightieth Congress, supported New Deal measures in the fond hope that such action would win the election. It was bound to fail.

III

The Republican Party must build a program to meet the issues as they exist today. Fundamental principles of justice and freedom must be invoked; there must be no temporizing. In domestic affairs the fight against state socialism is inevitable. Abroad, our global commitments are such as to require a review of our allegedly bipartisan foreign policy. The peace of the world is involved and there is no more important business before us. Will Mr. Truman have more diplomatic success in the next 4 years than he has had in the past? International morality has hit a new low and the Republicans cannot escape responsibility for some of it. We can, however, do something about it by advocating and sticking to principle.

Nearly 4 years have elapsed since the Nazis collapsed, and yet we have failed to write a peace with either Germany or Japan. It is recognized that if Europe is to recover it must be upon the basis of a reconstructed Germany. Ten Marshall plans will not do the job so long as industrial Germany is crucified. What will the Republicans do about this? Have they the courage to give the lead which the electorate has the right to expect from those who assert a claim to leadership?

In the absence of peace we are engaged in an armaments race, greater than anything ever attempted in this country in time of peace. Fifteen billions are to be spent in the current fiscal year; another fifteen next year. In addition, there is conscription of young men for military service. Further, there is talk of a military alliance with other European countries, and the lend-lease of guns, ammunition, and air-force equipment at an estimated cost of fifteen or twenty billion dollars. Obviously, this is a confession that Russia took Roosevelt and the United States of America for a ride; that in effect we lost the war. No other deduction is possible. It is only when the diplomat fails that the Army steps in.

The present situation could and should have been anticipated. Before the shooting stopped in Europe and the Pacific our leaders were compromising principle. The high idealism expressed in the Atlantic Charter was ignored in the rush to achieve a military victory—at any price. In our blind hate for Hitler and Hirohito we were trapped by Stalin and his Politburo. They outsmarted Roosevelt and his subservient State Department, and we now know that they were parties to a cunning deception of Poland, Yugoslavia, and China. In a hearing before the House Committee on Foreign Affairs, there was testimony that Chiang Kai-shek was not even informed of Roosevelt's deal with Russia, whereby the Communists obtained special rights in Manchuria, the Port of Dairen, half of Korea, and all the Kuriles. Yet Chiang was our ally. This sort of double dealing went on at Moscow, Tehran, Yalta, and Potsdam. It was a wholesale violation of the principles of justice and decency and constitutes a national disgrace.

What will the Republicans do about this? Did not top flight party leaders attend these conferences?

The Republican minority in the Congress cannot avoid its responsibility in these matters; it cannot honestly use the cloak of bipartisan foreign policy as an excuse for avoiding its definite obligation to the people. Fortunately, there is evidence that some Republicans in Congress realize their responsibilities.

IV

Last April Representative CASE of South Dakota, as chairman of the House subcommittee reporting on Germany, raised two important questions: (1) The present military occupation of Germany; and (2) the future disposition of Germany as a conquered nation. The report implied a responsibility on the part of Congress for United States policy in Germany.

The report also implies that Congress had a responsibility in the disposition of plants, railroad transportation, productive facilities, shipping, and other captured equipment in the American zone of occupation. But it was pointed out that the whole reparations and demolition programs were being carried on through agreements and commitments made by the President entirely on his own initiative. There is no justification, in law, for such conduct. There is certainly no justification, in the American tradition, for such arrogation of executive power.

Temporary military occupation, of course, called for certain action under the rules of war, administered by the military government by direction of the President as Commander in Chief. The ultimate objective, however, is permanent settlement by the writing of an honorable treaty of peace. What did we do?

At the close of the war Mr. Truman secretly adopted the Morgenthau plan, contrary to the principles of international law. It is evident now that this was intended as the permanent peacetime policy for Germany. The plan was seemingly designed to prevent German rearmament by keeping the German people impoverished both in natural resources and in productive capacity. It has been well said that: "Advocates of this permanent policy thus sought to find in our military occupation a status novel in international law."

There is such a thing as a code of morality for nations, and we invoked it to justify our cause. Republicans must now make a real fight for those basic American principles which the administration has not upheld. Only in this way can we hope for a decent peace.

Wool Market

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following address of John G. Wright, president, Boston Wool Trade Association, at the annual meeting held at the Parker House, Boston, at 12:30 p. m., November 16, 1948:

There is no stock of fine wools in this country or the world, and the world is consuming more of the wanted fine wools than there is being produced. There are less sheep in this country than there were in 1867, when the population was only 35,000,000. Men's-wear fabrics are slow, despite the fact they are based on wool bought on a much lower market. Continuation of present high rate of national prosperity insures heavy consumer demand. It seems, therefore, that fabrics must soon be based on the much higher world level of wool prices.

You have heard the reports of your many committees and it is apparent, both from their reports and from the circulars sent out during the year, that they have spent a lot

of time in useful efforts for the trade as a whole. It seems probable that your committees will have as much or more work in the coming year, and I think we are fortunate in having so many able men willing to give their time freely on these committees. It is particularly gratifying to have progressed to a program which is mutually satisfactory to the wool growers and our trade. I am not going to dwell further on the activities of these committees, for, as important as they are, they are secondary to the major problem which the trade as a whole has to face.

According to the Department of Agriculture, in the first census of the sheep population in 1867, there were 39,000,000 sheep on the farms. At that time the population in the United States was only about 35,000,000 people. Today there are only about 35,000,000 sheep, while the population has risen to 145,000,000, of which over 60,000,000 are gainfully employed. Putting it a little differently, in 1867 there were one and eleven one-hundredths sheep for every person in the country, while now there is only twenty-four one-hundredths of a sheep per person. This emphasizes very clearly how dependent we are today on the foreign markets for our wool supply.

A year ago our Government still had a very large stock pile of domestic wool. Despite the fact that much of this wool was of the less desirable types, the great bulk of it has been sold.

A year ago the stock pile of colonial wools owned by J. O. was felt by some to be a weight over the market which might prove a serious detriment to the orderly marketing of the clips of the Southern Hemisphere. By spring it was apparent that the world had been consuming since the war far more than was being grown of apparel wools, and that while the J. O. stock pile still contained some 3,000,000 bales, there was very little left of the badly wanted free, fine-combing wools.

A year ago there was a large surplus of low wools in the Argentine and the growers were contending that it was impossible to raise low wools at the then current prices. Since then the surplus wools have been almost completely cleaned up together with the current clip, and the new clip of low wools will probably not be more than 80 percent of the previous one. There was no carry-over of fine wools and the Argentine industries have been contracting the new clip at prices well above the Australian level. It is predicted that the increased demand from the local industries will leave little fine wools available for export. The reduced clip in low wools and increased use of fine wools, together with new taxes and regulations which have been recently imposed, will certainly make this market a less dependable source of supply.

Uruguay starts their new season with no carry-over from previous years and a somewhat increased demand from their own local industries.

The International Wool Study Group, which met in London in October, estimated that the world clip of apparel wool for this year would be slightly less than 3,000,000,000 pounds, whereas they estimated the consumption would be 3,750,000,000 pounds.

So far this season the rest of the world has readily absorbed the offerings in the Southern Hemisphere with very little help from the United States. After some recession in prices in October, prices have climbed to what is reported to be the highest point in history.

Despite the fact that in this country the pricing of the manufacturers' goods has lagged well behind the world wool market, there has been a distinct slowing up in the men's wear end of our business. If this is due, as some claim, to price resistance by the consumer, there seems to be little relief in sight at present with the big gap between the basis for our manufactured goods and the world market price for wool. Certainly there are no signs of reduced labor costs.

Consumption in this country up to September 1, which is as far as the reports are available, was approximately equal to the consumption in 1947, and though the consumption may be at a reduced rate in the last four months, the year's figure will still be very large and will undoubtedly leave the smallest inventory on January 1 that we have had since the early years of the war, when we were very short of wool because of the lack of shipping; and even this small stock contains mostly the unwanted medium wools.

Many have felt that the high prices being paid in the world markets for wool were induced by a flight from currency. So far, though, there has been no indication of any surplus wool having been accumulated on the continent or in England.

The man in the street has been fortunate for the last few years in having available finely tailored garments made from fine fabrics at the lowest prices in the world.

With our national income at the amazing height that it is, it seems improbable that we will continue to have for any length of time a lack of a healthy consumer demand for both woolen and worsted fabrics.

Just as this country has come to realize that it can no longer live within its own boundaries, so must our trade realize that we are now dependent on the world wool market for the major part of our raw material. We can only influence the trend of world prices insofar as our requirements are larger or smaller than usual.

—And the Brass Feud's On

EXTENSION OF REMARKS
OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the RECORD, I wish to submit a copy of an editorial from the Washington Times-Herald, of date January 2, 1949, entitled "—And the Brass Feud's On," which I think is of interest to the Congress and the country, especially in view of the reports that our armed forces are not getting together under the unification of the armed services under the legislation enacted by the Congress.

The article follows:

—AND THE BRASS FEUD'S ON

Just about 2 years ago President Harry S. Truman and his Eightieth Congress did United States defense a potential good turn by pushing through a general unification and streamlining of our armed forces. One new feature was a separate Air Force, which most hands agreed was a step forward, militarily.

Another important innovation was to be a super-duper intelligence agency. Purpose: to prevent another Pearl Harbor from catching Uncle Sam with his battleships down.

So what happened? Well, the now-called Central Intelligence Agency was set up—on paper, anyway. The armed forces rotated some available colonels and admirals into the outfit. Some civilian radio experts and economic specialists were given office space. And probably a few useful, energetic, honest-to-goodness spies were hired.

But, on best evidence available, our Nation's intelligence service was foggy and fumbling before and during the late war, and actually hasn't improved much since.

One of the pithiest commentators on Uncle Sam's outmoded intelligence habits has been Rear Adm. Ellis M. Zacharias (retired), ex-deputy chief of Naval Intelligence.

Zacharias was one of our few military chiefs who called his shots correctly on Pearl Harbor. Now, in the current issue of United Nations World, he unburdens himself of more peppery opinions.

We just didn't learn our lesson at Pearl Harbor, Zacharias points out. In fact, he believes it's possible that our fumbling military intelligence set-ups did the country an even worse turn at Yalta, in February 1945.

THE BLAME FOR YALTA

The admiral, a true Navy gentleman, doesn't point his finger at Roosevelt alone for Yalta's classic boners. Instead, he explains tactfully that our sick-unto-death President might have been the victim of overmuch faith in his Joint Chiefs of Staff. This high brass, in turn, apparently has been hornswoggled by one of the worst-bungled intelligence reports in history.

The big problem then, of course (Germany was almost licked), was how much strength Japan had left. Could our Army, Navy, and Marine Corps subdue Tojo on their own, without too great losses? Or would Stalin have to be invited, or bribed, into living up to his Tehran promises to help us out?

That's where our military intelligence pulled the boner which is still giving the world the miseries. Three reports, Zacharias says, were handed in. His low-rated Tojo.

One Army Intelligence report echoed these we-don't-need-Russia sentiments. But another Army estimate said that the Japs had an extremely tough and powerful fighting machine in Manchuria, and recommended that we concede anything or everything to Stalin, to get his help in Asia.

WHO HID THE FACTS?

So our Chinese allies were sold down the river to Stalin because, in Zacharias' pointed words, "the more accurate evaluation of Japanese potentialities was pigeonholed by a competitive intelligence outfit in the Assistant War Secretary's office."

Also, the disgusted admiral adds, "I have reason to believe that they (Roosevelt and his Joint Chiefs) lacked access to vital documents, filed and forgotten * * * on the lower echelons of War Department Intelligence."

Sabotage or just dumbness? Zacharias doesn't say.

Too many reports are now coming in, however, indicating that our old-time intelligence set-ups are still continuing their feuds and jealousies, and are hamstringing the work of the new Central Intelligence Agency.

Last spring, in Bogota, Colombia, alert CIA operatives learned that Commies were planning to sabotage the Pan American Conference with strikes and riots. Somebody kept this important report from reaching our State Department.

ALMOST A WAR

Also this spring, an inept Army intelligence unit almost got us into a shooting war in Germany, by reporting that Stalin might be plotting a sneak attack. The CIA's correct dope on that one was almost ignored, too.

So, unless a lot of expert observers are wrong, our brass is still balking at any drastic revision of its intelligence habits—despite its past failures. United States military chiefs, apparently, just don't like spies, even ours.

It's about time, our feeling is, for Mr. Truman to step into this situation again, and perhaps read a bit of a riot act to our military gents before it's too late. As fighters, our boys are the best in the world. But they're not even fair gumshoe artists. The world being what it is, we need lots of spies, and good ones; so let's have them and let's listen to their reports.

Power Grabbers

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of Wednesday, December 22, 1948, which is in agreement with my proposal to amend the House Rules to limit the power of the Committee on Rules:

POWER GRABBERS

Representative EBERHARTER reports that 25 percent of the House Members have responded to his recent proposal for curbing the dictatorial Rules Committee, and nearly all the replies are favorable. If this reform is adequately presented to Members of the House, it will probably have the support of a large majority. For the average Congressman is interested in getting legislation enacted and is as disgusted as other citizens when the Rules Committee takes upon itself the responsibility of saying that the House shall not vote on measures that a majority may favor.

Legislators of the Seventy-ninth Congress will remember that when the House Labor Committee reported out a labor-relations bill the Rules Committee impertinently discarded it and gave a special rule to the much more drastic Case bill The latter bill had been introduced only 2 days previously and had never been considered by a legislative committee. In other words, the Rules Committee usurped the function of the Labor Committee and disrupted the orderly process of lawmaking instead of aiding it. This year the Rules Committee forced the emasculation of the Taft-Ellender-Wagner bill before permitting it to go to the floor. It was responsible in very large measure for the defeat of that bill and thus contributed immeasurably to the Republican debacle in November.

Of course, the House never intended to give any small group of men such arbitrary power. It created the Rules Committee only to facilitate the flow of legislation by granting priority to important bills and prescribing conditions under which they may be debated. The rule makers have come to be dictators only because House leaders and a long-suffering membership have tolerated that breach of trust. Once before the House surrendered its powers of legislation in accord with the wishes of the majority, but those abuses were swept away in the revolt against Uncle Joe Cannon in 1910. Now another uprising must curb the powers of the Rules Committee if the House is to become a reliable instrument of the popular will. The first duty of every progressive, democratic, and liberal-minded Representative in the Eighty-first Congress will be to reduce the power-grabbing Rules Committee to its proper status as a legislative traffic director.

Repeal of Taft-Hartley Law

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. BLATNIK. Mr. Speaker, I have today introduced a bill to repeal the infamous Taft-Hartley law, and to reestablish the Wagner Labor Act as the legal foundation of labor-management relations. In so doing, I know that I am acting in accordance with the will of the people as expressed in the recent election.

For if the November 1948 election means anything, it represents a clear-cut mandate to strike from the statute books the provisions of the Taft-Hartley law—that measure which was conceived in hysteria, written by labor-hating NAM lawyers and designed to shackle and destroy the American labor movement.

There can be no doubt but that the Taft-Hartley law has been a complete failure—it has not brought stability to industrial relations—it has not increased industrial productivity—it has not eliminated strikes. Instead it has brought about resentment and bitterness on the part of labor, and has become a symbol of oppression to working men and women everywhere.

And labor has made its opposition to the law felt in several ways. On one hand, labor went to the polls and voted against the Taft-Hartley law in the last election, and by so doing, a number of those responsible for its enactment have been retired to private life. Every labor organization in America—the American Federation of Labor, the Congress of Industrial Organizations, and the railroad brotherhoods—have adopted resolutions demanding its complete repeal.

I might mention that even a majority of businessmen now agree that the Taft-Hartley law was ill-advised. As the conservative McGraw-Hill publication, Business Week, stated on December 28, 1948:

What was wrong was that the Taft-Hartley Act went too far. * * * Given a few million unemployed in America, given an administration in Washington which was not prounion—and the Taft-Hartley Act * * * could wreck the labor movement. * * * By going so far, the law defeated itself.

With the overwhelming majority of the American people in open opposition to the Taft-Hartley law, it is my hope that the Eighty-first Congress will take immediate action to implement the people's mandate by repealing this vicious antilabor measure, and by restoring the Wagner Labor Act in the interests of sound labor-management relations and industrial peace. It is my firm conviction that the repeal of the Taft-Hartley law should be placed on our agenda as the first item for consideration.

To End a House Oligarchy

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of Tuesday, December 14, 1948, which is in agreement with my proposal to amend the House rules to limit the power of the Committee on Rules:

TO END A HOUSE OLIGARCHY

A sensible and politically feasible plan for reducing the House Rules Committee's excessive powers has been proposed by Representative EBERHARTER, of Pennsylvania.

If the proposal had to go through the Rules Committee, obviously it would be killed. The only time when it would not have to go through the committee is on the first day of Congress before the rules for the session are adopted. Mr. EBERHARTER proposes during that brief moment of opportunity to amend the powers of the committee so that it will be less dictatorial and more regulatory, as it is intended to be.

At present a bill may be extracted from the Rules Committee's pigeonholes only by a petition signed by a majority of the House. The Eberharter proposal would force a vote on bringing up the bill if the Rules Committee had not reported it out a reasonable length of time after the date when the committee from which it came had recommended its being brought up. The committee would still have the power to schedule the priority of bills, the length of debate, and the terms on which amendments could be offered.

The Rules Committee has been an empire-building group since it began reaching out for special prerogatives more than a century ago—and getting them. The instances of its abuses of authority are many. It refused to report the wages and hours bill, although sentiment was so overwhelmingly for it, that a petition bringing the measure to the floor was signed in less than 3 hours by a majority of Members.

It permitted only a teller vote on the public utilities holding company bill to protect members against being put on record for the way they voted. It refused to report the Taft-Ellender-Wagner public housing bill in the Eightieth Congress.

There is no way to justify the Rules Committee's powers on the grounds of propriety or efficiency, but House Members sometimes find it persuasive that these powers may be exercised in their behalf, to stymie an issue in which they are in the minority, or to relieve them of the necessity of casting an embarrassing vote.

On the new Congress' convening it will be interesting to see which of these considerations govern the majority of Representatives.

TVA After 15 Years

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of January 2, 1949:

TVA AFTER 15 YEARS

In a little over 15 years the Tennessee Valley program has grown from a dream to a great achievement. Under TVA the Valley now produces 15,000,000,000 kilowatt-hours of electricity, as contrasted with about one-tenth of that amount in 1933; per capita income in the Valley has risen from 40 percent to 60 percent of the national average; the people of the Valley now pay 6.3 percent of the individual income taxes of the Nation, as contrasted with 3.4 percent in 1933; the Tennessee River has been made navigable to Knoxville; improved fertilizers and farming practices have helped to save the wasting

land; new industries, big and little, have come in; the initiative of the people has had a chance to show itself. These are some of the gains of which TVA has a right to boast in its fifteenth annual report, made public on the last day of the old year.

There may never be unanimous agreement as to the financial aspects of TVA's operations. The Authority pays sums in lieu of taxes, but it does not carry all the burdens of a private corporation. On the other hand, it is now earning a net return of 4¼ percent on the average net power investment of $405,000,000. It is doing this by selling power at reasonable wholesale rates. The great savings to private consumers are found in the low rates made available by municipalities and cooperatives using TVA power. Yet these distributing agencies have a combined net income of 20 cents on each dollar of revenues. If we assume that the Tennessee River had to be developed as a unit and that no private agency could or should have done this, we must admit that a great and necessary task has been accomplished, efficiently, honestly, and without deliberate or careless waste.

TVA had a heavy load to carry during the Second World War, and it carried that load superbly. We now know that when its facilities seemed insufficient during the final war years this was because a huge block of power was being diverted into the secret atomic project of Oak Ridge. This one service alone, made possible by the record-breaking construction of new dams, would have justified TVA. Now we face the problems of other possible river authorities—and they are not simple. What TVA has done is to show that they can be solved in a democratic way, with few or none of the evils of a centralized bureaucracy.

Germans as Arrogant as Prewar

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. JAVITS. Mr. Speaker, the following article is essential reading for every Member. The basis for German aggression three times repeated, and the last time with almost fatal consequences to civilization, is the German people. Before we go overboard on the industrial rehabilitation of Germany which may lead to her rearmament let us remember the character of the Germans. It will cost us far more to fight another war with Germany as the spearhead of aggression than to work out our problems in Europe and in Germany's occupation today even if it costs some money for a few more years. A good beginning has been made in the agreement for international control of the Ruhr. It would be shortsighted economy indeed if we nullified this agreement in the course of our consideration of American occupation policies in Germany during the next few months:

[From the New York Post Home News of December 12, 1948]

BIZONAL GERMANS JUST AS ARROGANT AS PREWAR

(By Ernest Leiser)

FRANKFURT, GERMANY, December 11.—The arrogance of the west Germans is on the way back. Gone is the unctuousness and servility which marked the defeated Germans of 1945. In their place is self-importance and a demanding cockiness.

When the Germans spot an American on foot, and they're driving, they'll do their best to send him hopping out of the way. When the Germans are the pedestrians, they'll saunter perversely and stolidly in front of an American auto.

More serious, perhaps, is the attitude of the new crop of German politicians. Two years ago they were the latter-day personifications of Uriah Heep. Today they're every bit as rude and pompous as in the days of the Kaiser or Hitler.

HOW TIMES HAVE CHANGED

This writer made the rounds of the Bizonal Economic Council in Frankfurt with a liaison officer of United States Military Government the other day. A couple of years ago the same officer would have been flattered, fawned on, and treated with the greatest humility by German functionaries.

Now one official's secretary said with the utmost self-righteousness that the Herr Direktor simply hadn't time to see the MG man. Another official brusquely broke off his conversations with the United States liaison officer in the middle of a question to say that he had to leave for a conference; a third German used the entire interview for loud denunciation of the Americans.

Two years ago any request would have been couched in humble terms, but today the demands are sharp and strident: German officials demand that occupation costs be cut, demand that dismantling be halted, demand that United States aid be increased.

In a recent speech of August Hausleiter, deputy chief of Bavaria's rightist Christian Social Union Party, charged that the presence of one American Army private costs the German economy 1,000 marks monthly (which is untrue), and demanded that occupation costs be reduced. He asserted that dismantling of plants for reparations cost twice as much as Germany's Marshall plan dollar grants (again untrue) and demanded that the dismantling cease and the grants be increased.

Two years ago it would have been a venturesome German who dared make such a statement in public. Today no United States official has even suggested that he be taken to task.

OFFICIALS IN QUANDARY

Perhaps the most discouraging factor is that the cockiness increases in direct proportion to German economic recovery. United States military government is committed to that economic recovery. Does that mean, military government officials ask, that they are also committed to acceptance of the arrogance?

After a day of bickering with bizonal bigwigs and listening to their complaints and criticism, one irritated officer in the Civil Administration Division declared:

"Officially, we say that Europe cannot live economically without a strong Germany. Personally, I'm convinced by now that neither Europe, nor anyone else on this earth, can live politically with a strong Germany."

Happy New Year

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit, at the request of one of my constituents, New Year's greetings to the President, in the form of the following telegram:

OPELOUSAS, LA.

Congressman HENRY D. LARCADE, Jr.,
New House Office Building,
Washington, D. C:

My wish for a Happy New Year,
Please give President Truman, the dear.
His inauguration I must miss,
But just ask old Harry this,
From his inauguration platform,
Which I will never see,
Get Harry to send, WAA style,
His civil-rights plank to me.

SAM TARLETON.

Status of Merchant Seamen Under Draft Act

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JAMES G. FULTON,
House of Representatives,
Washington, D. C.

DEAR SIR: We are writing in regard to a group of merchant seamen which made up a great part of the November draft quota.

During the war we were considered essential to the national war emergency, and for that reason were draft exempt, and also received a certificate of substantial service, covered by the congressional Public Law 87.

Looking up the statistics of death and casualties of merchant seamen in comparison with all armed forces combined, it was listed that there were more, of course, per ratio.

One point that should be brought to attention is the fact that most drafted seamen have spent over 3 months in maritime training regulated by the Government under the jurisdiction of the United States Coast Guard, which is equivalent to the 3-month period which exempts any discharged man from being redrafted, spending this length of time in the Army, Navy, or any branch considered under military service.

After this pretraining, the majority of we seamen here at Fort Knox spent well over 3 years at sea during wartime and feel certain that this time given to their country should be considered eligible for exemption from the provisions of the draft law.

Most of we seamen here are 26 or very near that age, and think it unjust to give up more time again in peacetime and feel certain that if another war would arise we seamen here would be grateful to serve our country again.

We feel sure that you will not overlook the fact that we have served our country and some consideration should be made on our behalf.

George B. Ravis, Charles J. Stahl, Joseph D. Bonadio, Jack L. Stumpf, Warren A. Anderson, George M. Mallory, Gino Perzeri, Robert N. Eiben, William Vargo, Harold K. Johnson, Joe B. Davis, Samuel P. Chaney, a group of merchant seamen, Battery C, Fifty-fourth AFA Battalion CCC, Third Armored Division.

FORT KNOX, KY., *December 20, 1948.*

Credit Squeeze Can Be Very Dangerous and Could Cause Devastating Depression

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. PATMAN. Mr. Speaker, on the first day of the new year, 1949, last Saturday, I authorized the following news release, which is self-explanatory:

WASHINGTON, D. C., January 2, 1949.—Representative WRIGHT PATMAN, Democrat, of Texas, today charged the Federal Reserve Board with "drying up credit channels and threatening the United States with a serious depression."

The Congressman, who is in line for the chairmanship of the Small Business Committee of the Eighty-first Congress, said: "I am particularly concerned over how the present credit squeeze is hitting small business and depriving millions of people of the chance to buy automobiles. It really is depriving those of modest incomes of the chance to buy better new cars or forcing them to buy second-hand cars, while the rich with large incomes can go merrily on, needing no credit channels which the Federal Reserve Board has closed by making monthly payments higher than the great masses can afford."

Mr. PATMAN demanded speedy modification of the Federal Reserve Board's regulation W, which forces auto purchasers to pay in the short period of 18 months. He declared that unless the period is extended to 24 months, the mass market for medium-priced cars will be choked off, causing substantial business failures and unemployment among tens of thousands of workers.

"A credit squeeze is being imposed by the Federal Reserve Board that can start a chain reaction leading to a wholly unnecessary depression," Mr. PATMAN said. Already warning signals are appearing like led up to the 1929 panic.

"Reports indicate commercial banks are calling loans which will cause, if not stopped, a credit squeeze which has led to every man-made depression in the past.

"A depression is unnecessary; the urgent need is for action now to prevent this.

"Many consumer-goods industries are undergoing hardships from too stringent Federal credit rules. Inventories are beginning to stack up, not because there are not people who want to buy the goods, but because they cannot meet the high monthly payments required by the Reserve Board.

"The Federal Reserve Board has received thousands of telegrams and letters of protest from small-business men. In Pennsylvania alone, I am informed, 95 percent of the State's auto dealers reported regulation W is curtailing car sales. Manufacturers have notified the Reserve Board they will have to cut back production and lay off great numbers of employees unless the payment period is extended to 24 months, so buyers can return to the market.

"The 18-month period makes it necessary for the purchaser of a medium-priced car to pay more than $100 a month. Only persons of upper-bracket incomes can afford to pay $100 a month and up. But if the payments were extended over 24 months, then literally millions of citizens of the great middle class could afford to pay the resulting $75 or so a month to buy the cars which they want and which now are available for the first time since the war.

"The payments could be increased to 30 months and thus provide a greater insurance against depression.

"I voted against the controls on consumer installment credit which the Eightieth Congress authorized the Federal Reserve Board to impose. Events have shown the Board is abusing the powers given it. The Federal Reserve Board has not carried out the intent of the legislation. Congress instructed it to see that the controls resulted in the least possible dislocation of industry. Instead, the Board has caused sales of durable goods to fall off, thereby causing production to decline and unemployment to mount.

"The Federal Reserve Board by its tyrannical administration of arbitrary credit controls on automobile and other installment purchases is threatening to cause mass layoffs in basic industries where sales are being drastically curtailed by these unrealistic Federal Reserve restrictions.

"The time to act is now, before the damages snowball into a depression. Some day the people will rise en masse and punish those who, with grave responsibilities, fail to act—and thus create man-made depressions.

"The Federal Reserve Board members must act now and swiftly before they are charged with too little thought and too late."

The Red Mass

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon delivered by Rt. Rev. Msgr. William T. Dillon, J. D., president of St. Joseph's College for Women, at the annual red Mass at St. Charles Borromeo Church on Thursday, September 23, 1948:

ASSERTS THAT LAW FACES PARALYSIS—BISHOP CELEBRATES RED MASS; MONSIGNOR DILLON PREACHES

The profession of the law is "in grave danger of becoming paralytic, ancient and respected as it is," and members of the profession "are in vast danger of being senescent without so much as suspecting," declared Rt. Rev. Msgr. William T. Dillon, J. D., president of St. Joseph's College for Women, at the annual red Mass at St. Charles Borromeo Church Thursday morning.

Citing evidence of the lack of quality in the profession of the law today, Monsignor Dillon charged that the "lamentable machinery that curses the criminal branch of law, not less than the unprovable perjury that is so rampant in negligence, has grown in such wise that it has become a source of demoralization." The text of the sermon appears below.

The Mass of the Holy Ghost was offered by Bishop Molloy. Rt. Rev. Msgr. Edmund J. Reilly, V. F., pastor of Our Lady of Angels Church, was master of ceremonies to his excellency, assisted by Rev. William F. Donohue, assistant pastor of St. Charles Borromeo's. A large number attended the Mass, including leading civic and judicial figures, lawyers, and officials of the Army and Navy.

Present in the sanctuary were Rt. Rev. Msgr. Edward P. Hoar, P. A., V. G.; Rt. Rev. Msgr. Francis P. Connelly, V. F.; Rt. Rev. Msgr. J. Jerome Reddy; Rev. Ambrose S. Aitken, pastor of St. Charles Borromeo's; Rev. Harold Folser, S. J.; Rev. Anthony De Liberty; and Rev. Joseph A. Murphy, Ph. D.

BISHOP MOLLOY SPEAKS

Bishop Molloy, addressing the congregation after the Mass, commended Monsignor Dillon's sermon for its fearlessness and frankness.

Declaring that it was a privilege to offer the Mass of the Holy Ghost each year for the members of the bar and bench, his excellency reminded the men and women that the joy of the occasion should be tinged with sorrow upon recalling those who had died since the red Mass the previous year. He asked that the latter be remembered in the prayers of those attending.

He emphasized that the Mass is the source of all grace and truth and that it is Christ, who is God, present on the altar. The purpose of the Mass, he continued, is to adore and to praise God, to thank Him for His kindness and goodness and to beg of Him, as the giver of all gifts, protection and guidance during the year.

Children, his excellency said, do not fully comprehend God's beneficence nor do they realize what He is giving them, but adults should at all times be grateful for the blessings of mankind. He cited the incident in which but one of the ten made clean by Christ returned to thank Him and he urged that no one present fall into the class of the nine who failed to return to give thanks.

God only asks men to try to do better, Bishop Molloy said, because He is conscious of man's shortcomings; He desires, nevertheless, that each man strive to improve himself.

SEES FAILURE TO SEEK GOD

His excellency also pointed out a paradox of the day, namely, that men who believe in God rarely seek His help and guidance. The saddest situation of our times, he said, is the lack of acknowledgment of responsibility to God and the negation of God by man's self-sufficiency and negative living.

Quoting George Washington's First Inaugural Address to the effect that it "would be peculiarly improper if I were to begin my official life without supplication to Almighty God," Bishop Molloy said the words of the first President should be a guidepost today, when the affairs of men are in such a critical shape. The Nation, he added, can only be as good as the individuals who comprise it.

His excellency concluded his talk by urging the members of the bar and the bench to remain close to God during the months to come.

THE SERMON

Following is the text of Monsignor Dillon's sermon:

"In the last chapter but one of the Great Book there is a vision of a brand new world. It is John on his lonely island of exile writing and he says: 'I saw the new Jerusalem and I heard a great voice saying "Behold the tabernacle of God with men and He shall dwell with them and they shall be His people" and He who sat on the throne said "Behold I make all things new" (and He said to me "Write, for these things are true").'

"What follows is hardly more than epilogue to the greatest joint venture of literature and inspiration that has ever come from the mind or pen of man. The very essence of Christianity is here epitomized. Christ came to make things new, to cast fire upon the earth, and so to renew it.

"The growing seasons tell of the cycle of the years. Each dawn announces a world made new. We think of God as new if we really think, for we know that He has no age—no years, no time. It is unfortunate that He is ever depicted as venerably old. Rather, does He rejoice to run the ways of the world—forever young.

"It has ever been the way of age to look with caressing approval upon the past. Too long the perpetuation of what was has been the standard for what is to be. Conservatism has been regarded by too many as the virtue

paramount and progressivism as the original sin.

"I should be the last to minimize the wisdom of age. I would be a poor teacher if I failed to recognize the fact that we have our roots in the past and that much of life's grandeur is what grows out of its historical origins. I know that palimpsests can teach us much and I cherish a fine regard for all things good that were.

"For all of this and in face of it I am still sure that the angel of wisdom who spoke in revelation is still abroad, still counseling the while we listen with calloused ear and in our lethargy bless the past and find no challenge. It is so much easier to follow old roads than to cut new paths through rock and across dense forests. We are by nature apathetic, not given to dare the darkness. This is as true in the world of spirit and of theory as it was geographically in all the centuries until a brave Genoese led a trio of phantom ships into the strange harbor of San Salvador. Mayhap we shall find that same savior in our questing search.

"I have listened these many years to sermons at the red Mass here and elsewhere. They have been preached by eminent scholars and worthy men, but I have always come away with the conviction that they were merely regurgitating mentally. Almost without exception there has been the insistence that the law of the jurisdictions is a phase of the natural law. I wonder how many in any audience ever doubted that. I grant you that we are likely to forget but historically most of us agree to that and such a reminder even as brief as this is, in my opinion, sufficient.

"When I listen I expect to be challenged. I come to think—to be shaken out of my sullen security if that must be—to be made new spiritually.

PROFESSION IN GRAVE DANGER

"I am satisfied that our profession of the law is in grave danger of becoming paralytic, ancient and respected as it is. Perhaps this very element has given it undue contentment with itself. You and I are in vast danger of being senescent without so much as suspecting. We must be reminded that life is ever new and young, however senile we may be—that we as priests in the temple of justice must be zealots for that justice and that we have no right to sit in ancient shadows.

"Do not be alarmed. I am not asking that we destroy the arches of this great cathedral that we have builded so patiently, so slowly, and so arduously. I am not attacking the foundations of our system of judicature, not yet complete but always growing. I have supremest respect for the law of this land—and its votaries. I believe in the ultimate honesty of its judiciary and in the solid scholarship of its advocates, but I think that any plan or pattern that pretends to be perfect this side of the stars is steeled to dissolution and I am certain that no one of us cherishes such an attitude towards the law.

"It is in this mood that I speak to you. I submit that we must begin to do some very radical thinking if we are going to preserve the profession in its pristine dignity. What is more important, we must soon become revolutionary or fail humanity, and that is vastly more terrible to contemplate.

"It is true that the very heart of our jurisprudence is the principle of stare decisis but it is no less true that within that very structure we have succeeded for centuries in keeping a wondrous virility. We have done it partly by a series of fictions in which all law seems to abound. Sir Henry Maine in his classical treatises has demonstrated the fecund function of fiction in Roman and oriental as well as in English law. All peoples seem to have loved to dramatize and to indulge in play acting at least in the origins of their codes.

"So we have to some degree pretended that we followed precedent when in reality we used endless inventiveness to make new situations fall into old categories until you and I, reading the decisions, have sometimes smiled and more often wept to observe the kind of circuitous reasoning used to establish parallels where in reality there were but angles.

"The Romans of the postclassical age were much more realistic. They demanded that you establish your equities by adducing the weight or authority in numbers, boldly assigning to one Ulpian, as I recall, a numerical superiority.

CAN MAKE RENOVATIONS

"I am convinced that, adhering to our principles, we can still make all necessary renovations by doing exactly what those whose ideologies we repudiate have done. With the zeal of evangelists, they have written new law and all within the purview of our Constitution.

"When they found that they could not achieve their ends in face of the dangers of review by courts of higher authority, they introduced administrative and commission law—a thing foreign to our genius. We may not like it but the fact remains that it was found constitutional and it arrived at the destiny they sought. In too many cases it may have been directed to ends that seem to you evil. The process reversed, it should and could be effective unto good—why not?

"You can't avoid the discouraging truth that in most cases it was used to effectuate new and sometimes startling ultimates.

"May I remind you here that it had a very lordly and excellent background? The most unacademic amongst you know the origin of equity. You know how when the law had become sterile and had put a serious burden on the conscience of the king (who too frequently had no conscience for anything else) there came magnificent relief in the person of the Chancelor of the Privy Seal, who cut through the horrible formalism of legality and found writs—mandamus—certiorari—discovered injunction and specific performances—found a way for accounting and marshaling and did a thousand other things, and the law that was all but moribund took on new life. I would emphasize to this Catholic audience that this was done by churchmen largely who were supposed to be steeped in conservatism (a worse calumny has never been perpetrated).

"The good cleric, like the good Catholic—the good man the world over, of whatever creed—will be the brave man who dares to say the thing he honestly and courageously thinks, however stodginess and rump authority may disapprove. It is my thesis that as good Catholics you must be root thinkers, not content to solve all problems contemporary with the yardstick of the Chaldeans.

WORLD PROBLEMS

"We have seen a country laid waste because a Goering dared a new, if terrible, instrumentality of war. We shall see civilization decimated by a new and much more deletive weapon of the soul unless we of the west can meet the psychic weapons of a new and terrifying power—a power of a man's soul gone spiritually berserk.

"We of America have grown arteriosclerotic even in our youth. We of the churches have all alike sat calmly by the while the powers of dissolution were maniacally active, and we of the law have surrendered our prerogative as watchmen of the night because we are mentally inert and temperamentally satisfied. We do not look to roots where others have been planting. We do not make things new. How can we hope to see the new Jerusalem?

"I have insisted that what I say is said in no spirit of the seer or of the reformer. I do not propose to offer you some simple remedy for the world's maladies or even for the law's deficiencies. I have not even the notion that I should proffer any specifics, although I do not consider that too difficult, and I have and shall enunciate shortcomings that anyone who runs may read. I shall be more than content if I succeed in making you more cognizant of world problems—less interested in your own personal advancement.

"The great things in any area of man's travail have been done forever by those who were ready to sacrifice their personal future—sometimes their names and very lives. The great litterateurs have died unknown—the great artists have lived in penury and succumbed to starvation. The great musicians have sung their lovely songs upon a waste of beach where no one heard and the waves drowned their singing.

"I venture the thought that no great lawyer has ever died wealthy and few of them have been acclaimed. Indeed, the reverse is almost the literal truth. It is almost invariable that the opulent lawyer has sold his genius to the stagnating business of keeping the status quo—however stupid that may be.

A STAGNANT SCIENCE

"It is a matter of personal concern to me, as well as a social problem, that the law in its wide reaches is presently about the most stagnant of all the sciences, at least here in America. It is also disturbing to observe that where it is most operative and achieving it is about 100 percent left of balance. You and I may rationalize about that if we will and defend ourselves. We may even allege that this is proof that we should follow all the old paths, but we are living in a fool's paradise if we do.

"Economics, sociology, the physical sciences, medicine, even mathematics, have made prodigious changes, many of them advances. In some cases they have been torn loose from their wharfage—sometimes tragically. We of jurisprudence have sat idly by as though these cataclysms could not so much as touch us.

"In Europe, where Roman law still points the way, the literature has been so vastly superior in quantity and quality to curs as to mock comparison. It can be truly said that we have no modern literature in our field, and where it exists even in phantasy it is utterly pagan. Can anyone gainsay this? Can anyone explain it? I wish I could. I so wish it were not so.

"We are dedicated to the glory that was. We are the knights of the preterite and the champions of the accomplished. Most of you who listen must confess that this thought has not occurred to you or where it has you have been content to cast it away with the reflection that this is the business of judges or of law reviews or of texts.

"This is not the attitude of your confreres at the bar. You have seen some things done that your brethren of a generation ago would have labeled impossible. True, NRA was declared unconstitutional, and WPA died of its own weight, and a score of other codes have perished, some aborning; but no one will ever kill save by blood the things—the bastard things in too many cases—that they forgot. Why could not you have fathered things that led to light and luster?

URGES RETHINKING

"The Nuremberg trials are an outrage upon the common law, however speciously Justice Jackson or anyone else may write. They are a breach of international law as we knew it. I am not at all sure that they were not justifiable under the law of nature. This by way of illustration.

"I wish I had the time to point out some of the things within our own pattern that need revamping. May I simply indicate.

"Is there anyone who believes that the tax laws are builded upon the principles of

equity? Are they not rather the fabrication of opportunism and postulated upon the hypothesis that the government will take all that the traffic will bear. This is only one aspect of a general proposition that the law is not concerned with morality, and we are certainly reaping the legitimate harvest of that axiom. The tax laws, like the traffic laws, are honored mostly in dishonor. To ignore this is to belie fact. Is this not the problem of the jurist?

"The lamentable machinery that curses the criminal branch of law not less than the unprovable perjury that is so rampant in negligence has grown in such wise that it has become a source of demoralization. Is this no business of ours?

"We can find ways of diagonalizing when we want to do it. For centuries insurance was taboo because, if you please, it was an aleatory contract. I submit that it still is, although I can't see what is wrong with it. Captious reasoning calls it a contract of indemnification and it becomes thereafter lily pure.

"Surely you can see that we have not been doing the kind of basic thinking so necessary in such a vital aspect of our culture—indeed of our very life.

"Almost anyone here would be able to tell the Un-American Activities Committee how to operate. You probably glory in your hatred of communism. (Incidentally could you tell that same body how to get around some of the chicanery that our much exploited Bill of Rights makes possible.) I know that freedom of speech is one of the noblest things we have, but I know that all freedoms are bound (speech included) or we lose all freedom. There is no freedom save by law.

"What I would like to point out about communism is that we have wantonly allowed this kind of political theory to become the law of half the world because we as legists insisted that we had no stake or interest in economic or social or philosophical theories. We have now become interested in socialized medicine because it may ultimately mean socialized advocacy and that will touch us personally.

"Please don't misinterpret. This is not said in cheap criticism. I love this profession and its exponents. I believe them to be an exemplary body of men, but I feel that they have sold their competence and bartered their birthright, that they have grown all but sterile in a world of youth.

"I am no prophet nor am I his son. I do not speak from Grecian loneliness. I have no thought of destruction. I ask only that you rethink everything—that you make all things new.

"To hate Communists is un-Christian and gives them fair logic for hating in return—for reprisal and all these other things of which we read with so much alarm and concern. It is very well to talk about loving Communists and hating communism. I fear that is a bit of psychic nonsense. I don't believe hatred is an answer to anything. We must evolve the answer—a real solution—not an empty phraseology, and we must begin not in Russia, not beyond the curtain of steel, but here in America.

CITES MOVEMENT IN EUROPE

"Lest you think I am talking like a candidate on the so-called Progressive Party, lest you think this is academic froth or long-haired theory, I would refer you to the Christian movements now current in Europe. Have you read France Alive, by Claire Bishop, or Priest Workman in Germany, by Perrin, or Fisher of Men, by Van der Meersch? Have you read the fictioned Letters of Pope Celestine the Sixth, by Giovanni Papini? Here are people writing out of the fullness of hearts and living in the red shadow of the blood of their bravest. Here are men and women who are making things new after Christ's own novelty. I don't approve of all they say or do but I stand in ecstatic awe of their achievements, for they are not preachers of the word alone but doers.

"I would have each one of you read Human Destiny, by Le Comte Du Nouy, that you might see how new old thoughts can become. If you must, skip the first half of that volume that is purely scientific. Eliminate what may be questionable dogma, and then breathe the inspiration of his magnificent thoughts.

"See what a scientist can offer the world of reality by way of definite procedure and logical thought. That volume should have come from some philosopher, some publicist—some lawyer to show men's minds what way we travel.

"Read that book and set it against such propaganda as Shadow in the Earth, presumably the work of a Catholic. The critics writing about this latter volume told that it was a man's struggle for faith. In truth it is a fair picture of the complete collapse of what was never more than an anaemic counterpart of a faith, while the former is verily the slow calvarian climb to a gorgeous summit of a paschal evening.

TELLS OF RESPECT FOR LAW

"My brethren in the law—I love the things you represent. I love the atmosphere of the courts with their spirit of reverence for the majesty of justice still maintained. I love the noise of busy corridors and the quiet of dim libraries where great minds of the past speak through buckram-covered reports. I cherish all the memories of my association with you. I dream of a world made better because of you.

"A recent picture has given current meaning to a very simple message that told a very vital story. Written where anyone with soul might see stood the seemingly stoical statement 'Some one passed this way.'

"That is the history of each of us, and most of us pass as pass the clouds or the seasons or a bird in flight, and no one even marks our going or chronicles the fact, and life is nowise different for that passing.

"Not that your names be written in flame of fire—not that you win acclaim in books of light do I ask your help this hour, but that a world in doubt may learn to believe that a humanity lost may find its way, that Christ's heart brutally outraged may once again be whole—that His blood that incarnadines the world in endless rivers may wash us clean. This is not done in days or years. We have not come here as of yesterday but through epochs. This is not done by red Mass sermons or mere good intentions but only by the daily living of such men as you—virile, faithful, honest men. It is not the fruit of chance but the bitter harvest of a sun-drenched drought. It is not the easy spawn of carelessness but the tireless labor of supreme intelligence, and this, my friends of bench and bar, is at once your Golgotha and your Olivet.

"No one will praise you—not even a grateful people. This is the way of virtue and of good men. No one will bless you save only God. No one will write of you but someone who peruses the magical Apocalypse will lay down the volume with a sense of deepest gratitude and find new meaning as he reads: 'I saw the new Jerusalem and I heard a great voice saying "Behold the tabernacle of God with men and He shall dwell with them and they shall be His people" and He who sat on the throne said, "Behold, I make all things new." '"

Meeting of Congress Seen Marking Epoch of Lavish Spending

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by David Lawrence from the Washington Evening Star of Monday, January 3, 1949:

MEETING OF CONGRESS SEEN MARKING EPOCH OF LAVISH SPENDING—MANDATES HELD TO MEAN NEW MILESTONE IN AMERICAN EVOLUTION

(By David Lawrence)

This is not just another political turn-over in Congress—one political party taking over today from the other.

This day is historic, for it marks the beginning of an epoch. It is a milestone in American evolution. For the new Congress which was voted into power in November 2 has been given a mandate which many pressure groups are claiming is an instruction to break up American businesses of large size, levy penalties on profits, give labor unions unhampered power to do as they please, and permit all manner of strikes and work stoppages, no matter how the public interest may be jeopardized.

It is being interpreted also as a mandate to spend vast sums of money in the name of social welfare, irrespective of the fact that a $250,000,000,000 debt hangs over the national economy and already imperils the future value of the dollar in terms of gold.

The Members of the new Congress have been elected on a platform that repudiates the economy policies of the Eightieth Congress and denounces its unwillingness to vote more money or privileges for special groups. So the converse of that policy of thrift and conservatism apparently has now been given sanction.

It means that the party which promises the most out of the Public Treasury can count on support at the polls. The efforts made by the Republicans to hold the scales even as between management and labor are termed reactionary while the new program of giving the labor unions power to maintain closed-shop monopolies is characterized as a return of New Dealism or liberalism.

STALIN SEEN SATISFIED

To be liberal with the taxpayers' money is the political philosophy that dominates the scene—the theory being that America's resources are inexhaustible and that tax moneys are to be gathered in merely by legislating a new set of tax rates.

"Good old Joe Stalin," as President Truman in a momentary bit of good-natured comment once called him, must be looking on with unconcealed satisfaction. His hope is that some day the system of capitalism and private initiative must break down. He has said so in his writings over and over again. He visualizes the first step inside the democracies as the breaking up of the managerial and property-owning classes simultaneous with the rise of the working class.

In America, where there is an honest belief among so-called liberals that capitalism and the private-enterprise system can be subjected to any amount of political punishment and still thrive and keep its economic strength, there is an unwitting but determined effort to intensify the very class con-

flict on which the Communists pin their hopes so strongly.

Britain has already weakened under the strain of the first step toward disintegration, which is socialism. No longer is the British economic system able to hold up its head in the world, and were it not for the alms of a benevolent America, through direct loans and now the Marshall plan, Mr. Stalin would be witnessing a greater infiltration of Communist and left-wing philosophy in England than has appeared thus far.

RISK CAPITAL AFFECTED

In America the managerial class has for the last 15 years taken a real beating through punitive taxes which not only impair incentive but actually prevent the rise of an equity market out of which the risk capital to build new enterprises or expand old ones must be derived.

When American businesses, by reason of efficient production and the fortunate circumstance of an unprecedented demand for goods following the war, manage to accumulate profits large enough to furnish risk capital to finance out of their own bank accounts the needed expansion or replacement of equipment, the radical left wing promptly starts a move to do away with that sinew of strength by urging a higher tax on profits.

The new Congress, being sponsored by radicals and aided and abetted by the most powerful left-wing movement America has witnessed in all its history, now will take over the job of performing a surgical operation on American business enterprise. All this is going on at a time when the huge public debt has failed to impress the managers of governmental funds that there is need for a smaller instead of a larger annual budget.

The end result inevitably must be a climax in which economic upheaval will stir up more and more demands for more socialism and state control.

Liberalism or Reaction?

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 3, 1949

Mr. CASE of South Dakota. Mr. Speaker, it is strange commentary on the age that today the House of Representatives should, without a word of debate being permitted, undo in the name of liberalism what was done in the name of liberalism 39 years ago.

Probably no single incident in the history of parliamentary government in America has been more often cited as an example of progressivism than the revolt against the domination of the House by Speaker Joe Cannon back in 1910. The movement was led by a Member from Nebraska, George W. Norris.

If memory serves me correctly, when Mr. Norris retired from the political scene no lesser leader of the New Deal than Franklin Delano Roosevelt paid tribute to George Norris as the great liberal.

Back in 1910, George Norris led the movement to take from the speakership certain powers. What were they? First, the chairmanship of the Committee on Rules; second, the right to name Members to the various committees.

Of the first battle—one that ran through several hours of historic session, marked by sharp debate all the way—permit me, under the permission given by the House, to quote briefly from the proceedings of March 19, 1910.

One Member said:

Mr. Speaker, no man in this presence realizes more thoroughly than I do the seriousness as well as the importance of this occasion. * * * This is not a personal fight, so far as I am concerned, or ever has been, against the Honorable Joseph G. Cannon, from the State of Illinois, personally. [Loud applause on both sides of the Chamber.] * * *

I want to say another thing. * * * I have believed ever since I was in the House long enough to understand the work of the Committee on Rules that the fact that the Speaker of the House was chairman of that committee, and practically the Committee on Rules, gives the Speaker of this House more power than any one man ought to have over the destinies of this Republic. [Applause on the Democratic side.]

That Member, Mr. Speaker, was a fairly distinguished Member of the House in his day. He later became Speaker himself. His name was Champ Clark, of Missouri.

Did he speak in a temporary way? He answered that question a bit further in his remarks by saying:

The enlargement of the Committee on Rules even in itself has some beneficent features attached to it because it takes into consideration, as the gentleman from Wisconsin (Mr. Cooper) stated the other night, the larger portion of the country. But I am not giving my adhesion to any proposition concerning this rules business that does not remove the Speaker now, and so far as we can control it, for all time to come, from the Committee on Rules. [Applause on the Democratic side.]

If Champ Clark were alive today, what would he say? What would he say when the House, so far from removing the Speaker from the Committee on Rules, makes of him and the chairman of a legislative committee, a super-Committee on Rules of two members, without minority representation, with authority to override a Committee of Eleven, representing both majority and minority and chosen by the House to give "consideration to the larger portion of the country"?

Was Champ Clark alone among the distinguished statesmen of his day in taking such a position with George W. Norris? There was another outstanding statesman in the House in those days—one who spoke somewhat convincingly. He said in part:

Mr. Speaker, if this resolution is adopted by the House, we have reached the end of an era in the parliamentary history of this body. * * * We recognize today that there has to be leadership; that some man must be the leader of the majority and some man must be the leader of the minority, but we say the place for that leadership is not in the Chair. [Applause from the Democratic side.]

I say that, no matter how high or of what pure character a man may be who occupies the Speaker's chair of this House, that leader cannot divorce the leadership and the partisanship of the leader from the Speaker when he is presiding over the deliberations of this House. This great parliamentary body is entitled to a presiding office who wields the scales of justice between man and man, between the two contending political parties, and that is what we are standing for today. [Applause from the Democratic side.]

Whose words? The Member who spoke those words was Oscar W. Underwood, of Alabama. And did he and Champ Clark stand alone with George W. Norris in their fight that day?

The roll call supporting the Norris resolution included such names as Byrns and Hull of Tennessee, of Penroot and Poindexter, of Rainey and Sherley. Yes; and, yes, strange as it may seem, the name of the one Member whose service bridges from that day to this, the distinguished gentleman from Illinois, the man who offered the motion to restore to the speakership the power to overrule the Committee on Rules, the probable chairman of that committee, Mr. SABATH.

Well, times change, and I shall not labor the obvious point of these remarks.

The truth is, and every Member should know it, that the real protection to the membership in getting floor consideration for bills reported by a legislative committee but unwanted by the Rules Committee should be found in Calendar Wednesday. If a legislative committee fails to report a bill out, there is the discharge petition, a method which can be used by a majority of the House.

The basic rules of the House provide for 1 day of the week, Wednesday, when the committees of the House are called in order—or are supposed to be. And when called, they may bring up any bill the committee chooses, failure to obtain clearance from the Rules Committee notwithstanding.

The trouble, as those who have been Members for the last 5 or 10 years know, is that, along about 1940, the leadership adopted the practice of dispensing with Calendar Wednesday. It may have been brought on by the press of business during the war. That practice may have been continued because of the dilatory tactics that were sometimes followed by those who wanted to prevent a vote on final passage.

The remedy, if the latter was the reason, however, was to strengthen the rules against dilatory tactics on Calendar Wednesday. This, it was my understanding, the gentleman from Massachusetts [Mr. HERTER] proposed to do today, had the motion for the previous question been voted down. There was no opportunity afforded him, or anyone else, however, to explain that situation today. And so we have the strange spectacle of undoing today what George Norris, Champ Clark, Oscar Underwood, and the others did in the famous revolt of the insurgents 39 years ago.

Tidelands

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 3, 1949

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit a statement issued by Hon. Chep Morrison, mayor of

the city of New Orleans, La., including the text of a resolution of the American Municipal Association adopted at its recent Washington, D. C., conference in regard to the question of tidelands, as follows:

NEW ORLEANS, December 28, 1948.—Mayor Chep Morrison, of New Orleans, newly elected president of the American Municipal Association, today made public the contents of a resolution adopted by the American Municipal Association at its recent Washington convention, urging congressional action to secure title to oil tidelands to the State governments.

In calling attention to the resolution, Mayor Morrison said:

"Louisiana members attending the American Municipal Association convention were among those actively promoting this resolution. The American Municipal Association board will vigorously urge the new Congress to take the action recommended in this resolution. The American Municipal Association, representing the officials of 9,500 cities and towns of America, believes that the States should have title to the oil tidelands, and the consolidated weight of this organization will be thrown behind our position in this matter. I have sent a copy of the resolution to members of the Louisiana congressional delegation, with the request that they all personally interest themselves in this fight."

Following is the text of the AMA tidelands resolution:

"Whereas the title to lands lying beneath tidal and navigable waters has been resolved against the States and political subdivisions thereof by the Supreme Court decision in the case of *United States* v. *California;* and

"Whereas this decision has created multiple conflicts of opinion as to the validity of the title to these lands in the States and their several grantees; and

"Whereas Federal legislative action appears to be the sole remedy which States and cities have to secure title to these tidelands upon which billions of dollars have been expended by such State and local governments: Now, therefore, be it

"*Resolved,* That the American Municipal Association urge the Congress of the United States, during its next session, to adopt legislation to correct the injustices which would follow from the Supreme Court's decision and restore to the States and their municipalities their property rights and titles in accordance with the law of property established by the Supreme Court of the United States in a long line of decisions handed down throughout 100 years, to the effect that the States and their grantees hold complete title and ownership to all lands lying beneath tidewaters and navigable waters within their respective boundaries; and that this organization lend its cooperation and full support to securing the enactment of such legislation."

Curbing the Rules Committee

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 3, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of Wednesday, December 15, 1948, which is in agreement with my proposal to amend the House rules to limit the power of the Committee on Rules:

CURBING THE RULES COMMITTEE

(By Richard L. Strout)

WASHINGTON.—It is now certain that action will be pressed against the power of the autocratic House Rules Committee when Congress meets January 3.

Representative HERMAN P. EBERHARTER, of Pennsylvania, Democratic whip and member of the important House Ways and Means Committee, has stated that he will offer an amendment to the parliamentary rules of the Chamber. He has written to all 435 Members of the House in an effort to get bipartisan support.

The Rules Committee is a political as well as a legislative organization and as such is one of those smaller orbs in the legislative planetary system which follow their own paths and are answerable only to themselves.

In theory, the committee is a traffic director on the legislative highway determining the order of business on the floor of the House. Too often, however, it flashes a red stop light for important legislation. Then the Nation witnesses a spectacle like that in city traffic when a small 40-watt red bulb can hold back immense lines of traffic. In this case the majority vote of a small committee flashes a "stop" signal that may hold up needed bills and reforms for months or years.

The Rules Committee received much of the power which was formerly held by the Speaker of the House. Then in the revolt against "Cannonism," the authority of the "czar" Speaker was broken up and distributed. The trouble is that the reforms of yesterday often become the problems of today.

It is agreed that the Speaker formerly held too much power. But at the same time he represented his party and party discipline. If the Speaker refused to let legislation come before Congress, as the ardent young liberal reformers like the late George Norris charged, at least the responsibility was firmly fixed. The party to which the Speaker belonged was held responsible.

America has just gone through another big election in which the record of the Eightieth Congress was an important issue. Today, instead of one man—the Speaker—the charge of usurpation of power is directed largely against the Rules Committee, a body of 12 men. Thus the responsibility has been diffused but the traffic road block, it is alleged, still remains.

"The committee," charges Mr. EBERHARTER, "often allows bills to come up before the House only on its own terms. It frequently usurps the functions of the regular legislative committees of the House by holding hearings and reviewing the merits of bills that have already been carefully studied by the proper legislative committees."

Today the Rules Committee is composed of eight members of the majority party and four members of the minority. In the Eightieth Congress the members who had worked their way up to this committee were somewhat more conservative, as it seemed, than even the Legislature itself. Representative LEO E. ALLEN (Republican), of Illinois, the chairman, looked on foreign financial commitments with some of the suspicion of the Chicago Tribune. Among the four Democrats, veteran ADOLPH J. SABATH, of Illinois, represented the newer point of view of his party, but the three other members were southerners and in their suspicious approach to recent social and economic changes indistinguishable in most respects from the Republicans.

The obvious difficulty is to get any better system under the present legislative set-up. The House membership is actually far too large for effective debate. The detailed work of the Chamber is consequently divided up among powerful committees.

Under the Eberharter plan, when a member of any House committee, usually the chairman, favorably reports a bill to the House with recommendation that it be passed, he would at the same time introduce a House resolution. This resolution, or rule, as it is known, would call for debate of whatever length and kind the reporting legislative committee thinks would be desirable. At present, the power to decide this is in the hands of the Rules Committee.

Once the proposed House resolution had been passed it would then be referred to the Committee on Rules. This committee would continue its present power only to the extent of scheduling the priority and length of debate. The Rules Committee, however, could recommend shortening or lengthening the time for debate requested by the committee in charge of a bill as well as the terms under which amendments might be offered.

But if the Rules Committee declined to act, or failed to act, within reasonable time (as it did on several vital occasions in the 80th Cong.) then a privileged motion would be in order.

Curb the Rules Committee

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 3, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Post-Gazette of Monday, December 27, 1948, which is in agreement with my proposal to amend the House rules to limit the power of the Committee on Rules:

CURB THE RULES COMMITTEE

Representative HERMAN P. EBERHARTER, of this district, is now sponsoring a plan which, if adopted, will put an end to the House Rules Committee's role as "the graveyard of legislation."

This committee is the most powerful in the House. Though its ostensible function is to fix a timetable and rules of debate for House consideration of bills drawn up in the various committees, actually it has too often proved a roadblock to progress. It has used its powers to strike out from legislation those provisions of which it does not approve. Worse, it has pigeonholed measures to prevent their being voted on at all. Thus in the Eightieth Congress the House Rules Committee, under the reactionary leadership of Representative LEO ALLEN, killed the public housing section of the Taft-Ellender-Wagner bill and also universal military training legislation.

At present the Rules Committee can be forced eventually to discharge a bill by a petition signed by a majority of the House, but this procedure is cumbersome and dilatory.

Under Representative EBERHARTER'S plan, the chairman of each House legislative committee would propose the rules for debate on bills approved by his committee. Then the Rules Committee would have, at most, 3 weeks in which to modify those rules.

Address by Hon. Joseph C. O'Mahoney, of Wyoming, at the Town Hall Dinner Honoring Senator Barkley

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 5, 1949

Mr. HILL. Mr. President, on December 15 last, at the Waldorf Astoria, in New York, a dinner was tendered by Town Hall in honor of the distinguished senior Senator from Kentucky [Mr. BARKLEY]. On this very historic and auspicious occasion, the distinguished Senator from Wyoming [Mr. O'MAHONEY] paid a very fine and deserved tribute to the Senator from Kentucky. I ask unanimous consent to have this tribute printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Town Hall has performed a gracious and appropriate act in arranging this dinner in honor of Senator ALBEN W. BARKLEY, Vice President-elect of the United States. It is a gracious act because Town Hall has a Nation-wide radio audience built up over the years, an audience which has become accustomed to have presented to it, under the sponsorship of Town Hall, the most important subjects and the most distinguished personalities in the Nation. So, tonight, you pay tribute to one of the greatest public leaders in our history before a distinguished group of business leaders assembled in this hall and before a much larger assemblage of all the people who may be listening on the radio.

It is appropriate because Senator BARKLEY ranks among the great statesmen of this Republic. The modesty, the good humor, and the poise which have always characterized him have, I think, to some extent concealed his great stature. How many of us know, for example, that as majority leader of the Senate he made the greatest record in history. He served longer in that capacity than any man since John Adams, as Vice President under Washington, first opened the sessions of that body.

The 10 years in which he occupied this post were among the most difficult in the life of the Nation. The legislative problems which came before the Senate were among the most controversial ever debated in our Chamber. They covered a wider range of subjects than at any previous time. They required a broader knowledge and greater parliamentary skill than previous occupants of that post were called upon to display. They cast a greater physical and mental burden upon this leader than any of his predecessors was ever called upon to carry.

He discharged this great responsibility with sympathy and patience and when I speak of patience I ask you to remember that he was dealing with a group of Senators who, because they were Democrats, were congenitally inclined to run their own independent course.

It was my privilege to observe Senator BARKLEY throughout this period, including also the two additional years in which he served as minority leader, and I can assure you that even during these two latter years he lost none of the patience and good humor that characterized him during the long period in which his party was in power—in spite of all the temptations.

I shall not speak of Senator BARKLEY as a statesman. A great Republican Speaker of the House of Representatives, Thomas Brackett Reed, once said, "A statesman is a dead politician," and the Vice President-elect is anything but dead, as all who will trace his airplane travels during the last 3 months will readily testify. Senator BARKLEY is a real politician, that is to say, he is a man skilled in the science of politics and, may I say, that politics, in the real sense, is not the search for personal preferment or selfish gain, it is the science of government, the science of getting results in the public interest.

All of the great and successful leaders of the United States from Jefferson down through Jackson and Lincoln and both Roosevelts were politicians measured by this standard of the capacity to produce beneficial results in the public good.

The Vice President-elect belongs in this category of great and able politicians and, therefore, when you ask me to say a word upon the Outlook of 1949 I ask you to remember that the Presiding Officer of the United States Senate during that year will be a man skilled as few have been in our history in the science and art of democratic government. The greatest service in the world can be performed now by men who have the capacity to make democratic government work. It is what the world needs. The future of freedom, of economic and political freedom, for individuals throughout the world depends upon the success with which the people and the Government of the United States can demonstrate to all the world that the free system produces better results than any totalitarian or dictatorial regime.

The people of the United States have selected for their Vice President a man who possesses rare qualities of leadership. We shall, however, need more than that. We shall need cooperation among all groups and classes and, above all, we shall need faith in the wisdom of the people of the United States.

We are involved in a world-wide conflict of political and economic objectives, a conflict between the ideology of Soviet Russia, upon the one hand, and that of the democratic nations of the world, upon the other. This dispute is over which system, totalitarian or democratic, will provide the highest and most stable standard of living and of human dignity for the masses of the people.

The leaders of communism tell us that capitalism will fail because they say a capitalistic nation cannot rise above the immediate urge of acquisitiveness to serve the long-range objective of the common good.

So the leaders of the Kremlin go down the road of dictatorship confident that agreement is so difficult among the individuals who constitute a democratic capitalistic society that the latter is bound to collapse through economic depression before its overall objectives can be attained.

The Soviet leaders are waiting for this collapse. It is our task to disappoint them, not through our capacity to make war but through our ability to raise the standard of living for all of the people, to stabilize the economy, and to give the whole world a demonstration of the ability of a free people not only to attain but also to maintain prosperity for all.

Under the leadership which is offered in the new administration represented here tonight by Senator BARKLEY, we are presented with a great opportunity for cooperation. Your Government does not want to impose any rule upon the people. It does not want to regiment or to dictate. It wants to make effective the great objectives of common progress which the people of this land have repeatedly shown they desire to achieve.

This task has been committed to the Government, and, in the words of Abraham Lincoln, "The legitimate object of government is to do for a community of people whatever they need to have done but cannot do at all or cannot do so well for themselves in their separate and individual capacities."

The people cannot win the peace of the world in their separate and individual capacities. It must be done by the Government. To do this the Government must be able to call upon all the resources of the people, for unless the peace of the world is established, there will be no resources left for the people or for any group among them.

We must be concerned with more than the outlook for 1949. We must be concerned with the outlook for the future because free institutions cannot survive another war or another depression.

It is war and depression which undermine freedom. How clearly this was seen by another Republican President may be understood from the inaugural address that was delivered 28 years ago on the 4th of March next, by Warren G. Harding:

"I can vision the ideal Republic," said he, "where every man and woman is called under the flag, for assignment to duty, for whatever service, military or civil, the individual is best fitted; where we may call to universal service every plant, agency or facility, all in the sublime sacrifice for country, and not 1 penny of war profit shall inure to the benefit of private individual, corporation, or combination, but all above the normal shall flow into the defense chest of the Nation."

We stand now upon the threshold of a new era of good feeling. The people of the United States have spoken. Their desires have been clearly enunciated. We need only the strengthening of a spirit of understanding and cooperation under wise and tolerant leadership.

Here in the presence of this group and in the presence of the Vice President-elect of the United States, ALBEN W. BARKLEY, I say to you without reservation that you have a Government under wise and tolerant leadership. You can give it your trust and your support.

Record for Speaker Rayburn

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. WOLVERTON. Mr. Speaker, the popularity of our Speaker is widespread. The dignity and the ability with which he has served as Speaker of this House has often been the subject of newspaper articles and editorials throughout the Nation.

It is pleasing to me that the Courier-Post newspapers of Camden, N. J., within the district which I have the honor to represent in the Congress of the United States, has also seen fit to recognize, by an editorial appearing in the issue of these newspapers on January 3, 1949, the qualities that have made Speaker RAYBURN the great man that he is—loved and respected by all who have had the honor to serve with him in the House. It has also been gratifying to note that the editorial likewise stresses the fact that Speaker RAYBURN has served longer

as Speaker than any of his predecessors in that high office.

Under the unanimous consent granted, I herewith insert as part of these remarks the editorial to which I have referred. It reads as follows:

RECORD FOR RAYBURN

Six men have served 8 years as Speaker of the House of Representatives, either consecutively or with intervals between terms. The first five were Henry Clay, of Kentucky; Andrew Stevenson, of Virginia; Schuyler Colfax, of Indiana; Joseph H. Cannon, of Illinois; and Champ Clark, of Missouri.

Some famous names are in that list. Other men who made history as Speaker, however, are missing—"Czar" Reed, Nicholas Longworth, and "Cactus Jack" Garner, to mention some of the more recent ones.

All these will be eclipsed in length of service by SAM RAYBURN, of Texas, who now takes office again.

RAYBURN also held the speakership for four terms, prior to losing it to Republican JOSEPH MARTIN, of Massachusetts, in the Eightieth Congress.

The popular Texan has achieved a truly unique distinction. The Speaker no longer has the autocratic power over legislation exerted by the Reeds and Cannons. A good deal of that power has passed over to the House Rules Committee, and it is doubtful whether the change has been entirely for the better. Yet the Speaker's office remains one of the most important in Washington, and it is good to know that for the next 2 years it will be filled by a man as scrupulously fair and as well liked by his colleagues of both parties as the gentleman from Texas.

Planning for Chaos

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 5, 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Planning for Chaos," by Merryle Stanley Rukeyser, from the New York Journal-American of December 30, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PLANNING FOR CHAOS

(By Merryle Stanley Rukeyser)

Success in personal life, as in business, is the outcome of courageous action designed to surmount obstacles.

There are inevitable risks in trade and in the business of living.

Only in the surcease of death is there serenity and complete security.

As the current post-armistice boom is watched for indications that it may be tapering off, there are sufficient inevitable hazards to challenge the mind and the heart of the strongest leaders.

In the circumstances, it seems superfluous to add to the complexities and uncertainties through deliberate, man-made crises.

Nevertheless, the Federal Trade Commission and the Supreme Court created such additional man-made chaos by a somewhat theoretical view of the freight absorption basing point situation.

On the basis of the court ruling in the cement case, the steel industry voluntarily relinquished its time-honored system whereby the seller, in quoting prices, absorbed freight charges.

With uncertainty as to whether the rules of business will be permanently changed, businessmen are in a dither.

Factories had been located throughout the land on the basis of the former belief that the basing point technique was legal and desirable.

If the new view is to prevail, then the economic map of the country needs to be redrawn, and many factories need to be relocated.

At a time when war-bred shortages of factory facilities and housing still exist, it would indeed be more socially useful to use manpower and materials to provide for such pressing human needs rather than to redraw the industrial map in order to satisfy the arbitrary, changing theories of a few highly placed bureaucrats.

Relocations of plants would resemble the type of industry carried on by inmates of a prison who carry boulders down the road and back again just for the self-discipline involved.

While admittedly there is room for argument as to whether a new pricing system might not be as good as the old one, the very practice of needlessly and frivolously changing the rules should be discouraged.

The nature of the technical dispute can perhaps be clarified by an analogy taken from auction bridge. At present the game is played with 52 cards. If a theorist had the power of the Federal Trade Commission and the Supreme Court behind him, he might insist that—say—56 cards would be better. Such an arbitrary ruling would tend to make obsolete and unusable all the decks of cards in the hands of the people.

In light of the uncertainty as to the legal and economic status of the highly technical dispute, the Senate Trade Policies Committee, under the Chairmanship of Senator CAPEHART, Republican, of Indiana, has been conducting immensely useful hearings into the merits of the basing point. Spokesmen of business and labor unions have spelled out the practical significance of the issue.

Out of the hearings is developing the know-how for a congressional act clearing up the whole muddle.

If the Eighty-first Congress has the wit to pass clarifying legislation, it will contribute to prosperity by ending the present nervousness and chaos. Many job-creating projects are being postponed until business knows which road is legal.

The old basing-point set-up was a system whereby prices, including freight charges, were averaged by the convention of using nominal shipping points, instead of actual ones. It made for simplicity and for the widening of the trading area of a given factory.

In upsetting the old arrangement, the Supreme Court specifically outlawed basing-point pricing where conspiracy is involved. But the vagueness of its legalistic words left some doubt as to whether it did not also forbid all forms of freight absorption by the seller, even in cases where no conspiracy existed.

Senator CAPEHART'S fruitful campaign to write a statute which will substitute clarity and economic soundness for the existing doubt and uncertainty deserves widespread bipartisan support.

There is enough confusion on the horizon without creating unnecessary man-made crises and hurdles.

"Exhuming" an Economic Law

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, January 5, 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Deseret News, of Salt Lake City, Utah, on January 2, 1949, entitled " 'Exhuming' an Economic Law."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"EXHUMING" AN ECONOMIC LAW

The old and much-maligned law of supply and demand and a few of the other old-fashioned principles of economics and human nature—thought to be dead and buried long since—may play some tricks on the incoming Congress and administration.

You will recall that President Truman and some United States Senators and Representatives were elected on platforms which contained planks calling for Government price and wage control and rationing as necessary means of dealing with inflation.

Although the controls and rationing may have been requested only on a stand-by basis, the very thought of such a course in peacetime made cold shivers run up and down the spines of those possessing any degree of foresight or backsight.

Those with even average memories shuddered to think that OPA conditions might be returning. They remembered the black markets, the empty shelves, the blight on production, the stamp nuisance, and the times when it didn't matter who you were, or what you had, but, rather, whom you knew.

And those who can look ahead a little were terrified by the probable consequences of peacetime rationing and price and wage control. They foresaw the deterioration of production with the great reduction or elimination of profit incentives and, eventually, the police state as more and more controls were added in an endless effort to make effective the controls already imposed.

To the students of economic history it was not a pretty picture. They knew that since the beginning of recorded time man has never found a way to outlaw inflation or legislate prosperity. No; the threatened return of controls was not a happy prospect.

Then, lo, we awaken in the past few weeks to find that some of the economic laws are not dead, but had been put to sleep by the knock-out drops administered by war and Government controls.

Our fifth-grade economics primer used to teach that, in a free economy, supply will tend to equal effective demand. That simply means that if the supply of goods exceeds demand, prices will drop until the supply is reduced and brought into balance. And, conversely, if effective demand (demand backed by money or credit to buy with), exceeds supply, prices will go up, stimulating more production until the supply is increased sufficiently to equal demand.

It is an economic law, as faithful in operation as the natural or physical law of gravity, provided you have a free economy and don't tamper too much with it so that it gets a chance to work.

Since the termination of OPA the law of supply and demand has had a chance to work and it has been working. Now, for the first time since 1941, the supply of most

things is about equal to demand. In many cases supply exceeds effective demand at these prices, so many prices are on their way down. We all should hope that they do not go down too fast or too far.

So controls are becoming quite unlikely. Price control is not needed if the price trend is downward. And rationing does not make sense if goods are in surplus.

After Taft-Hartley, What?

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, January 5, 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "After Taft-Hartley, What?" from the December 30 issue of the Register-Guard, of Eugene, Oreg.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AFTER TAFT-HARTLEY, WHAT?

Out of our experiences with the Wagner Act and with the Taft-Hartley Act, there is an opportunity for the Eighty-first Congress to evolve a new program which will salvage out of both laws those features which have proved good, discard those which have been proved bad. There is need of a new law for labor relations, under a new name, and we believe it can be achieved, if the two great factions will approach the problem now with tolerance and with full recognition of the fact that "the success of any law must rest on public consent."

In the January issue of Fortune there is a forthright discussion of this situation by Archibald Cox, professor of labor law at Harvard, in which he offers this keynote: "The time is ripe for both industry and labor to repudiate the extreme positions already rejected by public opinion."

In the Wagner Act labor received its Magna Carta, the right to bargain collectively was guaranteed, and this is a guaranty which must be preserved and protected, but the Wagner Act went too far when it denied to the employer virtually all rights, including the right to talk freely with his employees.

The Taft-Hartley Act was the creature of the Congress elected at the end of the war which reflected the reaction of the American people to the many excesses which were perpetrated by labor unions under the cover of the Wagner Act. Now the Taft-Hartley Act has been repudiated, and Professor Cox reads this meaning into the 1948 election:

"There is an equally powerful public conviction that union abuses should not be made to cover a general attack on labor unions."

And we find the progressive magazine Business Week expressing the situation another way:

"Only a police state can enforce a law which is believed to be unjust by the people it affects. The Taft-Hartley law crossed the narrow line separating a law which aims only to regulate from one which could destroy."

The Taft-Hartley Act was not so bad in its entirety as it was painted by labor leaders, but as the Christian Science Monitor points out:

"Given a depression and a surplus of labor, and an unfriendly administration, employers who wished could (1) wait for or bring about strikes on wages and hours; (2) replace just enough strikers with strikebreakers; (3) demand collective-bargaining elections in which replaced strikers could not vote; (4) throw out the unions."

But, from the public point of view, it will be as great a mistake to interpret the 1948 election as a mandate to repeal the Taft-Hartley Act and put nothing constructive in its place as it was to interpret the 1946 congressional elections as a mandate to repeal the Wagner Act and hand the employers the driver's seat and the whip.

The public demands that both labor and management shall be regulated and shall accept such procedures as will protect both sides in their essential rights, but forbid both to indulge in those practices which lead to constant turmoil and imperil the safety and welfare of the public.

There is need of a new labor relations law, under a new name embodying what is sound and fair and acceptable out of past experience. There is need of a law which will be so fair that it will have behind it the great American principle of consent.

Europe-First Policy Has Weakened United States in Pacific

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Sunday Star of January 2, 1949:

EUROPE-FIRST POLICY HAS WEAKENED UNITED STATES IN PACIFIC

(By Constantine Brown)

The American military strategy of World War II—which was to concentrate our principal effort on Europe while making the Pacific a secondary theater of operations, to be taken care of after the defeat of the Axis—is being repeated now in the diplomatic field.

President Roosevelt, who was Commander in Chief of American armed forces in fact as well as name, had good reasons for directing his admirals and generals to liquidate the European war first. The Nazis and their associates unquestionably were the strongest of the Axis combination.

The British, the Russians, and other Allies clamored for action against the Germans and Italians first, fearing with good reason that if we were to direct our main effort against Japan, they might be overpowered by the Germans.

Top strategists and logistic experts in Washington agreed that a victory against Japan at the expense of our effort in Europe would be futile if, during the interval, Hitler succeeded in overwhelming Britain and Russia.

SITUATION IS CHANGED

During World War II we had to keep in mind the power of resistance of our European associates. We were not fighting the war alone. The people across the Atlantic had not been exhausted, as they are now. We had not become the main target for destruction on the Nazis' schedule. The Nazi ideological propaganda had failed utterly in this country and we were one united Nation in our fight against nazism and fascism.

The situation is different now. We have become the No. 1 enemy of the Union of Soviet Socialist Republics, whose boundaries extend from western Germany to the Pacific. We are the only barrier to this semi-Asiatic expansion, which has been making great strides since 1945 by a policy of terrorism.

The nations adjoining Russia have, for the most part, succumbed to the Kremlin's attack. Those more distant from the Soviet Union—such as Italy, France, and the lesser western European states—are in constant turmoil created by agents of the Moscow Politburo with the indirect support of the masses of Red soldiers, poised within striking distance of their frontiers.

If it had not been for America's direct intervention with many billions of dollars to support non-Communist governments, there is little doubt that those governments would have come under the domination of the Kremlin. Their physical power of resistance was destroyed by World War II, and the will to survive as free and independent states would have been no real obstacle to the Soviet drive, which would have enlisted segments of the intellectual and labor classes in each country.

DOMINATION IS THE AIM

Communism does not establish itself in a country by the free will of the people. It establishes itself by the domination of the few over the great majority. Had it not been for the active intervention of the United States in European affairs, the Old World would have come under the Russian heel.

This is realized even more acutely in Moscow than in America, and it has increased the determination of the handful of men who rule the destinies of hundreds of millions to crush this opposition.

Because we are so much closer intellectually to Europe than to Asia, our major strategic interests have been sacrificed by our diplomats to our ideological emotionalism over the old country. The Russians, however, are not emotional in their policies. They appreciated soon enough that we would neglect the Pacific again, and impelled America—by means of the cold war and semiviolent actions—to direct its effort toward Europe at the expense of our real interests in the Pacific.

While we were worrying about Europe, from which periodic rumors reached us that the Soviet armies might attack at almost any time, we neglected the Pacific.

HELPED CHINA'S WAR

While waging a cold war in Europe, the Russians were helping to keep the shooting war going in China. Within 2 years, the armies of Generalissimo Chiang Kai-shek have been pulverized by the Communists, headed by the Moscow-trained Mao Tse-tung. When China finally collapses, the strategically most important lands of Asia may follow.

The Russians realize what we apparently have failed to do. They know that America will be far more vulnerable if they gain possession of the great arc extending from the Kurile Islands to the Indian Ocean than if they simply take all of Europe.

In spite of the difficulty of obtaining positive information from inside the U. S. S. R., even the feared MVD has not been able to prevent information from reaching this country about the military establishments organized by the Soviet high command in the area facing Alaska. While our intelligence services may lack complete details, they know that there are upward of 10 divisions, including 3 paratroop divisions, in the region between Vladivostok and Wrangel Island in the Arctic. Between 3,000 and 4,000 planes are available at airfields constructed since 1944, principally with lend-lease materials.

High-octane gasoline plants have been established in the vicinity of those fields, with equipment provided by the United States during the war. Until last June, Soviet tankers carried large quantities of gas and oil from the west coast to Siberia. It was more convenient for our Soviet friends to purchase these in America and send them to Vladivostok nad Nikolaevsk than to ship gasoline from Baku and other oil-producing centers in European Russia.

STRATEGY BECOMES CLEAR

These men and planes are not stationed in what once was the wasteland of Siberia for purposes of sport and recreation. Obviously they have a definite mission. Since we would not move in that area, even if we had aggressive intentions toward the U. S. S. R., the logical conclusion is that these troops and planes have been located where they will be handy in case Russia decides to carry out another Pearl Harbor on Alaska.

The Alaska Territory—and this may sound strange to the average American—is completely defenseless. The few troops we had there last summer—some 7,000 in all—have been moved back to the United States, because not enough money was appropriated to provide them with winter quarters. It is no exaggeration to say that today the Soviets could move into Alaska without meeting more than perfunctory opposition from the ground crews on our airfields.

What is more tragic is that if Russia decides to put its scheme into effect and the Moscow dictators act in the same manner as Tojo did December 7, 1941, the Soviet forces would face no more than two and a half fully trained divisions, which is all we possess in the continental territory of the United States. So much for the short-range danger to this country.

WEAK IN PACIFIC

Our position in the Pacific is becoming weaker by the day. The Nanking Government and Generalissimo Chiang may be considered as eliminated from the international picture. Strategically vital Manchuria now is in the hands of the Reds. The most optimistic estimates are that it will not be long before the "democratic" government of North Korea takes over the south, where a free government has been established. Korea is of strategic importance because of its proximity to the Japanese islands.

In his frequent and alarming reports from Tokyo, General MacArthur repeatedly has pointed out that the establishment of the Reds on the Yangtze River and in Korea will make his position in Japan untenable, unless large reinforcements are sent to him from the United States. He has explained that with the Russians making great strides on the Asiatic mainland, our position in Japan is rapidly deteriorating. The Japanese Communist movement, which only a year ago was hardly noticeable, is gaining new strength among the Socialists.

Japan cannot produce and sell unless it has free access to the Chinese mainland, and especially to Manchuria. With that whole area in the hands of the Communists, Japan has only dim prospects for the future and her sole hope, say the representatives of business, lies in closer association with the Communists. Since this is not possible unless Japan embraces the Communist form of government, they believe that Japan ultimately will be compelled to do so, although it will involve giving up the Emperor and all of Japan's traditions.

CONCERN IN HOKKAIDO

General MacArthur does not conceal his concern over a possible Russian coup in the near future in the island of Hokkaido. He remembers that in December 1945 when Secretary of State Byrnes went to Moscow to discuss the various problems with Foreign Minister Molotov, he agreed in principle to the Russian demand that Russian troops participate in the occupation of Japan, in accordance with the Japanese armistice. He also yielded to the request by Mr. Molotov that Russian troops be separated from other forces of occupation and be permitted to take over Hokkaido.

Energetic protests from General MacArthur, who claimed the right as supreme commander of the Allied powers to designate the numbers of troops and their assignment, compelled our Government to refuse to confirm the agreement, which is believed to have been verbal.

But the Russians did not give up. Because of diplomatic and other considerations they did not insist. But there are reports now from Moscow and Vladivostok that General MacArthur might be confronted one of these mornings by a strong Soviet expeditionary force ready to take over Hokkaido, in accordance with the armistice terms.

The British, Australians, and French have withdrawn practically all of their troops from Honshu. By the end of March there will be only a corporal's guard in that Japanese island. We still have about 100,000 men in Japan, with half that number combat troops. But unless they are strongly reinforced, they will not be able to cope with the situation.

This is not, of course, a cheerful new year picture. But unfortunately it is a correct one. In our efforts to hold off the Russians in Europe the diplomats have overruled the military leaders and are letting Asia go by default.

State Cigarette Taxes

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 5, 1949

Mr. MILLER of Nebraska. Mr. Speaker, I am today introducing a bill to curtail the nefarious practice of evading tax on cigarettes by mail-order firms who are now sending cigarettes through the mail, into those States having a tax on the sale of cigarettes. There are now 39 States who levy taxes on cigarettes. These taxes range from 10 to 80 cents on a carton of 10 packages. They are taxes on the consumer of cigarettes, and by ordering from concerns in tax-free States, the citizen evades the law and does not pay his share of the cigarette tax.

Certain mail-order houses through radio and newspaper advertising make inducements to the consumer to save this tax by direct shipment to the consumer. It is estimated that 20 percent of the entire consumption of cigarettes in some States evade the State tax. This of course reduces the revenue to those States. The 39 States having taxes on cigarettes collect nearly $400,000,000 from this source. It can be readily seen that when they lose 15 or 20 percent of this tax, it is a considerable loss. It seems that wholesale distributors in nontax States secure a list of cigarette smokers in States which impose cigarette taxes and then circularize the list with tempting offers to mail their remittances in advance for cigarettes which will be sent to them by mail, thus saving the amount of the State tax. The House did pass a bill last year which would prevent some of these mail-order houses from sending tax-free cigarettes through the mail.

It seems to me that it ought to be a function of Congress to protect the States in this form of bootlegging of cigarettes.

The bill I am introducing is designed to stop this type of mockery and evasion of the law. It will be of benefit to those wholesalers and retailers who are not bootlegging cigarettes. These deserving businessmen are now penalized merely because they are located in the States which impose a cigarette tax or refuse to violate the law.

The Federal Government in 1947 collected about one and a quarter billion dollars in cigarette taxes.

The bill, if enacted into law, does not require another governmental agency. It merely places in the hands of the State tax administrator, the means for removing any inequity in the collection of State taxes on cigarettes. It does seem to me that Congress should come to the rescue of those States who do have a cigarette tax, and that it is in the public interest to see that they are protected.

Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Wednesday, January 5, 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the Portland Labor-Management Committee regarding management and labor relations.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas one of the functions of the Portland Labor-Management Committee is to provide and recommend orderly and peaceful procedures for labor or management to settle their disputes and to assist in any manner possible to protect the rights of the public and to further recommend, promote, and assist in closer, harmonious relations between labor and management in the city of Portland and in the State of Oregon; and

Whereas the Portland Labor-Management Committee has been successful since its inception in maintaining its influence and by its actions a stabilized friendly condition between labor and management in this area; and

Whereas the fact that the cost of living, Bureau of Labor index all items for the city of Portland, Oreg., and vicinity has been a major factor in the settlement of labor relation disputes due to four out of five contract negotiations either being determined direct by the percentage increase of the cost of living, Bureau of Labor Statistics Index, or by the Index constituting a major factor; and

Whereas such Bureau of Labor statistics index figures for the city of Portland, Oreg., and vicinity are being surveyed and released

only in 3 months' periods rather than monthly as in other larger areas and cities in the United States; and

Whereas such delay in the issuance by the Bureau of Labor Statistics of the index for this particular area has brought about disputes and misunderstandings due to there being no computable or acceptable index to replace it during the months in which it is not issued for this area; and because such issuance has been found impossible by the Bureau of Labor Statistics due to the curtailment of appropriations to the United States Department of Labor: Now, therefore, be it

Resolved, That the Portland Labor-Management Committee recommend to the President of the United States, the Secretary of Labor, and the Director of the Bureau of Labor Statistics that if any surplus funds are available in the Department that such moneys as are necessary be allotted to the Bureau of Labor Statistics to permit issuing a 30-day Cost of Living Index for the Portland area; and be it further

Resolved, That should no such funds be available that the Portland Labor-Management Committee recommend to the Congress of the United States that sufficient moneys be appropriated to the United States Department of Labor in order that its subdivision, the Bureau of Labor Statistics, be enabled to function in a manner compatible in the best interests of labor and management in this area; that the statistics showing the Cost of Living Index may be issued on a monthly basis; and that the Department of Labor so order the Bureau of Labor Statistics to issue these indexes on a monthly basis for the Portland area as soon as sufficient moneys have been appropriated and as soon as feasible thereafter in order that labor and management may take advantage and use timely these statistics so necessary in the prompt and orderly settlement of labor management disputes; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the Secretary of Labor, the Director of the Bureau of Labor Statistics, United States Senators GUY CORDON and WAYNE MORSE and United States Congressman HOMER D. ANGELL.

(Resolution passed this 27th day of October 1948 by the officers and board of directors of the Portland Labor-Management Committee.)

Curtailing Power of Rules Committee

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. WOLVERTON. Mr. Speaker, the amendment to curtail the power of the Rules Committee for the purpose of making more certain the consideration of legislation by the House is a progressive move and entitled to the support it has received.

I am now and always have been strongly of the opinion that the Rules Committee should not have the right to substitute its judgment on proposed legislation in the place and stead of the regular committees of the House. The latter are authorized by the Rules of the House to study and report legislation within their respective jurisdictions. Such reports are preceded by hearings in which interested parties are given an opportunity to express their views for or against the proposed legislation. After days, and sometimes weeks of hearings, together with careful consideration by the members of the committee, the report is finally made to the House. However, notwithstanding all of this preliminary study it has been necessary in most cases in addition thereto to obtain approval of the Rules Committee before the House could consider the bill. Many times, regardless of what political party was in control of the House, I have seen legislation of worth-while character prevented from coming to the floor of the House by either the refusal or adverse action of the Rules Committee. This in my opinion is not representative government at its best. Therefore I have given my support to the proposed amendment.

In giving my support to the amended rule I am, nevertheless, aware of the fact that even this new rule will not necessarily insure that all legislation approved by appropriate committees will come before the House for action. In my opinion the amendment could and should have been stronger in its terms to insure this result. However, it is better than the old procedure that so often was utilized to thwart the will of the House.

Too often the Rules Committee has exercised an arbitrary attitude. Frequently it has prevented consideration by the House of progressive and worthwhile legislation desired by the people. Furthermore, in most instances, members of the Rules Committee have cast their votes behind closed doors. Consequently, in many cases of important legislation the public has not known who voted for or against the consideration of the legislation by the House. Therefore, even with the limitations of the new rule it is in my opinion a great improvement over the rule that has been in existence for many years. Public business should be done in the open and representatives of the people in Congress should have the right to express upon behalf of their constituency, by their votes on the floor of the House on all proposed legislation what they consider to be the will of the people whom they represent.

The proposal to discharge the Rules Committee of legislation by giving to the chairman of the committee that approved the legislation the unrestricted right to move for such discharge after the expiration of 21 days, is undoubtedly a step in the right direction. It makes it possible for legislation to be considered by the entire House Membership instead of by the few Members constituting the Rules Committee. Thus, the people, through their elected Representatives are empowered to have a direct vote on all matters of legislation that has been approved by the standing committee of the House having jurisdiction in the matter.

Ours is a representative form of government. To achieve the accomplishments that such a form of government is intended to provide it must be representative in fact as well as in name. To the extent that it is not it will fail to accomplish all that it should. The amendment of the rule, that has so long held sway, is an effort to eliminate arbitrary action of the few and substitute the action of all the members, and, thus provide more representative government. It consequently has my fullest support.

Majority Abuse

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. KEATING. Mr. Speaker, if the exhibition in the House on Monday is a fair example of what we may expect from the Eighty-first Congress, representative government, as we know it, faces some rough going at this session. Discussion and floor revision are of the very essence of sound legislation. Yet in the very first measure presented to us for consideration, on a subject and at a time which furnished no justification for such action, both debate and amendment were foreclosed by the parliamentary device selected by the majority.

It is recognized that there are some types of legislation which inherently do not lend themselves to the privilege of amendment from the floor in the interests of orderly procedure. Certainly the rules governing the conduct of proceedings in the House do not fall in this category.

Also, at some points in the progress of the Legislative Calendar, notably at the end of a session, there may be some justification, because of the time element, for shutting off debate and curtailing amendments. Even then this imposition of a gag should be administered sparingly. Indeed, I can think of almost no situation which justifies the procedure adopted here of presenting a resolution, immediately moving the previous question and thereby completely eliminating any possibility for discussion, debate, or questions from the floor. Certainly at the very beginning of the session, when there is ample time for debate and when the Congress is in session for only 3 or 4 days a week and then only perhaps 2 hours a day, the membership should not be saddled with an important change in its basic rules of procedure, even assuming the eminent soundness of the change which does not presently appear, without a thorough exploration of the pros and cons of this important subject.

As soon as I gained any familiarity at all with the rules governing the conduct in the House, I became convinced that they should be changed to prevent the Committee on Rules, composed of 12 members, from blocking consideration by the entire membership of legislation which has been favorably considered by one of the legislative committees.

I agree that one of the first things we should do at this session is to put our own house in order. We should take effective action to end the possibility of virtual minority rule by seven members.

The present permissive procedure by discharge petition to bring a bill to the floor of the House is admittedly not adequate to insure consideration of important measures by the membership.

In an effort, however, to remedy an abuse resulting from the concentration of too much power in the hands of one committee of 12 Members representing both political parties, we have now created a situation fraught with possibilities of infinitely greater danger by vesting dictatorial authority to two men, the chairman of a legislative committee and the Speaker, both necessarily of the majority. Through the medium of the votes which they control the majority has seen fit to deprive the minority of any voice whatever in the scheduling of legislation for consideration. Concededly the majority should be dominant. That is the way democracy works. My vigorous opposition is to the usurpation of dictatorial power.

Through his power to recognize a committee chairman or withhold recognition, the Speaker will become an absolute dictator over the course of legislation. Although we all have profound respect for the gentleman from Texas who has resumed the post of Speaker, that fact has no bearing on the consideration of this legislation. It is the principle of one-man dictatorship under the claim of liberalism which I am attacking.

We were not sent here to delegate our prerogatives to another. True, it will grease the wheels for another rubber-stamp Congress such as we witnessed in the middle thirties, but such a maneuver should be fought tooth and nail by every Representative, regardless of political affiliation, who intends to vote his own convictions rather than turn over to someone else his legislative responsibility.

Under a false veneer of liberalism, this is reaction of the rankest type.

Unemployment Compensation

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following, which I received from Mr. Edward F. Connelly, chairman, social-security committee, Associated Industries of Massachusetts, Boston, Mass.:

AUGUST 13, 1948.

Hon. THOMAS J. LANE,
Lawrence, Mass.

MY DEAR CONGRESSMAN: We are enclosing a memorandum with reference to a situation of serious magnitude that faces one of the most important departments in the State government, namely, the operations of its employment-security division, engaged in the task of administering the Commonwealth's unemployment-compensation law.

The memorandum speaks for itself in its emphasis upon the immediate necessity for securing for Massachusetts additional funds whereby the division can efficiently administer its law. In the absence of these additional funds, we can assure you that the present problems which face the Commonwealth under its unemployment-compensation system will increase tenfold.

We urge you in the strongest fashion we know to help in securing additional administrative funds, and as quickly as possible thereafter to bring about a change in the law that will permit the Commonwealth of Massachusetts itself to determine the disposition that shall be made of the funds which members now pay to the State government for the administration of unemployment compensation.

Until this absentee control of the administration of the Commonwealth's law is finally eliminated, we shall continue to be completely frustrated in any efforts that are made to make our unemployment-compensation system serve the purpose for which it was originally created.

Sincerely yours,

EDWARD F. CONNELLY,
Chairman, Social Security Committee, Associated Industries of Massachusetts.

THE ADMINISTRATIVE PROBLEM OF THE MASSACHUSETTS EMPLOYMENT SECURITY DIVISION

It is not too much to say that the problem of employment security in the Commonwealth of Massachusetts is today rising to the point of desperateness. The factor that has intensified the problem to the breaking point, is the recent cut by the Federal Bureau of Employment Security of $504,000 in the request of the Massachusetts Division of Employment Security for administrative funds for the last 6 months of 1948.

During the first 6 months of 1948, the allotment by the Federal Bureau to the Commonwealth's division of employment security for the administration of the latter's employment security and employment service programs, was $2,785,293. The Commonwealth's division requested $2,857,651 as administrative funds for the last 6 months of 1948; the regional representative of the Federal Bureau of Employment Security recommended $2,787,605; the Federal Bureau approved $2,353,484.

The amount requested by the Massachusetts division for the last 6 months of 1948 was 3.8 percent more than for the first 6 months, which was the lowest percent increase sought in the Nation. The amount actually allocated by the Federal Bureau to the Massachusetts division represented, under one method of calculation, the third highest cut of requested allocation of all States in the Nation, and under another method of calculation, the second highest cut.

On a yearly basis the amount allocated to Massachusetts for the administration of its employment security and employment service functions, is approximately $4,707,000, whereas the three-tenths of 1 percent Federal unemployment compensation tax on wages sent by Massachusetts employers to Washington now is in the neighborhood of $10,000,000.

The Commonwealth of Massachusetts and the administration of its division of employment security has the reputation of being one of the most, if not the most, efficiently administered employment security divisions in the United States. The fact that the Commonwealth's requested increase in allocation for the last 6 months of 1948 over the first 6 months of 1948; namely, 3.8 percent, was the lowest percent increase requested in the entire Nation, is indicative of the care with which this Commonwealth administers the fund, and of the efficiency of its operations.

Under the circumstances, the cut in the requested allocation can only mean that employees must be laid off. It can only mean that the efficiency of the Bureau will be seriously impaired. It can only mean that levied on top of the other problems that face the Commonwealth in its employment security problem, the net result is that we have truly reached a stage of desperation in our unemployment compensation problems.

Despite the extraordinary employment condition that exists now in Massachusetts beyond any previous expectation, we are paying out unemployment-compensation benefits under our law at the rate of $50,000,000 a year. Last year we paid out over $53,000,000 in benefits. The provisions of the Massachusetts law are so attractive in their incentive to individuals to remain unemployed that the pressures upon the Massachusetts Employment Security Division are tremendous, and require the most careful administration in order that the law may not run wild and become an object lesson throughout the Nation.

No analysis of the problems of the division of employment security can be made without reaching the conclusion that we have truly come to a stage of desperateness that requires the immediate action on both the State level and the national level.

The immediate problem is to find the means whereby additional moneys can immediately be allocated to Massachusetts in order that the efficiency of the administration of the Massachusetts division may not recede to the point where millions of dollars of increased cost will accrue, and where, in the absence of proper administration, benefit checks would be held up for weeks beyond the time when they should be properly paid.

It is obvious from the present plight of Massachusetts that the absentee control now exercised by the Federal Government over the administration of our law is an error of the gravest magnitude. Efficient administration of such a program can never be attained under a continuance of this relationship, and it is a fraud on Massachusetts when it is taxed to the extent of approximately $10,000,000 for the administration of the law and receives in return less than $5,000,000 under circumstances where the more efficiently the attempt is made to avoid unnecessary expense, the greater becomes the problem of securing the moneys that are needed for the proper administration of the law.

If the heart of the problem is to be reached, the law must be changed in Congress to allow Massachusetts to determine what amount should be spent for administrative purposes, and the employers who are taxed for these administrative funds insist that this be done.

But there is the immediate responsibility resting upon the State government and the representatives of the Commonwealth in Congress to immediately seek and obtain from the Federal Bureau of Employment Security the necessary funds to enable the Commonwealth to meet the desperateness of the situation with which it is now faced.

EDWARD F. CONNELLY,
Chairman, Social Security Committee, Associated Industries of Massachusetts.

The Late Honorable John J. Delaney

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. KEARNEY. Mr. Speaker, one of my warmest friends, a Member of this

House, has passed away since the recess of the special session.

The death of the Honorable John J. Delaney, who represented the Seventh District of the State of New York since the Sixty-fifth Congress and the Seventy-second Congress, has saddened his many friends on both sides of the aisle.

Mr. Delaney for years was active in the civic, religious, and fraternal life of his community and represented with great ability his district in the House of Representatives.

I have been closely associated with Jack Delaney since I first came to the Congress. I counted him as one of my personal friends. He was a man of great understanding, sympathetic to all who brought their problems to him, and a great humanitarian.

To his widow, his son, and his daughter I extend my heartfelt sympathy.

Justice George A. Larkin

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. REED of New York. Mr. Speaker, there has just been retired from the bench because of age a great jurist who has rendered conspicuous service as a lawyer, as a distinguished justice, and as an outstanding American. I refer to Justice George A. Larkin, of Olean, N. Y. I include as a part of my remarks his record as published in the Olean Times-Herald of December 31, 1948:

JUSTICE LARKIN ENDS CAREER ON BENCH—TO RETIRE SATURDAY

Justice George A. Larkin of the Appellate Division, New York State Supreme Court, stepped down from the bench today, ending a judicial career that spans 33 years.

Justice Larkin's retirement Saturday, January 1, 1949, is mandatory under the retirement law.

Gov. Thomas E. Dewey appointed Justice Henry J. Kimball, Watertown, who has been serving on a temporary basis, to a full 5-year term as a regular associate justice to succeed Justice Larkin.

Justice R. Foster Piper, Buffalo, was named by the Governor to a temporary appointment in place of Justice Kimball.

SURROGATE IN 1915

Justice Larkin has served 33 years on the bench. His first judicial office was that of surrogate judge for Cattaraugus County, to which he was elected in 1915.

After serving 2 years, he resigned to be elected county judge on both Republican and Democratic tickets. After his 6-year term as county judge ended in 1923 he was elected supreme-court justice, and his 1937 bid for reelection was successful.

He was elected that year for a 14-year term, but the law requires trial and appellate jurists to retire at age 70, which Justice Larkin reached December 10.

He was appointed to the appellate division of the supreme court by Gov. Thomas E. Dewey January 1, 1944, succeeding Justice Harley N. Crosby, of Falconer.

NATIVE OF OLEAN

Justice Larkin was born in Olean December 10, 1878, and was educated in the public and parochial schools of this city. He was a member of the first graduating class of St. Mary of the Angels Parochial School in 1893, and in 1895 he graduated from Olean High School.

Then, in a competitive examination, he won a New York State scholarship for Cornell University from Cattaraugus County. He entered Cornell in 1896, winning also a competitive examination for a university scholarship. He graduated from Cornell in 1900, having been elected to Phi Beta Kappa, national scholastic fraternity, and having also become a leading track athlete at Cornell.

STARTS LAW PRACTICE

After leaving Cornell, he returned to his home town to study law in the office of Carey, Rumsey, and Hastings. In 1903 he was admitted to the bar.

Taking an early interest in politics, Justice Larkin successfully managed the candidacy of a Republican candidate for mayor of Olean in 1907 and again in 1913.

He served as city attorney from 1907 to 1909, and in 1915 he entered a spirited primary contest for the Republican nomination for surrogate of Cattaraugus County. He won the contest and in the fall of that year was elected surrogate for a 6-year term.

ON TWO TICKETS

In the 1917 compaign for county judge he ran as both Republican and Democratic nominee.

In the 1923 campaign for justice of the supreme court he was the Republican candidate, and in the 1937 campaign he was the standard bearer for the Republican and Democratic Parties, being endorsed by both judicial conventions.

Soon after his reelection in 1937, Justice Larkin became widely known through western New York when he presided at an extraordinary term of supreme court in Buffalo to investigate municipal affairs in that city. He was appointed to that term by Gov. Herbert H. Lehman.

Justice Larkin is a member of the Cattaraugus County Bar Association, the City Club of Olean, the Bartlett Country Club, and the Olean Lodge of Elks. He is a member of the Olean Council of the Knights of Columbus and the Holy Name Society of St. Mary of the Angels Church.

Justice Larkin's office has been located in the First National Bank Building. He lives at 144 South Union Street.

Supreme Court Decision in Cement Case

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 5, 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "United States Supreme Court Decision in Cement Case Brings Serious Problem," delivered by me and published in the journal of the National Association of Retail Druggists on December 20, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNITED STATES SUPREME COURT DECISION IN CEMENT CASE BRINGS SERIOUS PROBLEM

(By HOMER E. CAPEHART, United States Senator from Indiana)

The Supreme Court's decision in the Cement case has created a great deal of confusion as to what pricing practices are now legal.

This uncertainty involves uniform national delivered prices, uniform zone prices, freight equalization practices, and freight absorption to meet the lower price of a competitor located closer to the customer.

Not only are businessmen and their lawyers in disagreement as to the legality of these pricing practices, but the members of the Federal Trade Commission and their staff are in equal disagreement among themselves. This confusion as to what practices businessmen may lawfully follow does not promote the best interests of our industrial economy. It seems to me that businessmen who wish to be law-abiding citizens are entitled to know what pricing practices they may lawfully follow.

The Trade Commission has done a commendable job in policing price-fixing conspiracies. It must remain free to continue to do so. There is no room in our economy for price-fixing conspiracies.

The attacks of the Federal Trade Commission on price-fixing conspiracies have my wholehearted and sincere approval.

The fundamental question which must now be answered is: What about delivered prices and freight absorption which are not practiced by conspiracy or agreement among sellers?

In 1936 a bill was introduced in Congress for the admitted purpose of outlawing delivered prices and the basing-point systems.

Later a bill was introduced in Congress which would have defined "price" in the Robinson-Patman Act as meaning the seller's "mill net."

The Chief Justice of the Supreme Court has said that that definition of "price" would have outlawed delivered prices and basing-point systems.

In 1941 Senator JOSEPH C. O'MAHONEY'S TNEC advocated legislation of a similar nature.

The proposed legislation was supported by the Federal Trade Commission.

In each case, Congress refused to pass the bill outlawing delivered prices and the basing-point systems.

Finding the pricing policies which will best serve to further our American free enterprise competitive system is most important.

The Senate Interstate and Foreign Commerce Committee has appointed an advisory council of 47 people to aid in finding the answer to that question. They include businessmen from all sections of the country. Some are small-business men, others are from rather large companies. The advisory council also includes prominent economists, labor union leaders, farm group leaders, and representatives of chambers of commerce. We tried to procure for the advisory council representatives of as many parts of the country and as many segments of our national economy as the limitations of a working group permitted.

The advisory council is at liberty to reach any conclusions and to follow any course in making its study which it thinks proper and beneficial.

At the opening session of the advisory council, without meaning in any way to limit the scope of its study, I told the members that I would be grateful to them for whatever help they could give our committee in reaching bedrock with respect to four questions which I feel must be answered to determine what pricing policies will best serve our national economy.

Referring to the pricing policies apparently advocated by the Federal Trade Commission, I asked the advisory council to help answer these questions:

1. Will these pricing policies foster and promote competition in industry and advance the free enterprise American way of business life?

2. Will these pricing policies promote a beneficial decentralization of industry in the furtherance of our national security?

3. What will be the effect of these pricing policies on the cost to the consumer of the manufactured articles he buys?

4. Will these pricing policies result in shifts in population which will materially affect the Nation?

The answers to those questions will be of considerable help to the inquiry we are now making.

THREE STATUTES

The Federal Trade Commission attacks pricing policies under three statutes: (1) the Sherman Act, which prohibits all price-fixing conspiracies; (2) the Federal Trade Commission Act, which prohibits unfair methods of competition; and (3) the Clayton Act, as amended by the Robinson-Patman Act, which prohibits price discriminations.

The Federal Trade Commission takes the view that price-fixing conspiracies may be most readily eliminated by compelling all sellers in heavy industries to sell f. o. b. mill. This would result in different delivered prices to different buyers of the same sellers. It would also result in different prices to the same buyer from different sellers. Such pricing practices would substantially eliminate agreements to fix prices at uniform levels. But uniform f. o. b. mill pricing would also do a great many other things to our national economy.

Congress must determine whether the cure is worse than the disease.

The Federal Trade Commission contends that a single seller individually and knowingly following a pricing practice parallel to his competitors is guilty of collusive action.

Most businessmen feel that parallel conduct resulting from conspiracy must stand on wholly different ground from parallel conduct resulting from honest competition.

The Federal Trade Commission has further contended that buyers located close to the seller's mill have an economic right to buy at lower prices than more distantly located buyers. It calls this the advantage of location.

VARYING MILL NET PRICES

The Federal Trade Commission also contends that price discriminations occur whenever a seller has varying mill net prices among his buyers. Varying mill net prices occur whenever a seller sells at the same price to two customers who are located at unequal distances from his plant. These discriminations are illegal when the Federal Trade Commission finds they may injure competition.

The Federal Trade Commission says that economic philosophy is directed at achieving price competition. Its goal in the field of competition seems to be limited to the level of price. It does not seem concerned with competition at the levels of service, quality, or business integrity.

The pricing policies that may be lawfully followed are of considerable concern to industry. But the larger and the far more important question is: What pricing policies will serve the best interests of the Nation? That issue involves the economic future of the country as well as our national security.

We must explore the pricing policy based on advantage of location.

It is the obligation of Congress to determine the extent to which advantage of location will alter the economic future of the country and our ability to defend ourselves against foreign aggressors. We must determine whether a business enterprise should be required to locate its plant at that site having a freight advantage of location, or whether industry should be permitted to locate at a site which is desirable as to raw materials, labor, climatic conditions, available markets and security from bombing attacks by foreign aggressors, in addition to the advantage of location freightwise.

NATURE DECIDES

Coal, iron ore, sand, silica, limestone, timber, clay, oil and countless other minerals are found only where nature deposited them. Sugar, corn, and countless other commodities may be grown only in the soil which nature conditioned for that purpose. Such basic commodities are the primary ingredients of a number of the products of American industry, including steel. The greatest number of products are generally consumed where the most people live. But nature did not locate our minerals and farm lands at the same locations chosen by man for our highly populated areas.

Chicago is a substantial business center near the center of the Nation. It has a large consuming population. Thus there are many advantages in locating a plant in southern Illinois, Iowa, or Wisconsin. We must find out if a producer is to be required to locate in Chicago in order to compete in that market. It does not seem to be an answer to say that he may locate in Iowa and adjust his plant price to that level which, with the addition of freight to Chicago, will permit him to compete in that market, for the freight to Chicago is different from the freight to St. Louis or Omaha. And the seller may wish to compete in all three markets.

At this point, it may well be asked why the inbound freight advantage of one seller doesn't offer the outbound freight advantage of the other seller, and leave each in an equal competitive position. This would be true if there were only two manufacturers in an industry, or, if all manufacturers in an industry were competing only in one market.

The Robinson-Patman Act, however, seems to require a seller to have a uniform mill net price to all of his competing customers.

A seller might be able to adjust his mill price so that the delivered price will be competitive in any one market, but it does not appear possible for a seller to have a uniform mill net price which will permit his delivered prices to be competitive in all of the markets which he may choose to invade. It has long been the unquestioned practice of manufacturers of shirts, shoes, and suits to equalize their material costs. I suppose that you small fellows pay a part of the cost for the extra material that I get in the clothes I buy.

MANUFACTURERS PROTEST

Manufacturers have asked why they cannot equalize the cost of freight between their nearby customer and the distant customer if they can equalize the cost of material between small and large manufacturers. Many substantial industrial plants in America are now compelled to pay substantially higher prices for steel because they are not located near steel mills. Some say they must move their factory to a more advantageous location if freight absorption is to be outlawed. Quite recently the owners of plants in Muskegon, Mich., and Watertown, N. Y., said they would have to move to Pittsburgh if freight absorption were not permitted.

The Congress has the serious problem of determining whether investments in plants in such cities as Muskegon and Watertown whose location have a freight disadvantage are to be wiped out. We must also consider the welfare of the many people who have made their homes in those communities.

I have said on many occasions that I favor those pricing practices which will best promote competition in our American free enterprise competitive system. I am sure the members of the Federal Trade Commission want to promote competition. And I am certain that the Congress has for its fixed policy the promotion of competition in American industry. But we must determine what pricing practices will best serve those purposes.

I have pointed out the activities of the Federal Trade Commission to achieve price competition. It seems to be conceded, however, that buyers will not, and competitively cannot, pay more for identical steel, cement, or other similar commodities from one seller than from another seller. Thus, we must find out whether we should require buyers of steel and cement to purchase only from the closest seller in order to receive the lowest price. Or, shall we permit other sellers to invade those territories by meeting those prices? Shall we give the buyer a choice in his source of supply?

Service and quality of products are vital in any business. Many buyers are vitally concerned with the integrity of the sellers with whom they do business. We have been deluged with protests from buyers who say that they much prefer to do business with a particular seller with whom they have had satisfactory and pleasant relations over a great number of years. These buyers demand the right to purchase from those sellers without being compelled to pay higher prices. They may not do so if the seller cannot absorb the freight.

I am told that f. o. b. mill pricing will favor multiple plant operators and be to the disadvantage of, and discriminate against, single plant operators. It seems that f. o. b. mill pricing in basic commodities will create local monopolies for each seller within what the Federal Trade Commission calls his "natural freight advantage territory." The Congress must determine whether that economic result best serves our national economy.

We must seriously consider any practice that tends to create an artificial trade barrier between any sections of our country.

NATIONAL POLICY

It is our national policy to encourage the elimination of the trade barriers now existing between the small countries of Europe. We know only too well what those European trade barriers have done to the standard of living and the achievement of mass production economics in industry in Europe. We must be cautious lest we permit any pricing policy to create artificial trade barriers in this country.

Our economy, and the economic principles that have made us the greatest nation in the world, have long been predicated on free commercial intercourse between all sections of the country. National distribution has long been the legitimate goal of most producers.

Among the problems which we must consider is the financial integrity of the railroads. We learned in the late war how vital the railroads are to national defense. I need not remind you of the strategic bombing of railroad facilities in Europe which led to the breakdown of the enemy's transportation system. We cannot permit a breakdown of American railroad systems.

Let us assume that losses in mass production economies resulting from a number of small plants replacing one large plant will be offset by savings in the eliminating of cross-hauling. We must still consider the loss of revenue to the railroads.

The contention of the Federal Trade Commission is, in effect, that it is an economic waste to haul soap from Boston to Cincinnati while other soap is being hauled from Cincinnati to Boston. We must consider not only whether such market invasions are the essence of competition, but what the elimination of those well-established practices will do to our present railroad system—a system which is essential to our national security.

I have but one more observation to make with respect to the scope of this problem. That is its effect on national security. The national security requires the dispersal of American industry to rural areas. Concentrated industry is vulnerable to enemy air attack.

The Government's National Security Resources Board has urged that industry be dispersed to the rural communities. It has pointed to an increasing trend since 1940 of locating manufacturing plants in the smaller cities and towns. We know that some large manufacturing plants have recently been located in the sparsely settled areas of the south, southwest and the middle west. They are there less vulnerable to enemy air attack. This trend must not be reversed.

WOULD ABANDON PLANTS

I have noted in the public press indications that many businesses intend to abandon present plants that are not strategically located. I have already referred to such plants in Muskegon and Watertown. I am told that there are many steel fabricating plants, particularly in the Southwest, West and far West, whose current inability to procure steel from eastern mills is causing them to shut down. This is said to result from the eastern mills trying to satisfy the requirements of their nearby customers, good will of whom they will need in a buyers' market. Those plants, even though located at greater distances from steel mills, are a part of the industrial capacity of this Nation. Such plants contributed to the tremendous war production that made us the arsenal of democracy and furnished the weapons to defeat the Axis. We cannot afford to make obsolete any part of our industrial capacity. This can be permitted only if the advantages more than offset the loss of industrial production.

We must find out if our national security will permit us to make obsolete any plants, solely because they are located in communities that do not have an advantage of location with respect to freight rates.

You are, of course, most concerned with how this pricing policy affects the drug industry.

Retail druggists have for many years fought a vigorous battle for the uniform fair-trade laws which are now a part of the statutes of 45 States and are embodied in the Miller-Tydings Act.

It seems elementary that the enforcement of fair-trade agreements requires that drug manufacturers be permitted to sell at uniform national delivered prices, so that uniform resale retail prices may be established. It is equally elementary that a drug manufacturer cannot have a uniform delivered price without having varying mill net prices. These are illegal when the Federal Trade Commission finds they may injure competition.

Parke-Davis drugs are made in Detroit, Lilly drugs are produced in Indianapolis, and Abbott's drugs are manufactured in Chicago. It is cross hauling, and may well be an economic waste, for Abbott's to invade the Detroit market or for Lilly to invade the Chicago market. We must inquire, however, whether this is not the essence of competition.

When Indianapolis drugs are sold in Detroit at the same price at which they are sold in Indianapolis, they compete with drugs manufactured in Detroit and, at the same time, result in a higher net mill price being paid by Indianapolis druggists than is paid by Detroit druggists. This results in varying mill net prices.

It is obvious from the foregoing facts that such pricing practices may well be construed as injuring competition.

I think it is safe to predict that compulsory f. o. b. plant pricing would be a serious blow to the uniform fair-trade agreements for which retail druggists have fought so vigorously in these past years. I have been advised by wholesale druggists that f. o. b. plant pricing would probably increase the volume of business of drug manufacturers having several plants or having regional warehouses throughout the country. I am told that a corresponding reduction in volume would occur to the smaller drug manufacturers operating a single plant and not having the benefits of regional warehouses. It is feared by some that this would result in a tendency toward monopoly in the bigger drug companies and the elimination of many of the smaller companies. We must not permit the possibility of that prospect to become true likelihood.

The tremendous number of items which you sell in a drug store, and the varying prices at which they are sold, seems to create a substantial problem for the small druggist in tending to his bookkeeping. This is particularly true with respect to many drugs, usually high priced, which the average small druggist does not carry in stock, but which he is occasionally required to procure for a customer.

The manufacturers' price lists are invaluable to the small druggist in determining the prices of products which he wishes to buy. These price lists would be of considerably less value if they indicated only factory prices to which the druggist would be required to add the cost of transportation. There are no doubt many advantages in the drug business of f. o. b. factory pricing.

The Senate Interstate and Foreign Commerce Committee would welcome any such suggestions. It is our goal to find that pricing policy which will best preserve our American free-enterprise, competitive system. It is our determined policy to encourage competition. Our problem is to find that pricing policy which will do so and put it into law.

This is one Nation; it is one great and united country. Our strength lies in that fact. We must certainly preserve that strength.

Issues Facing the Eighty-first Congress

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. WOLVERTON. Mr. Speaker, under the unanimous consent granted to me, I herewith include as part of my remarks an editorial entitled "Long and Urgent Calendar Faces Eighty-first Congress." It appeared in the January 3, 1949, issue of the Courier-Post newspapers, Camden, N. J.

The editorial sets forth in a short but complete way the issues that face this Eighty-first Congress. It reads as follows:

LONG AND URGENT CALENDAR FACES EIGHTY-FIRST CONGRESS

Few peacetime Congresses have faced so crowded a calendar as the one convening today.

Moreover, few have faced the necessity of acting so rapidly as the Eighty-first Congress must on several major items of legislation, though most of its business probably will consume months of hearings and debate.

In the main, domestic legislation occupies the preponderant place on the congressional agenda. At least three items concerning foreign policy, however, will have high priority, because of time pressure.

Export controls expire within 2 months and require renewal. This is likely to be accompanied by a stricter license system to prevent fraud.

April must see the renewal of the ECA program, and there will be a fight over the size and allocation of funds if not over the renewal itself.

Another program expiring is that of reciprocal trade agreements, in June. This is likely to be strengthened by the repeal of amendments made by the Eightieth Congress and a return to the original law.

Among the domestic issues requiring immediate attention is rent control, which will lapse March 31 unless extended. Renewal is expected, possibly with a 15-percent increase in rentals.

The proposal to raise the President's salary, because of constitutional limitations, must go through before January 20 if it is to take effect during Mr. Truman's full term.

If the House Un-American Activities Committee is to continue operating it will need an early authorization of funds. This may stir up one of the hottest fights of the session, with the abolition or reorganization of the committee a possibility.

Most of the issues coming up are less urgent in the time sense than those listed above but many of them are of equal or greater importance.

Repeal or amendment of the Taft-Hartley law will provide one of the great battles of the year. An increase in the minimum wage is another major item of labor legislation.

Civil rights legislation on such matters as the poll tax, lynching, and tightening of the espionage laws will be a burning issue.

Congress waits on President Truman's message to see whether price controls will be another storm center. The message likewise will furnish the clue to what the line-up on taxes will be.

Farm price supports and conservation legislation will be battlegrounds of agriculture.

Housing, Federal aid to education, broadening and liberalization of social security, national health insurance, and reclamation projects are other major subjects coming up.

While dealing with affairs concerning the Nation and the world, Congress also must wrestle with matters of procedure. Another attempt will be made to abolish the filibuster in the Senate, while the House may restrict the powers of its Rules Committee. Both these changes would be in the interest of speeding legislation.

The Democrats have regained control of Congress, but their internal divisions continue and make it most doubtful that President Truman will be able to put through legislation as easily as Franklin D. Roosevelt did early in his administration.

Bitter and prolonged struggles over much of the expected Truman program are the prospect for 1949.

River Valley Development

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article, which appeared in the Lynn Telegram-News, Saturday, November 27, 1948:

A MISSOURI VALLEY AUTHORITY

One of the major developments that depended on the election is the Missouri Valley Authority. The TVA made history, and even geography, when Roosevelt endorsed it in 1933. Since then the whole idea of river valley development has been under attack from the private utility interests which have

been nesting in the ruins of the Republican Party.

These interests were sufficiently powerful to prevent the integration of the Columbia Valley's Federal power developments, despite the great structures at Grand Coulee and Bonneville. These interests even went so far as to hamstring the Central Valley Development in California and had placed plans for the valley-plan type of Federal project on the Missouri in the deep-freeze of Republican reaction.

Now that President Truman has won his first election to the White House, however, there is no reason to fear that the entrenched influence of the privately owned public utilities will prevent the logical extension of the TVA idea into separate projects for the Missouri Valley and for other tributaries to the Mississippi River system.

As a matter of fact, one of the developments in this field, is the opposition of the original TVA'ers to the MVA. Such a project would create competition in public interest and for public funds with their own unique plan, and it would be ironical though not unexpected if some of the leading advocates of the TVA were to appear in opposition to the MVA.

However, in this case the TVA group will carry little political weight. The question already is being asked in Washington: "Where was Dave Lilienthal at Armageddon?" Where, indeed, were the members of the Atomic Energy Commission which have sprouted like mushrooms around the TVA output of hydroelectric energy? Where, oh where, were the public power boys when the light went out?

The Missouri River is not only the largest tributary to the Mississippi it also is the most logical place to start our next major national development in headwater and watershed control. Some of the elements, such as the Fort Peck Dam, already have been installed. Now it remains for the Army engineers and Congress to devise ways and means for the progressive development of navigation, power, flood control, and irrigation on the Missouri River.

After the Missouri Valley Authority, it will be time to turn attention to the other valleys of mid-America. Until the Big Muddy is brought under control, however, all of our other valley-planning experiments will be secondary and remote. For the meaning of the election is that the American people expect President Truman to do the job they want done. High on the list of their desires stands the extension of the TVA idea to other major river basins of this country.

George Heron Milne: Well Done, Thou Good and Faithful Servant

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 5, 1949

Mr. REED of New York. Mr. Speaker, upon my recent return to Washington, I was deeply distressed at learning of the passing of one of our most useful and esteemed public servants on Capitol Hill.

On October 25 death ended the long career of George Heron Milne, custodian of the congressional reading room in the Library of Congress. To some of us his name was not known, but I dare say there are very few of us who at one time or another have not had occasion to consult with him, either in person or by telephone, and receive benefit of his wise counsel. Those of the present Congress who did not have the pleasure of knowing Mr. Milne will be less fortunate, for he did impart to those with whom he came in contact a certain reverence for all that is worth while.

His quiet, unassuming manner won for him the friendship and respect of thousands, both in and out of Congress. No problem seemed too great or too small for George Milne. He made each individual Member's problem his own, and never did he complain that there were other equally important demands on his time and energies. For 39 years Mr. Milne served that trust, and served it well.

A native Washingtonian, born to Alexander and Isabella Metcalfe Milne on July 3, 1887, he started his early career as a messenger with the Evening Star in 1902, and remained there until 1905. In 1906, and for several years thereafter, he was employed with a haberdashery firm, but this held no special appeal for him. During his spare time he assisted his father, who was in the furniture business and was an interior decorator of high esteem, his services having been requested at the White House on many occasions. On these trips to the White House George was always delighted to accompany his father, for he and the Roosevelt children had developed a mutual friendship.

In 1909 he was appointed to a position in the Reading Room of the Library of Congress. After a few months service there, he was transferred to the Library Station in the Capitol, and his excellent work in that position further prepared him for the future role he was to fill. His personal service to Members of Congress won him many friends.

Returning to the main reading room a year or so later, he carried on his reference service to the public and did research in many fields. In 1917 his fine record brought him another promotion. He was assigned to the Congressional Reading Room in charge of one of the alternating shifts. In this new assignment there were many added responsibilities. He proved to be most ideally suited for this job, for his service to Congress has received the highest praise.

The Library of Congress seemed to be the mecca of all his dreams, for he was a lover of books, and this was his great opportunity. Books now became the guiding light in his life. No small collector himself, he amassed a considerable library of his own with a goodly portion of rare and first editions, and autographed volumes.

He did not, however, let this be his only interest, for he had a great liking for the theater as is attested by numerous letters, autographed photographs, and other expressions from his friends in that profession.

Nature and the out-of-doors also had a special appeal to him, and he was never happier than when spending a week end at his mountain cottage, or in his rose garden at home. He knew the names of all domestic flowers and plants as well as most wild flowers and could spot them at a glance. He has related to me how as a boy he would go on treks through the woods in search of new wild species of plants not generally known.

Only death ended this keen sensitiveness, when he was stricken with a heart ailment after a prolonged illness. His often-repeated remark that "There are not enough hours in the day to get the things done that I would like to do," seemed to be truly characteristic of him, for he never knew an idle moment. His dreams and plans for the future were cut short only too soon.

Mr. Milne was married in 1917 to Ella Baldwin Lower, a Cleveland girl with whom he had become acquainted shortly after joining the staff of the Library of Congress.

In final tribute, I consider it an honor to have known such a man as George Heron Milne. His keen intellect, his sincerity of purpose, and greatness of character enrich the lives of all who knew him.

Government and Health

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, January 5, 1949

Mr. SMITH of New Jersey. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a brief article which I prepared at the request of certain newspapers in my State on the subject of government and health.

This article deals with possible approaches to this problem, and has special reference to the proposed compulsory national health insurance program recently advocated by Mr. Oscar Ewing, Federal Security Administrator.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOVERNMENT AND HEALTH

(By Senator H. ALEXANDER SMITH)

It is very gratifying that so much discussion is taking place nowadays on the subject of the health of the American people. Our national health is a vital ingredient of our economic productivity, our national security, and—above all—of that greater fulfillment of the democratic promise of American life which we must be ever seeking to achieve.

My position in the Senate during the last 2 years has kept me in daily contact with this health question. The health subcommittee of which I am chairman held hearings which cover over 2,000 pages in the printed record in an effort to develop a sound Federal health program. I was therefore closely interested in Federal Security Administrator Oscar Ewing's report to the President, published in September under the title "The Nation's Health: A 10-Year Program."

This document sets up goals for national accomplishment by the year 1960 in training of medical personnel, construction of hospitals, improvement of local public-health services where these are inadequate, and pursuit of certain especially important special programs in the fields of mental health, chronic diseases, vocational rehabilitation, and child care. In his presentation Mr.

Ewing states very forcefully the discrepancy between our present level of achievement in all these fields and what he considers a feasible ideal.

Of course, in the nature of the case the Federal Security Administrator is a special pleader for expanded Federal health activities. It is therefore not surprising that, in the fields just mentioned, he calls for a total Federal health expenditure of some $2,300,000,000 by 1960—more than three times the present figures. Yet, if there is room for difference of opinion on size and detail, still I find myself substantially agreeing with his presentation of these needs; they are all of great importance and probably all of them should benefit by greater Federal participation, as Mr. Ewing suggests, side by side with the States and local communities.

PARTING OF THE WAYS

So far, so good. But where Mr. Ewing and I part company is in approaching the central question of national health—the question of how to achieve the best distribution of medical and hospital services among all the people, regardless of their location or economic status. His answer constitutes the heart of his report. By now it is a familiar answer to many of us. He advocates a Nation-wide, compulsory system of health insurance, to be financed primarily by a percentage tax on all wages. Under this system the insured person would be guaranteed whatever care he needed without charge. Doctors and hospitals would be reimbursed out of the national insurance fund. Both the States and the Federal Government would be involved in determining the method of payment, the extent and standards of services to be rendered under the system, and the respective rights of patients, doctors, and hospitals.

It is, of course, beyond dispute that a large proportion of the American people cannot pay for the medical and other health services they need. But to say that compulsory health insurance, with all its glaring disadvantages, is the only way to meet this problem is a premature admission of defeat.

Such a system would involve a very considerable administrative cost on all levels, which would have to be paid out of the wage-earner's special tax. It would involve Government inspection of medical and hospital facilities and Government adjudication of any complaints by either patients or doctors in order to assure them their respective rights under the law. All this would add to the cost of actual medical care. Meanwhile, if foreign experience with compulsory health insurance is a reliable guide, we could expect the quality of medical care to suffer, and preventive medicine to fall into disuse, as more and more efforts were bent toward administering the largest possible amount of treatment to the greatest number of patients.

DOUBTS FEASIBILITY

In view of these probabilities, I have the most serious doubt that the services promised under Mr. Ewing's proposal could be delivered. I think it very possible that we would find ourselves taxing the people under false pretenses. This consideration alone would be enough to deter me from voting to put such a scheme on the statute books.

But to my mind there is an even more compelling reason for opposing the compulsory system. Our Federal system, with its balanced division of responsibilities between the local communities, the States, and the Central Government, is one of our great sources of strength as a Nation. Before we do violence to this system by granting to our Central Government such a vast new power as Mr. Ewing proposes, there must be an overriding necessity for it. Those who are urging this grant of power have tried to make out a case for such a necessity—but in so doing they have had to exaggerate the size and urgency of the country's health needs, and they have minimized the possible achievements of activity by States and voluntary groups.

The plan for American health which I support is very different. It would preserve the existing Federal-State relationship in the health field. The Federal role would remain one of stimulation and support through grants-in-aid to the States. Under these grants, each State would be challenged to work out its own approach to the most urgent health problems facing it—especially the problem of making good medical and hospital care available to those who cannot afford to pay for this care. The keynote of the whole program would be experimentation. With 48 laboratories working at once to develop and mobilize their health resources, I am confident that sound and fruitful solutions would emerge to fit the different needs of the various States.

COSTS ALREADY STUPENDOUS

The share of the Federal Government in health activities is already large—nearly $750,000,000 a year—and is sure to grow larger. Therefore the question of organization of these functions becomes increasingly important. Governor Dewey has already proposed the creation of a new Cabinet department to include all the Government's social (welfare) functions—in social security and education as well as in health. The logic of this idea appeals to me, since clearly the health, the education, and the general economic security of the people are very closely bound together. The proposals of the so-called Hoover Commission, which will report to Congress in January on the organization of the entire executive branch, should be of value in this connection. Whatever organization we finally agree on, the vitally important point is that the Federal Government should play its proper role in the effort to improve the health of America. That role is one of consultation, encouragement, and stimulation by financial and other means—to the end that the States, the professions involved, and the consumers of medical services may be enabled to work out their own salvation in this vital realm.

Address of Joseph K. Carson, Jr., Commissioner, United States Maritime Commission

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 3, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Joseph K. Carson, Jr., Commissioner, United States Maritime Commission, at a luncheon meeting of the Propeller Club of the Port of New York at the Waldorf Astoria, New York, on September 15, 1948:

Mr. Chairman, guests, and members of the Propeller Club, I should like to make it clear that the remarks I am about to make represent my own ideas and may not be shared by other members of the Commission.

Mr. Chairman, it is customary, I presume, for a speaker to employ a ghost writer to prepare his paper, with the clear admonition that it is to be devoid of anything controversial, shot through with platitudes, and properly surfeited with complimentary references to the audience. Well, the speech I am about to give is my own. Therefore, it would appear appropriate that I ask you to apply to my remarks the marine-insurance principle of particular average and let the blame lie where it falls.

Now, I am fully aware that the maritime industry is confronted with some obstacles which, while not insurmountable, are nonetheless a grave threat to the future welfare of our merchant marine. I shall not catalog them all in this short preface but shall refer to only two. The first is the erroneous belief on the part of the public generally that the American merchant marine is in such a prosperous condition that it can meet with ease and without aid the impact of foreign competition. The second is the belief of some, in and out of Government, that we should abandon the high seas to other nations in order that they may build up dollar credits and thereby bolster their foreign exchange.

We can, of course, do much to correct the public misconception respecting the ability of American-flag vessels to compete with the foreigner. But when it comes to those who favor letting foreign-flag vessels have a preferential position in world-wide shipping we have a more serious problem. They are of that school of thought which favors a form of appeasement which in their opinion will buy good will. They forget that good will must be earned—that it cannot be bought. Further, they fail to realize that when dollar credits shall have melted away through juggling of international exchange or otherwise, much of civilization's requirements must still be transported in real tangible things, called ships.

Before beginning a discussion of the subject in hand, I wish to make it clear that while the merchant marine is an auxiliary, if not a concomitant, of the armed services in time of national emergency, in peacetime it is a civilian activity and I hope it will ever remain such. Except for the purpose of meeting an emergency, there must be a complete separation of the merchant marine and the regulation thereof from the military. If we integrate the merchant marine with armed forces in time of peace, we shall have nationalization of shipping—period.

Although there are many maritime matters I might talk about today, I do not propose to discuss the decline of ship construction, the softening of rates, the virtues of our merchant marine in war, nor the importance of our reserve fleet. Indeed, I shall leave unsaid many of these and other important things maritime which have been better said time and again by others far more qualified than I. I shall discuss instead a subject which may be equally engaging—namely, some aspects of the mission of the Maritime Commission. As you know, that mission is the regulation, operation when imperative, and the promotion of the welfare of the American merchant marine.

Regulation or management—which road? In order that the area of discussion be made clear—by regulation I mean that degree of supervision by government necessary to insure compliance with the law and public policy; and by management, I mean the exercise by those in proprietary control of complete discretion in the conduct of their business so long as they violate no law, offend no public policy, or invade no rights of others.

The regulation of shipping and the management of shipping are, of course, separate provinces. The problem which the Commission and the maritime industry face is, How may the Commission exercise its regulatory powers properly without impinging upon the functions of management or narrowing the area of free enterprise?

This is not an academic question. I have not erected a straw man merely to attack and destroy him as an empty shibboleth. There is a real and fundamental issue involved here. It is an issue that encompasses not only the regulation of shipping but the

whole field of government as well. In a recent editorial on this subject, the liberal Washington Post admirably defined the basic issue, as follows:

"The problem that confronts the country today is how to preserve the narrowing field reserved for free enterprise under a necessarily costly system of government that is becoming more and more paternalistic."

It, of course, must be made clear that Government regulation per se is not an unwarranted invasion of the individual's independence. For example, I believe it is generally recognized that the public interest required regulation of the securities market. The excesses of the late 1920's and the operations of some men, whom you and I could name, made manifest the need for regulation in that field. I would much rather have seen such regulation proceed from within the market, but since it did not, action by government became necessary.

Let us take another example. On every side we hear concern and alarm over the spiraling of living costs. There is real cause for alarm. How to control prices without erecting a police state presents a problem which now challenges the best there is in us. I don't know the answer, but I do know this: I had not been back from the European theater of operations but a short time when I became thunderstruck at the arrogance of some who were holding the line. I know that the task of those charged with enforcement of price control was not easy. But it is no secret that the bossy way in which some things were done brought about near revolt.

In my opinion, price controls were removed—not because the people wanted rises in prices but because they were willing to take the risk rather than contend with what millions felt was an unwarranted invasion of their personal rights. To avoid further inflation, some form of price control may prove to be imperative. If it comes, we can ascribe to private enterprise the failure to provide its own method. Therefore, we must accept regulation as a part of the warp and woof of our intricate and complex economic system. But in so doing we need not and should not so administer regulation as to deprive management of its rightful functions or relieve management of its manifest responsibilities.

What may we say of free enterprise and of rights of management? In the first place we must recognize that management has certain rights under the law and that these rights may be asserted with the same vigor that government is permitted to apply the the law. I accept the doctrine that government has no greater power than the people clearly give. I oppose the theory that we are all creatures of the state and have no greater rights than government hands down. This fundamental difference in concept is the real issue we consider today.

In certain self-styled liberal quarters it has become verboten even to mention the words free enterprise. Most of the advocates of government paternalism regard competition, individual initiative, and related concepts as remnants of a bygone day, asserting that their virtues may have had a valuable purpose in the remote past but they no longer function. Actually in these uneasy times we need fair competition carried on by men of daring and strong convictions.

If the Commission accepts the philosophy of the self-anointed liberal and approaches its duties in the belief that no one is capable of deciding what is good for him, it will impose conditions which will make prudent management impossible. In my view the discharge of public duty does not require a belief that man is essentially all dishonest. Rather, I believe in the principle that all men are presumed to be law abiding until the contrary is proved. I cannot support the premise that in the discharge of a public duty proper stewardship requires denying to one that to which he is lawfully entitled. In my view we are not commissioned to extend, enlarge or modify the law. Our job is not to legislate through contract. Our administration of law should be as strong as the law, and no stronger. Confronted with the fundamental policy, to foster and encourage a privately owned and privately operated American merchant marine, the Commission in my opinion is obliged to give management as much freedom of choice, as much scope of authority, and as much independence of control as the law commands.

I have deep-rooted convictions, long established and continuously confirmed, that men are creative, ingenious, imaginative, and daring to the extent that they are free from external compulsion. My convictions urge me to do everything within my power for the promotion of individual freedom, for the defense of the individual against the aggressions of the state or of any other organization or interest that threatens his sovereignty, so long as his sovereignty is not inconsistent with the general welfare.

A few days ago I received a letter from a Belgian officer whom I came to know while I was in France and Germany serving on the staff of Gen. Omar Bradley. He said in part: "The time I was with the Americans was a good time for me and comes to good stead now and then. I liked your Army, that is more civilian than military—and yet so damned efficient." What this officer, now a member of the Belgian Senate, has not had full opportunity to know is that our efficiency was the product of individual initiative, not regimentation.

I have heard it said that in carrying out regulatory powers a Government agency properly and of necessity must take a definite part in conducting the affairs of private business. That is not so. When such a step is taken the agency in question abdicates its role of regulation.

In order to confuse the issue the position is taken by some that in the case of the subsidized operator the Commission must of necessity take a part in managing the affairs of the contractor.

None will deny that when one applies for and receives an operating-differential subsidy such applicant must in turn meet and comply with the conditions set forth in the law. Nor will it be disputed that the applicant must throughout the life of his contract continue to meet all statutory requirements. The real point involved is whether the operator upon entering into an operating-differential subsidy contract becomes a ward of the Government? My answer is a most emphatic "No."

In the first place, before an applicant is granted an operating-differential subsidy he must possess the ability, experience, financial resources, and other qualifications necessary to enable him to conduct the proposed operations of the vessel or vessels as to meet competitive conditions and promote foreign commerce. It would indeed be paradoxical for the Commission one day to declare operator X possesses the ability, experience, financial resources, and other qualifications necessary to accomplish certain statutory requirements and on the very next day decree that he needs a guardian.

In the second place, it should ever be borne in mind that the subsidy granted is not nor is it to be regarded as a bonus, gift, or contribution. If a subsidy payment were to fall in either category, the Commission would be remiss in its duty. In truth, any subsidy must, if lawful, represent a recompensable disparity—nothing more.

So far as I am concerned, I shall not consciously lend my assent to entering into a contract with an applicant who does not know how to manage his own business. The subsidized operator takes on certain obligations. My concern is whether he is discharging those obligations—not how.

To get at the very meat and substance of the subject, let us discuss a few examples wherein it will be evident how a basic policy can materially affect administration and thereby encourage or inhibit freedom of management.

The contractor (the subsidized operator) and every affiliate, domestic agent, subsidiary, or holding company connected with, or directly or indirectly controlling or controlled by, the contractor shall keep books, records, and accounts in such form and under such regulations as may be prescribed by the Commission; and that the contractor, etc., file, upon notice from the Commission, balance sheets, profit and loss statements, and such other statements of financial operations, special reports, memoranda of any facts and transactions which in the opinion of the Commission affect the financial results in the performance of, or transactions or operations under, such contract; and that the Commission shall be authorized to examine and audit the books, records, and accounts of all persons referred to in this section whenever it may deem it necessary or desirable.

This does not mean that the Commission is invested with the authority conferred in order to manage the business of the operator. Quite the contrary, it means to me that the Commission has that authority in order that it may know if the contractor is managing his business in compliance with the applicable law and policy.

Let us take a look at pooling agreements. Should a subsidized operator be permitted to enter into such an arrangement? That depends upon what kind of a pooling agreement it is. Policy should, of course, attach to the question as to whether the pooling agreement is detrimental to the American merchant marine.

I use the phrase "detrimental to the interest of the American merchant marine" rather than the statutory language "to the detriment of the commerce of the United States" advisedly. I do not mean to distinguish between the two, but to emphasize the fact that there is no distinction between them. That which is detrimental to the interest of the American merchant marine necessarily operates to the detriment of the commerce of the United States, and nothing detrimental to the interest of the commerce of the United States can conceivably be in the interest of the American merchant marine.

This identity of interest furnishes us with a touchstone to be applied to pooling agreements and joint operating arrangements of all kinds. And the more widely we disseminate the knowledge that the prosperity of American shipping on the one hand and the prosperity of the American producer and taxpayer on the other necessarily go hand in hand, the better it will be for all concerned.

Capital necessarily employed. Frankly this subject is provoking of various interpretations. The question is now before the Commission. Therefore I cannot discuss it here today.

Conferences and contract rates offer a good example of conflicting interests and hair-line questions of regulation and management. As long as a conference agreement is not unjustly discriminatory or detrimental to the commerce of the United States, the parties thereto are entitled to the enjoyment of all their rights thereunder.

When we come to the determination as to the type, speed, and number of vessels a subsidized contractor is required to have to enable him to operate and maintain a service, route, or line to meet competition and promote foreign commerce, the question arises as to whether the Commission or the operator has the primary duty of making this determination. Traffic offered will

likely determine the number. As to type and speed, the operator should know the answers respecting type and speed else he is not competent to operate the required berth and liner service assigned him.

When we consider such matters as a proper charter policy or essential trade routes we are confronted with a different aspect of the Commission's responsibilities. While much valuable aid can be supplied to us by private industry, the decision is for the Commission alone. By the way, I understand there is quite some interest in what the future charter policy of the Commission is to be. Is my information correct?

Other subjects can be cited to illustrate into which field of competency responsibility should fall, but time will not permit.

The appropriateness or timeliness of the discussion of the regulation-management subject at this time may be questioned. My reason for broaching it now is twofold. First, the road or course chosen now by the Commission and by the industry may well presage whether future performance by the Commission and management will be in keeping with the declaration of policy in the Merchant Marine Act of 1936, and second, it is timely because the routine functions of the Commission dislocated by war are now being overhauled so as to be geared for long-range activities.

During the war the Maritime Commission became to all practical intents and purposes a construction agency. At the same time the War Shipping Administration became the largest ship operator the world has ever known. Each was in fact quasi-military or at least served military objectives. The scope and absoluteness of the authority of each of them as constructor and operator, respectively, meant that each accordingly assumed and exercised all of the functions of management and even more. As for military functions, each performed with amazing efficiency—wartime efficiency—but war is waste and wartime methods are not suited to peacetime conditions.

We are essentially creatures of habit. We fall naturally into patterns of behavior. Seldom do we voluntarily relinquish authority, because once we have used authority it becomes second nature to us. We are told that once a function becomes established in government it continues almost invariably forever. My experience supports that observation and it is for that reason that I am concerned that we should chart carefully our future course. As I have already stated, we should not permit our procedures and practices to lead virtually to legislation by contract.

To sum up my position on the invasion of management's province, it can be stated that I oppose in principle any attempt to saddle management with controls and strictures not sanctioned by law or public policy. In order to foster and encourage a privately owned and operated merchant marine we must guard against the imposition of such restraints upon the industry.

Earlier in my remarks I stated that among the obstacles which confront the American merchant marine are an uniformed public and those who wish to abandon world shipping to foreign flags. There is a third one which should also be mentioned. This third obstacle is the fellow who interprets the term private enterprise to mean a private right to secure by any means that to which he is not entitled or as a preferential right to dine lushly out of the taxpayers' pocket. We must keep such out of the American merchant marine. To men of that ilk most credit is due for troublesome and oppressive laws and regulations. They set the stage for a certain type of reformer, the chap who attacks the ill-advised with great zeal and brings about disaster.

I am seeing no hobgoblin when I express concern lest the fate of other nations overtake us. My concern stems from facts as I know them.

During World War II, I was among those participating in the planning for the occupation and postwar administration of the defeated Axis nations. In the course of this work it was necessary to study carefully the political phenomena of the rise of fascism and nazism.

Please bear with me while I point out briefly what happened in Italy and Germany prior to World War II. A multiplicity of parties and a tightly woven system of internal regulation made it virtually impossible for any government to function in Italy after World War I. Cabinet after Cabinet fell. A new premier was powerless to carry out his commitments. Dissident political elements and a maze of red tape frustrated every move. The people of Italy, in sheer desperation, turned to Mussolini—who promised corrective measures. In order to put his plans into effect he resorted to force and propaganda. The Italians are a peace-loving people. They wanted security and got it—that is, a brand of it—but at a terrible price. Too late they discovered they had no freedom left. I am reminded of the Fascist expression: "Il Fascisti tutti hanno questo merito: non discutono il capo." The Fascists all have this virtue; they do not question the chief.

Bear in mind the fact that the steps taken by Mussolini to acquire power and keep it were taken within the framework of the statute—the Italian basic law. Little by little, aided by a complacent judiciary and subservient legislation, Il Duce enslaved the Italian people—and curiously enough for a time their economic lot was greatly improved.

That which happened in Germany followed much the same pattern In that country they had what was said to be the best organized and most efficient functioning civil government in the world. Germany had a constitution—the Weimar Constitution—Hitler got his first office, that of Chancellor legally. President Hindenburg called upon him to form a cabinet, which he did. Hitler had to have an incident to grasp power. The Reichstag was fired and he used that as an excuse for securing emergency legislation. From then on the way was cleared for a welter of crime which cost the lives of millions, nearly brought about the end of civilization—and it all started legally.

The corporate state which existed in Italy of which we have heard so much was a development within the law of that country. Of course, to make it work there had to be force to insure no deviation from the established order and, of course, that meant dictatorship. I am greatly indebted to Mr. Herman Finer, formerly a reader at the University of London, for a succinct and cogent statement of the substance of the corporative system. In his work "Mussolini's Italy" he says:

"Among the many questions that divide the Italian oligarchy is this, whether the corporative system means the Fascist system as a whole, or whether it has only the narrower meaning, the regulation of economic relations between workers and employers and between the various branches of production. Does it include the militarism, the dictatorship, and all the rest, or only the problem of economic production? Does it imply a theory of just economic distribution? These are not mere academic questions. For there are many who would accept the mere planning and conciliatory functions of the corporations, but not the dictatorship in their background. There are others who want the dictatorship, as many employers do, but not the control of industry embodied in the corporations. The direct observer cannot escape the conviction that the term 'corporative' has been used, if not invented, to rouse a sense of wonder in the people, to keep them guessing, to provoke inquiry, and to contrive, out of the sheer mystification of an unusual word, at once to hide the compulsion on which the dictatorship finally depends and to suggest that a miraculous work of universal benevolence is in the course of performance. The fundamental truth, however, is that the Fascist state claims the right to regulate economic as well as other aspects of life, and has aimed at accomplishing the former through the corporate organization. The dictatorship is the necessary rack and screw of the corporate system; all the rest is subordinate machinery."

My attention has been called to the great number of governmental activities and agencies with which the maritime industry must cope. You naturally desire less governmental supervision and regulation. Your principal concern now should be that you do not get more. I warn you not to become too complacent, because I am told there are no less than 19 Federal departments and independent agencies and 67 other subdivisions that are concerned with maritime affairs. To these must be added, of course, 23 standing committees of Congress. It is doubtful if any other industry encounters more regulation, supervision, and what not than the shipping industry.

Our real cause for concern does not lie in the fact that so much of our time is consumed responding to governmental requirements. The continual encroachment of Government into the private affairs of our people would obviously extinguish all free enterprise and result in the equivalent of a corporate state. Should that happen, little else will matter.

May I ask your indulgence while I refer to one aspect of the law affecting the merchant marine—i. e., the Merchant Marine Act of 1936. It is a good law and should remain on the statute books. It places great discretion in the hands of the Commission; hence it is the manner in which the law is applied that matters most.

It is an accepted principle of statutory construction that a remedial law is to be liberally construed in order to effectuate the purposes for which it was enacted. Right here is where I differ violently with some. In the execution of my duties as a Commissioner, I take the position that the palpable intent of the Congress was that our merchant marine be privately owned and privately operated.

In construing and applying the 1936 act we should ever bear in mind the purpose for which the law was written rather than to apply strictures and road blocks to everything private industry seeks to do. At the same time the Commission must, in keeping with its plain duty, resist any attempt anywhere by anyone to evade compliance with every facet of regulation which the law or public policy enjoins upon us all.

Now there will naturally be suggestions from time to time that the laws affecting shipping be amended. Many of such suggestions will emanate from the maritime industry. Those now receiving benefits or aid under present law will be tempted to ask for more. Well, that for which you ask may indeed be proper but I adjure you to proceed with utmost care. Please never lose sight of the fact that if you do get more, you will get with it a full need of regulation. More regulation will occasion offices and more officers. If we don't watch out we may have cause to say of ourselves much the same as the American colonists had to say in the Declaration of Independence of the King of England. They said, and I quote: "He has erected a multitude of new offices and sent hither swarms of officers to harass our people and eat out our substance."

As we bring this discussion to a close let us summarize our respective responsibilities.

In your case, you must not only interpret your duties accurately but you must discharge them without being driven into action.

In our case, we must not only determine truly our job, but we must also be so organized as to insure speed and accuracy in performance. The Commission has undertaken a complete reorganization. The aim is better administration of applicable law in order that our task and yours will be less onerous. We have a right to expect of you businessmen full cooperation in the Commission's efforts to give better service to the industry. Former Commissioner Richard Parkhurst said not long ago: "The Commission was created to aid shipping—not to dominate it." I agree with him.

The ideal situation would be one wherein the maritime industry could so conduct its business as to obviate the necessity for regulation, but unfortunately such a happy estate is not ours to enjoy. However, as we accept regulation as an inevitable part of our official responsibility we should so administer that responsibility as to relieve those subject to regulation of as many costly and time consuming details as may be consonant with public duty. In a word, we should not regulate for the sake of regulation.

Therefore, since regulation is here, let us be sure that neither Government nor management invades the competency of the other. A commingling of our respective responsibilities impairs the integrity of each.

The Maritime Commission and the former War Shipping Administration, in common with many other Government agencies, have been subjected to almost continuous attack from one source or another. Some have recommended that the Commission be abolished and that a radically different organization be set up to administer maritime matters. Others have suggested that it be placed under some department of the Government, while others have argued for a splitting up of this agency among other offices of the Government.

I cannot support any of these proposals because I believe that none of them offers the opportunity for service to the public and the industry that are afforded within the framework of existing law. The Maritime Commission is now empowered to carry out our national policy to further the development and maintenance of an adequate and well-balanced American merchant marine, to promote the commerce of the United States, and to aid in the national defense.

There is nothing wrong with the law, but to meet the residual problems of war and to resolve a multitude of new ones, the Commission has, as already indicated, undertaken the most extensive reorganization in its history.

I predict that the steps we have been and are taking will not only result in getting things done but will also strengthen the confidence of the public, the Congress and the industry in the policies and performance of the Commission.

As a citizen, as an ex-serviceman, and as a public official, I recognize that a strong merchant marine is indispensable to the continued growth and prosperity of the United States and I also recognize that it is imperative that we have such a merchant marine as a weapon of national defense. And, furthermore, I believe that such a merchant marine should be privately owned and privately operated.

I accepted my present post in the hope that I could make a contribution to the maintenance of a merchant marine adequate to meet all of our national requirements. I intend to do all I can to aid in the accomplishment of that objective.

If you give the Commission your cooperation and support, we are certain of success.

Political Medicine

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 5, 1949

Mr. REED of New York. Mr. Speaker, I believe that every thoughtful American should begin to give heed to the socialistic road this Government is traveling. Just how long the taxpayers of this country can finance foreign socialistic governments presents a question of paramount importance to every person who loves liberty.

Step by step there are pressure groups demanding the nationalization of our free enterprise system—a system that has made possible our high standard of living, now envied by the entire world. It has been said by a wise man that people can lose their liberties and not miss them for a century. It has now been demonstrated that people can lose their liberties and miss them very soon—after it is too late to salvage them.

Just to stimulate thought on the part of those who love liberty and deplore our present rapid trend toward socialism, I am, under leave to extend, inserting a statement made by Merwin K. Hart, president of the National Economic Council, Inc., entitled "Political Medicine":

POLITICAL MEDICINE

American medicine—except for the licensing of physicians and nurses and certain restrictions on harmful drugs—has always been free from the meddling of Government.

If a member of your family falls ill, you get a doctor. If hospitalization is required, you can get a free bed, if you cannot afford to pay; or you can get a private room if you can pay. The services of the best surgeons are available. If you are well to do, you pay a good fee for a serious operation. In most cases, if you are of moderate means, you get the same services for less. If you can't afford to pay anything, you can get them for nothing.

Many thousands of the finest men and women in the land give their services free as trustees of hospitals.

Roughly 160,000 physicians and surgeons are today taking care of the sick and injured in America and are rendering them better service than in any other country in the world.

We can remember 45 years ago, when Germany led the world in medical development, listening in Berlin to a well-informed German medical man explaining to several surprised medical colleagues that American medicine was offering great promise of improvement. Since then German medicine and surgery have gone down, and American practice has risen to its present high level.

American medicine thus gained ascendancy because American doctors have been capable, earnest and ambitious, and have had a high sense of duty. It happened, too, because they were practicing medicine in a free country where as yet Government bureaus have been prevented from extending their tentacles over the care of the sick. Save in rare and isolated cases, Government has had no part in, and can claim no credit for, its astounding development. In fact, the contrary is true: for in those countries where the medical profession has been placed under the dictation of the state, political control has been stultifying and disastrous.

Of course, American medicine and surgery have not been perfect—what human activity is? Of course, faults can here and there be found. Some neighborhoods are without enough capable practitioners or lack an adequate hospital. Some doctors are better than others. It is true, too, that those able to pay most often get the best services—though this advantage is tempered by the earnestness and high character and the desire of most doctors to minister to the sick whatever their economic status or station in life.

In all these respects, though further improvement is still to be accomplished, great advances have already been made.

America's supremacy in the field of medicine has been possible largely through two factors. Since nowhere else on earth have these factors existed in comparable measure, nowhere else on earth have the same good fruits appeared.

The first factor is the complete liberty our fathers won for us. Liberty places in human hands the power of choice—the power to excel, the will to excel. It is the mainspring of creative effort—the power that inspired a young race to conquer and people a virgin continent, to perfect communications, invent new ways of doing old tasks, and then, still unsatisfied, to dream new dreams and bring them to amazing fulfillment. Save for the dynamic energy released by the practice of liberty, little progress might have been made in the standard of life and living upon the American continent.

The second factor is the profound impulse of Christian philanthropy. Often other peoples, usually the less successful, have condemned Americans as money getters and profiteers. Nothing could more clearly show the falsity of this charge than the lavish manner in which the fruits of American business have been poured out for humane causes. Wherever human needs have appeared, Americans have been warm-hearted and generous, giving freely of the substance earned by foresight and industry. As in no other land on earth, the earnings of Americans have been given to erect hospitals, sanitaria, medical schools, and foundations for medical research. It is this profoundly Christian impulse, made possible by the economic freedom that alone implements the will to give, that has provided American medicine with the physical facilities necessary to its development.

The important fact is that the practice of medicine and the care of the sick have reached in the United States the highest level any country has ever seen. We may be sure continued effort along the same lines will bring ever greater improvement.

CLOUDS ARE GATHERING

But there is trouble on the horizon. Politicians, at the instance of Marxist schemers, have long had their eye on this whole business of the care of the sick. Great Britain has politicalized her medicine, which means simply that political bureaucrats have stepped in, and from now on will tell doctors, dentists, nurses, and patients what to do to the very last detail.

And the same political move threatens here and now in the United States. It will rise to full height during the coming session of Congress. A supreme effort is to be made to convert our magnificent system of caring for the sick into a government-run machine of political medicine.

The fate of 160,000 doctors is at stake. But, more important still, is the stake of the 148,000,000 people to whom they minister.

If you, Mr. and Mrs. American, are willing to let Government bureaucrats tell you just how your sick and injured are to be cared for, then pay no attention to this letter. But if you are not willing, now is the time to do something about it.

It may shock many to be told that the incomparable fabric of American medicine has enemies, and that these enemies wish first to destroy it, and then replace it by something else under their own control.

Who are these enemies? They are certain groups now high in the Federal bureaucracy. And behind them, directing the fight, are sinister persons and forces of whom we shall speak presently.

What do they wish to do? They wish to destroy the freedom of American medicine by placing it under the political management and control of Government—that is, themselves. They wish to destroy the most successful medical system the world has ever seen, and substitute for it a system that has failed everywhere else.

The physicians of America, who are probably in a better position to see the disastrous consequences of political control than anyone else, are doing what they can to fight this evil thing. But they can devote little energy to it; they are out on the firing line every day in their battle against sickness and death. The whole burden of the fight to keep medicine free should not be left to them.

The National Economic Council does not enter this fight in the special interest of the medical profession. The politicians who seek to muscle in, try to smear the medical profession by sneeringly accusing the doctors of being selfishly concerned with profits in opposing political control. That's just the old Marxist tripe. We believe there is no more unselfish profession, taken as a whole, than the medical profession, and that there is no more power-hungry, grasping type of person in the world than the political bureaucrat. Yet it is not to protect one group against the predatory spoliation of the other, that we raise our voice.

We are against political control of medicine because it will be disastrous to the American people. It will inevitably lower the standards and efficiency of medical care. It will in the long run cost every American family many hundreds of dollars more each year, for the offer of free medicine is only a sucker's come-on. It will, if adopted, destroy American freedom, not only as it relates to medicine, but as it relates to our whole life. It is the door to the police state.

In the last several sessions of Congress a bill for political control of medicine has regularly been introduced. With minor alterations it will be introduced into the forthcoming session of the Eighty-first Congress. In the last session it was called the Wagner-Murray-Dingell bill. Powerful forces are arrayed behind it. The President will call for its adoption—he thoughtlessly promised it in the campaign, unquestionably at the instance of left-wingers at his elbow. Unless the American people rise, and rise now, to defend their liberties as they rose at Lexington and Bunker Hill, this measure will be fastened upon them.

WHAT THE SCHEME IS

Just what is proposed in this scheme to politicalize American medicine?

First of all, a National Social Insurance System would be set up. The Federal Security Agency would collect all "security" taxes. It would be closely integrated with the other "security" programs—for disability and old age. Vast sums of money would be required, both to support the horde of new officeholders necessary to run the system and to build up reserve-fund accounts in the Treasury. Perhaps for the first year or two taxes would be small. But that is just bait. Commissioner of Social Security Arthur J. Altmeyer, chief advocate of political medicine, who would probably administer the whole program, proposed to the Advisory Council of the Senate Finance Committee on December 4, 1947, that the pay-roll tax should be 6 percent on employees and 6 percent on employers on the first $4,800 of income.

To administer the proposed system, the whole United States would have to be divided into administrative districts, each of about the population of a city police precinct. There would be many thousands of administrative offices, together with administrators, assistants, clerical help and investigators to staff them. Before its return to the States in 1947, the United States Employment Service had over 3,000 employment offices in operation to take care of the needs of a few million unemployed.

The administration of political medicine would be infinitely more complex, for people consult doctors far more often than they change employment. And with 15 to 20 times the number of people to handle as were handled by USES at its peak, political medicine would probably require 100,000 field offices alone. It is likely that within 5 years of coming into operation political medicine would have at least a million persons on its pay rolls.

Now the chief appeal of the advocates of political medicine is, that low-cost medical coverage will be supplied to all. But it hardly takes a wizard of finance to see that if you add a million more persons to the number who have to be paid to furnish medical coverage, the total cost to all the people will be, not less but more. Some of it will be taken from pay-roll taxes, and the amounts will be more than the average family now spends in a year on medical fees. But part of the cost will be hidden in income taxes, which must inevitably be increased to pay for the mounting expenses of the ever-growing bureaucracy.

In New Zealand, where political medicine was set up less than 10 years ago, the expense today absorbs 40 percent of all revenues collected by Government, and deficit financing has been resorted to in a desperate attempt to furnish the benefits promised. Forty percent of the comparable revenues of the United States would exceed $15,000,000,000 a year.

WOULD THE HIGHER COST BRING BETTER SERVICE?

But even if the cost were several times greater than the present cost of medical service to the American people, might it not be worth it if everybody got better medical care? Let's see.

In the first place, there is no magic in the mere spending of money. The Government cannot create more physicians or nurses by appropriating vast sums to bureaucrats for the control of physicians and nurses. Only medical schools and hospitals can produce such qualified practitioners, and no Federal funds can make the numbers who will graduate greater than they will be anyway.

In the second place, the history of political medicine in every country where it has ever been tried has presented one outstanding fact. Nothing is so dear to the heart of a bureaucrat as rules and regulations. There is no record in any department of any government telling of rules that have at first been long and complicated, and have then been made short and simple. It always works the other way.

The pioneer country in political medicine was Germany under Bismarck. There, the early rules were simple. Forty years later, they had become so complicated that no single mind in the land knew them all. Dr. Walter Sulzbach, a recognized authority on the subject, has said that in the 1920's "so many changes in laws on social insurance were made that the pertinent commentaries were no longer published in book form but in loose-leaf catalog form, so that any entry could quickly be replaced by another."

The story is the same everywhere. In England at first national health insurance covered only 20,000,000 people, yet within 30 years the rules and regulations required a volume of 1,300 pages to set them forth.

In the United States, less homogeneous, where there is greater variation in every way, and where 148,000,000 people would be affected, rules and regulations would pass beyond the power of any individual to understand and interpret. Physicians, dentists, pharmacists, nurses, hospitals, and applicants for medical treatment would alike be overwhelmed by them. A vast policing system would have to be set up to enforce them. Such matters as the number and cost of all prescriptions issued by physicians and the prices the 80,000 pharmacists could charge the Government for every free prescription, would be among the many matters to be controlled. Every item of expense in every hospital would be subject to bureaucratic scrutiny. Such a system, in which physicians would have to spend hours daily writing out reports, would lead to deterioration of medical services, if not to downright distintegration.

One major respect in which political medicine would work adversely to the interest of the individual patient would be in the freedom of choice in selecting his physician.

Despite assurances that freedom of choice will be preserved, such freedom is impossible if the system is to work at all. Many advocates admit as much privately. It is generally agreed that a "capitation" system will be used in the beginning, though later it is probable that all physicians will be salaried Government employees. A "capitation" system means that each physician will be permitted to have so many patients sign up in advance to be treated by him, and when his quota, to be fixed by the bureaucrats, is filled, he may take on no more. He will be paid so much per person, or "head," each year.

So the only free choice the individual might have would be at the moment of signing up. If the physician were known to be a good one, his list would be quickly filled, and the patient would have to go looking for another whose quota had not yet been filled. If he still wanted to consult his favorite physician, he would have to do it at his own expense (assuming the bureaucrats would permit it at all), and so pay twice—once in taxes and again in fees.

It is contemplated that, in time, all patients will have to visit the doctors in public-health clinics. This is the plan followed in Great Britain. There, according to a noted actuary, Elizabeth W. Wilson, writing in the Christian Science Monitor for September 18, 1948, "Any Britisher can go to, and not—except under unusual circumstances—send for, the physician of his choice. He waits possibly an hour or more in a queue for a visit which lasts, on the average, 4 to 6 minutes." Seventeen minutes has been considered the average necessary in America for diagnosis and adequate treatment.

WHAT IS BEHIND THE DEMAND FOR POLITICAL MEDICINE?

Only in Soviet Russia has political medicine been thoroughly carried out. If the United States of America adopts political medicine, as called for in the Wagner-Murray-Dingell bill, it will have taken a long step toward state medicine as rigidly controlled as Russia's.

It is therefore no surprise to find that American Communists are working hard for political medicine. If political medicine comes, the eventual socialization of American business will be so much the easier. Conspicuous among Communist influences working for such a bill is the Morning Freiheit of New York, a Yiddish language daily read by over 300,000 persons. Alexander Bittelman, notorious Communist now under deportation proceedings, is the moving spirit of this journal.

Louis F. Budenz, ex-Communist editor of the Daily Worker, has stated that in 1930 Manuilski, then secretary of the Communist International, told a gathering of American agents in Moscow, "In the United States * * * the Communists must

launch a powerful movement for social insurance." Manuilski added that state medicine would be used to promote communism in the United States.

We have had occasion more than once to mention the ILO (International Labor Organization). The United States of America joined ILO in 1934, at the instance of Frances Perkins. And ever since that time ILO, directly and through numerous affiliates, has engaged heavily in propagandizing for social insurance, including political medicine. First fruits of its efforts was the original Social Security Act. Since then it has worked for the Wagner-Murray-Dingell bill. Indeed, it is known that ILO publications furnished much of the material from which the bill was drafted, and there is more than a suspicion that the bill was drawn in collaboration with ILO personnel.

We pointed out in Letter 200 that a pending convention of ILO, if ratified by the United States Senate, would mean the abdication by the American Government to an international body of all control over relations between American employers and employees. It is this same ILO that seems to be the author and prime mover in the present drive to fasten political medicine on the American people.

A powerful influence for the adoption of political medicine has come from within the Federal Government itself, notably from the Public Health Service and the Federal Security Agency, whose top directors have an incalculable amount of power to gain if the scheme is adopted. These persons have, in violation of the criminal statutes, been using the money of the taxpayers to influence legislation and enhance their own prestige, power, and emoluments. Conspicuous among these are three officers of the Federal Security Administration: Arthur J. Altmeyer, Commissioner; Isidore S. Falk, Director of the Bureau of Research and Statistics; and Wilbur J. Cohen, Falk's assistant.

Representative Harness of Indiana has exposed the so-called Physicians' Forum, which has been advocating political medicine, under the chairmanship of Dr. Ernest P. Boas, of New York—identified by the House Committee on Un-American Activities as being a member of no less than eight Communist-front organizations.

WHAT YOU CAN DO

Against all the sinister forces working together for enactment of political medicine, those striving to defeat it have one chief reliance. That is in the innate good sense and love of liberty of the American people.

The American people do not have to have this scheme, fathered by communism, mothered by socialism, and wet-nursed by power-hungry bureaucracy, imposed upon them. It is not inevitable. Nothing that limits freedom is inevitable so long as enough free men and women have the courage to stand up and fight against it. The hour is late, but there is still time.

Army Organized Reserve

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 5, 1949

Mr. SIKES. Mr. Speaker, one of the significant steps taken to strengthen the Reserve components of the armed services during the past year was an Executive order issued by the President of the United States directing more adequate recognition and expeditious organization of the Reserve components. Vigorous work on the part of the Reserve organizations is credited in large measure with the issuance of the President's directive. A very fine statement on this entire subject was published in the Reserve Officer for December 1948. It was written by Col. William H. Neblett, USAFR, who was president of the Reserve Officers' Association. Colonel Neblett's splendid article is in keeping with the excellent service he rendered the Reserves, and I include it in the CONGRESSIONAL RECORD at this point:

A DEADLOCK IS BROKEN—WITH THE ISSUANCE OF AN EXECUTIVE ORDER A NEW ERA SEEMS IMMINENT FOR THE RESERVE

(By Col. William H. Neblett, USAFR)

The deadlock between Regulars and Reserves has been broken. It took the President of the United States to break it. Because of the failure of the Regulars to appreciate the great asset which national defense has in the Reserves, all efforts to get them to organize the Reserve since VJ-day have failed. With his Executive order of October 15, 1948, the President has made us into a living military organization and set the pattern to build us into a powerful citizen force.

ROA would make a big mistake if it rested upon the President's order without a militant program to assist in its development. We will not help the program by viewing our task eye to eye with the Regulars through the peephole which they have always regarded us. Already the professionals are raising the old bug-a-boo of no funds and the lack of facilities for training. The claim of no funds never had any foundation. Funds could have been provided for the training of the Reserve if the Regulars had wanted a Reserve. All they had to do was to ask for an allocation to the Reserve of a part of the money appropriated for them.

The President has said that proper allocation will be made in the 1949–50 budget. ROA believes that Congress will approve this allocation with an overwhelming majority. The Reserve has always had enthusiastic support from Members of Congress. President Truman, in all of his official and State papers on the subject of military preparedness, has consistently urged the organization of our military forces as a predominantly citizen army.

The Regulars were strong enough at the end of World War II to ignore an act of Congress which required them to transfer every man released from the services to a unit of the Organized Reserve. Releasing all of the men without transferring them to the Reserve as required by congressional act was a new departure from the rule of constitutional government. ROA believes that the Regulars' extraordinary assumption of power, great enough to repeal a Congressional act, has been effectively checked and changed in the right direction by President Truman's order.

The Regulars object to the organization of the Reserve into real live units because they say it would be too expensive. It is felt that organization of the Reserve as directed by the President will be less expensive than the great horde of pensioners which is being built up by easy retirement provisions made for those who have had relatively short enlistments in the great professional force which the regulars propose to maintain.

Our armies in World Wars I and II were over 98 percent civilian. The sprinkling of 2 percent Regulars took and held, throughout both wars, the commands solely in themselves. They did a good job, but in modern times there is considerable disagreement as to whether or not they did a better job than the citizen soldiers would have done if they had been allowed to hold some part of the high command. The citizen soldier had no chance to show how good he would have been in command. The citizen soldier was not permitted to compete with the Regulars. The Regulars had control; they carefully guarded it. Since the end of the shooting war all plans which have come out of the Pentagon place the command solely in the Regulars. The Regulars have already set up a command structure which leaves no opening for the Reserve officer above company grade. This situation must be changed. The President's order is the beginning of the change.

History will probably record that President Truman's Executive order was the beginning of the decentralization of professional control of our military forces and the greatest of all democratic moves to bring the control of our military forces where it belongs—into the hands of our citizens. No longer will the citizen soldiers be considered just a "number" or a "body." This unenviable position occupied by him might have gone on for years if it were not for the wise disposition made by the President. It is probable that the President had in mind, when he made the order, that the great victories which our citizen armies won in World Wars I and II should be credited to the civilian soldiers in the proportion of 98 percent to 2 percent, which were the proportions occupied in these wars by citizens and Regulars. Our citizen armies destroyed the great professional armies of Germany and Japan, the two nations which invented the modern professional army. It follows that citizen armies are more efficient than professional forces.

We were roundly scored at our Denver convention by General Bradley because of our criticism of the professionals for not providing a plan for the reserves. It seems that we get along better with the regulars than the regulars do among themselves. Speaking at Des Moines, Iowa, on Navy Day, General Bradley said, according to the press, that "Generals and admirals are blind to the future, aspirants more concerned with careers than their obligations, reckless specialists intent on beating their own drums." General Bradley went on to say that these generals and admirals should put "service to the Nation before the old school tie. * * * The United States cannot stake its national defense requirements on a popularity contest where glitter, glamor, and shrewd public appeal become more important than military judgment. You cannot risk your security to a bout for public favor and congressional indulgence." We hope that General Bradley will put some of these fine words into orders which he has the power to do.

We believe that the services, for whom the public has done so much, should settle their quarrels among themselves before they criticize reserves for whom the services have done so little. General Bradley went on in his speech to say that "If a budget dollar is to produce a dollar's worth of defense, then it must be apportioned to the services in the terms of D-day and follow-up missions—with likely enemies in mind." We wonder what General Bradley meant by the apportionment of the dollar. We hope he meant that a considerable sum of the budget dollar would be apportioned to the reserve, upon which our national defense has always rested in an emergency and is likely to continue to rest in the future. However, we think that what he meant was apportionment among the regular services with the same old 1-percent allocation from the military budget to the reserve. If this is what he meant, the President's order is in time to save the citizen force and to begin to build our defenses in accord with our time-honored national policy, a policy which has been much talked of but for which little had been done up until President Truman signed the Executive order organizing the Reserves.

Minor advantages of this order are that it will give Reserve members the opportunity to gain credits for inactive duty training pay, for promotion, and for retirement. The major advantages are that the order is the beginning of the establishment of defense forces which will be so organized that they will be able to meet the menace of atomic and bacteriological weapons, which are the only types of weapons an enemy can now use with effectiveness against us.

In the Church of Brooklyn's Poles

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by the House, I include with these remarks the following very interesting article entitled "In the Church of Brooklyn's Poles," by Margaret Mara, which was published in the Brooklyn Eagle of Friday, December 24, 1948.

I am proud of the fact that Our Lady of Czentsochowa Roman Catholic Church, of which Rt. Rev. Msgr. Boleslaus Puchalski is the founder and only pastor, is located in Brooklyn within the confines of the congressional district which I have the honor to represent.

IN THE CHURCH OF BROOKLYN'S POLES

(By Margaret Mara)

Old World customs still prevail in borough churches founded by immigrants, going hand in hand with the marked piety of the people in the congregation. Our Lady of Czentsochowa R. C. Church on Twenty-fourth Street, between Third and Fourth Avenues, is one of the churches I have in mind. It was founded by south Brooklyn's Polish colony 52 years ago and built at a cost of $80,000 contributed by parishioners who largely were hard-working laborers. It was erected on the site of the first parish church, a frame building which was destroyed by fire.

Gothic in design, the brick and sandstone church has three steeples, the tallest of which is 175 feet from the ground. Striking contrast to the immediate neighborhood of factories and shipyards a block away, Our Lady of Czentsochowa Church draws the wondering eyes of motorists on the nearby Belt Parkway.

LOVE THEIR PASTOR

The houses on Twenty-fourth Street are modest in the extreme, but they are neat and cheerful looking. The parish has a strong hold on the affections of its people, nurtured by the venerable Right Reverend Monsignor Boleslaus Puchalski, founder and only pastor of the church.

Old Poland is ever present in Our Lady of Czentsochowa Church. Its famous St. Cecelia Choir sings typical Polish hymns and on special occasions the congregation participates in a revered old-country devotion.

This particular ceremony is the lowering from the high altar of a large and beautiful painting of the Miraculous Mother of Czentsochowa. The painting is lowered slowly before a congregation that usually crowds the church to the doors. First seen is the Crucifixion, then the head and shoulders of Mary with the Child Jesus in her arms, and finally the entire picture is in sight. At this point the congregation falls on its knees in prayer.

HONOR THE SEASON

Children from other parts of the borough as well as those in the parish attend the School of Our Lady of Czentsochowa, which is conducted by nuns of the Order of the Holy Family of Nazareth. The gleaming windows of the school are now decorated with sketches made by the children in honor of Christmas. The simplicity of the decorations is particularly appealing. There is no tinsel or ready-made wreath. Instead, the Star of Bethlehem is depicted, and the humble stable.

Our Lady of Czentsochowa parish, cherishing as it does the colorful customs of prewar Poland, seems to me a wonderful and inspiring part of life in our borough. Its presence enriches us, and I, for one, am grateful.

Congress and Its Rules

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun-Times of Wednesday, December 29, 1948, which is in agreement with my proposal to amend the House rules to limit the power of the Committee on Rules:

CONGRESS AND ITS RULES

Representative ADOLPH SABATH has rendered many services to the cause of progressive legislation during his long career in Washington. He now has the opportunity to come up with one which might eclipse all the rest.

Representative SABATH'S prestige and influence are needed if the progressive movement to reform the House Rules Committee is to succeed. Representative SABATH is chairman of that committee. If he arose on the first day of the Eighty-first Congress to ask that its powers and privileges be revised, his counsel would probably be respected.

A change in the Rules Committee's position is essential if progressive legislation is to have a fair hearing during the Eighty-first Congress. A change is essential if the lower House is to become permanently more responsive to the people's will.

Under both Democratic and Republican leadership, the Rules Committee has been obstructing legislation for a long time. During the Eightieth Congress its power to strangle was dramatically illustrated when it single-handedly doomed the Taft-Ellender-Wagner housing bill.

The housing bill had been passed by the Senate and approved by the House Committee on Banking and Currency. But the Rules Committee, which is supposed to be a legislative traffic cop, undertook to substitute its own judgment for that of the proper House committee.

It refused to permit the House as a whole to consider the T.-E.-W. bill, and even substituted a bill of its own. The House never had a chance to decide whether its membership favored T.-E.-W. or something else.

Several proposals have been made to deal with this situation. Representative HERMAN P. EBERHARTER, Democrat, of Pennsylvania, suggests that when the Rules Committee bottles up a bill which has won approval of another committee any member of the latter should be empowered, after a suitable interval, to obtain a House vote on it.

Representative A. S. MIKE MONRONEY, Democrat, of Oklahoma, proposes that the Rules Committee be required to report every bill, favorably or unfavorably, within a specified time.

Representative CHRISTIAN HERTER, Republican, of Massachusetts, suggests that the Rules Committee function as a "second-thought" agency. It could return to other committees any legislation it did not approve; but if the committee sent the legislation back a second time, the Rules Committee would then be required to submit it to the House.

Whatever method may be adopted, some means of returning the Rules Committee to its original function—that of regulating legislative traffic—is clearly desirable. This is not a partisan issue. Nor is it a question of committee personnel, to be solved merely by enlarging or changing the membership.

No matter which party runs the committee, no matter whether the leadership is progressive or conservative, it is undemocratic to give a few men unlimited power to dictate the content of legislation or to decide whether the House shall consider it.

On the opening day of Congress the House can change its rules by a simple majority vote. For about an hour on that day the House will have the power to restore the original function of the Rules Committee without subjecting the proposal to a committee veto.

Chairmen do not often sponsor a movement to clip the wings of their own committees. Representative SABATH would make history and score a notable victory for progressivism if he violated that custom and assumed leadership of the movement for a more democratic House.

The Preservation of a Free Economy

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Wednesday, January 5, 1949

Mr. O'MAHONEY. Mr. President, on December 10 last, at the invitation of the New York Security Dealers' Association, I spoke to that group at the Waldorf-Astoria Hotel in New York City on the preservation of a free economy. I ask unanimous consent that my remarks on that occasion may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PRESERVATION OF A FREE ECONOMY

Your committee on public relations in its memorandum advising members of this meeting and of the identity of the speaker, stated that it felt it appropriate to have a representative of the Government speak in view of what it called the confused thinking upon the part of many since the election. There is really no reason for confusion, provided you have thrown away the dream books written in Washington which were read so widely prior to November 2.

This Government of ours is an American Government with no interest to serve but that of the people. You have a President from Missouri, a Vice President from Kentucky, each of whom has a background rich in the tradition of personal courage and character which have made this country great. Each of them is wholly loyal to the traditional concept of American Government and

American business, namely, that there should be freedom and opportunity for all.

You will have in the Eighty-first Congress a group of representatives fresh from the people in every State, with only one ambition, namely, to serve the general welfare.

President Truman is guided by a firm purpose to lead the world to peace. He knows that cannot be accomplished unless we maintain a prosperous and stable economy here at home. He may be depended upon to continue as he began with his effort to balance the budget, to avoid every possibility of depression, to hold Government expenditures down to those which are essential to the preservation of a high level of production, while at the same time to do those things which only Government can do to win the peace. His over-all objective to accomplish this purpose is to maintain a high standard of living for all of the people. One fact stands out—neither the world nor the United States can afford another depression, and it is the solemn obligation for statesmanship in business and in Government to make certain that such a catastrophe is avoided.

THIS IS A TIME FOR STATESMANSHIP

Certainly if ever there were a time for clear thinking, it is now. If there ever was a time for statesmanship in business and in Government, this is it. What we think and say and do must be viewed against the background of world events. Nothing that we can say or do can have the slightest effect except within the structure created by the world problem which, reduced to its bare bones, is the struggle between communism and democracy, between the philosophy of those who would have the economic affairs of the people managed for them, and the philosophy of those who believe that these affairs must be managed by the people themselves. I have no hesitation in saying that the people of the United States have accepted the destiny of this country to play a decisive role in world affairs for the preservation of individual freedom and real democracy, and that in domestic affairs they are committed to working out a program of social and economic progress with emphasis upon the humanitarian rather than on the mere administrative objectives.

If this be true—and certainly it is true, witness our bipartisan foreign policy and the declaration of all political leaders in the recent campaign of their devotion to social progress—if this be true, I say, then clearly we must measure every political and economic proposal by the effect it has on the power of the people to control their own political and economic destiny.

We have a world problem only because the power of the people to control their own affairs has been undermined in our time. It has been undermined by the concentration of both political and economic authority, but we shall not begin to understand the significance of the events of which we are a part unless we realize first of all that the concentration of political power in totalitarian government has always been preceded by concentration of economic power. The rise of Hitler would have been utterly impossible if there had not already been erected in Germany a concentrated economic structure that he was able to take over by a wave of the hand. The concentrated arbitrary power of Lenin and Stalin was erected only upon the foundations of the old concentrated economic power of the czars and their nobles. The people of Russia did not direct the old regime any more than they direct the new regime now. The change from the czars to the Communists was merely an exchange of dictators.

WAR WAS WON FOR FREEDOM

World War II was a struggle between the peoples of the democratic nations of the world who believe that the people should control their own destiny, and totalitarian dictators who wanted to turn back the clock of reaction by reestablishing arbitrary central power in the world. As a matter of self-preservation, the Communist dictators aligned themselves in that struggle with the democracies. We thought during the war that after victory they would see the value of democracy, but we are now learning they are quite as steeped in their totalitarian ideologies as when, before they were attacked, they had made common cause with Hitler. The war was won for democracy because the habits of freedom had made our armies and navies and air fighters more resourceful, more competent, more effective as individuals than were the regimented hordes of the dictators. We know perfectly well that the capacities of the fighting men of America were not measured by their origin, their calling, their social or economic status. Whether they were recruited from the ranks of labor, the ranks of management, agriculture, business, or the professions, their competence was the result of the fact that they were the products of free institutions. Surely we have seen enough to know that the future progress of all the races of men depends wholly upon the degree to which the opportunities of freedom are extended to the peoples of all nations.

This, then, is the background against which we must view the economic problem in America. This is the background against which we must examine the plans and purposes of business as well as the plans and purposes of government.

NO ONE IN WASHINGTON WANTS POLICE STATE

I undertake to say to this group that despite all the slogans of the political campaign, there is no purpose among the members of your Government, whether they are in the executive or the legislative branches, to establish in the United States a police state. The time has come to take off the blinders of mere partisanship, of mere factionalism, and to look at facts exactly as they are. When this is done, we shall have much better eyes to appraise our problem and to see precisely where we want to go. I feel very strongly that it ought to be possible to recruit among the members of this organization a group of militant evangelists dedicated to the preservation of a free economy without any thought or purpose of hostile action against any group or any individual so long as such group or individual remains loyal to the American tradition of freedom and opportunity for people. We shall find the solution of our difficulties, not in punitive action but in constructive action, not in the punishment of alleged or, indeed, of real offenses but in the framing of an economic structure that will protect an expanding economy of opportunity against the restrictive and deadening influences of economic concentration. I undertake to say that the difficulties in which the security dealers find themselves at the present moment are not due to any deliberate plan upon the part of any person or any group to create such a situation, but solely to the fact that we have not understood the forces which have been drying up the flow of investment capital and making difficult the establishment of new free, competitive enterprise.

No one knows better than the members of this organization that comparatively few investment houses have for years been doing the bulk of the security business. This was made clear during the study of the Temporary National Economic Committee. It is equally clear now. During the period from January 1934 to June 1939, six New York City firms handled more than 57 percent of all security issues. During the period from January 1938 to April 30, 1947, the percentage fell off slightly. There were more issues, but the same six firms managed more than 51 percent of the total. The fact that the percentage of concentration fell off in the more recent period and that the number of issues increased shows that there has been a slight gain, and that all the talk in Washington during the past 16 years about economic freedom has not been wholly without avail. At the same time there has undoubtedly been a steady increase in the area of private placement by financial and insurance institutions. I do not cite these figures as evidence of any direct purpose among investment bankers to promote or to retard concentration. I cite them only to illustrate the cold facts and to indicate that if it is desirable to bring about a broader distribution of this type of business, the time has come for us to understand the forces which of themselves promote concentration even without any planned purpose on the part of any group.

In saying this, I do not wish to be understood as meaning that concentration has not been actively promoted in some instances. I know, for example, that many mergers of industrial companies have been brought about by investment houses for the purpose of issuing new securities. Industrial engineers and investment bankers have been known to look over the field seeking to discover firms which, for a fee or a commission, could be brought together in corporate merger. The result inevitably is to narrow rather than to expand the field of competition, to increase concentration of economic power, and, therefore, to some extent to reduce the number of security issues. The practice also results in denying to the far reaches of the country, to the extent to which the mergers are carried out, the normal development of a free, competitive economy.

All that, however, I believe is only an incident to the progress of concentration, although, of course, in the early days of this century industrial mergers, out of which came some of our well-known industrial giants, were promoted by those who were primarily concerned in the fiscal phases of the transaction.

GROWTH OF FEDERAL GOVERNMENT

What I desire to call to the attention of this group is that neither in business nor in Government has there been a clear appraisal of the differences between little business and big business, nor does the public understand the degree to which big business has come to dominate the entire economic and social scene. The Government in Washington has expanded, not because of any plot upon the part of any Member of Congress or of the Executive to increase Federal powers, but because the progress of economic concentration in the field of big business has turned the attention of little and local businessmen all over the country to Washington and to the Government as a source of protection and of necessary capital. It was clearly shown during the studies of the Temporary National Economic Committee that the savings of the people through banks and insurance companies flow into the financial centers where, under central management, they are available, practically exclusively, for the use of big business. The head of the greatest insurance company in the country testifying only last week before the Joint Insurance Committee of the New York State Legislature, pointed out that more than $14,000,000,000 of the total of $37,000,000,000 in insurance issued by his company is supported by weekly and monthly premium payments of less than $10 a month. More than one-third of the insurance policies issued by this company are carried by individuals in the lower income brackets who can afford to pay their premiums only weekly or monthly, and whose pennies flow from all parts of the country into the central reservoirs of investment here in New York City. Thus it was that the pennies of the poor built the Empire State Building and Rockefeller Center. The head of another great national insurance company with its head offices here in New York City told the Tem-

porary National Economic Committee almost 10 years ago that his company was not interested in a loan of less than $250,000 and, as I recall, that it would prefer not to be bothered by loan applications for less than one-half million dollars.

That is understandable, of course, when one considers the annoyances of the detailed work necessary to serve the small loans which little business wants, but it also illustrates why the demand is continually rising from all parts of the country for Government loans to little business. The people turn to government for action only when the service they need is not provided for them by the institutions which exist. So Congress is constantly under pressure, not from any radical group, not on the part of any State planners, not upon the part of any advocates of a police state, but upon the part of the people themselves to provide, through RFC or otherwise, sources of Government capital to supply the need which the expanding economy of the country demands but which is not met by the loaning institutions we have.

The dispatches from Hollywood, Fla., tell us that at the meeting of the Investment Bankers' Association there this week the retiring president, Mr. Julian H. Collins, declared that there is still opportunity for a thriving private business for resourceful and aggressive firms in spite of what he called the persisting drift toward socialism in the United States. I say to you that if there be a drift toward socialism it is due to the fact that industrial and business statesmanship has not yet looked at facts as they are and has not clearly appraised the conditions which are promoting the drift toward centralism. More than that, industrial and financial leaders sometimes seem to give more concern and attention to things they fear may happen than to the things which are taking place under their own noses. Only the day before yesterday, for example, the Washington correspondent of a well-known insurance journal came to me during the hearings on business profits and showed me a telegram from his editor directing him to interview me and get a good story on the legislation to provide Federal regulation of insurance which, the editor told him, I was busily engaged in preparing. There was not even the slightest basis for the report, and the massage was the first and only knowledge I had had about my alleged activity. This is another illustration of the wisdom of the remark made a few years ago by a very competent lawyer of the Far West, who said, "The worst things in life seldom happen."

If, instead of planning defenses against things that are not happening in government, business and financial leaders would devote their attention to the things that are happening in business, better progress would be made all along the line both in government and in business. This would be particularly true if business leadership would devote itself to a constructive campaign for the preservation of the free-enterprise system, in which it professes to believe, from internal dangers.

BIG-BUSINESS DOMINANCE

Now let me turn to the amazing fact that out of a total of 3,316,000 business firms and persons engaged in business in the United States in 1939 employing 28,707,500 persons, 26,900 firms, less than 1 percent of the total, in fact only eight-tenths of 1 percent of the total, employed 15,955,700 workers, or 56.6 percent of all. In other words, all the business firms in the United States employing less than 100 persons, though they constitute 99.2 percent of the total, actually employ only 44.4 percent of all the workers. More amazing, the 4,900 firms, each of which employs 500 or more workers, though they constitute one-tenth of 1 percent of the total, employ 40 percent of all workers.

These are not my figures. They are not the figures of any New Deal propagandist. I have taken them from page 25 of the study on Small Business: Its Place and Problems, written by Dr. A. D. H. Kaplan, of the Brookings Institution, for the businessmen's Committee for Economic Development and published by McGraw-Hill, the New York publishers, who, by no strain of the imagination, can be called propagandists for the police state. They show the degree to which economic concentration has already advanced and is continuing to advance.

This is the most significant social and economic fact of our time. The little firms, the little businesses, see the savings of the communities in which they live siphoned off into the big city reservoirs of capital where they are available, not for the free, independent developments of the communities in which these savings were earned, but for distribution to the big-business enterprises which finance their capital needs either by loans from the huge fiscal institutions of New York or from some Government agency.

So I say to the investment fraternity, don't blame the politicians for the growth of big government. Blame yourselves, because you have not taken the initiative to provide the capital which a growing free economy demands; nor have you taken the necessary steps to protect little business from being overwhelmed by centralism. If you permit the free economy to starve for lack of private capital, don't complain if the people turn to Government for what they want.

Now, I do not pretend to say that business leaders alone are responsible for this condition. Government leaders, too, must share the responsibility. The Reconstruction Finance Corporation, in announcing its willingness to act upon small business applications for loans, has made it a practice of asking local bank participation, but local banks are reluctant to participate for two reasons: First, perhaps because they would like a better rate of interest than proposed; and, secondly and primarily, because the banking arm of the Government frowns on long-term loans by commercial banks. So there are many cases of businesses throughout the country who, because they cannot get their capital needs from the RFC because of Federal Reserve or Comptroller of the Currency regulations, turn to the insurance companies of New York or sell out to big business, thus affording an opportunity for big investment bankers to issue new securities for a new merger.

WHAT IS THE REMEDY?

Well, you say, what are we going to do about it? First, we must recognize not only the difference between little business and big business, but the difference between individual business and organized corporate business. We must recognize the fact that in present circumstances corporations with unlimited charters are permitted to set up any number of subsidiaries and affiliates and engage in any number of businesses their directors desire. Accumulated earnings in the hands of the big corporations seek new avenues for investment, and so they go into nonrelated lines as well as into actual subsidiary lines. They expand out geographically into a dozen, a score, or even more States, and business institutions in localities far from the central office of the mother corporation are under the supervisory direction of the central managers who sit at the top of vast industrial empires which are in fact governed not by the real owners, the stockholders, but by employed experts. Thus, local economic independence is broken down and in its place is built a managerial economy which sets the pattern for the managerial state.

If local economic independence is broken down, how can you expect to escape the expanding power of the Government in Washington? The growth of the Federal Government and the undermining of local economic independence are two aspects of the same thing. There can be no cure by mere railing against the growth of government if we pay no attention to the preservation of local economic independence. It is idle to talk about States' rights in the political field when we abandon States' rights in the economic field.

The security dealer of a big city like New York is just as much a victim of this drift as are the little businesses of the country, and as are the localities which are turning to Washington for aid and assistance.

Let no one forget that the Government has expanded steadily ever since the close of the Civil War, no matter what political party was in power. Business has clamored against every extension of Government activity. It denounced the establishment of the parcel post system under the administration of President William Howard Taft just as vigorously as it denounced any of the legislation of the New Deal. The Federal meat inspection law demanded by Teddy Roosevelt at the turn of the century was roundly condemned as an adventure in socialism. It was President Harding who signed his name as Chief Executive to the Packers and Stockyards Act which gave the Secretary of Agriculture more power to regulate the packers and stockyards industry than was ever granted by any administration to any Government agency.

We are in the hands of events, and if we do not control the events, the events will control us. I have no hesitation in saying to you that neither President Truman nor any responsible leader of the Democratic Party in Congress, nor, for that matter, any Member of Congress, wants to expand the power of government for the mere sake of building up an all-powerful state. The Federal power grows merely because in the modern world with modern technology and the modern corporate system, the concentration of economic power proceeds relentlessly with the inevitable result that the people turn to Washington for relief. Unless we learn the solemn fact that economic concentration is but the prelude to political concentration, we must be prepared for that eventuality.

THE PRESERVATION OF CAPITALISM

Over and over again during the past 15 years I have expressed the personal opinion that the preservation of the capitalistic system depends upon our recognition of the characteristics of the modern corporate system as it has developed. It is the dominant social and economic institution of our age. It is necessary enough. Without the modern corporation, we couldn't possibly develop and use the instruments, to say nothing of the tools this new age demands, but it is the instrument through which we have permitted economic concentration to proceed. I talk about the degree to which economic power has been concentrated in the hands of a few managers, but by that I do not mean and never have suggested that big business should be broken up. I do say that we shall not be able to prevent this continued drift toward centralism in business and in government unless we make up our minds definitely to define by Federal law the powers, the authority, and social responsibility of the corporation that does business in the field of interstate and foreign commerce, the regulation of which, by the Constitution of the United States was committed to the Congress of the United States, for otherwise, the position of little business will become steadily weaker and the power of government steadily greater.

Though I have introduced a bill in Congress after Congress to provide for Federal charters, I do not pretend to say that any single person is competent to define all these powers and responsibilities. I feel that it is highly desirable that there should be a conference of business experts, of corporate-law experts, of consumers, of farmers, and of workers—called by authority of law—to study this problem and to present to Congress its recommendations for a national charter law. We need an economic constitutional convention now just as much as our predecessors after the American Revolution needed a political constitutional convention.

Labor and management have already made great progress in developing a better relationship. Universities have established seminars in which labor and management leaders confer and study their problems with most beneficial results. I am convinced that there is a much greater degree of agreement among all affected by this problem than there is disagreement, but it is the disagreements that get into the headlines, thus cultivating the fears which hold business leaders back from the cooperation which is essential to a sensible solution of the problem before us.

Security dealers have so vital an interest in this problem of concentrated economic power, they have so vital an interest in the free flow of capital, that they could well take the lead in promoting this basic understanding of the meaning and effects of continued concentration, so that our capitalistic economy can demonstrate to all the people of the world that freedom makes for stability and progress far better than any system of arbitrary central power.

You gentlemen are professionally concerned in the investment of capital. You are primarily concerned in the investment of risk capital. You have seen the flow of savings become steadily more institutionalized. You have seen private placement and investment bankers and savings institutions dry up the "free market" for money, and I wonder whether, like most of us in Government, you are not overlooking the greatest new source of money seeking investment. The Treasury of the United States in World War I, by the issuance of savings stamps and savings bonds in small denominations of $100 and less, opened the eyes of the business world to the tremendous possibilities for new capital existing among the rank and file of the people. Full employment in our time has created a new reservoir for risk capital in the savings of the people in the lower and middle income brackets who are now earning more than they ever earned before.

How many of us realize that the total amount received in income during a single year by taxpayers under the 1948 tax law who receive an annual income of less than $2,000 is more than three times as great as the aggregate sum received by every income recipient in the United States whose annual income is over $25,000. The millions in the under $2,000 group receive a total of $35,300,000,000, whereas all over $25,000 receive only $10,800,000,000. Indeed, the total receipts of all individuals with an income of over $10,000 amount only to $19,800,000,000, whereas all under $5,000 a year receive a sum more than five times greater, or $103,700,000,000.

If business leadership will join with Government leadership to protect the investment of these little fellows at the bottom of the economic scale from being wiped out by the operation of economic concentration, we shall then be able to save both the free economy and the free political system which are the traditional ideals of the people of the United States.

The Seattle Times

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Wednesday, January 5, 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an account in the press section of the January 3 issue of Newsweek magazine of an outstanding public service performed by a newspaper and newspaperman in the State of Washington. The public service rendered by the Seattle Times, of Seattle, is typical of the fine work being done by many newspapers and newspapermen throughout the Nation. In this case the reporter was a veteran ace editor, Mr. Don Magnuson; his city editor is Mr. Henry MacLeod, and his managing editor is Mr. Russell MacGrath. They all deserve commendation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DETECTIVE STORY

Slowly, as he kept handing the prisoner a chain of cigarettes, the reporter's steel skepticism crumbled into sympathy. The lifer swore his innocence, and somehow Don Magnuson believed him.

Then back in the Seattle Times newsroom Magnuson told Henry MacLeod, his city editor: "It would take some time and cash. But we might have one chance in four of getting a pardon." "Where a man's liberty is at stake," MacLeod snapped back, "a 25-percent chance is good enough for me."

It took cash and it took time, but last week the Washington State penitentiary gates clanked open, and Clarence Boggie, after 13 years of prison for a murder he almost unquestionably didn't commit, sped home for Christmas with his aged parents.

TIPS

A letter, the kind of letter with which newspapers are deluged every day and often discard simply as crank mail, unfolded to The Times the strange case of prisoner No. 16587:

In 1935 in Spokane the ruddy, talky Oregon logger, then 42, was doomed to life for the brutal blackjack murder two and a half years before of old Moritz Peterson. More than anything else, an overcoat convicted him. Boggie wore the murdered man's coat, which he swore he bought in a pawn shop.

Over the seemingly endless years No. 16587 amassed an imposing heap of documents, including a 720-page transcript of his trial, to back his innocence. He talked many people, among them Warden Tom Smith, into believing his story.

MacLeod kept the letter. When Magnuson was going to the Walla Walla prison last January on another story, the city editor handed it to him. See Clarence Boggie, he ordered. Magnuson returned convinced.

ON THE TRAIL

For 6 months the tall, lean, graying 37-year-old reporter pored over evidence. He and other Times men went on the road—2,000 miles through three States—to grill jurors, friends, cops, witnesses; anyone who might hold even a hint of a tip.

A 15-year-old trail is a hopelessly cold path to follow. Most persons important to Magnuson's search had moved. At least nine were dead, and even Boggie's parents required an 8-hour sales talk before consenting to an interview. Sensitive, the Spokane officials were reluctant to help.

But by late August Magnuson had plowed up enough evidence that, if it did not conclusively clear Boggie, at least proved thin the grounds on which he was imprisoned. These facts the reporter presented to Gov. Mon Wallgren and told to the public in a flood of Times stories.

RECANTINGS

Three of the four Boggie jurors The Times could find had confessed that, after all, maybe they hadn't been so positive, and Magnuson pointed out, among other things, that the state's star witness admittedly had not seen the slayer's face.

Too, all Magnuson's sleuthing pointed squarely to another suspect, a hotel porter with a crablike gait, who before the killing had publicly brandished a homemade blackjack. The victim had gasped to detectives his attacker was a porter. Witnesses described the murderer as a man who walked like a crab. Boggie never walked that way.

Yet Governor Wallgren was wary. After all, even before the murder, two robbbery convictions had blotched Boggie's record.

Then 2 weeks ago Don Magnuson turned up the clinching clue. In the home of a retired Spokane detective he uncovered an old police file showing that 2½ years before five witnesses positively identified Boggie as the killer, the same five had positively put the finger on another suspect. Wallgren signed a pardon.

MAGNUSON'S WAY

The case of 16587 is the second whacking scoop Donald Hammer Magnuson's methodical, plodding reporting has uncorked for the Times. In 1942, at the height of the wartime labor drought, he posed 2 weeks as a shipyard worker to ferret out an exposé of loafing in the yard.

At the University of Washington, an instructor advised him to give up his journalism course, that he'd never make a newspaperman. Magnuson graduated anyway, in 1931, smack into the middle of the depression. He was a gas-station attendant, brickyard worker, riveter, and $1-a-day wheat harvesting hand before he finally got a job in 1934 on the little Olympia Daily Olympian.

There he covered everything from society to murders and got a scoop on the Weyerhaeuser kidnaping. He turned off the lights in a self-service elevator, scooted up to the floor where G-men were booking the kidnapers, and then listened quietly through the ajar elevator door. He went to the Times in 1941.

No sentimentalist, Magnuson can be as cynical, or as compassionate, as the next newsman. Somehow, though, other reporters know he means it when he says as he did on the Boggie story: "I cry inside."

Puerto Rico's Inauguration

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 5, 1949

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Washington Daily News of January 3, 1949:

PUERTO RICO'S INAUGURATION

The inauguration of Luis Munoz-Marín yesterday as the first governor of Puerto Rico to be elected by its people was a significant event for the United States and for world democracy, as well as for that island itself.

In the 50 years since Puerto Rico was taken from Spain its governors have been appointed by American Presidents. Some were capable men who devoted themselves to their duties, others were political hacks or plain misfits. Not until 1946, when President Truman appointed Jesus T. Pinero, was a Puerto Rican chosen for the position.

Mr. Truman and the Eightieth Congress wisely provided that the island should elect its own governor, by popular vote. Last November Mr. Munoz-Marín was elected overwhelmingly, with more than three-fourths of the qualified voters casting their ballots, thus receiving a clearer mandate than Mr. Truman, or, indeed, any American President in modern times has obtained.

Puerto Rico, overpopulated as it is, faces grave economic problems even in these prosperous times. Beyond desiring greater autonomy, its leaders themselves have not agreed upon what the island's future political status should be—statehood, independence, or continued existence as a Territory.

But for the present Puerto Rico is a part of the United States and its people are American citizens. It is notable that, whatever their feelings toward the United States, Puerto Ricans have so absorbed the principles of democracy that communism has made little headway there.

In permitting Puerto Ricans to elect their own governor, the United States has taken an important step toward carrying out a goal of the United Nations—greater self-government for territories and possessions of the great powers.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

PROVIDENCE, R. I., *January 4, 1949.*
Hon. JOHN E. FOGARTY,
House Office Building,
Washington, D. C.:

Following is resolution believed self-explanatory:

"Whereas the Christian world is angered and saddened by the flagrant disregard of the dignity of the human personality in the arrest and imprisonment of Joseph Cardinal Mindszenty by the Hungarian Government: Be it

Resolved, That the Monsignor Peter E. Blessing Division of the Ancient Order of Hibernians in Providence, R. I., protests this latest outrage of Hungarian communism and asks that our Representatives in Congress direct the appropriate authorities to take immediate steps to register this country's formal protest and to exert the influence of the United States through its representatives in the United Nations to probe the charges leveled against this stalwart proponent of Christian ideals in Hungary and to secure his release if they are found false; and be it further

"Resolved, That copies of this resolution be sent to the Congressional Representatives of Rhode Island and to the United States Senate Foreign Relations Committee."

Unanimously adopted by Msgr. Peter E. Blessing Division in meeting duly assembled this 3d day of January 1949.

JAMES F. SHIEL.
EUGENE F. COCHRAN.
PETER C. MORAN.

Method of Election of President and Vice President

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, a recent issue of the Christian Science Monitor has editorially commented on the outmoded method by which the President and Vice President of the United States are elected. I hope the Eighty-first Congress will correct this situation by submitting a constitutional amendment along the lines of the Lodge-Gossett resolution. I have introduced a similar resolution, not to detract in the least from the credit due my friend, the gentleman from Texas [Mr. GOSSETT], but to tangibly express the support of a Member on this side of the aisle.

The editorial follows:

THE MACHINERY CREAKED

On December 13 Harry S. Truman was elected President. Legally, that is more correct than to say that he was elected on November 2. For under the Constitution and the controlling Federal statute it was only when 303 votes were cast in the electoral college on the first Monday after the second Wednesday in December that the actual election took place.

The ancient machinery creaked more audibly than usual. And more Americans were listening. For on the night of November 2 millions had been concerned lest their voting produce a stalemate in the electoral college and force an election by the House of Representatives. Happily, that invitation to political deals was bypassed.

But there was still the prospect of a three-way split and much uncertainty about how many States' Rights Democrats would keep their pledge to vote against Mr. Truman. In the end, all but one did so, and he came from a State whose popular vote went to the President. Another elector from the same State chose to keep his pledge rather than follow the vote.

Citizens had fresh opportunity to see that the electoral college is anything but accurate and efficient. Governor Dewey got only 189 of the 531 votes, although receiving nearly half the popular total. And President Truman got none of New York's 47 electoral ballots although he ran only 60,000 behind Mr. Dewey in a vote of 6,000,000. Citizens learned again that under this unsystematic system they might choose a President at the polls and have him beaten in the electoral college.

This time the antique college performed its function, but also pointed up faults which should put fresh steam behind proposals for reform. It is not necessary to throw out the apportionment of electoral votes which gives small States a bit of extra weight. But it would be helpful to give each candidate his fair proportion of electoral votes according to his popular vote in each State. The new Congress should adopt the plan to do this, proposed as a constitutional amendment in the Lodge-Gossett resolution.

Amendment of House Rules

EXTENSION OF REMARKS
OF
HON. E. E. COX
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. COX. Mr. Speaker, the action taken by the House on Monday reducing the powers of the Rules Committee is something that will rise up to plague this body and the country in the months to come.

The reason given for amending the rules was that it was necessary to make possible majority control, but this was not the real reason, as there has never been a time when a majority of the House could not work its will upon any measure properly falling within its jurisdiction.

While the Rules Committee has, on occasions, held up bills that have been reported by legislative committees, it was always within the power of the majority to take these bills from the committee and do with them what it pleased. The Rules Committee has functioned as a screen to keep out of the House controversial measures on which the majority did not wish to take a public position. It has simply served to insure moderation and to prevent precipitant action.

The resolution may, to the uninformed, seem harmless and inconsequential, but to the informed it will be construed as a violent turn to the left that may well sweep the country into an advanced form of socialism, for by its adoption the House broke down the barrier that has held back the flood tide of radicalism and protected the country against the killing effect of statism. What was done could mean—it may mean—that we are going the way that England went, and without the restraint, caution, and moderation that England has shown. Certainly it will have a frightening effect upon business which will kill off expansion, slow down production, lower commodity prices, and create such a state of uncertainty in the minds of the people as to cause liquidation when expansion is needed.

What has been done will result in the creation of the greatest social disturbance that this country has ever experienced, for it opens the door for the whole of the so-called civil-rights program and all of its companion radical measures. It is a blow to the institution of private ownership, for under laws that will follow the management of one's own private property will, in part, be taken away from him, as he will no longer be permitted to exercise a free discretion in the choice of his associates or his employees.

The disturbance in the South will be greater than in any other part of the

country, for there the racial question is greatest. The color line will be completely wiped out and all distinction between the races outlawed. There will be no more separate schools, separate hotels, separate churches, separate fraternal lodges—no more separate anything—and State laws against the marriage of whites and blacks will be federally invalidated. There is not a Member of Congress who does not know that this is so, and when in the months to come a Federal gestapo moves into the South and takes her people by the throat in the enforcement of laws, regulations, and edicts that are obnoxious to them, no one can plead ignorance, for we are all fully informed and have been so since the first hour in the life of the present Congress. A vote for the resolution was a vote for the FEPC, which is a weapon aimed at the heart of the South, her civilization, and the institutions that her people have erected. It was to those of us who come from the South a test of our loyalty to our people. As for myself, I had to meet it with proper respect of the position that I have heretofore taken, and with due regard to the welfare of those who sent me here.

What has been done makes certain the adoption of laws that will repudiate the principle that "the excellence of every government is its adaptation to the state of those to be governed by it" and that laws which affect their happiness "must flow from their own habits, their own feelings, and the resources of their own minds."

The powers of the States are going to be further reduced and the Constitution in regard thereto further circumvented. Laws will be imposed upon the people that are as completely disregardful of their habits, manners, and ways of thinking which constitute a part of their nature as if they were dictated by a foreign power.

Amendment of House Rules

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. HERTER. Mr. Speaker, on the opening day of the Congress we of the minority were steam-rollered into accepting a change in the rules without being able to read the changes suggested except as they had appeared in the press. Furthermore, the suggested changes were read once by the Clerk of the House, and even today, 2 days later, there is a drastic difference of opinion among parliamentary leaders as to what these changes mean.

In effect, these changes permit any committee chairman on alternate Mondays to call up for consideration any bill which has been favorably reported by his committee and has sat awaiting a rule in the Rules Committee for a period in excess of 21 legislative days. It has been argued by those in the highest position in the Democratic caucus, at which agreement was reached on this change in the rules, that the matter of recognizing the committee chairman for the purpose of calling up such a bill is discretionary with the Speaker. It is also argued by eminent parliamentary authorities that under the wording of this change, the Speaker has no authority and must recognize the chairman. Whichever interpretation is correct, the change is a very drastic one.

There is no need whatever for this change in order to take care of a situation against which there has been considerable complaint; namely, the killing of bills by the Rules Committee. Many years ago, the House had adopted a rule setting aside every Wednesday as a day on which committee chairmen or other members of a committee, upon instructions from their committee, could, when their turn came, call up for consideration any matter already favorably voted upon by the committee and listed on the Union Calendar. In the past 8 or 10 years, Calendar Wednesday has been almost always dispensed with by unanimous consent; however, if anyone objects to dispensing with Calendar Wednesday, it take a two-thirds vote to dispense with it. Hence one-third of the Members have always been and still are in a position to insist that Calendar Wednesday be proceeded with. The only difficulty with respect to the handling of very controversial bills on Calendar Wednesday has arisen from the fact that dilatory tactics could successfully achieve an adjournment of the House before general debate on such a bill had been finished, in which case the particular bill could not be again brought before the House until the turn of the committee sponsoring it came up again on some succeeding Calendar Wednesday. General debate for all bills called up on Calendar Wednesday is limited to 2 hours. When that debate is finished, the committee chairman in charge of the bill makes a motion for the previous question. If this motion is adopted, the bill is then read for amendment under the 5-minute rule and becomes unfinished business of the House. In other words, even though action on it is not completed on that Wednesday, further consideration is not postponed to succeeding Calendar Wednesdays, but is continued on succeeding days.

While I realize that this explanation is somewhat technical, it does, I think, show clearly enough that if Calendar Wednesday is properly observed, every committee has an opportunity of bringing important legislation on the floor of the House without resorting to the Rules Committee. However, dilatory tactics in order to make Calendar Wednesday ineffective have been resorted to so frequently that a slight change in the rules would undoubtedly be desirable to prevent such tactics. Had the vote on the previous question offered by Congressman SABATH not prevailed on Monday, then I would have offered a substitute amendment to the rules which had received the full approval of the Republican steering committee. That amendment read as follows:

Amend clause 7 of rule 24 by adding thereto the following: *"Provided further,* That pending action on the previous question no motion for adjournment or other motion which in the opinion of the Chair is frivolous or has for its purpose delaying consideration of a motion on the previous question shall be entertained by the Chair."

In view of the fact that the procedure with respect to Calendar Wednesday is still a part of our rules and that in order to get around making use of Calendar Wednesday, motions will have to be made dispensing with it every single week, I am convinced that it is much more logical and orderly a procedure for us to stick by the existing rules with the amendment which I had planned to offer. For that reason, I am now filing the proposed amendment as a separate resolution.

The Businessman's Obligations to the Government

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, January 5, 1949

Mr. WILEY. Mr. President, the December issue of the magazine Dun's Review, published by Dun and Bradstreet, contains an article prepared by me on the subject of the businessman's obligations to our Government and to our people.

I ask unanimous consent that the text of this article be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered printed in the RECORD, as follows:

TEN WAYS IN WHICH BUSINESSMEN CAN HELP THE NATIONAL WELFARE

(By ALEXANDER WILEY, United States Senator from Wisconsin)

The scene was at a chamber of commerce convention. A group of important businessmen were gathered around a table with myself discussing problems of the day.

At last one of them said dejectedly, "Well, after we go home, what can we do to make a serious and constructive contribution to our country? It seems that you fellows in Washington are the only ones who can really do anything about taking care of the problems of America at home and abroad. The citizen can't do much more than sit back and pray that Congress will make the right decisions. Yes, he can write letters and telegrams to Congress, but, in the long run, it's what Congress itself thinks and decides that really tells the story."

I listened to the businessman and recognized in his thinking the views of many other folks—businessmen, laboring men, housewives, clergymen—all types in our population.

But I disagreed with this viewpoint and I proceeded to explain why. I said that the American businessman enjoys a basic bill of rights as does every other citizen of our country. Congress has been seeking to implement the businessman's bill of rights because, for too long, private enterprise was

abused by arbitrary labor-union practices, by interference with employers' freedom of speech, and by the mass intimidation and coercion of employers, and so on.

But while Congress has been seeking to assure true liberty for the businessman, as well as for everyone else in our population, no one, I said, should lose sight of the fact that each of us has a bill of obligations, particularly the businessman. Why? Because the businessman in his community is a leader, a builder, a sustainer of community life. It is he who creates jobs, who creates wealth. It is he to whom public and private officials look for support in community development campaigns. Obviously, therefore, the businessman has heavy obligations and responsibilities commensurate with his power and prestige.

IMPORTANCE OF OBLIGATIONS

Moreover these are not empty obligations in the sense that the businessman has to do them as a matter of form without actually expecting important consequences from them. On the contrary, it is by fulfillment of these obligations that the businessman individually and collectively can actually do as much of significance for the benefit of the Nation as can the Congress.

That may seem like a pretty broad statement, but it is nevertheless true. It is at the grass roots of America that the real American decisions are made. Nothing the Congress does, no laws it enacts, no amendments that it writes, can have any meaning or validity unless the businessmen back at the grass roots of the Nation continue to keep the economic and other currents moving.

Well, what are these obligations of the businessman?

Here they are, as I see them:

1. Demonstration of personal qualities of leadership: It is up to each businessman to radiate sincere courage, confidence, and hope. He can do this by starting off and counting his blessings as an American instead of counting his woes, his tax troubles, his labor troubles, his material shortages, and so on. How many businessmen do you know whose every public utterance is one of gloom and dissatisfaction? How many businessmen do you know who can only talk in terms of calamity, catastrophe, and tragedy for America unless certain things are done? I don't mean that businessmen can or should be Pollyannas, making believe that all is sweetness and light. I do mean that they should be realists. It is an essential truth about realism that you can't start off toward success without realistically believing in your mission and having faith in it, in yourself, and in your Nation.

2. Moderation in business charges: Too often in the past, some businessmen have been accused of charging for their product "all the traffic would bear." Sometimes that charge has been true. More often it has been false. Through chambers of commerce and other enlightened institutions, that very small minority of businessmen who insist on abusing their authority, has been brought increasingly into line. This minority has been made to understand that it is a part of its obligation to charge moderately and ask only a reasonable profit, rather than to create bad public relations for business as a whole by reckless profiteering. Still, some elements of that profiteering minority exist, just as such racketeering elements exist in every other segment of our economy. We should progressively, however, seek to decrease the numbers in that minority.

HASTY JUDGMENTS

3. Exemplifying caution: A brother Senator once said: "Why should I study bills here in the Congress when all I need to do is ask any businessman from my home State, who has never even been to Washington and has never even studied the bills, for his opinion, and he can proceed to give me a 10,000-word lecture on just what should be done and how it should be done?"

This Senator was voicing reactions of many other legislators who have received the impression, justified or not, that businessmen have gotten into the habit of giving curbstone advice, snap judgments, without actually studying issues. We can understand why that happens. After all, businessmen are usually active during every minute of their working day on problems vitally affecting their own industry and don't have too much time to devote intensively to national and international affairs. That fact should, however, give them more of a sense of caution than some of them frequently evidence.

I don't mean that they should be overly shy about communicating their judgment to Congress. On the contrary, I believe that they have a long way to go in making their voice heard and respected in the Congress. But they will be more heard and more respected if they refrain from posing as seers and prophets, just as no other segment of our economy should assume that it automatically knows more than Congressmen who may have studied particular problems for months and months.

4. Faith in government: Businessmen's experiences with government during the years—their being victimized by Government snoopers, by Government questionnaires, by bureaucrats with arbitrary directives—have caused many businessmen to lose their faith, not only in the present Government as it is politically constituted but also in government itself as an institution. This, too, we can understand, in view of American businessmen being so long at the receiving end of bureaucratic blows. Of course, our businessmen are grateful for those many public servants who are truly servants—faithful employees of the people—and who try to do a conscientious, helpful job in Government service. In spite of some experiences that businessmen have with arbitrary bureaucrats, every community in the Nation is looking to its businessmen for faith in the American Republic, in the American processes of government, and the businessmen should live up to the people's expectations of that faith.

STILL ROOM FOR ADVANCEMENT

5. Sound labor relations: In these days there is an increasing emphasis on farsighted and intelligent labor relations. Little need be said on this topic, because American industry has made spectacular advances in getting an understanding of employees' problems and in enabling employees to understand the problems of management. There have been wonderful advances made in labor-management conferences, in employees' suggestion programs, and in other devices designed to blend labor and management into an effective team. We still, however, have broad horizons toward which to advance in this field of labor relations. You need only look at America's recent heavy strike record to recognize that.

6. Fairness in tax payments: No one loves to pay taxes. But we recognize taxes as the inevitable consequence of living in this atomic age with a huge Government establishment, particularly for national defense. Of course, Congress should go a long way toward eliminating unnecessary Government overhead, streamlining government, and achieving more efficiency, less duplication of effort. At the same time, no businessman should attempt to justify evasion of taxes on the grounds that some of his tax money is being misspent. You and I know that with America's staggering $250,000,000,000 national debt and with her vast forty-billion-dollars-or-so budget, we all must carry our tax load if Uncle Sam is to maintain his solvency.

THE NATION WILL BENEFIT

7. Supporting worthy movements: Every mail to the businessman brings appeals from charities and from various community organizations, asking a helping hand for various projects. It is a tribute to America's free-enterprise system that we can support our great private charity set-up, our wonderful private educational system, and many other institutions which depend so vitally upon the support by the men and women of industry. Still, there are other movements afoot, designed to create better and nobler living, better human relations, better appreciation of man's spiritual responsibilities and aesthetic values. It is up to the businessman to support these movements, consistent with his means, as should everyone else.

It is very important that we do not support sucker outfits designed to bleed the public and bleed business. We should definitely not support alien-minded, subversive organizations hiding behind letterheads with glittering titles. We should, however, advance movements for nobler living that will truly contribute to the Nation.

8. Aid to youth: In perhaps no other field can the businessman make a greater contribution than in the field of aid to the young men and women who will be the leaders of the America of tomorrow. That is no new revelation, because in every community throughout our land businessmen, already, through their chambers of commerce, through their fraternal clubs, and through veterans' organizations, are lending the hand of a father or a big brother to the Nation's youth, seeking to curb the problem of juvenile delinquency, seeking to infuse in the Nation's young people a love of our free way of life. Here too, however, business and the rest of us still have a long way to go. Any reading of today's newspapers, with their reports of youth caught in the web of crime or in alien movements, shows how vast and unfulfilled the need still is.

UPHOLD AMERICAN BUSINESS

9. Aid in Government procurement: Now that America has embarked on the $6,000,000,000 Marshall plan, as well as on a tremendous national defense preparation, there will be a huge amount of procurement in the goods and services of business. It is essential that this procurement be conducted on the highest plane, not only in order to save the money of the taxpayers, not only in order to maintain the citizen's faith in his Government (which has too often been tarnished by cynical observations about corruption and graft in procurement), but in order to uphold the name of American business itself (which has often been smeared because of deficiencies in procedures and results of procurement with Government agencies). Here is a tremendous challenge to American business—to be worthy of the billions of dollars that will be poured into it and to give a fair return for every cent of the taxpayers' money, without indulging in any of the shady or the fraudulent practices which have sometimes (if only in very slight proportion) characterized Government procurement.

10. Aiding better public service: Perhaps a final point in business' bill of obligations is rendering support to the public servants of our land in every possible way, including, where necessary, sending business experts, if only temporarily, into Government service in order to help fulfill necessary programs. The record of American business' contributions to government during the war effort is so well known that it needs no repetition. Today, however, in a time when there is less patriotic appeal because, fortunately, we are at peace rather than in the midst of a terrible war, business has no less of a responsibility to supply needed personnel to government and to aid Government employees in performance of their vital work.

This does not mean that business should allow any Government employees to make arbitrary demands upon business. On the contrary, there are some Government employees with a master complex which they must lose and they must start behaving like the servants that they are supposed to be. At the same time, business should not allow two wrongs to make a right and should not fail to cooperate with government just because government at times has been arbitrary and has overextended its authority.

These, then, are some of the obligations of American businessmen. You undoubtedly could add many more. This seems like quite a list and quite a burden upon the businessman, but in our society, as in every society, it is the true leaders who must bear the primary burden. I know that business will indeed shoulder that burden as it has always shouldered the tasks that have been assigned to it in the American way of life—the greatest way of life in the world.

Better Home Building

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. JAVITS. Mr. Speaker, in the current controversy over the capability of private builders to fill America's housing needs the questions involved are not only about housing for low-income families but also about giving their money's worth to home buyers. The greatest public interest can be served by the strict attention of all—rather than only some—builders and contractors to the public interest. This is admirably stated by the following editorial from the New York Times today:

BETTER HOMES NEEDED

Many home builders who are worried over increasing buyer resistance to their product need not look beyond the interiors of their own houses to find the reason for slackening sales. Even after due allowance is made for the reduced value of the dollar, it is obvious that the industry must offer a better value than it is now doing if it hopes to check a further decline in the market.

A study of some of the new residences quickly shows why the market has become selective and why certain groups of homes are standing vacant in the face of a continuing housing shortage. Tiny rooms, cramped quarters, and poorly planned lay-out of space are the rule rather than the exception, even in dwellings built to sell for as much as $25,000. One of the complaints most often received these days from disillusioned home seekers is the failure of the builders to provide adequate closet space. Some of the smaller houses have virtually no storage room, a shortcoming which is more keenly felt because many of these homes are without basements.

Many of the smaller cottages are able to meet suburban zoning and building restrictions only by counting unfinished garret space as part of the floor area to bring the house up to the minimum requirements of 900 to 1,000 square feet. This space generally is advertised as an "expansion attic," but the inadequacy of windows and utility connections will make it difficult to transform it into convenient living quarters.

In the frantic pursuit of shelter just after the war, anxious families by the thousands in every metropolitan area were purchasing such homes before the foundations were laid, but the sponsors are now learning lessons from competition and from the growing feeling that prices have advanced out of proportion to the value of the product. In this connection it is reassuring to note that some of the more reliable builders who have studied the needs of housewives and who recognize the value of satisfied customers by erecting satisfactory houses on conveniently situated sites are continuing to sell their output as rapidly as before. With most materials of good quality now readily available, it is time the others improved their homes in keeping with modern living standards. It would be good business for them to do so, but over and above that consideration is their obligation to the public. Pleasing homes make a happier people.

Panama Boondoggling

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. MARTIN of Iowa. Mr. Speaker, one of the large questions now before the Congress is the modernization of the Panama Canal. The November 1948 edition of the Work Boat, a magazine dedicated to the development and operation of waterways, published an enlightening article on the canal question, under the title of "Panama Boondoggling" by Arthur Stanley Riggs.

Published with the article is the following biographical sketch of its author:

Arthur Stanley Riggs, commander, United States Naval Reserve, retired, is an archeologist, historian, and lecturer specializing in Spanish and Italian fields. His long period of travel, residence, and research in Europe, Africa, and the Orient, together with intensive studies of canals and their problems, equip him with the proper background for a discussion of the Panama Canal. His naval service afloat and ashore qualifies him further to consider the naval aspects of our vitally essential big ditch. Something must be done about the Panama Canal and Commander Riggs presents the case very clearly.

I recommend this informative article on the Panama Canal be read by every Member of Congress. It follows:

PANAMA BOONDOGGLING

(By Arthur S. Riggs, commander, U. S. Naval Reserve (retired))

"A commission," reads H. R. 4833, presented to the House of Representatives on January 6, 1948, by Capt. Willis W. Bradley, U. S. N., retired, Member of Congress from California, authority on naval ordnance engineering, practical shiphandler and holder of our highest decoration, the Congressional Medal of Honor, "is hereby created to be known as the Interoceanic Canals Commission * * * to be composed of nine members * * * to conduct a comprehensive investigation and study of all problems arising in connection with" the present canal at Panama and any other possible canals to link the two oceans.

Most Americans are unimpressed nowadays by the statement that our big ditch will be inadequate by 1960, and that to make it capable of handling world trade will be expensive. We are used to growth, to thinking in billions. So the typical response would be a complacent assumption that if we really need a bigger and better canal, we will build it and the cost will take care of itself.

First of all, however, is the natural question: "What's the matter with the Panama Canal?"

It has the defects of its qualities. It was imagined by the French. When they could not finish it, we took hold and with improved machinery, more cash and unlimited skills, brought a greater canal to a successful conclusion. But the Canal was conceived by engineers, built by engineers. The men who have to get the ships through were never consulted. As a result there are defects of design which create hazards that endanger every vessel going through. After all, the object of any canal is to afford safe and speedy transit for vessels, since it is cheaper to send certain cargoes by water than by any other means. The principal problems that canal transit presents are accordingly operating problems. Their solution is so obvious that anything beyond that solution is merely creating an unwarrantable liability.

When Ferdinand de Lesseps, diplomat and promoter, not engineer or seaman, suggested the Panama Canal, he was thinking in terms of the Suez Canal, which runs between sandbanks across level terrain. He naturally thought of a sea-level waterway in spite of the warnings of the French engineer, Godin de Lepinay. After years of wasted effort and vast sums of money, he abandoned the sea-level idea as completely unfeasible. A mountain range, the Continental Divide, rising more than 600 feet in height, had to be slashed through, and the floodwaters of the Chagres River Valley had to be controlled. To cut a tidal channel through both that vast mass and great swamps was a task beyond the capacity of any French machinery of the day within any reasonable period.

So the high-lake-type canal was adopted in 1906, and has served its purpose within limits for the ocean traffic of the entire world. Those limits developed only as experience in handling vessels in the canal revealed them. First of all to show itself was the lack of balance between Atlantic and Pacific ends. The prime flaw in the design, which created some of the most dangerous features, was the location of the Pacific locks. At the Atlantic end the Gatun locks are arranged in two parallel sets of three lifts, a logical design for ease, safety, and speed of handling. When the geologists studied the nature of the ground for the foundations of the Pacific locks, they believed no solid footings existed in a continuous series for the vast structures. So they made the fatal error of placing the Pedro Miguel single-lift lock squarely across the mouth of the Gaillard cut, creating a traffic bottleneck. At the southern end of Miraflores Lake, about a mile away, they placed the two-stage Miraflores locks. As a result of this all vessels have to be separately locked twice, losing about an hour in transit, and being exposed to unnecessary risks.

But the Pedro Miguel lock has a far more serious effect than delay. Every time it is filled, the millions of cubic feet of water are drawn from Gaillard cut, a lockage surge results whose amplitude is about 3 feet, its speed about 25 miles an hour. This surge oscillates back and forth; when one lockage follows another in quick succession, the surges either amplify or damp. In either case they create local currents and eddies which at times make vessels impossible to control. The banks of Gaillard cut are rocky, and striking them is always hazardous. The accident statistics of the canal show this clearly. They also show that the relatively low accident record is due to highly efficient piloting rather than to sound planning.

A year or two ago the Navy began a scientific study of this condition with elaborate tests at the David Taylor Model Basin at Carderock, Md. The results of these tests, which were conducted with especially designed channels reproducing as nearly as possible

canal conditions, and scaled models representing both naval and commercial vessels of several types, gave astonishing data. They clearly revealed the relation between the size and type of the vessel, her speed, maneuverability and draft, and the width and depth of the channel. The mathematical tables worked out from the tests disclosed the point at which vessels become unmanageable, and the angle of rudder necessary to keep them under control. The pilots who take all ships through are highly skilled and extracompetent, with long experience. Yet cautious as they are, the accident tables divulge a relatively large accident record in Gaillard Cut, where striking the rocky banks is a serious matter.

The dividing of the Pacific locks between the one-stage Pedro Miguel and the two-stage Miraflores increases the accident risks in approaching the narrow lock chambers, and greatly delays transit. On top of all this is the occurrence of impenetrable nocturnal fogs in Gaillard Cut. These fogs generally descend after 10 p. m., completely fill parts of the cut with heavy vapor and make safe navigation impossible. Fog occurs on the average one night out of every three, and is especially frequent during the rainy season, but always clears after sunrise the following morning.

When students of oceanic commerce and military necessity began to study the Canal with relation to the future, one of the first important items to be considered was the vulnerability of any type to the atomic bomb. Someone conceived the notion that a sea-level canal would be less liable to crippling or destruction by the bomb than a high-lake canal. Not long thereafter the Seventy-ninth Congress enacted Public Law 280, directing the Governor of the Canal to investigate the situation. The curious text of this law indicates that its original draft was made on the spot by the Canal authorities, with a predetermined objective. It reads in part that—

"The Governor of the Panama Canal, under the supervision of the Secretary of War, is hereby authorized and directed to make a comprehensive review and study, with approximate estimates of costs, of the means for increasing the capacity and security of the Panama Canal to meet the future needs of interoceanic commerce and national defense, including restudy of the construction of additional facilities for the Panama Canal authorized by the act approved August 11, 1939 (53 Stat. 1409). He shall also make such study as he may deem desirable to permit him to determine whether a canal or canals at other locations, including consideration of any new means of transporting ships across land, may be more useful to the future needs of interoceanic commerce or national defense than can the present Canal with improvements."

The Governor has now submitted his report, written with the advice of a number of consulting engineers not a man of whom ever had 5 minutes' experience in the construction of the original canal. Famous engineers, with years of experience on the Isthmus, are active, eligible, and competent to the last degree. Why were they not selected?

Though the report has not yet been published, its recommendations are fully known, and no less a person than Governor Mehaffy himself publicly contradicted part of it in a public hearing before the congressional committee which examined him. The Governor's denial concerned the atomic-bomb scare given as the reason why we should abandon the present canal for a sea-level waterway. The latter, the report stated, would be far safer, more easily cleared if attacked, and could not possibly be closed. In his testimony before the inquiring Congressmen, the Governor finally admitted that no matter what type of canal we have, it must be defended adequately. Recently Congressman Bradley extended his remarks in the CONGRESSIONAL RECORD by saying of the bomb and its relation to the canal:

"As far as I can ascertain, the greatest authorities on modern weapons of war who have given this subject serious attention hold that any type of canal would be critically vulnerable to the atomic bomb, regardless of type; that a sea-level canal would be in the same security class as a lake canal; that a sea-level canal could be closed for long periods of time beyond any hope of speedy restoration; and that a sea-level canal cannot be considered secure in an atomic war. These same authorities also agree that the atomic bomb is irrelevant as a controlling factor in the planning of operational improvements of the Panama Canal."

That disposes of the atomic-bomb propaganda. Any canal is subject to sabotage. We can be reasonably prepared for that by proper local measures. But it should never be overlooked that the only security for any canal resides in the combined military, air, and naval power of the United States, not in inherent physical characteristics.

Study of the technical papers covering the sea-level plan that have appeared in various engineering journals immediately reveal two glaring evasions. No paper known to the writer has mentioned that before we can decide upon a sea-level canal we must negotiate an entirely new treaty giving us permission to build it. In the case of Panama, the political difficulties are grave. It is necessary only to read canal history[1] to understand the conditions.

Every engineer and geologist who participated in building the canal knows the entire lack of homogeneity in the region. The Isthmus is an "area of complex Tertiary geology * * * Engineering projects * * * have to reckon with conditions of soil and rock instability, and particularly with landslides and foundation hazards." Dr. Donald F. McDonald, who wrote that as consulting geologist to the Canal, also analyzed the causes of the slides which blocked it repeatedly during construction and which still cause trouble. He told of the 74,400,000 cubic yards of slide material that had to be removed; of the 200 miles of railway tracks completely rebuilt because of slides; finally that slopes which had been apparently permanent, after more than 30 years began to give way in slides.

In the face of such evidence as this the sea-level advocates declare that in 10 years they can move four times as much material, not counting the inevitable slides, as we moved between 1906 and 1916; 1,069,000,000 cubic yards compared with 267,000,000. Without an independent check by engineers experienced in building the existing canal, can such a claim be accepted at face value? Congressman Bradley went even farther than this in a notable address when he called attention to the statement in the Governor's report that the sea-level canal would cost $2,483,000,000, the high-lake type canal $2,308,000,000. The latter figure is highly misleading as well as grossly exaggerated in that it conceals a tremendous expenditure for alleged defensive armament not only useless in the military sense but which could actually render operation of the canal machinery more difficult and time-consuming.

Study of the sea-level plan reveals one vital objection after another. Instead of a Gaillard cut some 7 miles long, the sea-level narrows would extend more than 30. The fogs that fill Gaillard cut would also fill this much longer and deeper channel and increase navigational hazards proportionally. Some 31 miles of retaining dams to control flood waters of the Chagres and other rivers would have to be built, in good part on muck bottoms, Gatun Lake dewatered on the Canal side of these dams, the present Canal cut in five places, and—. The list is incredible and endless. Moreover, the proposed sea-level plan would junk the existing Canal and require an entirely new one in the same area.

No engineer who had anything to do with building the Canal regards the sea-level idea with anything but consternation. These gentlemen ask how we are going to construct dredges to excavate under water at depths up to 147 feet. None believes the present estimates of cost and of 5 to 10 years for building are anything but a rough minimum, with the present Canal out of operation so long no one knows what the economic, political, and strategic effects might be.

Against that the obvious solution is the simple, sensible terminal lake plan, which has the tremendous advantages of working with instead of against nature and of being something we can pay for without having to raise Canal tolls so high shipping would be bankrupted or the public pay heavily increased taxes. The terminal lake plan, while it is not a solution of all the difficulties, is the rational proposal for making the Canal safer, faster in operation, and capable of increased traffic.

Briefly, it wipes out the lockage surges by removing the present Pedro Miguel lock at the south end of Gaillard Cut, concentrates all Pacific locks in three lifts in a new location at Miraflores, where there is a substantial foundation for them, and thus creates a natural terminal lake balancing the Atlantic terminal lake at Gatun, and affording vessels safe anchorage at the Pacific mouth of the cut. While it is being constructed the present Canal will go right on functioning regularly except for a few hours. Its real cost is estimated at perhaps half a million dollars, the time to build it from 4 to 6 years without interference with routine traffic. The certainty born of 30 years' experience at Gatun that it is entirely practical as contrasted with the sea-level idea makes it difficult to understand why, once the facts are known to responsible legislators, there should be any debate. The Canal serves business; business will pay its costs, directly or indirectly; and business will know how to convince the Congress that it wants common sense and usefulness, not politics or boondoggling, for no realistic businessman abandons a project of proven worth and reasonable expense for one of doubtful value at unbearable cost.

China Tragedy

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the December 1948 issue of the magazine Columbia:

THE AMERICAN FAILURE IN CHINA

(By James F. Kearney, S. J.)

KEYSTONE TO THE PACIFIC ARCH

(Some do not see why an all-Red China would be so vitally important to the United States, since China is so far away; but the big military men with oriental experience do. General Wedemeyer has stated publicly that unless appropriate measures are taken

in time to stop communism in the Far East it will ultimately mean the shedding of American blood. General MacArthur, who should know what he is talking about, insists that China is not only important but is the "fundamental keystone to the Pacific arch." To those who consider Europe as the vital American frontier he replied unequivocally: "In bulwarking the frontiers of freedom against the assaults of political despotism, one major frontier is no less important than the other." Which means, in everyday language, that if you say you are trying to stop, to pen up, to contain any living things, whether chickens, or pigs, or expanding Soviets, it is childish to think you can do it by putting up wires on one side only.—J. F. K.)

On a recent swing around the United States, after 18 years in China, this writer was astonished to find how badly informed even intelligent Americans were about the Orient; but then highly pleased to note how interested and sympathetic they became when a few simple facts were laid before them, facts that show how the very existence of Christianity, of American business and educational interests, not to mention the survival of the United States as a nation, are at stake today in far-off China—facts which have been deeply and doubtless deliberately buried by interested parties under a mass of half truths and pink propaganda.

"China is so far away," I have been told by people as an excuse for their lack of attention to the tragedy that has been going on out there—a tragedy that involves a fifth of the human race. But the fact that our feet are a long way from our head does not prevent us from taking an interest in what happens to them. The reason is that they are a part of our body—what happens to them happens to us. If they are injured, we suffer. Now, the church in China is a part of the mystical body of Christ; as much a part of it as is the church in America. What happens to the church is, therefore, of real concern to American Catholics. When it suffers, they suffer. When it is persecuted—and a major persecution is raging against it now in Red China—they, as members of the same body, are being persecuted. One who says China is too far away to concern him is not speaking as a Catholic.

BLAME ENOUGH TO GO AROUND

The present deplorable situation out there should interest us also as Americans. Who is responsible for the China tragedy? Some try to lay all the blame on the central government, others on the Chinese Communists backed by Moscow. While both share the blame, it is also true that a large part of the responsibility for the mess must be charged to certain Americans, who have played a shameful, perhaps short-sighted, role where they might have played a splendid one.

Despite the extraordinary generosity of the American people toward suffering China, the queer shenanigans of the Far Eastern Bureau of our own State Department have given the United States a bad name not only among the Chinese but among the many foreigners of different nationalities in the Far East, while a large proportion of the American press correspondents have done more damage than they realize, both in China and the States, by the way they have reported the situation out there.

To put things in their proper perspective first: There is one American who has spent but little time in the Orient and does not, I believe, pretend to understand it fully, yet who deserves the thanks of Catholics as well as other Americans. For he has done more than all the correspondents together to give the American people a correct evaluation of the importance of present-day China to the United States. That man is William C. Bullitt, former United States Ambassador to Soviet Russia (1936–40) and later to France. In 1946, in his book, The Great Globe Itself, he gave 14 points for stopping Russian aggression, most of which, by the way, turned up in the Truman doctrine and the Marshall plan.

One of the 14 was: "Maintain steady and active opposition to the efforts of Soviet imperialism to swallow Manchuria, North Korea, North China, etc., which it now controls." This point, unfortunately, was not adopted. Then, while our far eastern "experts" were still blithely telling the American public that of course the Chinese Communists were not real Communists but only idealistic agricultural reformers who should be admitted forthwith into the national Government, Mr. Bullitt visited China and returned to publish his Report to the American People, in Life, October 1947, in which among other things he warned bluntly that unless the tragic United States policy in China were quickly reversed it would be too late. Our State Department, which had based its policy on the falsehood that the Chinese Reds weren't really Reds, paid little heed. The public, apparently finding the China situation too confused for understanding and believing they had already done enough for the Chinese, followed suit. A third and more insistent warning was sounded by Mr. Bullitt in Life, August 30 and September 6, of 1948, in a masterly article entitled, "How We Won the War and Lost the Peace." This time the present writer found that, save in our far eastern bureau, very many intelligent people were at last awake to the danger in the East and the necessity of paying the closest attention to what was happening out there.

Mr. Bullitt's thesis on the Far East fits in with the traditional United States global policy based on the Monroe Doctrine, the Atlantic Doctrine and the Open Door, i. e., the people of the United States must: (1) prevent any European or Asiatic power from extending its political system to the Western Hemisphere (Monroe Doctrine, 1823); (2) prevent any power which might become hostile to us from controlling the Atlantic coasts of Europe and Africa, and the water gates to the Atlantic—the North Sea, the English Channel and the Straits of Gibraltar (this Atlantic doctrine guided President Wilson's acts during World War 1); (3) prevent any power from destroying the independence of China and mobilizing the manpower and resources of China for eventual attack on the United States. This was a development of the old open-door doctrine of 1899, which had two aims: (a) to prevent the dividing up of China into spheres of influence by other powers, and (b) to prevent any one power from getting complete control of China. Mr. Bullitt contends that the maintenance of all three of these doctrines is essential to the very survival of the United States.

Not all Americans remember that when imperial Russia got into Port Arthur and Dairen at the start of the century, she promised to hand the territory back to China on October 8, 1903. Shortly after she had failed to evacuate Manchuria at the stipulated time, Japan, fearing further Russian encroachments in the direction of Korea, and with the backing of Great Britain and a financial loan from the United States, declared war and drove her out. The Russian menace in the Far East was thus halted and did not seriously arise again till Yalta when, as Mr. Bullitt puts it, "our weary President was on the verge of thrombosis but was obliged to travel to Russia for the privilege of talking once more with the Soviet dictator. He was not at his best, and in a moment of weakness gave the Kurile Islands and control of the Chinese ports of Port Arthur and Dairen to the Soviet Union."

This action, so contrary to the traditional interests of both China and the United States and so helpful to Soviet Russia, was but one of many strange moves that have since been made by our Far Eastern Bureau, practically all of which have likewise harmed us and the Chinese, but have aided the Soviets. In her statement after being elected, in 1947, as President of the American China Policy Association, which insists that our Government return to the traditional open-door policy defined in 1899 and solemnly pledged again in the nine-power treaty of 1922 guaranteeing the independence and territorial integrity of China, Mrs. Clare Boothe Luce stated: "We urge on our Government the removal from their positions of the officials who have advised and implemented the policies which for the last 4 years have conflicted with the objectives for which the war in the Pacific was fought; and the appointment in their place of men who will guide and implement our policy along traditional American lines, with no trace of defeatism and no trace of appeasement of the Soviet Union or communism. * * * Only such a policy can restore American honor, American pledges, and American prestige in China, and only by such a policy can the 500,000,000 people of China continue to remain our friends and allies in a free world."

POLICY ATTRIBUTED TO HENRY WALLACE

Who formed this about-face China policy, which has proved so detrimental to everyone but the Soviets? The American China Policy Association insists it was Henry Wallace, who was sent in 1944 by President Roosevelt to Siberia and China, accompanied by Mr. Carter Vincent, who was later to head the Far Eastern Bureau of the State Department and try to carry it out. It is claimed on the very best authority that Mr. Wallace's report was the basis of the demands made on China at the time of the unfortunate Stilwell incident; that the American Ambassador to China, Mr. Patrick Hurley, was instructed to consider the Wallace report as a policy directive, and that the mission of General Marshall to China to bring about a coalition government—a united front, and hence a traditional Soviet, not an American policy at all—was also in accordance with the Wallace recommendations. President Truman was openly challenged in April 1948 to make public this report lest "continued implementation of Mr. Wallace's recommendations lead to a Far East defenseless against communism, an untenable Korea, a Japan just strong enough to be a second Bataan, and a Communist-ruled slave state of 800,000,000 human beings in East Asia, regardless of the success or failure of our efforts to stop communism in Europe." The President did not accept the challenge, the report was not published, the pro-Soviet policy was not altered, and, as a result, the Reds have continued their triumphant march in the Far East.

Some do not see why an all-Red China would be so vitally important to the United States, since China is so far away; but the big military men with oriental experience do. General Wedemeyer has stated publicly that unless appropriate measures are taken in time to stop communism in the Far East it will ultimately mean the shedding of American blood. General MacArthur, who should know what he is talking about, insists that China is not only important but is the "fundamental keystone to the Pacific arch." To those who consider Europe as the vital American frontier he replied unequivocally: "In bulwarking the frontiers of freedom against the assaults of political despotism, one major frontier is no less important than the other." Which means in everyday language that if you say you are trying to stop, to pen up, to contain any living things, whether chickens, or pigs, or expanding Soviets, it is childish to think you can do it by putting up wires on one side only.

Today, Stalin's iron curtain cuts off Dairen and Port Arthur from all but his own

vessels. It is only logical to conclude that if he gains control of all the east coast of Asia he will drop his iron curtain over every port there, too. Japan today depends upon the Asiatic Continent for food and raw materials for its factories and markets for its products. Those Americans who have been busily counselling Uncle Sam to withdraw entirely from China and stake everything on his Japanese bases will soon, if allowed to continue with their nonsense, have us facing an oriental Berlin airlift of incredible magnitude, where we would have to supply the Japanese with raw materials clear across the Pacific and then buy all their manufactured products, not to mention the trifle of feeding close to half of their 80,000,000 people jammed without enough food into the small area of the Japanese islands. How long could even America keep this up? Marshal Stalin must be highly pleased with the way so many top United States experts have been preparing both China and Japan to come behind the iron curtain, to join the hordes he would lead against us.

The preceding point is nicely and authoritatively summed up in a quizz of General Marshall by Representative WALTER JUDD after the former had testified at the congressional hearings in March 1948:

JUDD: "If the present Chinese Government, with all its admitted weaknesses—some of which are not matters to be ashamed of as they were honorably acquired in years of resistance against a vastly stronger enemy—if it were to go down, would you agree there is in China no third party that could possibly take over and organize the Government?"

Marshall: "That would appear to be the case at the present time."

JUDD: "If North China and Manchuria should be taken over and organized by the Communists, do you think our position in Korea would long be tenable?"

Marshall: "I think it would not be tenable."

JUDD: "Do you think that Japan can ever become self-sufficient or long remain secure if the continent of East Asia north of the Yangtse is controlled by Marxists?"

Marshall: "That would present a great problem, for Japan to take care of herself without help from outside."

JUDD: "We would be faced with withdrawal from Japan and abandonment of the western Pacific, or else almost endless subsidies of Japan and military support as well as economic?"

Marshall: "There is no question but what we would be faced with a very serious situation in Japan."

That was evidently Marshall, the military man speaking; yet Marshall, the Secretary of State, has shown no eagerness to change the United States far eastern policy to prevent the above clearly envisaged catastrophe from taking place. What is the key to this mystery? There has been a bipartisan foreign policy for Europe, and it seems to have been succeeding fairly well. Why not one for Asia? Whether it is because of General Marshall's blindness, as Bullitt charges, or his stubbornness in pretending to be right about China when events have proved him clearly and tragically wrong; or merely a deep-seated personal dislike for Generalissimo Chiang Kai-shek that prevents him from backing him more than half-heartedly, I do not know. But it would seem difficult to exonerate the Secretary of State for his China blunders which have brought, and continue to bring, so much misery on China's millions as well as the possibly complete destruction of the Christian missions, both Protestant and Catholic, while imperiling the safety of our far eastern defenses, entailing the eventual withdrawal of the United States frontier in this time of crisis 5,000 miles back, to the American side of the Pacific.

I was shocked to see, from this side, how much of the news from China is slanted left. Whether there is an open alliance between the pinks in the far eastern bureau and those among the foreign correspondents in China is a matter of conjecture. One thing is certain—our Catholic missionaries of a dozen different nationalities, men who have spent years in China and know the Chinese language and the Chinese psychology in a way that makes them far better authorities than the majority of the correspondents, have been unanimous in denouncing the half-truths and the flagrant falsity of a very large proportion of the reports on China that appear in American papers.

This is not a blanket indictment, for there are at least two quite distinct groups among the correspondents. There is the Time-Life-Fortune and Scripps-Howard group, whose analysis of the situation corresponds with that of Messrs. Bullitt, Judd, etc.; while opposed to them is the New York Herald Tribune and Washington Post group, followers of Edgar Snow, Ted White, and, out in China, of J. W. Powell, of the China Weekly Review, which has a big following among Chinese students. As this sharp division has apparently resulted in almost hopelessly confusing the American reading public, it may be valuable to Catholics to know that our missionaries, who need not apologize for claiming to be well informed on China, agree almost unanimously with the former group and roundly denounce the second group for consistently misrepresenting the China scene.

The Snow-White group acknowledge as their leader Owen Lattimore. Who is he? He became years ago quite an authority on Mongolia, a prominent member of the Institute of Pacific Relations, was later named by President Roosevelt as political adviser to Chiang Kai-shek, and still later joined the faculty of Johns Hopkins University. He apparently plays an important behind-the-scenes role. Former Communist Freda Utley has something interesting to say about him in her Last Chance in China:

"Having worked in Moscow up to the summer of 1936," she writes, "in the Pacific Ocean Cabinet of the Institute of World Economy and Politics, I know that the Chinese Communists never ceased to be under Moscow's orders. * * * There was never any question but that the Communist Parties would do what they were told. The Kremlin was in a better position to help its friends and discomfit its enemies in the Far East than anywhere else, thanks to the Institute of Pacific Relations. The institute where I worked was a branch of the Communist Academy * * * and was also the Russian branch of the IPR. It was we who received its American delegates when they came to Moscow for help and advice. To hear these Americans submit themselves to our dictates on theory and policy was amusing, if sad. In the spring of 1936 one of them, Owen Lattimore, attempted to argue with the theoreticians of our institute on questions concerned with Mongolia, but he was overborne by the prestige of these high priests of communism." Apparently Moscow is still dictating to some obedient American fellow travelers exactly how it wants China and all east Asia handed over to it on a silver platter.

Only one man prevents this from happening. He discovered years ago what the Reds were and has consistently thwarted them in China ever since. For that reason they have done everything to discredit him. To read the "pink" reports from China, one would think that he, Chiang Kai-shek, is America's great enemy and that if he could only be ousted all would be lovely. It would be—for Moscow. By holding out against the Reds, however inefficiently, he is protecting United States interests, even while flocks of supposedly good Americans are stabbing him in the back. The latest attempt to discredit him is Ted White's edition of the Stilwell Letters, which has impressed many readers in America. No one doubts that Stilwell really had the difficulties with the Generalissimo that he recounts. It must be remembered, though, that "Vinegar Joe" allowed himself to be surrounded and advised by a group of pro-Communists, including Agnes Smedley, John Davies, of Mission to Moscow notoriety, and Col. Evans Carlson. That made him look so benignly upon the Reds that, according to The Tyrannous Decade (Fortune, February 1948), "At the end of July 1945 there was dispatched to Chungking for urgent discussion with Chiang a United States plan proposed by General Stilwell: The landing of his Tenth Army north of Shanghai, the supply of arms to a million Chinese Communists, the capture of Shanghai, and the clearing of the Yangtze—a great coup for the Chinese Communists. As soon as Chiang saw the plan, he became enraged and refused to see any American for days."

Those of us who were interned at Shanghai had no desire to see the city fall into the hands of the Reds. Chiang was right, and "Vinegar Joe" was wrong; for had the latter had his way, the Communist conquest of China would have been much further advanced than it is today—and with naive American assistance. White's statement is interesting: "For Stilwell union of all Chinese parties seemed to be essential. Such a unity, moreover, would bring China through to peace as a mighty unified nation, able to face and repel all foreign enemies with her own resources. "It is strange that in the light of what happened to General Marshall's ill-starred China mission, so many Americans could still believe that "Vinegar Joe" was right about China. He wasn't. Neither is Ted White.

As White is a typical leftist correspondent, we might here join the American Policy Association in asking, "What is wrong with the American correspondents in China? Why are most of them sympathetic to the Chinese Communists and to Soviet Russia? * * * We suggest that the editors urge the press agencies to replace the fellow-travelers and dupes in the Far East with Americans who have at least some knowledge of the history and culture of the countries to which they are assigned, and who understand the meaning of America's open-door policy."

Even well-disposed correspondents can't get behind the Red iron curtain in China to find out what is going on there. Hence, all their difficulties are with the Chiang government, not with the Reds. They therefore compare the National Government not with its only present alternative—the Communists—as they should, but with the United States Government which they know; and the comparison is unfavorable. Nine-tenths of the reports I have read in the States were unfavorable to the Chiang group, while not even one-tenth said anything unfavorable to the Reds, though it should be clear even to a child that the Reds are America's No. 1 enemy. That is unfair and dangerous reporting. Any correspondent interested in getting the facts about the Red regime can easily do so. In all the big cities of China there are scores of foreigners and thousands upon thousands of Chinese who have lived under it and can give him all the details he wants about the tyranny that reigns there. Our missionaries, who have lived under both regimes, state that life under the Reds is incomparably more difficult for them and the people than under Chiang. If the correspondents think the Central Government is bad, let them realize that the Red government is 10 times worse. Why don't they discover this and tell the United States public? Their consistently unfavorable reports

are later translated into Chinese and published in Government territory, where they have done perhaps irreparable harm to Chinese morale.

In conclusion, what should be done? First of all, China is difficult to help. But Almighty God gave us intelligence, and we should begin to use it at long last on the China situation to protect our vital interests. If the Chinese Reds are Reds, and they are, the war there is not just a civil war but a war of conquest directed by Soviet Russia. Mr. Bullitt insists that if the President wishes now, in this hour of danger, to protect the future of the United States, he should, unless he is so foolish as to believe that 46,000,000 Americans can resist a future attack by all the rest of the world united under the Red banner, send at once to China the munitions and the top-quality military advisers—with orders to advise on strategy, tactics, and operations—essential to prevent the subjugation of China and Japan by Stalin.

We might add, those put in charge of dealing with Chinese problems should learn to face the facts, not to try to change everything in China overnight; to take the Chinese as they are, not as they would like them to be; to remember that just as Americans are Americans and not Chinese, so Chinese are Chinese and not Americans, nor can they be made Americans next week, or next year, or 50 years from now. That reflection would prevent our representatives from making a lot of the puerile and costly blunders that have disgraced our policy there in recent years. They should think more of cooperating with than of reforming China. Finally, since foreign correspondents are playing such a major role in short-sightedly discrediting the Chinese Government and thus weakening the morale of the anti-Red forces, their employers could help by sending better qualified men who have sense enough to put the press to work for China and America instead of for Soviet Russia; for now it seems bent chiefly on dropping the iron curtain over the open door. We wouldn't then have to apologize to missionaries of other nationalities for what our pink reporters have done to ruin the Catholic Church in China.

The Reserve Components Provide the Cannon Fodder When the Shooting Starts—They Are Entitled to a More Important Place in Time of Peace

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. BROOKS. Mr. Speaker, in accordance with the permission granted me to extend my remarks in the RECORD, I present an article taken from the January 1949 issue of the Reserve Officer entitled "The Reserve Components Provide the Cannon Fodder When the Shooting Starts—They Are Entitled to a More Important Place in Time of Peace," by the Honorable ROBERT L. F. SIKES, Congressman from the State of Florida. Mr. SIKES is an able and conscientious Member of the House of Representatives, and, in my judgment, this article is worthy of consideration by all of the Members of the House who are interested in the welfare and safety of this Nation. The article is as follows:

THE RESERVE COMPONENTS PROVIDE THE CANNON FODDER WHEN THE SHOOTING STARTS—THEY ARE ENTITLED TO A MORE IMPORTANT PLACE IN TIME OF PEACE

(By Hon. ROBERT L. F. SIKES, House of Representatives, U. S. Congress)

America at long last has a world policy. She no longer walks indecisively in world affairs and a great part of the world recognizes and welcomes the change. She now positively seeks world peace, world security, and world democracy. To achieve these things she is engaged in an ideological struggle as old as time; a struggle between free government and dictatorship. Figuratively, America walks a tightrope and war and chaos are on either side.

The Eighty-first Congress will play a vital role in the shaping of American world policy and the pattern of world recovery. Legislation and appropriations essential to the success of America's efforts abroad will hinge upon congressional action. Congress cannot insure the success of American world policy. That is a responsibility of the administrative branch of the Government. But Congress provides or withholds the tools for the job.

There is no reason to believe that the Eighty-first Congress will seek to cripple world progress by refusing to implement our bipartisan foreign policy. The American people have shown clearly that they are defense-minded and world-minded, and the work of Congress will reflect that attitude. But we can well efford to concern ourselves with the types of legislation by which Congress will express the will of the people.

If world recovery, now unmistakably in motion, continues its present pace, the heavier expenditures of government will be for defense rather than for the Marshall plan or for like programs. This is due to the fact that there is no indication from Stalin that preparedness will not be a continuing necessity until the show-down between this country and Russia.

We are headed for a show-down and we apparently intend to allow Stalin to choose the time for it. This is a weakness in our foreign policy. We now hold the trumps but time may work against us. Since, however, such is our policy we can do no less than keep up the armament race until Stalin chooses peace or war.

In other words, full military preparedness is essential. But preparedness is costly. Present-day weapons and the newest aircraft cost much more than their World War II counterparts. Then good bombers could be built for a quarter of a million dollars each. They have given way to jet jobs costing 10 times as much. The cost of carriers and other battlecraft has doubled. Pay and maintenance of a soldier and sailor are two or three times as great. Small wonder that the Government's $40,000,000,000 budget is largely due to past wars or future ones.

There are ways of keeping down defense costs without sacrificing essential military strength. Congress and the Nation should be interested. True unification is one way and we have not achieved it. The application of an over-all policy of promotion by merit, provided by recent legislation, will help when made fully effective. The Navy has benefited for years by such a policy. Greater reliance upon the Reserve components can cut many millions from the present costs of national defense.

In time of war the Infantry is the unsung hero of battle. But when peace comes, it is the Reservists who are forgotten. The Reserve components offer an excellent media for maintaining training standards and a valuable backlog of trained men. There are millions of men who are eligible for Reserve activities. Their use offers another effective argument for those world statesmen who still measure world security by armed force.

Heretofore the Reserve components actually have been used for little except in time of war. They have not even been trained adequately in peacetime. Yet the cost of training and maintaining a Reservist is many times less than that of a Regular.

There are minimum limits, of course, below which the strength of the regular services cannot safely be cut, but any fair-minded observer knows that the Reserves can be used to implement the work of the regular services to a greater extent than they are now being used.

Greater emphasis on research and development, the use of highly trained specialists in key activities and more reliance upon the Reserve components will reduce costs and maintain a needed backlog of trained men. It need not result either in serious loss of efficiency or in lowered morale. The Reserve components provide the cannon fodder when the shooting starts. They are entitled to a more important place in time of peace.

The generals and admirals won't like this suggestion. It is easier and more spectacular to operate under the conventional big army and big navy pattern. Their immediate striking power is undeniably greater. But it is the responsibility of Congress to achieve adequate national defense as economically as safety permits. If safety plus savings can be achieved, it's worth a try.

The work of the Eightieth Congress brought the Reserve components out of the middle age. It vigorously advanced a legislative program designed to strengthen them. But the job is not finished. Congress has other work to do if the Reserve components are to reach their rightful stature. The same progressive efforts, if applied in the Eighty-first Congress, can complete the elevation of the Reserve components to a plane commensurate with their great service in wartime.

It should be in order to touch briefly on some of the pressing needs. One is for federally sponsored armories, to be jointly used by all the Reserve components in a community. Another need is for the common commission bill, which nearly became law in the Eightieth Congress. It is highly important that greater use be made of the inactive duty training pay measure and the Reserve components retirement plan. They automatically open the way to greater expansion of Reserve activities. There are other important objectives.

These will not come unassisted. Much work will be required, in and out of Congress. Those who believe there is a real place for the Reserve components in our defense program, a place beyond that presently assigned them, will have to make it known. The groundwork is laid. Intelligent, cooperative action can complete the job during the Eighty-first Congress.

Rev. Arsenio Caprio

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. ROONEY. Mr. Speaker, many thousands of the people who reside within the confines of the Twelfth Congres-

sional District which I represent were saddened on August 11 last upon the death of Rev. Arsenio Caprio, D. D., pastor of Sacred Heart-St. Stephen's Roman Catholic Church.

Under the permission heretofore granted me by the House, I include the following beautiful and scholarly eulogy which was delivered at the solemn mass of requiem for Father Caprio by Rev. Vincent O. Genova, pastor of Holy Family Roman Catholic Church, Canarsie, N. Y.:

"Be thou faithful unto death: I will give thee the crown of life."—Apocalypse II: 10.

Dear brethren, in one of the Western States a strange sight draws the attention of travelers. There is a place where people are brought for burial—but it is not called a cemetery. There are no crosses because no graves are visible. There is a beautiful landscape dotted with pleasing monuments, surrounded by flowers, trees, and shrubbery, while music from hidden sources fills the air; all so cleverly put together so as to banish every thought of the death that lies beneath the surface. This cemetery is the masterpiece of travesty of those who during their lives have fled God as though He were an enemy, and who attempt to hide beneath a covering of beauty, two facts from which no mortal can escape—death and the judgment that faces every human soul.

The church makes no attempt to illude her children. As she teaches us the truth during life, she does not want to hide it from us at the moment of death. In fact, when God sees fit to summon us from this life the church makes clear to us, in colors, words, and ceremonies which we can all understand, the four last things in all their stark reality. Death, judgment, heaven, and hell are realities we must all face. They cannot be hidden or put aside as an illusion. Every funeral mass then is a concrete lesson, with a friend, a relative, or even a stranger as the subject, on the great truth that death is the threshold to eternal life, the passageway that leads to God. Every funeral mass is a warning on the need of preparation for a holy death, the only kind that will lead to heaven. In the black vestments and the sadness of the chant is to be found the expression of sorrow of the church joined to our grief at the loss of someone dear. And the frequent refrain, Requiem Aeternam, in the holy sacrifice is the voice of our spiritual mother pleading to the mercy of God to have pity on one of her children, to grant him eternal life and happiness through the infinite merits of Christ the Redeemer.

The dread angel of death strikes impartially the sheep of the fold and the shepherds of the flock of Christ. This morning we are gathered in this Church of the Sacred Hearts with the solemn realization that it is the pastor of this parish, the Reverend Arsenio Caprio, for whom the bell tolls. Priests and people, family and friends, parishioners and strangers, we have been called to pay our last respects to one whom we admired and esteemed as brother-priest, as pastor of a great parish and a great people, as sympathetic friend, as zealous and devoted priest. After 46 years of priesthood, at the age of 71, Almighty God has lifted from the soul of Father Arsenio Caprio the burden of pastoral office and called him to his eternal reward. And we the clergy and religious of the diocese share the grief of his devoted family and the sorrow of his faithful flock, as we unite with the right reverend celebrant in pleading with our Divine Redeemer for the eternal repose of the deceased pastor. We pray that the Father of all consolation may lighten their burden of sorrow with the thought that he who in the words of Daniel the prophet "instructed many unto justice," and who was faithful to his ministry unto death, may soon receive "the crown of eternal life."

A priest is another Christ, because he exercises the saving mission of the Redeemer among men. His voice is the voice of Christ, because he preaches the gospel and the doctrine of Christ. His hands are the hands of Christ because in the sacrifice of the mass they are raised in supplication to the Eternal God on behalf of the living and of the dead. His is the heart of Christ, because it is concerned with the salvation of the members of the Kingdom of God on earth; because it is filled with compassion and mercy toward human frailty and sinfulness; because it is sympathetic to human sorrow, suffering, and misfortune. Not without reason did our Lord pick men, not angels, to represent Him on earth, and to be the dispensers of his sacred mysteries among the sheep of the true fold.

For this fulfillment of Christ's mission the sublime vocation of the Catholic priesthood is reverenced by the faithful and honored even by those without faith. It is the remembrance of many years of faithful accomplishment of pastoral duty that makes the loss of a pastor so keenly felt and so deeply mourned by the members of his parish. In the passing of Father Caprio you have sustained a great loss. You had in him a tireless worker, a priest who deemed the hours of each day too few to contain the energy and zeal which he devoted to the spiritual, moral, and educational needs of this great parish. This was his way as a young priest, and he did not shorten his strides with the passing years. You had in him a priest of personal courage, who was not afraid to face an issue squarely that involved the spiritual welfare of his people. You will remember him as one who felt at home with all classes, because of his knowledge and culture. As his learning did not make him superior, so his heavy responsibilities never caused him to lose that native wit and sense of humor characteristic of his people. As he served his Lord with a happy heart, he served his people in that spirit of friendliness which made his parish as happy as his priests.

Father Caprio's priestly ministry centered around his church and the Catholic school. On the church, the home of the eucharistic Lord, he lavished his loving care. Nothing was too good for it; the best in ecclesiastical decorative art, the most precious in marble altars, the finest in music had to adorn the house of God and the worship of God. In all these works which redound to the glory of God you had a part and you share the merit, because they were possible through your generous cooperation with your zealous pastor. In the large Catholic school of the parish, your pastor saw the indispensable instrument for the Christian education of the young. His 11 years of teaching experience as seminary professor had given him a competent grasp of practical pedagogy, which was never forgotten. The tried methods of the past and the soundest of the present were encouraged in the school directed by the competent Missionary Sisters of the Sacred Heart, in an effort to give a solid religious education which would produce virtuous, God-fearing, faithful youth.

With all that his many parochial responsibilities weighed heavily upon him Father Caprio gave cheerfully of his time to diocesan duties to which he was appointed by the bishop. For 15 years he has served as a member of the board of directors of Il Crociato; for over 20 years he gave important service to the chancery office in the role of judge in the diocesan tribunal.

As it is true that there is no one institution in the world which does as much good to humanity as the church; so, it is no exaggeration to state that there is no individual who in a lifetime does as much good to others as a priest. Yet, there is no one who is more quickly forgotten. No one would have it otherwise, least of all the priest. For it is the priesthood itself, perpetuating itself, and continuing its beneficent Christ-like mission, that is really important.

There is only one kind of remembrance which is desired by a priest. It is not that of idle praise, useless to a soul that has passed through the portals of death. It has already heard the only judgment and appraisal that counts—that of the mercy and justice of God.

If there is gratitude in human hearts for the great blessings you have received from a lifetime of priestly ministry, it should be expressed in prayer for the repose of his soul. There is nothing more consoling and so encouraging to priests than to know that people will not forget them in their prayers, that they will have masses said for the eternal repose of their souls.

Your deceased pastor lies before you, visible to you for the last time. He lies in death, not as a layman facing the altar, but as a priest facing his flock. His last sermon comes from silent lips, but it penetrates clearly into your hearts and souls. "Farewell, my people my family, my friends in Christ. May you be close to God in this life, that you may possess Him in the next. Pray for me, always. I, your shepherd, lift my arms in prayer for you, my flock. Now the shepherd is smitten, the flock must pray for the shepherd. Lift unceasingly your hands and hearts in earnest prayer that the merciful God may grant me eternal repose, peace and happiness, through Jesus Christ our Lord. Amen."

The Bible and the Constitution

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 6, 1949

Mr. WILEY. Mr. President, I am deeply grateful to the editor of the world-renowned magazine the Christian Herald, for his courtesy in publishing in its January 1949 issue an article which I prepared on the subject the Bible and the Constitution. The editor of this distinguished publication is the distinguished Rev. Daniel A. Poling, a spiritual leader famous in his own right, a man known for the vigor and courage of his opinions. He is also the father of one of the four heroic chaplains who gave up their lives when the ship *Dorchester* was torpedoed and sunk. These chaplains, as Members of the Senate will recall, offered their life belts to servicemen and thereby perished themselves. Their sacrificial deed has since been memorialized in a commemorative stamp which is symbolic of the spiritual faith and selflessness which these heroic chaplains represented in their unforgettable deed. I ask unanimous consent that the text of my article be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BIBLE AND THE CONSTITUTION

(By Hon. ALEXANDER WILEY, United States Senator from Wisconsin)

Do you remember that old story about the man who had just got religion? He was all

enthusiastic about his new discovery. When his minister remarked to him, "Well, brother, now that you have got religion, I know that you are going to cast off all sin." The enthusiastic convert answered, "I certainly am, reverend." Then the minister asked him, "I assume that you are going to pay your debts on time?" The convert looked a little perplexed at that one. "Wait a minute, reverend. You are not talking religion now. You are talking business."

This old story illustrates the unfortunate division in the minds of many people between the things of the spirit and material things. Somehow some folks still conceive of religion as a strictly Sunday affair, or as being in a little compartment all by itself, uncontaminated by everyday things. Yet we know that if man is to truly manifest his religion, he must do so every minute of every waking hour. We are told in 2 Corinthians 3: 6, "Not of the letter but of the spirit. For the letter killeth but the spirit giveth life."

You may wonder how I as a United States Senator am interested in this question. It is because, unfortunately, some of us have forgotten the spirit not only of our religion but of our patriotic faith. We look upon the United States Constitution, for example, with its Bill of Rights and merely admire it. We look upon the Declaration of Independence and respect it. We contemplate our whole system of checks and balances of this Republic—checks and balances which prevent autocratic use of power—and we feel that it is a wise system. We look upon the statutes of the great American founding fathers, and we know that we should feel pride in their achievements.

But in all these things there is unfortunately for too many of us a lack of true spiritual piety, of real vitality, of dynamic understanding. Our respect and admiration is superficial. We do not feel it down to the very roots of our being.

What I propose, therefore, is that each of us take it upon ourselves to quicken our spirit, to reinvigorate ourselves with the great truths, the great values which have made this Nation the envy of all the peoples on earth. We must, in sum, reinvigorate our patriotic faith.

So, too, we must read the Holy Gospel and understand it and appreciate it with every fiber of our being. We must recognize it as the true answer to man's problems—the means by which he can secure adequacy, by which he can achieve the harmony, the love, the peace, which were meant to be his.

Similarly, we must read and reread our civic bible, the United States Constitution, taking hold of the great truths which our founding fathers had when they breathed the spirit of life into this miraculous document.

Just as the Bible must not be a dead letter for us, so the Constitution should not be a dead letter. Imbedded within the Constitution are eternal laws of God and man which assured its success in succeeding generations. We must breathe the spirit of life into it, as its original writers did.

These great sources of inspiration must inspire us to action, they must give us continuous direction.

We are told that God is spirit and they that worship Him must worship Him in spirit and in truth. Let this be the guiding note of all our undertakings.

In the same way, let the spirit of the Constitution be truly respected, truly applied and fulfilled and we will be worthy of the heritage which is ours. To absorb that spirit, to catch hold of it, to make it a part of us—this is the great challenge to you and to me in these troubled times.

There is too much synthetic thinking about these values, too much thinking of the Constitution only as a dead letter, as something that was good enough for our fathers but perhaps outdated for us. We must quicken our spirit and it will give us true life.

Prayers by the Senate Chaplain, Dr. Peter Marshall

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 6, 1949

Mr. ROBERTSON. Mr. President, this morning there appeared in the Richmond Times-Dispatch a thoughtful and timely editorial regarding the prayers by Dr. Peter Marshall, Chaplain of the Senate, with which the daily sessions of the Senate are opened. This editorial deserves wide reading, and I therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DR. MARSHALL'S PRAYERS

The Democratic Senators deserve congratulations upon their decision to retain the Reverend Peter Marshall as Senate Chaplain, even though they were not altogether Christian in the manner of announcing it.

As Majority Leader LUCAS put it, the Democrats "decided not to mix politics with religion, as the Republicans did 2 years ago" when the incumbent Chaplain was ousted and Dr. Marshall was installed.

That Presbyterian Dr. Marshall has succeeded almost in causing the triumphant Democrats to cast malice from their hearts in this matter is perhaps due to the fact that he is one of the most powerful supplicants of our times.

Dr. Marshall's short, pungent, and pithy—and deeply reverent—supplications are well calculated to stir his Senate listeners. Consider a sentence from his invocation at the opening session Monday: "May they [the Senators] be aware of a mandate higher than that of the ballot box, a mandate from Thee to legislate wisely and well."

The Senate Chaplain has mastered the art of public prayer, which, as the Manchester Guardian recently remarked, is a most difficult one. Because of the sacred nature of such addresses, their form and content usually escape criticism, and therefore all too many public supplications are wafted above with slight editing.

The Guardian recounts the story of the young preacher in the north of England whose petition was reminding the Almighty that He was omnipotent and omniscient, eternal and infinite, when a devout old saint in the front, after waiting patiently for a time, interrupted with, "Eh, lad! He knaws He's all that. Ask Him for summat!"

In simple language, with a keen awareness of the needs of the legislators to whom he ministers, the Reverend Dr. Marshall usually asks the Lord for "summat," and in doing so manages to remind the men of the Senate of true and lasting values.

End That Press Subsidy

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 6, 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Rocky Mountain News of November 21, entitled "End That Press Subsidy." It discusses particularly the matter of the large magazines being able to send their publications through the mails at great loss to the taxpayers of the country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

END THAT PRESS SUBSIDY

The Post Office Department estimates that it will have a whopping deficit of $540,000,000 for 12 months ending next June 30.

The largest single item in the deficit, according to the Department, will be a loss of about $207,000,000 on carrying second-class mail, chiefly newspapers and magazines.

Department officials predict President Truman will ask the new Congress to increase postal rates. The boost most certain to be proposed, they say, will be on second-class mail.

Some of them are reported as saying that this has nothing to do with the fact that a majority of the Nation's press opposed Mr. Truman's election.

We're sure of that. Long before the election—in January 1947 and again in January 1948—Mr. Truman asked for higher postal rates. In 1947 the Department drafted a bill which, among other things, would have increased second-class rates sharply, but Congress didn't act on it.

We hope the new Congress will raise those rates.

The money the Post Office loses by carrying newspapers and magazines at less than cost of the service is a Government subsidy to the press.

And we don't believe the Government should subsidize the press.

As long as it does, newspapers and magazines which advocate Government economy and oppose subsidies for other special interests will be accused of insincerity.

We repeat what we have said here many times before:

"The Rocky Mountain News and the Scripps-Howard organization, of which we are a member, want no free ride at the taxpayers' expense. We are willing to pay the cost of distributing our newspapers. We would like to see other newspapers and magazines join in asking for abolition of this Government subsidy."

The United States Needs Experts

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, January 6, 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The United States Needs Experts," published in the Omaha (Nebr.) Evening World-Herald of December 16, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE UNITED STATES NEEDS EXPERTS

Gen. Patrick J. Hurley has summarized in unsparing fashion the failures of American diplomacy and statesmanship that now are resulting in the capture of China by communism. There was more than failure. There was surrender of pledged American principles, and of American war objectives. The Kurile Islands, Darien and Port Arthur, Sakhalin,

Korea, Manchuria, passed in whole or in part, directly or indirectly, to Russian control.

The consequences of all this are now spread before us.

"Half the dam" designed to "contain communism" has gone out.

What of the other half—the European half?

In Europe, too, there were calamitous surrenders to the Soviet despotism—at Tehran, at Yalta, at Potsdam. Eastern Europe—a large portion of Europe—passed into communism and the major part of it into Russian control. With these peoples and territories lost, the Truman doctrine and the Marshall plan were invoked in an effort to save what was left. The effort, while it has not failed, is meeting with but partial success.

Unhappily the record goes back further than that.

It goes back to the timid betrayal of Czechoslovakia at Munich—that made Hitler "great"; that made him believe his power could not be challenged; that it was irresistible—and that brought on World War II.

What part, if any, did American statesmanship play in that surrender?

The question arises once more because of allegations that stolen state papers unearthed by a congressional committee would confirm the fact, if all of them were made public, that President Roosevelt supported Chamberlain's foreign policy that led up to the Munich disaster.

"This is a fact fully confirmed on the public record," says the Chicago Daily News. "Yet it is a record that seems never to have penetrated deeply into the public consciousness."

After Munich, Roosevelt's friends claimed that he had saved the peace of the world and, confesses the News, "he was granted praise to the same effect even by some of his opponents." The facts are "already known to every student and to innumerable informed laymen. They are certainly known to the diplomats of every nation."

This recital of failure is not a pleasant one. The time has passed when it could serve any partisan advantage.

But the time is at hand, when similar problems press upon us, when the possibility exists of similar disastrous errors, for the United States to study carefully and prayerfully what it can learn from experience.

No responsible person charges there was deliberate, conscious betrayal on the part of American statesmanship. The charge does lie, abundantly supported by the record, that a succession of ghastly errors resulted from lack of understanding, lack of vision, from lack of trained diplomatic ability to deal with the inflamed mind of a Hitler as with the crafty Muscovite minds that spin their webs in the Kremlin.

Some of these errors were to be expected. The United States had for long been isolated from the European and Asiatic game of power politics. Following the advice of the founding fathers we had held ourselves aloof. And so, when we did venture in—to our ankles, to our knees, finally up to our ears—our diplomacy, our world statesmanship, was inexperienced, untrained, and but poorly informed. As amateurs, with confidence and glorious motives, we were playing poker—carelessly—with card sharps.

But it has been a long while—and a terrible while—since Munich. We have been long in the game. We are in the game still and have our shirts left. Surely we should have graduated from the sucker ranks. If we are to continue to play with any remote prospect of retrieving our losses, we must have graduated.

No use calling for a new deck. The decks have been changed often. The call is for better players, better playing. For realizing keenly the astuteness that confronts us, and for measuring up to it. Americans are anything but dumb. They are keen and shrewd and able to learn. All their hopes, so often disappointed, depend now upon their ability to prove it in the ugly game of power politics.

Possibly the players who now are pushing our remaining chips into the middle of the table have learned so much the hard way that they have become expert. And possibly not. Perhaps some deeply concerned kibitzers should be called in as replacements.

And this, of course, is for the President and his trusted advisers to decide. Theirs is a solemn responsibility.

The Republican Party

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Thursday, January 6, 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD two letters which have recently passed between Mrs. Alma G. Madden, of Bellingham, and the junior Senator from Washington. This correspondence may be of real interest to all Republicans and to those Americans who belong to neither of our two great political parties. Mrs. Madden has made it seem very much worth while, as it is worth while, to be a Republican on the basis of a deliberate choice. I was privileged to endorse her findings, and to wish her well.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

BELLINGHAM, WASH.,
December 29, 1948.

Senator HARRY CAIN,
United States Senate,
Washington, D. C.

DEAR SENATOR CAIN: Tonight in the evening paper I read your courageous statement about fighting to defeat unworkable laws. Further, I agree with you heartily that we need to do a merchandising job on the record of the Eightieth Congress. It is a good record, and when it becomes safe to say so, that is, when it has been tried long enough to prove its worth, the Democrats, many of whom helped put that record across, will say so too. I shouldn't wonder that years from now some of them may even be bragging about it.

They know some of these things must be done if we are ever to get on our feet in this country. That is, they know it if they haven't lost the sense they were born with. But right now they don't want to take any blame for its temporary unpopularity. We all knew that whoever began the disagreeable but necessary job of putting this country on a sound basis again would have to take a lot of smearing, a lot of grief and punishment. Well, the Eightieth Congress did the job, took the punishment, and now the Eighty-first will reap the reward. If the Eighty-first Congress has good sense, and patriotism enough to put the welfare of this country first, they will keep the foundation so laid and go on from there. Only the dear Lord knows whether they have the qualities to do the job.

This talk of liberalizing the party, if it means simply adopting a watered-down version of the New Deal, leaves me cold. What are we a party for—why do we maintain headquarters and go to the expense of national organization at all, if we are merely a pale imitation of what we already have in the White House and the administration party in Washington? Why not just join forces with the New Deal and save expenses?

I am a Republican because I believe in certain things, because I adhere to certain principles of Government, because I feel my party has a distinct and important function to perform in this Government, and that function is distinct and separate from those of the Democratic Party.

We are the conservative branch of the two-party system. I do not shy away from that word nor coyly and bashfully reach for cover under the label of being either a progressive or liberal. I am a conservative and proud as heck of it. It is a good word with an honorable lineage. Its prototype is to be found in the last chapter of Proverbs. It means to conserve, to guard, to foster, to protect, to build, to enlarge, to produce. It has no common interest with reaction or stand-pattism. It is no more reactionary than the mother guarding and rearing her children, no more stand-pat than the father who invests in a home or life insurance or savings for his family. Conservatism is as forward looking as a young man working his way through college, as a farmer trying out a new kind of wheat, as a mechanic working on a new gadget, as a man setting up in business. That is the kind of conservatism the Republican Party believes in. And this kind of conservatism is the warp and woof of what America itself is. What is there in that to be ashamed of or apologize for?

Too long we have permitted others to say what we are, and they have missaid us. Too long we have permitted others to pin labels on us which were mislabels. For permitting this we have been much to blame. We have been timid about our own virtues, hesitant about proclaiming our own beliefs. Our timidity has looked like consent, our hesitation like guilt. It is my conviction if we had been proudly forthright in our support of our own party convictions and about the record of the Eightieth Congress, of which we were a controlling part, we would have won the election. And even if we had not, we should have gone down with banners flying and in honest fight.

Any party worth the name should be willing to say:

"This I do believe; on this I take my stand, though all the world believe otherwise. Let all who feel as we do join us."

Maybe at the time what we believed wouldn't be popular enough to win an election that time but it would the next. At least such a program would have honesty, courage, and integrity. And I have a quaint conviction that honesty, courage, and integrity—the kind of honesty which states a conviction even if it loses votes, the kind of courage which sticks to unpopular convictions—are still mighty potent things in American life. It seems to me I recall a man standing up in the House of Burgesses in Virginia and saying something like that. And he didn't do so badly.

We at home have our work cut out to do a job of merchandising. If you will write a letter telling us women what we might do in our State Republican Federation along these lines, I shall be glad to read it at our board meeting in January.

I didn't mean to preach a discourse. I meant to leave that for you. Thank you for letting me blow off steam.

Yours sincerely,

ALMA G. MADDEN.

JANUARY 5, 1949.

MRS. ALMA G. MADDEN,
Bellingham, Wash.

MY DEAR MRS. MADDEN: Your letter of December 29 is before me as it has been since it came yesterday. I am more grateful than you can possibly imagine for your comments

CAN LIBRARY
FEDERAL ARCHIVES DEPOT

and attitude of mind. I know of no letter which has so stimulated and excited my interest. I can think of receiving no letter which I have encouraged every member of my staff to read with thoughtful concern. I don't know at the minute what I am going to do with your letter but I want to discover some way through which I can distribute its contents rather widely throughout the State. I share your convictions and pride about and in our party. Like yourself I want only for us to define what we stand for and live by our code. There are those among us who say we need a new look and by their conduct I think they want to outdo those who are doing too many things we don't stand for. Our monumental responsibility and task is to popularize our own conservative position. If this can be done, and it will call for sacrifice and very hard work, I am completely convinced that we shall be ultimately successful and happy as a party because people everywhere will make it so. Our prevailing uncertainty and distress as a party results from not knowing exactly what we are. Your definition of an intelligent conservative, and there is no point in being anything less, ought to reinspire those who are so fortunate as to read and understand it. You have made a contribution to me and I shall pass your gift along to just as many as I can.

May your understanding, common sense, and courage bring hope and satisfaction to all you come in contact with.

With warm personal regards, I want to remain,

Most cordially yours,

HARRY P. CAIN.

Congress Must Continue Its Spy Investigation

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. NIXON. Mr. Speaker, the Committee on Un-American Activities recently has uncovered shocking revelations of the existence of espionage in our Government involving the theft of highly secret documents for transfer to agents of a foreign government. There is overwhelming evidence that this exposure has not yet been completed. If this job is to be finished, it is highly essential that the Congress give unstinting support to the Committee on Un-American Activities. The American people insist that there shall be no whitewash or cover-up and that all guilty persons shall be brought to justice.

The necessity for continuing this investigation has been stated clearly and logically by the Saturday Evening Post in an editorial published in the issue of January 8, 1949. Under leave to extend my remarks, I wish to insert this editorial in the RECORD, as follows:

CONGRESS MUST CONTINUE ITS SPY INVESTIGATION

If there was ever any doubt as to the imperative need for the continuing services of the House Un-American Activities Committee, it must have been dispelled by the amazing attitude of President Truman and the Department of Justice toward the committee's sensational year-end revelations of Soviet espionage in the State Department. About the best that can be said for the President's performance is that it assures the continuance of the committee by the Eighty-first Congress. A left-wing statesman may be planted in the committee to pipe smear items out to compliant columnists, but a committee there will undoubtedly be. Everybody will be trying to get into the act.

President Truman's attitude on this vital matter has been, to say the least, uninformed. Top-secret and highly restricted documents, which had been removed from the confidential files of the State Department by somebody 10 years ago, were found on Mr. Whittaker Chambers' farm, as Chambers said they would be. The President, at his earliest opportunity to comment on this revelation, repeated his inept campaign declaration that the whole thing was a red herring. The Department of Justice, which from the first has belittled the discoveries of the committee, insisted on grabbing the committee's witnesses for a New York grand jury under circumstances which suggest greater eagerness to punish Mr. Chambers for confessing than to discover who represented Stalin's apparatus in the State Department. Instead, the grand jury indicted Alger Hiss for perjury, thereby indicating its belief that the committee had turned up something more substantial than red herring. This event did nothing to enhance the cogency of the President's earlier remark that he had no intention of getting into a controversy with a dead committee.

Fortunately for the safety of the United States, the Un-American Activities Committee lived long enough to produce this amazing piece of evidence—evidence which confirms the suspicions of those of us who have long feared that Stalin's tentacles had reached into the most intimate circles of the New Deal government. These suspicions are confirmed. We are left with new and darker suspicions—to wit, that the Truman administration regards the possible embarrassment of its own officialdom as more dreadful than the operation of Stalin's spies in this country. The President's remark that the committee should have turned over its evidence to the Department of Justice, which has been sleeping on this information for months, was a new low in cynicism. Despite some belated energy in the Department, presumably the result of competition, the fact remains that it was a committee of Congress which turned up the key information.

It is no wonder that the Communist conspirators take on new boldness throughout the world. They are aware that, however blustering the speeches of the representatives of the "free nations," there is little to fear from the United States of America under present management. When Igor Gouzenko uncovered the spy ring's operations in Canada and made it plain that the real Red objective was the United States, Washington was indifferent. It was apparently bad taste to disturb Soviet spies. Earlier, in 1945, the Amerasia scandal had made it plain that top-secret material had been stolen and copied by Communists and fellow travelers, but nothing much happened to the document thieves. Instead, former Under Secretary of State Grew was smeared out of the Department for the crime of having caught them at their thievery. Last month, with more of the disgraceful story brought forth by a congressional committee, Mr. Truman talked about red herrings. For once, we suspect, the President missed the popular note.

The Un-American Activities Committee of the Eightieth Congress is about to go behind the Truman iron curtain. Unless the Eighty-first Congress contains men of sufficient honor and patriotism to forget politics and insist that this investigation be carried forward, the whole matter will be brushed under the rug and, for all we know, Soviet agents will continue to have access to American plans and documents. From present indications, one must conclude that the President is still too ignorant of Communist methods to rebel against the Red strategy of using his administration as a front. For a real probe of this situation, the country must continue to rely on Congress.

Duplicate Taxes Imposed by the Federal, State, and Local Governments

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the CONGRESSIONAL RECORD the following address which I delivered before the Council of State Governments at Detroit, Mich., on December 2, 1948:

I am very happy to be here today to consider the problem of duplicate taxes imposed by Federal, State, and local governments.

The Federal Government, being a national government, reaches more people and has jurisdiction over more transactions than is possible in the case of States which are confined to taxing persons and subjects within their borders. It is, therefore, necessary that the Federal Government should have a tax system which is much more comprehensive and of a much greater variety and range than is possible under a State or local tax system. The Federal income tax itself reaches about 50 million taxpapers out of a total population of over 140 million. The remainder of the people are reached through selective excise taxes, a striking example of which is the admissions tax which by its very nature reaches a class of people which could not be reached under an income tax. From the standpoint of the individual in the low brackets, an excise tax of this nature is much less burdensome than an income tax, because the individual always has a choice as to whether or not to pay the tax or refrain from making the transaction subject to the tax. Included in this category are the taxes on liquor and tobacco. The Federal Government derives over three billion dollars from taxes on liquor and tobacco, alone. In addition, the Federal Government imposes taxes on gasoline, lubricating oils, automobiles and trucks, tires and tubes, refrigerators, radios, electrical energy, retail taxes on furs, jewelry, and toilet preparations, and luggage. There are also taxes on transportation of persons and property, admissions and communications, social security, and stamp taxes, not to overlook a tax on every telephone conversation.

Federal excise taxes alone yield over $8,500,000,000, with another $2,500,000,000 derived from customs and miscellaneous receipts. The remainder, approximately $33,000,000,000, comes from our Federal income tax on individuals and corporations. In fact, the total receipts of the Federal Government for the current fiscal year, ending June 30, 1949, are estimated at around $45,000,000,000. Adding to this our State and local taxes of approximately $13,000,000,000, the grand total is $58,000,000,000, compared with a prewar total of around $12,000,000,000. It can thus be said over 30 percent of our national income is—30 cents out of every dollar—now being absorbed by taxes, Federal, State, and local.

One of the primary reasons for this enormous increase in the Government tax bill is

the large increase in governmental expenditures. The cost of government has been steadily increasing in recent years. But nowhere has the increased cost been so pronounced as in the case of the Federal Government.

This enormous Federal tax bill is caused by a great many factors. In addition to the expenditures resulting from the aftermath of the war, including the European recovery program, the Federal Government is undertaking more and more to carrying on functions which fundamentally and properly belong to the States and local governments. Thus, we not only are faced with a duplicate tax system of Federal, State, and local governments, but also with duplicate expenditures for many of the same functions. The Federal Government is now engaging in a great many varied activities, which a few years ago were confined to the States, the local governments, and the people. To see this, one only need to compare 1913 Federal expenditures and State and local expenditures with present Federal, State, and local expenditures. In 1913 the Federal Government expenditures amounted to only 24.6 percent of the total governmental expenditures, State and local expenditures accounting for over 75 percent of the total. Today the Federal Government is accounting for approximately more than 75 percent of the total governmental expenditures, and State and local governments for approximately less than 25 percent of the total.

In terms of dollars, the Federal expenditures amounted to $700,000,000 in 1913. Today they exceed $40,000,000,000. In 1913, State and local expenditures by $1,300,000,000. Today they lag behind Federal expenditures by $27,000,000,000. This shows strikingly how far we are getting away from home rule by the States and local governments and getting more and more into a centralized Federal system. I am a great believer in leaving to the States and local governments those functions which essentially belong to them and which they can perform much better than the Federal Government, because they are so much closer to the people in their particular locality and are more familiar with the individual needs of the community.

While, of course, much of the increased Federal expenditures were caused by the war, nevertheless a considerable part of such increase is due to the assumption by the Federal Government of functions and activities which formerly were undertaken by the States and local governments. If we are ever going to get our Federal expenditures down to a sane and reasonable basis, State and local governments must refrain from asking Federal aid for projects which should be undertaken by State and local governments. Furthermore, State officials should use their influence through their Representatives in Congress to see that many activities which are now being carried on by the Federal Government be curtailed and returned to the States. Many of these requests for aid when granted by the Federal Government are hedged in by conditions and limitations which are unsuited to the needs of the particular community.

To curtail nonessential spending by the Federal Government is the real key to the elimination of duplications by governments in both the tax and expenditure field. I am convinced that by this means, and this means alone, will it be possible for the Federal Government to withdraw from certain fields of taxation, which are now being tapped by State and local governments.

But even here I wish to exercise a voice of caution. There are certain taxes which operate as a threat to business expansion, production, management incentive, and employment. Particular examples of these taxes are the Federal income taxes on individuals and corporations.

The Congress believed it necessary in the Revenue Act of 1948 to reduce income taxes on individuals. This reduction was deemed essential because the income taxes under the present tax law constituted a serious restriction upon new investment, management incentives, and employment.

As has often been said, tax rates do not produce income. Without the income, the rates are meaningless. Increased income and increased revenue go hand in hand. The wisdom of such a course has been evidenced by the way revenue receipts are running at the present time. In the current fiscal year, July 1 to October 29 receipts are running only $512,000,000 less than the actual receipts for the same period in the fiscal year 1948. When we consider the heavy income-tax collections to be received in March, April, and May of this fiscal year, it appears likely that even with the tax-reduction bill, our Federal receipts for the fiscal year 1949 will approximate our receipts for the fiscal year 1948.

But if the States had immediately tried to take advantage of this Federal tax reduction by imposing increased State income taxes to take up the reduction, the result would have nullified the benefit of the tax reduction. I therefore hope the States will not increase their income taxes so as to interfere with business expansion, production, and employment.

In the field of taxation, there are always four parties to be considered: the Federal Government, the State governments, the local governments, and the taxpayer. Too often the taxpayer is overlooked in the scramble for revenue. If governments are to adequately receive revenues to support their activities, it is vital that the taxpayer be kept in a sound, healthy, and prosperous condition. We cannot do this if we overburden him with oppressive and burdensome taxation. His incentive to earn and to invest must not be destroyed through oppressive taxation, whether imposed by State, Federal, or local governments. We have made a start in this direction by the Revenue Act of 1948. Let us try to make another step in the same direction. This can only be made possible through a reduction in Federal expenditures. Our present budget is the greatest peacetime budget in our national history. You can all help in this great work by using every means at your command to keep demand for Federal spending and increased activities down to a minimum.

I do not need to call it to the attention of this distinguished group that for the past 16 years or more there has been a steady growth of centralized power. More and more under a system of various aid to the States local and State governments are becoming subservient to the Federal Government. Home rule is gradually disappearing through these subventions.

I have lived in a period of home rule and even a city of only 15,000 people saw fit to revamp and rebuild the city. It desired industrial expansions and its facilities were not adequate to this purpose. Without turning to the State or the Federal Government for assistance the local people built 3,000 model homes for workers; called in experts and planned the city for the future, including transportation. High schools costing millions of dollars were erected. Parks and playgrounds were developed. The largest stadium west of Harvard University was built in 1917 and has been used almost every day since then. A golf course was established for the benefit of the workingman; a general hospital and a maternity hospital were built. A city health department was created which has functioned ever since. This was home rule in action. Did this program of home rule require the aid of the State or the Federal Government? No. All this was done through local effort and local expense. This home-rule program resulted in the growth of the city from 15,000 to 151,000 population, with a resulting era of prosperity from increased pay rolls.

The people were proud of their independence and never thought of being placed in a position of servitude to a centralized bureaucratic government advertising itself as the munificent almoner of indefinite charities.

Home rule was the strength of our Government in those days, and if any persons had been told that home rule was to be surrendered and replaced and controlled by a sprawling Federal bureaucracy, they would have deemed such a statement as coming from a disordered mind.

It is not necessary for me to furnish examples outside of this State, because in many of the Michigan cities today the great system of free enterprise came as a result of home rule. Some of the largest industries were started by venture capital furnished by those living in the community who had saved and were willing to take a risk in a new venture.

I repeat again that the constant turning of communities to the Federal Government to finance local projects not only has a demoralizing effect upon the citizens but leads to the first steps toward socialism. The surest way to permit the States to have the benefit of that part of the field of taxation now occupied by the Federal Government, I repeat, is to cut the expenditures of the Federal Government to the point where it will not have to tax practically everything, and especially to duplicate the taxes collected by the States.

We are on the verge of a great decision as to whether or not the States are to become weakened, the people reduced to servitude by an extravagant, wasteful Federal system in the use of the taxpayers' money. The answer is in the hands of the sovereign citizens who love liberty.

I wish to thank the members of this distinguished audience for their patience in listening to my views on the subject I have discussed.

St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 6, 1949

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from the annual message to the New York Legislature on January 5, 1949, by the Honorable Thomas E. Dewey, Governor of New York. His remarks deal with the proposed power development of the river by New York and Ontario.

The excerpts follow:

The plans for the construction of the St. Lawrence power project, approved by the United States Army Corps of Engineers, have been in existence since 1941, yet the unbridled power of this great river still flows wastefully to the sea. The State of New York is suffering from a power shortage. We are presently required to obtain from the Province of Ontario over 2,000,000,000 kilowatt-hours a year to maintain existing production. Meanwhile, Ontario, itself, is in such dire need for this power that its people have been required to resort to brown-outs and night operations to avoid normal peak loads.

To each new session of Congress there has been presented a bill to make possible the

development of the St. Lawrence. Conflicting interests have repeatedly made the passage of such a bill impossible. I have always favored the full development of the St. Lawrence seaway and will continue to support any program which respects the agreed rights of our State.

But, meanwhile, the power can be developed without reference to the seaway and, let me emphasize, without impeding it when and if it is approved by the Congress. Accordingly, last year, New York State attempted to go ahead under the terms of the existing Boundary Waters Treaty between the United States and Canada. The power authority of this State has applied to the Federal Power Commission for approval, and to the United States Department of State to transmit its application to the International Joint Commission.

Again the needs of the people of this State have been disregarded. The State Department has refused even to transmit the application of the State of New York.

Power in human terms means many things. It means new business, new employment, and greater prosperity. It means the extension of the modern conveniences of life to rural areas. It means a greater number of labor-saving appliances in every home. These benefits are being denied the people of the State of New York without valid reason.

Your honorable bodies can take the following steps to assist in clearing the way for action when and if Federal cooperation can be procured.

First, the law under which the New York State Power Authority acts should be improved by relaxing the requirement that the power authority must have firm contracts for the sale of its power before issuing any bonds.

Second, the authority should be empowered to construct transmission lines where necessary to bring this great supply of power to the load centers.

The Nation in 1949

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Milwaukee Journal, January 2, 1949:

THE NATION IN 1949

Today, just over the threshold of 1949, we cannot escape the fact that, on the national scene, 1948 was a do little year.

Congress, confronted with an election, dawdled in indecision on too many questions. The basic problems of our times—those made patent by the great depression as well as those rising out of the great war—remained unsettled. In fact, to a considerable extent, they remained unapproached.

We enter 1949 with the national elections over. The question is whether we enter it determined to accomplish what cries for accomplishment.

The first problems in 1949 involve the government itself. There is the matter of the budget, swollen by defense needs to a figure beyond anything we have known in peacetimes. Unless economies can be effected, there will have to be an increase in revenues from taxes.

Where will we go? Will we, following the suggestions of the Hoover group, really make a valiant effort to cut waste, extravagance, and duplication from our national activities? Or will we ignore the suggestions, pass a needlessly high budget, and raise the tax burden on the people?

Then there are the problems involved in inflation. Will we again in 1949 largely ignore this important matter, except in the field of rent control? Or will we act positively to sustain production while lowering prices?

Then there are the problems involving labor. What will we do about the Taft-Hartley act, about minimum wages and kindred matters? Will we yield entirely to labor's dictation or will we develop legislation in the interests of all the people?

Finally there are the many still unsolved problems concerning social security, housing, education, and health. Where will we go with these? Will we lean toward the pauperizing solutions of the Socialists or will we carry on according to the American tradition?

We can, of course, head toward "cradle to the grave" security, toward housing by Government, toward a federally directed education, and a federally managed health service. But will we then be headed in the American direction?

In these things we are likely to go far astray if, considering each problem separately, we act without the solid foundation of a basic American philosophy. In a chartless course there is always a tendency to yield to isms and panaceas, to lines of action which have no root in national experience and are fraught with ultimate danger.

There is little present need to fear that we will deliberately embark at this time on a new philosophy, as Britain did when she turned from an empty conservatism to an unproven socialism. The danger here is that, by forgetting our heritage, we may be hoodwinked into un-American solutions to some of our American problems, gradually setting a pattern foreign to our traditions.

In seeking solutions, whether it be for racial intolerance or for financial security, we must always remember that the greatness of our past lies in the development of private initiative and the protection of legitimate private enterprise.

Our American objective must always be to maintain a people free from unnecessary restraint and able through its individual efforts to enjoy an increasingly high standard of living, with a decreasing economic difference between those at the top and those at the bottom.

We must measure the effect of everything we do on the essential liberty of the sovereign individual. We must avoid a cumulative regimentation for health, for education and for security, which may in the end so weaken liberty that the state will be the master and the individual will be submerged.

The problems of 1949 bring us a basic challenge. We stand at a crossroads in our existence, with needs pressing from every side. The question is whether, approaching our needs, we have the wisdom to proceed calmly and with determination to rely wholly on American solutions—whether we have the prescience to know the right road from the wrong in this critical moment.

Small Business and the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I append hereto a resolution recently passed by the Smaller Business Association of New England, Inc., to be presented to Congress as expressive of the views of small business with reference to proposed changes in the Taft-Hartley Act:

Whereas we believe that true collective bargaining can take place only when both labor and management sit down at the bargaining table on equal terms; and

Whereas experience has shown that the Taft-Hartley Act has made the situation less one-sided than it was previously under the Wagner Act: Now be it

Resolved, That we, the Smaller Business Association of New England, Inc., hereby petition our Representatives in the Congress of the United States not to allow the provisions of that act, especially those pertaining to the jurisdictional strike and the secondary boycott, to be weakened, even though it may be considered desirable to make some changes in some parts of that act.

Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include a very fine editorial from the Bloomington (Ill.) Pantagraph under date of November 2, 1948. I maintain, Mr. Speaker, that the passage of the Taft-Hartley Act was the result of misdirected activities of labor leaders in this country who were thinking more of their own welfare than of the welfare of the rank-and-file members of their unions. Congress, in my opinion, has never been and is not now antilabor.

The editorial follows:

WILL CONGRESS KILL TAFT-HARTLEY BILL?

Organized labor is hailing the November 2 election results as a mandate given to Congress for outright repeal of the Tart-Hartley Labor Management Act. Philip Murray of the CIO, following his post-election call on President Truman at the White House, declared that "now the people have spoken," the Taft-Hartley Act would be repealed. William Green, A. F. of L. president, has called for congressional action to "wipe out the antilabor program of the last Congress."

Labor leaders want a repeal bill to have high priority when the new Congress convenes January 3. They point to the Democratic platform, Secretary of Labor Tobin's speeches, President Truman's campaign pronouncements, as prorepeal. However, none of these Democratic attacks on the Taft-Hartley Act denied the need for labor legislation of wider application than the 1935 National Labor Relations (Wagner) Act.

President Truman wanted something more than the Wagner Act when on December 5, 1945, he asked Congress for some action against the postwar strike wave. On May 6, 1946, the President asked Congress for authority to draft essential-industry strikers into the armed forces during the war emergency. In his 1947 address to the new Republican Congress the President asked for legislation the effect of which would be to restrict some of labor's prerogatives under the Wagner Act.

Further support for revision instead of outright repeal can be expected from many of the Democrats and Republicans who, as Members of the Eightieth Congress, voted for the Taft-Hartley bill. They will note that 80-odd Members, Democrats as well as Republicans, who voted for it will not be Members of the new Congress.

Senator MCKELLAR (Democrat, of Tennessee) who voted for Taft-Hartley in 1947, has said: "After the overwhelming expression of the American people as to the Taft-Hartley law, I believe that law should be repealed or modified in accordance with the expressed will of the people as shown by the vote on last Tuesday." In 1947 only two Senators who had voted for the bill shifted over to vote to sustain President Truman's veto, LUCAS (Democrat, of Illinois) and SPARKMAN (Democrat, of Alabama).

Among congressional leaders who will be calling for quick action on the Taft-Hartley law is Representative LESINSKI (Democrat, of Michigan), scheduled to become chairman of the House Labor Committee. Representative LESINSKI on June 24, 1947, 4 days after President Truman's Taft-Hartley law veto was overridden in the House, introduced a bill for its repeal.

Vice President-elect ALBEN BARKLEY has indicated that if there is compromise legislation it will be nearer to the Wagner Act than to the Taft-Hartley law.

What the American people want is a responsible body of organized labor that will act in the best interests of the country. The people want no more regulation of labor by Government than the conduct of labor makes necessary. The Taft-Hartley Act was the result of irresponsible, monopolistic actions of organized labor that virtually paralyzed this country's economic processes at the time we were trying to switch from war to peace production. It was less severe than President Truman himself sought in his May 6, 1946, request.

But under Democratic, Republican, or even labor government organized labor will be confronted with rigid controls if its conduct ignores the welfare of society as a whole. Repeal of the Taft-Hartley Act would not solve the problem. Revision would not solve it. Organized labor itself will determine what kind of labor laws we have—not by its lobbying power but by the actions of its leadership in industrial relations.

What Will We Do About China?

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New Hampshire Morning Union of January 4, 1949, entitled, "What Will We Do About China?":

WHAT WILL WE DO ABOUT CHINA?

The time has come when the United States must decide what it will do about China. Our policy of do-nothing and drift has finally come to the end of the way and is faced with grave disaster unless we meet the pending crisis squarely.

The Communists have swept over most of north China down to the Yangtse River, and the question now is whether they are to be allowed to dominate all Asia. For that is exactly what the present proposal of peace through a coalition means. Recent developments in Europe in the form of coalition governments with the Communists have demonstrated that they lead inevitably to one result—Communist domination. And Communist domination of all China will eventually include Malaya, Indochina, Burma, Thailand, India, and Indonesia. With the potential resources of all Asia at their disposal, the Russians would be in a good way to dominate the earth.

Unless we are absolutely oblivious of our welfare, this must not happen. China is not yet lost. The whole southern half of the country is as yet untouched by the Communists, and there is no reason why with a strong protective policy they should not be stopped at the Yangtse. As Hanson Baldwin, military analyst of the New York Times, has said, "It is still perfectly possible to create somewhere south of the Yangtse and north of Hong Kong and Canton a rampart or series of ramparts to contain communism."

This line of defense is as important as the line now drawn against communism in Europe, and its maintenance is as vital to the interests of world democracy. As Mr. Baldwin has said, a balance of power must be created in Asia, just as a balance of power is being created in Europe by the Marshall plan and the projected Atlantic alliance.

We must throw our strong support behind south China leaders—if not Chiang Kai-shek, then some others who will arise—and win friends and influence among the peoples of southeast Asia. This will be a diffcult task, but it is not impossible. Preserving south China from Communist domination not only will save southeast Asia for democracy and freedom but will provide a base from which later the recovery of north China from Communist control can be accomplished.

And we must act at once. There can be no delay. With the knowledge of strong American backing, the anti-Communist forces in south China will be encouraged to keep up the fight. Without that knowledge, they are certain to throw in the sponge either through abject surrender or by accepting a coalition government in which the Communists will dominate, which is the same thing. The hour has struck. We must act.

Cross-Filing in the California Primary

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. JOHNSON. Mr. Speaker, many Members of the House have been confused and do not understand the system of cross-filing which the California election laws permit in the primary election. The Stockton Record, under date of December 20, 1948, had an editorial in which some of the results of cross-filing are mentioned, as well as some of its features. In order to understand it, we should remember that under the primary system the voters themselves select the candidates. Each voter must register his party preference, or if he has no preference, he may refuse to designate. When primary election day comes, there are as many separate elections at the same time as there are qualified political parties. The voters who are registered and wish to vote enter the precinct election booth and the clerk in the booth determines, from the registration list, with which party they are affiliated, and consequently hands them the appropriate ballot—Republican, Democrat, and so forth.

In order to cross-file, the candidate must have sponsors from the party whose nomination he seeks, whether it be his own or other parties. For instance, I, as a Republican, when I enter my name as a candidate for the nomination for Congress by the Democratic Party, must be sponsored by from 40 to 60 registered Democrat voters. This enables me to get my name on the Democratic primary ballot, and gives the voters of that party the right to determine whether or not they would like me as their candidate. In effect, it merely means that voters of one party may endorse the candidacy of a person registered in another party. Since the voters are the ones who must make this determination, I can see no harm in permitting them a chance to vote on the name of anyone, sponsored by members of the party whose nomination is sought, who may be seeking the nomination irrespective of his party. If in their judgment he is the man that they think would be a good nominee for their party, why should they not have the right to say so? This is exactly what the California primary does.

In order to retain party identity and preserve party integrity, the law provides that in order to obtain the nomination of any other party than the one in which he is registered, a nominee must obtain the nomination of his own party. In other words, if his own party does not designate him as the nominee and therefore indicates they do not want him as their candidate, he is not permitted to have the candidacy of the other party whose nomination he was also seeking. In that event, the State central committee of each party selects a candidate to appear as the candidate of the respective party in the final election.

The article, which I ask leave to include in my remarks, gives in brief form the basic underlying idea of the cross-filing system, and indicates that in the past, as undoubtedly it will in the future, benefit the candidates of both parties. It distinctly takes the control of the party away from political bosses and keeps it in the hands of the voters themselves. The article referred to follows:

GOP RECALCITRANTS SEARCH FOR SCAPEGOATS

Calling themselves partisan Republicans, some 125 southern Californians are out searching for scapegoats on which to place the onus for defeat in the Presidential election. One member of the committee hit the nail squarely when she said, "We were defeated by ourselves." Then she went on to blame the wishy-washy, namby-pamby attitude of our leaders, especially Earl Warren.

The committee has two specific aims: To abolish by initiative and election the practice of cross-filing, and to retire Governor Warren from public office.

Cross-filing in primary elections permits a Democrat to seek the Republican nomination, and vice versa. More important, it enables the voters to express their approval of candidates for what they are, not for their party affiliation. The practice has been widely approved by political observers as giving the primary back to the people, making the primary a truly popular election rather than a strictly party affair as it is in most of the South. Neither party has been an exclusive beneficiary of the system, both Democrats

and Republicans virtually have won office in the primary by winning both nominations.

The Republican recalcitrants aim to restore party purity in the primary, a goal which means restoration of control and authority to party leadership at the expense of the people's full participation in determining who shall be nominated.

In attempting to explain the defeat of the Republicans on November 2, it is logical to center fire on the candidates. Where the unity theme originated is difficult to say. Both Governors Dewey and Warren were its spokesmen, and the theme was carried out by lesser party leaders as well. At the time most political sages nodded wisely in the belief that the party had only to avoid stirring antagonism by discussing issues; they pursued the strategy of floating along on the anticipated tide of public opinion.

To center blame on Governor Warren is absurd. At best, a Vice Presidential candidate is a secondary campaigner, not a policymaker. Nevertheless, on some issues of particular interest to the West, notably public power, Mr. Warren acted as Mr. Dewey's spokesman.

In attacking Governor Warren, the GOP faction appears to be dissenting from the progressive principles which have been stirred within the party. The results of the election demonstrate that a reversion to traditional conservatism would have made more decisive the defeat which was suffered and is likely to result in an extension of Democratic holds on administrations and legislatures in the future.

Senator Lucas His Party's Choice

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. PRICE. Mr. Speaker, Democrats and Republicans alike in the great State of Illinois are in hearty accord with the sentiment expressed in an editorial published in the Alton (Ill.) Evening Telegraph, Tuesday, January 4, 1949, commenting on the unanimous choice of Senator SCOTT W. LUCAS, of Illinois, as majority leader of the United States Senate.

Under leave to do so, Mr. Speaker, I herewith include the Evening Telegraph editorial as part of my remarks:

SENATOR LUCAS HIS PARTY'S CHOICE

Senator SCOTT LUCAS, of Illinois, was elected unanimously as majority leader of the Senate. It was an impressive tribute given to the Illinois Senator by his party. With many able men who would have esteemed it an honor to be chosen as the leader of the majority party in the United States Senate, the choice fell upon Senator LUCAS. He has made Illinois people feel that they are not represented by a nobody. No matter what the party lines of the administration may be it is important to Illinois that she have a representation amounting to something. Senator LUCAS has displayed a power of influence in the Senate that has given him attention of the men in the posts of party command that go to the long time Senate Members. It had been a foregone conclusion for sometime that Senator LUCAS would be the choice of his party members for leader of the Democratic forces in the United States Senate, but it would have seemed a bit too optimistic to think that the post of leader would go to him without opposition. Yet that is what has happened and the choice of him by his party becomes more complimentary. Senator DOUGLAS, who might have been urged as party leader because of his ability, was disqualified by reason of his being a novice in Senate Membership, but he will doubtless display a fast growing influence and he too become a highly important Member of that body.

It is recalled that when Senator LUCAS was up for renomination for the Senate he had no opposition in Illinois, getting the nomination with no contest.

Did We Buy Socialism With Truman?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of December 4, 1948:

DID WE BUY SOCIALISM WITH TRUMAN?

After all that has been said in felicitation of President Truman and his gallant fight against overwhelming odds, one has to face up to what this election may mean to the future of the United States. The people didn't hate Harry Truman enough to defeat him or love Governor Dewey enough to elect him. But after all, a contest for the office of President is not a golf match and all this talk of closing ranks and showing superior sportsmanship can hardly dispose of the fact that, unless Mr. Truman's campaign promises were so much guff, the country may be in for a rough ride.

If the President had stood on the record of his public acts, the prospects would not be bad. He has been right on a lot of things, among them aid to Greece and western Europe, defense, and control of atomic energy. But these things, for which Governor Dewey also stood, were not what elected President Truman. He owes his election pretty much to the fact that some millions of people have come to accept the philosophy of the heroine of Gentleman Prefer Blondes: to wit, that love and affection are very nice, but a diamond ring lasts a lifetime. The sterling American farmer reasoned that Dewey might be wonderful, but it was Truman who was paying the support prices. Other groups were persuaded by promises that Uncle Sam would build them a house, pay their doctors' bills, or guarantee hamburgers at 30 cents a pound. It all comes to the same thing.

President Truman is, of course, entitled to the hearty support of all citizens in his genuine efforts to promote peace and keep America free and prosperous. However, whenever the implementation of his campaign promises tempts him and his followers into measures involving a planned economy or some sort of benevolent national socialism, then the duty of such conservatives as remain in Congress becomes more complicated. In extreme circumstances it may become what it was during the first New Deal: to fight a rear-guard action to preserve as much of our free economy as possible. This blocking and tackling is a thankless and unprofitable job, but if all politicians had shirked it in the frenzied years from 1932 to 1940, the damage from the New Deal would have been more disastrous than it was.

There will be men in the new Congress, even in the President's own party, who will exert a conservative influence. It is hard to imagine SAM RAYBURN, who will be Speaker of the House, breaking his neck to help pass a too drastic civil-rights program, or Senator GEORGE, of Georgia, who will go back as chairman of the Senate Finance Committee, supporting an inflationary program. Such stalwarts seem less conspicuous in the House than in the Senate, but the run-of-mine, middle-of-the-road Democrats plus a good share of the Republicans ought to be able to erode the more bizarre items down to size. Repeal of the Taft-Hartley law may prove difficult, too. The measure may be doctored up and repassed as the Thomas-Lesinski bill, but Congress is sure to debate some time before repealing the law which President Truman himself used to end the coal strike, particularly since the large industrial States voted for Dewey. With prices leveling off, the Truman demand for price control will find opposition, too. Nevertheless, the President can fairly claim a mandate for the measures he stood for in his campaign. A fair share of them will land on the statute books.

President Truman, while he may not have understood all the implications of his multitudinous promises, intends them to be carried out. Many of them sounded like irresponsible enticements by a man who realized that it was impossible to overestimate the number of crackpots on the voting lists. But Kansas-City-type politics do not altogether explain Mr. Truman's campaign. Anyway, President Truman cannot now retreat from his program, the result of his decision to ignore the conservatives in his party and play for the lefties. Politically, this proved sound strategy, but it will cause a lot of headaches. The President is hooked with zealots like Senator-elect HUMPHREY, of Minneapolis, who wants to push so-called civil rights down the throat of the South. The CIO will expect prompt repeal of the Taft-Hartley law. Other pressure groups will remind Mr. Truman of his promises of price control, rent control, housing and health programs. And he'll have to go along, even if, like the Little Old Lady in the nursery rhyme, he wakes up some morning to the bewildered realization that "this is none of I."

We might as well not kid ourselves. Mr. Truman's program, as pieced together from his campaign pledges and speeches, contains the seeds of planning and a regimented economy. Call it a police state if you want to, because this is the way police states begin. The unending largess adds to the already backbreaking load on the Government credit. The consequent acceleration of inflation brings a new clamor for price control, with all the ubiquitous snoopers and spies needed to make it appear that there is compliance. When the producer, compelled to meet all wage demands, but forbidden to raise his prices, makes a squawk, he is first persecuted as an obstructionist and then forced to stand aside while functionaries of the state manage his business for him. Higher taxation discourages investment and dries up the supply of capital, so that the one remaining source for the succor of industry becomes the state. Finally, the worker, the supposed beneficiary of the intended Utopia, is reminded that things are going to pot because he—quite naturally—isn't producing enough. This would be where we came in, except that, normal incentives being frowned on as Fascist, direction of labor by the state takes its place. Take it away, Sir Stafford Legree.

Too gloomy? We hope so, but it seems reasonable to expect that the country will get at least some of what it voted for. If there are people so naive as to imagine that the Truman program could be carried out under a free economy, they are in for a rude awakening. And if there are even more naive people who believe you can have a state-controlled economy without regimentation and loss of freedom, their awakening will be

ruder. Of course, the voters didn't consciously vote for national socialism, but that makes little difference. The world's most prominent dictatorships started from small beginnings—social reformers giving the customers what they wanted without the least idea that they were sapping the structure of human freedom. Ironically, the most tyrannical dictatorship in history began its career by informing the suckers: "You have nothing to lose but your chains."

Such hope as remains of escaping this dreary routine lies in the historic distaste of Americans for change which goes too far. If repeated defeats for old-style liberalism have not convinced the conservatives in Congress that they are facing a wave of the future which there is no use fighting any longer, they may take the inevitable abuse certain to be heaped on anyone who tries to check the drive toward regimentation. But the disagreeable truth is that the American people have given the green light to the planners and the big government boys. Everywhere else in the world such people have needed but one lease on power to push their countries over the cliff. If we in America have better luck, we can hardly be said to deserve it.

Resolutions of Pure Milk Products Cooperative

EXTENSION OF REMARKS
OF

HON. GLENN R. DAVIS

OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 6, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, on October 26, 1948, the Pure Milk Products Cooperative, a fine organization of Wisconsin dairy producers, held its annual convention at Fond du Lac. There, after careful deliberation, the organization went on record regarding several important national issues of direct concern to America's dairymen. These are, or ought to be, of interest to every Member of the House of Representatives. Under unanimous consent, I include certain of these resolutions in my remarks, as follows:

FARM PRICES

Newspapers, magazines, and radio commentators the past year have been protesting the high cost of living. A close analysis of these protests would lead one to believe that the farmer is mainly responsible for the present inflation. The press and radio imply the farmers are rolling in wealth, are gouging the American public, and they further imply that the farmer is public enemy No. 1.

Pure Milk Products Cooperative holds no brief for the present rubber dollar, and we heartily favor sound methods of curbing inflation.

We wish, however, to point out these pertinent facts to the American public.

1. All-out production and a superabundance of goods is the first step to be taken in controlling inflation. American agriculture has taken this first step. While labor has been staging one strike after another and industry has been jockeying for price advantage, thereby curtailing the production of much needed goods, American agriculture has gone all out in its effort to produce an abundance of food. There have been no strikes staged and no price maneuvering by the American farmer. We have done our part, through production, to control inflation.

2. Due to the Marshall plan and other exporting policies of our National Government, many important foods are scarce, and, consequently, cost the consumer more money. The farmer is not responsible for this. It is part of the price all American citizens, both rural and urban, must pay for the stabilization of world governments and the alleviation of world misery.

3. Due to the fact that neither labor nor industry has met the challenge of all-out production, the farmer is forced to buy his necessary supplies and equipment on a market of scarcity rather than that of abundance, and he is consequently forced to pay inflationary prices. No economic class in America buys as high a percentage of consumer goods as does the farmer. Agriculture is thereby paying more than its proportionate share of high prices caused by the failure of labor and industry to meet their responsibilities.

4. The economic collapse of 1929 was largely brought about because prices which labor, industry, and agriculture received were out of ratio. The depression for agriculture started in 1921. For 8 years farm prices were depressed, while wages and industrial profits were rising. In this span agriculture lost through reduced prices and declining values, an amount of money equal to the cost of the First World War. The result was inevitable. No economic system can possibly prosper where one important economic segment receives high prices and another segment low prices. The respective incomes of labor, industry, and agriculture must be kept in balance. Thoughtful analysis will disclose that present food prices are not too high, but too low, when compared to the earnings of labor and industry.

The members of Pure Milk Products Cooperative assert that we have done our full share in curbing inflation through all-out production and that we are not responsible for the failure of labor and industry to do likewise. The American farmer is not responsible for present governmental policies which produce a scarcity of food in this country. We are not disposed to be penalized for the policies and failures of others.

Pure Milk Products Cooperative is opposed to inflation. Inflation has always been detrimental, even ruinous, to the farmer. We favor any sound method for curbing rising prices. The curb, however, must be imposed equally on the things the farmer sells and the things he buys. We insist that present farm prices in comparison with other prices are not too high—and furthermore—any curtailment of present farm prices must be met with a corresponding reduction of wages and prices of consumer goods and services which the farmer must buy.

FLOOR PRICES

Pure Milk Products Cooperative favors a floor price-support program for dairy products that will keep and maintain a production of dairy products adequate to meet the nutritional needs of our Nation. It is in the public interest that the returns for labor and investment to dairy farmers should be equal in comparison with other branches of agriculture, and we strongly urge the adoption of a comparable price system in such floor price program.

Further, that Pure Milk Products favors a program of floor price support sufficiently flexible to give consideration to the perishable nature of milk and butterfat, which first must be processed before they enter the main channels of trade and become adaptable to storage; and that further consideration should be given to the fact that farm loans, farm storage of milk and butterfat, and direct purchases of milk and cream from farmers for price-support purpose are impracticable, and that ways and means to overcome these impracticabilities should be developed in the floor price system; and, further, that wherever possible such floor prices should be announced far enough in advance to permit dairy farmers to gear their production goals in accordance with anticipated support prices.

We instruct the State board of directors of Pure Milk Products Cooperative to transmit a copy of this resolution to each Member of Congress from Wisconsin and to the secretary of the National Cooperative Milk Producers' Federation in annual convention at Portland, Oreg.

OLEOMARGARINE—NATIONAL

Pure Milk Products Cooperative, in their annual convention duly and legally assembled, wish to state clearly and concisely to the American public, our press, magazines, and newspapers, and especially to Congress our viewpoint and position relative to the controversial issue of oleomargarine versus butter.

In order to clarify the issue, let us understand:

1. The present controversy is not concerned with the superiority of one spread over another. Pure Milk Products is willing to let the discriminating taste of the consuming public decide this question.

2. Nor should the nutritive value of margarine or butter enter into our consideration. The proper place to decide this controversial point is in the laboratory.

3. We are perfectly aware that in this fight for a place on the table of the American consumer both margarine and butter must stand or fall on the basis of their own merit. The Congress should impose no oppressive restrictive measures on either. Any tax on colored margarine must therefore be regulatory, not discriminatory.

Down through the ages, from the days of Abraham and Isaac, the golden yellow color has been the distinctive and exclusive badge of butter. Through the years many competing spreads have come upon the market for a while, then vanished. Through the centuries, until now, no competing spread has ever attempted to deceive and defraud the public by usurping butter's golden-yellow color. Because of custom and usage, the consumer infers, without question, that the yellow color and butter are synonymous.

Margarine is attempting to deceive and defraud the buying public by stealing butter's yellow color. A careful study of the history of the entire controversy, a careful analysis of propaganda in newspapers and magazines, a minute scrutiny of congressional debates and court records, and a glance at margarine's present-day advertising leads to but one conclusion. Margarine manufacturers are not willing to sell their product on its merits but through fraud and deception are determined to pass their product off on the unsuspecting public as butter.

The butter industry of America is perhaps the most decentralized of all industries. Butter is the product of thousands of family-sized farms interspersed throughout the United States. Margarine is the fruit of the concentration of millions, even billions, of dollars in the hands of a relatively few men. The farmer has only one means at his disposal to protect himself against the attempted fraud and deception of the margarine industry. He must turn to the Congress and the several State legislatures.

We wish to reiterate that the present controversy is not over price, nor is it one of taste or quality. It is not a debate over taxes. The entire controversy boils down to this: Shall a competing spread be permitted to defraud the public by using butter's yellow color?

For this reason, we, the members of Pure Milk Products Cooperative at this, our annual convention, are resolved, that Congress should retain the present tax of 10 cents a pound on colored oleomargarine; not as a

tax in principle but as a regulatory measure, until by court action or through legislation butter is given the exclusive right to the use of the yellow color.

INCOME-TAX EXEMPTION

We again urge that nothing be done to impair the right to income-tax exemption bona fide farmer-owned and farmer-controlled cooperative associations. To this end we oppose any change in section 101 (12) of the Internal Revenue Code in the regulations promulgated under that section or in the interpretation of those regulations that have been made by the Treasury Department.

The principal address at the Fond du Lac convention was delivered by that great good friend of Wisconsin dairymen, our colleague from the Seventh Wisconsin District, the Honorable REID F. MURRAY.

I submit a condensed text of Mr. MURRAY's address at that time:

IS THE DAIRY INDUSTRY IN JEOPARDY?

(Address delivered by Hon. REID F. MURRAY, Member of Congress)

My contention is that never before in the history of our country has the dairy industry been in jeopardy as much as it is at the present hour. While one of the main controversies on the subject is based on oleo versus butter, the important issue is the battle between the vegetable oils and animal fats. Still another and perhaps greater issue is between the soil-depleting crop system of farming as opposed to livestock farming, which up to this time has been recognized as the system of farming which maintains the soil fertility.

That we may orderly approach the consideration of this problem, permit me to make the following statements:

Chicago is the "food capital" of the world and comparatively few States around Chicago furnish a large percentage of the food of the Nation. Iowa and Illinois alone provide nearly one-third of the country's total production of hogs. Wisconsin, Minnesota, and Iowa produce one-quarter of the milk.

This great Midwest is the largest area of rich, productive, fertile soil to be found anywhere in the world. There are times, however, when it appears that certain interest and certain sections have gone a long way toward ruining their own soils and now want to support an agricultural program which will ruin the soils of this great Midwest—which is not only the bread basket of the world—but the milkshed of the Nation and the largest meat-producing area in our country.

The dairy industry in the immediate future is confronted with the unfair competition of vegetable oils. In this connection I wish to point out that no experiment as yet conducted has proven that vegetable oils are nutritionally equal to animal fats.

The experiments conducted by Wisconsin and California showed certain results that have been interpreted as proving that vegetable oil is equal to animal fat, but the ridiculous part of the experiments has been that dairy products were used in conjunction with vegetable oils in order to prove that the vegetable oils are equal to animal fats.

The Chicago experiments in the orphanages, where some children were fed oleo and other children were fed butter, was not a real experiment and the conclusions were not justified because the children eating the oleo were also furnished butterfat in the form of milk to drink in addition to the skim milk contained in the oleo used in the experiment.

I repeat—there never has been any experiment which has proven that vegetable oil is equal to animal fat.

No experiment has been conducted by any agricultural scientist in any State or in the United States Department of Agriculture, that proves that a synthetic vitamin A is equal to a natural vitamin A.

There are many synthetic dairy products which now threaten the dairy industry. To mention a few:

1. Oleo, which propagandists would have us believe is equal to butter.

2. The "coconut cow" milk, which is made by incorporating vegetable oil with skim milk and which product is sold in competition with evaporated natural milk. It is a produce which at this time cannot be shipped interstate, although Dr. Carlson at the Catholic Rural Life Conference in La Crosse, on October 18 stated that in his opinion, is equal to evaporated natural milk.

3. Synthetic cheese, which has already been manufactured experimentally and which is just waiting until after the oleo bill is passed.

Here is some of this synthetic cheese made by the Dairy Division of the United States Department of Agriculture some 6 months ago. It is made of vegetable oil and skim milk. I gave some of this cheese to some people a few years ago and they thought it was pretty good—but I think anyone who knows anything about the cheese industry—would not rate this synthetic cheese very highly.

4. Now, in connection with filled milk, I am reliably informed that filled milk was made and distributed to the Mexicans last year. This same source advises that when the foot-and-mouth disease stopped the supply of fluid milk in certain Mexican cities, their first approach was to buy dried milk from the State of Wisconsin. However, this mixture appeared to be too expensive and so a certain company conceived the idea and put it into practice, of taking skim milk and incorporating coconut oil, subjecting it to certain mechanical processes and selling it in lieu of natural cow's milk.

It might be well to point out also that ice-cream manufacturers have already found competition where vegetable oils are being substituted for at least part of the butterfat in ice cream.

Did you know that considerable amounts of filled cream were sold illegally on some markets in large cities during the war? Vegetable oil was used to supplant some of the butterfat in this cream.

Here, then, my friends, are four direct threats to the dairy industry.

You will ask, "Where are we going to get the skim milk to make these synthetic products?" Well, I am sure you have heard of the reciprocity agreements which have been operating from the very beginning in opposition to the livestock industry and in favor of soil-depleting crops.

The duty on skim milk is only a fraction of 1 cent per pound and there is no reason why large quantities of dried skim milk cannot be obtained from Argentina—the present source of huge amounts of casein imports. You might also be interested in knowing that Canada is stepping up its exports of dried skim milk to the United States since the duty on this commodity has been reduced to an insignificant amount.

It must be remembered that 30 percent of the evaporated milk is produced in Wisconsin. Now, if cheap imported dried milk and vegetable oils are to be processed and sold in competition to evaporated milk, do you think that evaporated-milk plants could continue to operate?

In August 1948, 67,000,000 pounds of oleo were manufactured in the United States. One hundred and seventeen million pounds of butter were produced in the United States. In other words, at the present time, 20 oleo manufacturers produce one-third of the spread of the Nation and it would not require a very long time for 60 oleo manufacturers to take over the entire spread-manufacturing business of the Nation.

If cheap imported skim milk is incorporated with vegetable oils in the manufacture of synthetic cheese, just exactly how many cheese factories do you think will be eliminated from the picture?

Mr. Fluid-milk Man, you have deceived yourself in many instances if you have believed that it would not affect you if the Rivers bill had been passed, because you do not sell butter, but sell milk. You should be apprised of the fact that it is just as mechanically possible to make synthetic products out of skim milk and vegetable oils to compete with your bottle of milk as it is to any other synthetic dairy products.

Oleo is 80 percent vegetable oil and 15 percent skim milk. If by passing certain legislation this product is made equal to a 100 percent dairy product such as butter, it is apparent that it is but a short step to pass legislation making cocoanut cow's milk (which is composed of 6 percent vegetable oil and 94 percent skim milk) equal to evaporated natural milk, which is composed of 7 or 8 percent butter fat and 92 or 93 percent skim milk.

Do you think it will be a very long step to legalize filled cream?

Do you think it will be a very long step to legalize filled ice cream?

There is no use trying to sidestep this issue. Facts are facts. If, by legislation or otherwise, vegetable oil is made equal to animal fat, who is there to say that the synthetic products which I have mentioned, should not be produced?

Let us get this question straight and get it on the record.

If any individual, group, or organization wants to dismantle the evaporated milk business of this State; jeopardize the cheese industry and allow all of the spread to be made by 60 oleo manufacturers and close up the thousands of creameries and promote filled cream and ice cream; or be a party or organization to promote the manufacture of synthetic whole milk—that is a responsibility that they may assume and one for which they must answer.

I have given considerable time and study to this entire problem. I have diligently sought out the facts and I have always kept my argument based on scientific facts. I have accepted these scientific facts because they have been established by one of the greatest biochemists and nutritionists that the world has ever known, Dr. E. B. Hart, of our own University of Wisconsin. His experiments are beyond question. The statements which I have made concerning past experiments and tests have been cleared through this recognized authority on scientific facts.

So that no one will get the impression that the manufacture or production of synthetic dairy products and the controversy over oleo and butter applies just to the man who milks the cow, I hope that the people working in the dairy plants not only in our State, but throughout the country in handling the various forms of dairy products, will stop and ask themselves what kind of jobs they are going to have when a few plants manufacturing synthetic dairy products are given the green light. Ask yourselves what the effect will be on the dairy industry of our great State of Wisconsin.

It is evident that any State where the agricultural economy is based on the dairy cow, with 50 percent of the farm income from milk and milk products, will decline in economic importance.

The health of the State, of the country, and the world is closely allied with the dairy industry. We must be ever alert to the encroachments made upon it.

The Cardinal Mindszenty and Archbishop Stepinac Cases Are a Threat to Religious Freedom Everywhere

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I quote a letter which I have today addressed to our colleague the gentleman from New York, Hon. SOL BLOOM, chairman of the Committee on Foreign Affairs, urging the appointment of a special subcommittee to consider and take appropriate action on the shocking manifestations of communistic excesses involved in the recent imprisonment of Cardinal Mindszenty by the Hungarian Government and the equally outrageous action of the Yugoslav Government taken 2 years ago regarding Archbishop Stepinac.

I urge that all Members of this body who share my concern over these incidents express their views to the chairman and members of this committee, in order that we may not allow to go unchallenged this dangerous threat to the Christian church and to those who courageously dare to profess and proclaim their faith.

The letter follows:

JANUARY 6, 1949.

Hon. SOL BLOOM,
Chairman, Committee on Foreign Affairs, House of Representatives.

DEAR MR. BLOOM: The purpose of this letter is to request the appointment by you of a special subcommittee to inquire into the arrest and imprisonment of Cardinal Mindszenty of Hungary and Archbishop Stepinac of Yugoslavia. The outrageous action of the governments of these two countries in incarcerating these two courageous Christian leaders is an affront not only to the church they represent, but to right-thinking people the world over.

Certainly, the very least we should do as legislative representatives of the world's leading Christian nation is to condemn this action in the most emphatic terms of which we are capable.

In December 1946 I took up with the Department of State the sentencing of Archbishop Stepinac to a 16-year prison term at hard labor. Secretary Byrnes at that time wrote me that it was the contention of the Yugoslav Government that the case was an internal matter, and in the circumstances he intimated that it was not considered proper for his Department to interfere. Presumably, they would take the same position regarding the present situation.

Both Hungary and Yugoslavia were liberated in part by the blood of thousands of American boys who believed they were fighting to preserve ideals and principles now shattered in an alarming manner by these arbitrary governments. Probably these two fearless men of God care not what suffering and physical and mental torture faces them. It seems to me, however, we cannot sit idly by, as these Communist outrages recur, but must register our protest and exert the influence of our United Nations representatives to request a thorough probe of the actions taken against these stalwart Christians.

It is toward that end that I ask your cooperation through the appointment of a special subcommittee, which will serve to focus the attention of all nations on this great international and humanitarian problem.

Very sincerely yours,
KENNETH B. KEATING.

Workers Not Permitted To Join Union

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, from Detroit, under date of December 26, came a signed letter, giving the writer's address, and which reads in part as follows:

I read in the papers from time to time of your investigation of labor practicer, etc. How about helping some of us slaves, for that is what we are here in Detroit. Men have and are working here for 20 years and not allowed to join this union. The treatment we get is inhuman but we must pay union dues.

The enclosed clipping from Free Press and News will give you some idea.

The clipping from the Detroit Free Press reads as follows:

FILM UNION ACCUSED OF MONOPOLY—PROJECTIONIST SUES TO REGAIN HIS CARD

(By Clyde Bates)

Czarist tactics were charged to the Detroit Motion Picture Projectionists' Union (A. F. of L.) by a union operator in a circuit court suit Wednesday.

The operator was Louis G. Havens, 36, of 654 West Ferry.

He accused four officials and local 199, the operators' union, with violation of Michigan's antitrust laws. He said they maintain a manpower monopoly in the projectionist trade.

He also charged that the union holds scores of skilled operators as nonmember vassals.

These men are never admitted to membership, it was charged, and are liable to dismissal from day to day at the whim of union bosses.

Havens claimed he had been working in Detroit on this vassal basis since 1942—although the local accepted his $200 membership fee 3 years ago.

But he found another operator at his booth early this month, he said, when he angered the local by protesting to the international union.

Havens said that his union card and membership fee were returned to him.

Return of the card, he said, constitutes blacklisting in Detroit. He seeks an injunction ordering reinstatement of his job and admission to membership.

Union officials named in the suit were Local 199 President Frank Kinsora; Roger M. Kennedy, business agent; Joseph A. Sullivan, treasurer; and Roy R. Reuben, financial secretary.

The suit also named Wade E. Allen, owner of the Fine Arts Theater, where Havens was employed until his ouster by the union, December 10.

During the time when he was being refused union membership, Havens said, scores of sons, relatives, and friends of union members were admitted to full membership. They could then take nonmembers' jobs, he added.

Another signed letter from a union member reads:

I—a union man of long standing—some 20 years a builder, who served 5 years learning at my trade, receiving $9 per week, now at this late date when I am receiving $3 per hour, or $24 for 8 hours' work, I am compelled to work alongside a bunch of goons, who know as much about building as a hog does about Sunday, and who are admitted to the union regardless of their knowledge or experience, because they have the initiation fee. This type of goons get almost the same wages I do, yet cannot file their own saws, if they own one, which many don't. This type of crooks, due to the union, gyp the public and make it harder to get a home well constructed. We all wear buttons, advertising the fact that we are un-American and belong to a clique, which can tie up all the railroads, ships, factories, telephones, busses, streetcars, and anything you can think of within 24 hours, which goes to prove that laws, soldiers, and arms are useless when we decide to take over and change our system to that of Stalin; yet under our system of cheat, lie, steal, and murder to accumulate our gods and idols which bear these inscriptions, "In God we trust," our dumb, Christianized, legalized, politicalized, civil-servicized crooks are aiding Stalin's system faster than he ever hoped for. I at one time was proud to be an American, but don't advertise that fact any more.

Our system worked at Kalamazoo and other places; why not in Washington, D. C.?

Heaven in the Hills

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a poem by a valued friend of mine entitled "Heaven in the Hills."

The author of this poem is A. R. Grinstead. Mr. Grinstead is an attorney at law in the romantic little city of Sonoma, Calif. In this city, on June 14, 1846, the bear flag of California was raised. While California was at that time a part of Mexico, certain Americans, who had migrated westward, made up their minds that California should be a free and independent political unit. In this romantic little city many of the buildings are arranged in the original pattern laid out by the Spaniards, and I believe some of the original buildings are still in existence.

The place Mr. Grinstead refers to as heaven in the hills is known as Pinecrest, and is a mountain colony around an artificial lake. This area is located in Tuolumne County and is within the Stanislaus National Forest. It is a beautiful place and the Forest Service has done a fine job in trying to develop it. In fact, it is getting almost too thickly populated

for the sanitary facilities that are available in the area. The poem referred to follows:

HEAVEN IN THE HILLS

You will find it to the eastward—in the mountains clean and high,
Where it seems somehow suspended 'twixt the valley and the sky.
With blue skies that bend above it, bluer waters there below,
Turquoise shades in marked contrast with the white of mountain snow.
Fleecy clouds, its faithful guardians, sentinels—the fir and pine,
Standing on the green clad mountains which to waters edge incline.
It's a region of repose where we may cast aside our ills,
In the peace of lovely Pinecrest—that Heaven in the Hills.

I'm tired of fog and winds that drive the sunshine from the sky,
I'm tired of crowded buses, trains, I'm tired of buildings high,
I'm tired of geometric blocks, the rigid city street;
Of people's clamor, raucous sounds, and countless pounding feet.
So let me go where I can see, down there between the trees,
The white sails gliding to and fro before a lazy breeze,
Where crooning pine trees lull me and the protest in me stills.
I'm heading up to Pinecrest, to that Heaven in the Hills.

With gaudy lights I'm surfeited, the glamor of the towns.
Their colors have depressed me, the grays, the blacks and browns.
And so I seek a region where soothing colors blend,
For from Nature's own gay palette there's no color to offend.
So I've left behind the cities, the bridges and the bays,
Behind the sizzling valleys, in their hot and dusty haze;
And now I glimpse the timber, and its green my vision fills.
For I'm drawing near to Pinecrest, to that Heaven in the Hills.

Oh, I've seen too many people, I've been jostled by the crowd,
So I seek again the solitude of mountain top and cloud:
The sunshine slanting through the trees, the fragrant camp-fire smoke,
The snow flower, iris, columbine; the aspen and the oak.
Now Mother Lode's behind me, I climb the curving grade,
The giant trees surround me, I've reached their welcome shade.
The granite peaks, and now the lake, my stifled spirit thrills.
Once again the joy of Pinecrest—that Heaven in the Hills.

—*A. R. G.*

Presidential and Congressional Salaries

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. DAVIS of Georgia. Mr. Speaker, Hon. W. B. Jones, adjutant of East Atlanta Post, No. 159, of the American Legion, Atlanta, Ga., has forwarded to me a copy of resolution originally adopted by East Atlanta Post on December 19, 1944. This resolution was readopted by that post 4 years later, on December 16, 1948.

In order that the Members may know of this resolution twice adopted by East Atlanta Post, I am inserting it herewith in the RECORD:

Whereas the salary of the President of the United States, together with the Members of the United States Senate and House of Representatives, is fixed by the United States Congress; and

Whereas because of the drastic change in economics the salary is inadequate to meet the requirements commensurate with the dignity of the office held: Therefore be it

Resolved, That the resolution committee in the American Legion in executive committee assembly petition the United States Congress to enact such legislation necessary to increase the salary of the President of the United States to $100,000 and each member of the United States Senate and House of Representatives to $25,000 per year with the usual concessions.

Respectfully submitted by East Atlanta Post 159, the American Legion:

H. L. TERRY,
Acting Commander.

Readopted December 16, 1948.

E. E. SISK, *Commander.*
W. B. JONES, *Adjutant.*

Reform in the House

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Post-Gazette of Tuesday, January 4, 1949, which is in agreement with my proposal to amend the House rules to limit the power of the Committee on Rules:

REFORM IN THE HOUSE

House action taking from the Rules Committee its power to pigeonhole legislation gets the Eighty-first Congress off to an auspicious start. The reform offers real hope for a constructive legislative session.

The change of rules will allow the chairman of the legislative committee which prepared a bill to call for a vote of the House if the Rules Committee fails to grant the bill clearance after 21 calendar days. He will be recognized by the Speaker to call up a stalemated bill on the second and fourth Mondays of any month. If a majority of a quorum approves, the bill will become immediate House business. That will do far more to assure action than the present method of having to obtain 218 signatures to a discharge petition.

Thus, one of two badly needed legislative reforms is obtained before Congress is 24 hours old. Now it is up to the Senate to effect the other reform by amending its rules so that a majority rather than a two-thirds vote will halt filibusters. Congress will not function in a truly democratic fashion until it has deprived obstructive minorities of the power to keep from the floor legislation favored by the majority. We hope the Senate will promptly follow the House's fine example.

Meanwhile, Pennsylvania's delegation can take much of the credit for reform in the House. Representative HERMAN P. EBERHARTER, of Pittsburgh, promoted the change in the Democratic caucus on Saturday. Then, on Monday, Pennsylvania's 16 Democratic House Members, as well as some of the State's more progressive Republicans, gave it their support.

New York City Bar Association Suggests Rules Governing Procedure of Congressional Investigations

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1949

Mr. HAYS of Arkansas. Mr. Speaker, in considering various proposals for statutory rules for congressional investigations, I believe that Members of the Congress will find the report of a committee of the New York City Bar Association helpful. Composed of outstanding attorneys, the committee has produced a report suggesting certain specific rules which appear to have merit. Because of the interest in this problem and the thoroughness with which the committee has made its study, I include, under leave to extend my remarks, the following resolutions of the committee:

After giving careful consideration to the matter, your committee proposes that it be recommended that the association adopt the following resolution:

"*Resolved*, That this association recommends to the Congress of the United States the adoption, by concurrent resolution or otherwise, of the following principles to govern the conduct of investigations by committees of the Senate and the House of Representatives:

"1. The subject of any investigation in connection with which witnesses are summoned shall be clearly stated before the commencement of any hearings, and the evidence sought to be elicited shall be relevant and germane to the subject as so stated. In cases of special investigations authorized by congressional resolution, the subject of the investigation shall be so stated in the resolution, and in the case of investigations initiated by the committee, the subject shall be so stated by the committee and announced before the commencement of the hearings.

"2. Any witness summoned at a public hearing and, unless the committee by a majority vote determines otherwise, any witness before a private hearing shall have the right to be accompanied by counsel, who shall be permitted to advise the witness while on the witness stand of his rights.

"3. Every witness shall have an opportunity, at the conclusion of the examination by the committee, to supplement the testimony which he has given, by making a written or oral statement, which shall be made part of the record; but such testimony shall be confined to matters with regard to which he has previously been examined.

"4. An accurate stenographic record shall be kept of the testimony of each witness, whether in public or in executive session. In either case, the record of his testimony shall be made available for inspection by the witness or his counsel, and, if given in public session, he shall be furnished with a copy

thereof if he so requests, and if given in executive session, he shall be furnished with a copy thereof in case his testimony is subsequently used or referred to in a public session.

"5. No photographs, moving pictures, television, or radio broadcasting of the proceedings shall be permitted while any witness is testifying.

"6. Any person whose name is mentioned or who is specifically identified and who believes that testimony or other evidence given in a public hearing before any committee or comment made by any member of the committee or its counsel tends to defame him or otherwise adversely affect his reputation, shall be afforded the following privileges:

"(a) To file with the committee a sworn statement concerning such testimony, evidence, or comment, which shall be made a part of the record of such hearing.

"(b) To appear personally before the committee and testify in his own behalf.

"(c) To have the committee secure the appearance of witnesses whose testimony adversely affected him, and to cross-examine such witnesses, either personally or by counsel, but such cross-examination shall be limited to 1 hour as to any one witness unless the committee votes to lengthen the period. (A minority of your committee herewith submit a report recommending the insertion of the phrase "Unless the committee by a majority vote shall determine otherwise" at the beginning of subdivision 6 (c).)

"(d) In the discretion of the committee, by a majority vote, to have the committee call a reasonable number of witnesses in his behalf. The extent to which this privilege may be availed of shall be left to the discretion of the committee.

"7. These principles shall apply to investigations by all committees of either House of Congress, including standing committees, select committees, or joint committees of the two Houses, and a duly authorized subcommittee of any of the foregoing."

Respectfully submitted.

THE COMMITTEE ON THE BILL OF RIGHTS OF THE ASSOCIATION OF THE BAR.

Navy Day Address of Hon. John Nicholas Brown

EXTENSION OF REMARKS

OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, January 7, 1949

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks, I am including a profound speech made by Hon. John Nicholas Brown, Assistant Secretary of the Navy, which he delivered to a joint luncheon of the Navy League and the Kiwanis Club of Memphis on Navy Day, October 27 last.

Secretary Brown is a man of culture and splendid ability. He has brought to the Navy the highest sort of public service, and I wanted the membership of the House to have the benefit of reading this extraordinary address.

The speech follows:

In June of last year, when I visited Memphis for the first time, I learned, to my surprise, that here, a long way from the ocean, is a community that understands and appreciates the Navy. I discovered one of the most active councils of the Navy League. Furthermore, I found that quite a number of members of the council had taken off from the deck of an aircraft carrier.

These gentlemen are fortunate, because permission has been withdrawn for distinguished citizens to fly from carriers. Although carrier pilots are highly trained and their planes are as good as we can make them, we cannot deny that accidents occur.

Your Navy League Council was kind enough to ask me to dinner on my other visit, and there I believe I learned why this inland city is so conscious of the Navy. The council members had succeeded in having Memphis accept their view of the Navy. I must say that their efforts appear to have been aided by Admiral Stump and the officers and men of the naval air technical training center, and by Captain Taff and his people at the naval air station. While I was in the city of Memphis, I heard nothing but good of the training center, and while I was at the center itself, I heard among naval personnel nothing but good of Memphis.

One of the things that has impressed me since I went to the Navy Department has been the good feeling and understanding that exists between members of the service and members of the communities where they serve while ashore.

The Navy, like the Army and the Air Force, now is engaged in rebuilding after having fallen into a state of weakness following demobilization. The two naval facilities at Memphis typify important phases of naval expansion; one, the training of technical men and the other, preparation of the Reserve for active duty.

Training in the mechanical skills is a fundamental requisite of a sea service. From the time when ships first were sent out to carry fighting men over the waters, the naval service has been a technical service. Navies have incorporated the most advanced techniques of each period as rapidly as they could. This arises from the fact that naval warfare is mobile. Navies move, and that which can move fastest and farthest is that which returns victorious. This is a principle which has not been altered by time, but instead was proven sound in the last war, and if there is another war will be demonstrated again.

The first fleets were small craft in the Mediterranean, able to sail and fight only in calm weather in that inland sea. The first vessels designed for combat were propelled by oars. They could move rapidly for short periods and for short distances, since their motive power had the limitation of human strength.

To the north, where rough waters prevail around the British Isles, there arose another kind of combatant fleet which depended upon sail for its power. There the British refined the lines of their clumsy but seaworthy cargo vessels and produced ships of war which did not depend on men for their movement. However, the early British warships, like the Mediterranean galleys, really were only platforms on which foot soldiers stood and fought each other. The ships lay to alongside each other, and the fighting was much like that on land, except that a man could not retreat.

However, in the reign of Henry the Eighth, and under his sponsorship, there were developed guns which were designed to damage other ships rather than to injure men, and here arose the true fighting seamen.

This development did not occur in the Mediterranean at the same time, and so in a single day—in fact, in a single hour—because of its technical advantage in ships and guns, the British Fleet sailed into Cadiz in 1587 and there established its dominance of the sea which lasted for centuries. A year later it was their smaller, faster ships with guns of greater range which enabled the British to break up the Spanish Armada near their own shores.

Since that time all the navies of the world have striven for greater speed and for weapons of greater reach. Today the superiority of the United States Navy does not depend entirely upon its size. Instead, it is due to the fact that we have developed and refined far beyond anyone else a seagoing weapon which can reach farther than the weapons of other navies. This weapon is the carrier aircraft.

The principal striking power of the United States Navy against enemies afloat or ashore consists of aircraft launched from carrier as much as 700 miles away. The technical skills involved in such an operation are impossible for anyone to imagine who has not devoted years to their study. An aircraft carrier is the most complex machine that man has ever made and moved. It is, in fact, a town of two or three thousand people, with an airfield, with great machine shops, with stores of food, fuel, ammunition, and with every facility for living from bakeries and banks to a drug store and a church.

Its size, however, and its complexity are not the characteristics that distinguish it most. There are ashore larger communities with very much larger airfields in many places. What distinguishes the carrier is its ability to move.

Three-fourths of the surface of the earth is covered by salt water. It is fair to say, although we should be careful not to say it boastfully, that nothing can move on these seas except with the approval of the United States, because our Navy is able to control them. This is a vast responsibility. Actually, we do not use this power to hinder the movement of anyone on the seas. Instead, we use it to assure that the oceans are safe and that anyone who wishes to may traverse them without fear of molestation.

In time of peace that is not difficult. The mere presence of units of our Navy and of those of our allies serves to guarantee that the freedom of the seas shall not be an empty phrase. We must remember that unless the seas are free and open to our own commerce the industry of our country soon would grind to a halt. There is no prospect of such an occurrence in time of peace, but in time of war it would be a primary objective of any enemy to endeavor to cut the sea routes which bring us the raw materials for our enormous industrial organization.

This must be prevented at any cost. Therefore, the character of the Navy is changing step by step to meet circumstances which would arise in the event of hostilities. These changes are not made and cannot be made all at once, but since the end of the last war the shape of the Navy has altered. By that I mean that the Navy is not preparing to fight World War III but is endeavoring to be ready for World War III, should it arrive.

I regret that in discussing the Navy, or in discussing any of the armed services, it is necessary to speak of them in terms of a next war. However, there is no reason for maintaining them except to insure the security of our own country and to make sure that if we are attacked at any place a war would be fought to victory abroad and not here at home. Therefore, the Navy stands today ready to perform functions it has performed in all our wars, although it will not accomplish its missions in the same manner. It is ready to keep open the ocean highways so that we will not be lost for want of supplies, and it is ready to gain footholds abroad for the other services so that they may meet and defeat an enemy.

This brings to mind, of course, the submarine. There is without question a fear

that modern submarines may be so fast, so plentiful, and able to travel such distances that they cannot be dealt with. But I think many of the exaggerated fears that I have heard expressed are not warranted.

Antisubmarine warfare by plane and ship, and even by submarine, has been the subject of most intense study and experiment since the end of the war. There are now in existence a good number of hunter-killer teams made up of light carriers with their air groups and surface ships, and these teams work constantly to perfect the intricate tactics and the highest degree of coordination between naval officers in the air and naval officers on the bridges of the ships. I would not say that we would not suffer losses to merchant shipping should a war occur, but it is my opinion that we can hold such losses within manageable bounds and that we can eventually clear the seas of submarines. This would not be simple and it would not be immediate, but antisubmarine warfare has many aspects to which I have not alluded and I think a combination of them would be most effective.

Protection from submarines of shipping throughout the world is a primary responsibility of the Navy. However, I can assure you that if the Army or the Air Force should find itself able to assist the Navy in this form of warfare, such assistance would be heartily welcomed.

There is a tendency to speak of both the Navy and the Air Force in terms of material things, of planes and ships. That is not the right way to think of them. The planes of the Air Force, the ships and planes of the Navy, the tanks and guns of the Army are the sinews of war, but they are not the Army, the Navy, nor the Air Force. The sinews of war are no stronger than the hearts of the men who work them. The enthusiasm, the devotion, the esprit de corps, all the factors that enter into morale, are no less vital to the strength of the services than are their weapons.

The Navy never loses consciousness of the fact that it is made up of men. In all its planning for the man-machine team, the man comes first. I believe that the men of the Navy would be surprised to know how carefully their individual aptitudes and desires are considered in order that each may be placed in the billet in which he may serve most profitably.

In October 1775, the Continental Congress provided for a Navy. Throughout the years since, the Navy has grown large or sunk into a state of ineffectiveness as Congress determined what kind of a Navy the country required. Soon after this century began, Theodore Roosevelt became Assistant Secretray of the Navy and, through the efforts of this forceful and energetic man, a modern fleet was constructed of a size consistent with the rise of the United States to be a world power. Two years after Theodore Roosevelt's death, a group of men, many of whom had been his friends, selected October 27, his birthday, as a date most suitable to be annually observed as Navy Day.

The celebration of this day is in the hands of the Navy League, made up of people who recognize the importance of the Navy to the United States and who endeavor to keep it strong. Their efforts have played a vital part in the well-being of this country. The work of education that they did before the war had an important bearing on the readiness of the Navy when the blow fell at Pearl Harbor. And if there should come, as we pray there does not, another day when bursting bombs and clouds of smoke tell us that years of conflict lie ahead, we will owe to them in large measure the fact that we have a strong, a good, and a ready Navy to defend us.

The TVA and the Fertilizer Industry—Address by Mr. Gordon R. Clapp, Chairman of the Board of the Tennessee Valley Authority

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 6, 1949

Mr. RANKIN. Mr. Speaker, more than 15 years have passed since Senator George Norris and I waged a successful battle for the creation of the Tennessee Valley Authority.

Every promise that we made has been realized, and every human being in the United States who turns an electric switch is getting his electricity at a cheaper rate than he would have received it if we had failed in that undertaking.

The Tennessee Valley Authority has wrought the greatest development of ancient or modern times. Nothing that has been done, or attempted, since the building of the pyramids, compares with it.

When I entered this battle for the development of the Tennessee River in 1921 the American people were using only 37,181,000,000 kilowatt-hours of electricity a year.

We were told then there was a surplus and that additional power was not needed.

During the year ended October 31, 1948, the people of this country used 278,105,609,000 kilowatt-hours of electricity, or considerably more than seven times as much as they were using in 1921—and the demand for additional power is greater today than it has ever been before.

There are 394,000,000,000 kilowatt-hours of hydroelectric power now going to waste every year in our navigable streams and their tributaries.

I have introduced a bill (H. R. 894) for the development of the water power of the entire Nation. With a reasonable amount of "firming up," this additional 394,000,000,000 kilowatt-hours could be raised to 500,000,000,000, which added to the present supply would make this the richest and most powerful country of which the world has ever dreamed.

Then our fuel supply would last for centuries to come.

In addition to the development of the hydroelectric power in the Tennessee River and its tributaries, and the promotion of navigation, flood control, and so forth, the Tennessee Valley Authority is rendering a great service in helping to supply the farmers of the Nation with the ingredients necessary to fertilize their farms.

Under permission granted me to extend my remarks in the RECORD, I am inserting the address delivered by Mr. Gordon R. Clapp, Chairman of the Board of the Tennessee Valley Authority, before the convention of the National Fertilizer Association in Atlanta, Ga., on November 17, 1948.

It reads as follows:

THE TVA AND THE FERTILIZER INDUSTRY

During the past year your association and the TVA have begun to reexplore mutual interests. By meetings and correspondence we have tried to find a basis for constructive cooperation—cooperation that does no violence to the integrity of the basic purposes and methods of each. We believe the effort has been worth while; I think we understand each other a little better.

For the TVA I can say that these discussions have left us with the conviction that there are important areas of work offering opportunities for constructive relationships with your association that will advance the public interest.

We recognize that you are engaged in a complex business. Your membership includes many business enterprises large and small. Your business affects the farmer. It affects the farmer's use of the land, and those who consume the farmer's products. The kinds and amounts of fertilizers you manufacture and sell and the ways in which they are used—these things affect the kind, quality, and quantity of the ways the land can produce to feed and clothe people and to supply industry with raw materials.

The TVA is engaged in a complex program which has for its primary objective the strengthening of an entire region. TVA's responsibilities embrace a pervasive concern for the abundant water which can be a blessing or a curse in its effects upon the welfare of the people of the region and the Nation. That is why the TVA dams have been built—to control and use water for human benefit; that is why TVA concerns itself with the problems of making water work for the people who live on the land.

Because your interests and TVA's responsibilities at several points affect the same things—farmers, the soil, the consumers of food—our respective interests inevitably affect each other.

Your association has rediscovered the TVA in the past 2 or 3 years. Shortages of phosphate and nitrogen have plagued your ability to meet the fertilizer demands of farmers. Under these circumstances, any producer of basic chemical nitrogenous or phosphatic materials has been sought out by the fertilizer industry as a possible source of supply.

Your recent interest in the TVA seems to be based upon these circumstances. We produce triple superphosphate and ammonium nitrate at Muscle Shoals. Our production is a small part of the Nation's total supply. You know and farmers know that both materials are efficient fertilizers. Naturally, you want TVA to turn the output of our operations, especially the nitrogen, into the mixing and distributing channels that lie between the chemical industries and the farmer and his land. But when you began to offer to buy these materials from the TVA you found that these materials were being committed to a long-range educational program under distribution arrangements which had been worked out primarily through farmers' association and cooperatives.

Your members and the TVA have discussed this problem. We have enjoyed a most extensive correspondence with many of you. It seems clear that our relationships for the moment could be welded together if we were to withdraw TVA ammonium nitrate from farmer-controlled distribution channels and transfer it to you. But it is clear to TVA, after the most careful examination of this proposed change in distribution policy, that such a change would add nothing to and

might subtract much from TVA's ability to help farmers revise their farming practices, shift their land use, and thus help control and use the abundant water resources of the Tennessee Valley and elsewhere.

We are sure that such a solution would not serve the interest of the farmers, of the consumers of food and fiber, or of the Nation as a whole. It is not clear to us that a change in our distribution policy would even serve the long-run interest of the fertilizer industry.

The fertilizer industry can get a great deal more benefit from what the TVA is doing than a certain tonnage of nitrate or phosphate. TVA's nitrate, for example, if equally distributed among the fertilizer dealers of the Tennessee Valley States alone, would supply less than a carload to each dealer. It is difficult to believe that relationships between the members of this association and the TVA will stand or fall on such a small and fleeting issue. We would hope that you might be interested in the broader range of services the TVA has rendered and will continue to provide—services that should be of fundamental interest to the fertilizer industry.

One of these services, the test-demonstration farm program, is raising the level of efficiency of the whole farm system through the use of fertilizer, and thus increases the value of fertilizer to the farmer. The other major service, research in new processes and products, is increasing the concentration of the product and pointing the way to lower costs to the industry and to the farmer.

The record is clear, I believe, that these two fields of service benefit you as well as the farmer. These services help to expand and stabilize the market for fertilizer by increasing its value and lowering its cost to the farmer. We confidently expect that, among other things, TVA's new processes and products will provide the means for utilizing the western phosphate deposits to serve the expanding fertilizer requirements of the Central West.

Because these services and their effects contain the basis for constructive cooperation between your association and the TVA, I want to discuss each one in brief detail.

1. THE TVA PROGRAM HAS INCREASED YOUR MARKET

As you know, the TVA, with the assistance of the land-grant colleges, the Agricultural Extension Services, and tens of thousands of farmers in their organizations and associations, is carrying on a test-demonstration program. In this program TVA experimental fertilizers are tested and demonstrated on privately owned farms, operated as practical farming units. On these farms more efficient use of fertilizer makes possible more efficient long-range farm-management systems, thus realizing for the farmer the full value of his fertilizer.

For your purposes the test-demonstration program can be accurately regarded as a successful attempt to develop and educate new fertilizer markets. The educational use of TVA materials on the soils of the Tennessee Valley and elsewhere has increased your sales of fertilizers to farmers.

Here are a few facts: Between 1935 and 1943 the consumption of normal superphosphate in the United States increased 58 percent. In the Tennessee Valley States the increase was 63 percent; in Tennessee, 63 of whose 95 counties are in the Tennessee Valley, the increase during the 1935–43 period was 99 percent.

Recently we compiled figures showing the increases in the consumption of commercial fertilizer in the 107 counties of the Tennessee Valley, compared with consumption in the 258 counties outside the valley but in the States of Alabama, Georgia, North Carolina, and Tennessee. Between 1935 and 1948 the average increase in the sale of commercial fertilizer in the nonvalley counties was 63.5 percent. In the valley counties, where the number of active test-demonstration farmers has averaged about 12,000, the increase was 232.3 percent, nearly four times as much. Note that this increased sale of commercial fertilizer in the test-demonstration areas is over and above the TVA phosphate allotted to test-demonstration farmers. What happens is that both the test-demonstration farmers and their neighbors buy greatly increased amounts of fertilizer. The more intensive the test-demonstration activity and the longer it is maintained, the more the use of the TVA materials stimulates sales of commercial fertilizer.

2. A DIVERSIFIED AGRICULTURE WILL IMPROVE THE STABILITY OF YOUR MARKETS

The test-demonstration program as carried on in the Tennessee Valley and elsewhere is doing more than creating a new market for the sale of your products; this program is encouraging farmers to transform their farming methods by the introduction of practices that are essential to the full development of the soil and water resources and the welfare of the people.

In the 15 years the TVA has been at work with the agricultural agencies and the farmers of the Tennessee Valley, 1,000,000 acres have been shifted from open cultivated crops to grass and cover crops.

The acreage of pasture has increased 14 percent.

The application of phosphate and lime to grass and pasture lands is becoming an established and expanding practice.

Land in row crops in the Tennessee Valley decreased 19 percent while in the United States as a whole row crop acreage increased 2 percent.

With fewer acres in row crops, there has been a more intensive cultivation and greater use of fertilizers to increase the total yields of corn, cotton, and tobacco on less land, thereby helping the farmer to finance his new crop rotation systems, his new emphasis upon phosphate, pastures, and livestock. This brings a rapid increase in the diversity of farm products; and with this reform the farmer's income will be less sensitive to the fluctuations of price on a single cash crop. Grass, pastures, and livestock in addition to corn, cotton, and tobacco, will help to stabilize your fertilizer markets. Your business can become less dependent upon the price of a few cash crops—as it is now and has been for too long.

These results are important byproducts of the farm test-demonstration program. TVA's primary objective is the development and use of fertilizer as a tool in a regional demonstration of soil and water conservation and use. It is well known that regularity and volume of stream flow are influenced by the kind of crops grown on the watershed and the seasons at which they make their maximum growth. It is not so well known that the farmer can use that fertilizer in managing his land to serve both his own interest and that of helping to regulate stream flow in the interest of the region and the Nation.

One of the things we are learning through the test-demonstration program is how best to use TVA's new fertilizer materials to shift the prevailing farm systems of the Tennessee Valley from dependence on summer row crops, that make their maximum use of water when it is most needed in the streams, to a greater use of winter sod crops, which reach their peak use of water during the spring flood season. As farmers shift from corn to winter grown pastures and grains they check erosion losses; they build and maintain the fertility of the soil. This increases the utility of the water resources of the whole region.

TVA's experience in the utilization of fertilizers to adjust land use in the interest of better control and use of rainfall is readily applicable on other watersheds. As these practices spread they produce a new demand for fertilizers over and above ordinary uses. In helping to develop this demand, the TVA as a regional demonstration in soil fertility conservation serves as a pilot plant operation conducted in the interest of the Nation as a whole.

I suggest that the fertilizer industry can gain great benefit from this regional demonstration if it will study its effects and be prepared to meet the mineral requirements of the soil in this and other regions.

3. RESEARCH AND EXPERIMENT IN NEW PROCESSES OF PRODUCTION AND NEW FERTILIZER PRODUCTS POINT THE WAY TO GREATER SUPPLY FOR GREATER MARKETS

Behind the new fertilizer materials supplied by TVA to the test-demonstration farmers and their neighbors is a program of chemical research and experimental manufacture. In the reconstructed and improved nitrate plants built at Muscle Shoals during World War I—plants that did yeoman service in supplying munitions in World War II—TVA is carrying on research in the development of new processes and new fertilizer products. As one of its objectives, this research is designed to help you or anyone else open up the great undeveloped phosphate deposits of the West.

There is a shortage of phosphate fertilizer now—gaged by what the farmer is willing and able to buy. Figures released in February 1947 by the Production and Marketing Administration compare phosphate consumption with our estimated annual needs in the United States. These figures show that the average annual consumption was about 700,000 tons of P_2O_5 during the prewar period 1935–39. During the war years of 1944–45 the figure jumped to nearly 1,340,000 tons. But that, according to the USDA and the land-grant colleges, was only about half what the farmers could have used effectively if they had been able to buy as much as they needed. This estimate—nearly 3,000,000 tons of P_2O_5—was based largely on the experience of TVA test-demonstration farmers, who have led the way in the consumption of commercial fertilizer.

Many agriculturists consider this estimate of the phosphate requirement to be a very conservative goal. If the experience of the most successful of the TVA test-demonstration farmers had been used as a standard of potential profitable use, it would have been necessary to double the estimate at the very least. And even that total does not represent the true need of our soils for phosphate and other fertilizer materials if we are to protect our watersheds and operate our agriculture at a sustained high level of productivity and efficiency.

As I am sure all of you understand, TVA's fertilizer research is a balanced operation, necessarily concerned with both fertilizer use and fertilizer production—the development of new processes and products. One research supplements the other. The recorded experience of thousands of test-demonstration farmers helps to set production research targets. It tells the chemists and engineers the kinds of fertilizers they should try to develop to serve the present and future needs of the farmer and his soil.

You know from your long experience that important new fertilizer uses are emerging out of the experience of farmers throughout the Nation. I have mentioned the growing

use of mineral fertilizers as a means of helping the farmer to shift land use in the South and elsewhere; large amounts of phosphate especially are required to change from summer row crops to winter sod crops. There is also a steadily expanding market for fertilizer in irrigated agriculture.

Of these new markets, the most important, probably, is the expanding fertilizer need of the Nation's breadbasket—the 12 States of the Central and Middle West that grow 60 percent of the Nation's total production of food. In the past these States haven't used much fertilizer, but they are using more now and they would use a lot more if they could get it.

During the war and postwar years middle western farmers discovered that the natural fertility of their soils was declining and that it paid to fertilize. Phosphate consumption increased fourfold, fivefold, sevenfold, in the principal States of the Nation's breadbasket, and still the demand is far from satisfied. Over 25 percent of that phosphate is coming from Tennessee, which today holds only about 1 percent of our national phosphate supply. The great western phosphate deposits, representing nearly 70 percent of the Nation's total, have been supplying only 5 percent of the Nation's annual production. The rest comes from Florida. Freight and other distribution costs largely explain this situation. The cost of the long hauls between phosphate ore deposits and the areas that need the soil minerals must be reduced. One way to reduce shipping costs is to increase the concentration of the product.

TVA's calcium metaphosphate, with over 60 percent of P_2O_5, is a made-to-order fertilizer tool designed to break that bottleneck of distribution costs, open up the barely scratched western deposits, and underwrite the future of the most important agricultural producing area of America. That is its purpose and its promise. Whether this new product will fulfill that promise only research will tell—research in its use and research in its production.

We are making progress on both ends of the research. During the last fiscal year over 5,000 tons of calcium metaphosphate were spread on several hundred farms in a score of States. The large pilot plant that produced this material will soon be succeeded by an industrial-scale demonstration plant using a greatly improved process. Meanwhile from the field are coming hundreds of reports describing what happens when calcium metaphosphate is introduced into farm and farm community improvement programs under varied conditions of soil and climate. Thus far the evidence shows that calcium metaphosphate is excellent when used on soils in the humid belt; it is less effective than triple superphosphate on the high lime soils of the Dakotas, Nebraska, and parts of Kansas and Iowa.

In the TVA Act you will find some very specific language in the section dealing with fertilizer. We are instructed not just to produce new and better fertilizers but to get them used in better ways and in larger amounts. That means as we interpret it, that a fertilizer product can be considered successful when its value exceeds its cost to the farmer. Its value must be demonstrated by successful use in sound systems of farming. The qantities used by the farmer must be sufficient to build and maintain the soil; and the demand from farmers using the product must be sufficient to provide a steady outlet for the production of at least one plant operating at a practicable industrial scale. Only when that point is reached and industry begins to adopt the process—only then can our research be said to have attained its object. For example, when and if calcium metaphosphate is thoroughly tested and its value demonstrated so that some private agency begins to produce it to supply the demand we have stimulated, we will then begin to try out another product, developed from the laboratory and pilot plant.

Success in fertilizer research is not to be had overnight. It takes years of time and the combined energies of thousands of people to carry through the research and demonstration job on a single new fertilizer product. And there must be many new products. There will probably never be a universal fertilizer; we have too many kinds of soil in this country, too many climates, too many types of farming, and too wide a range of economic and other variables. That is why we now have at various stages of laboratory and pilot-plant development at least a half dozen processes for producing high-analysis phosphatic and double nutrient nitrogen-phosphate fertilizers. Our engineers consider at least two of these products to be almost as promising as calcium metaphosphate.

For years we have enjoyed cordial and mutually helpful relations with the technical personnel of the industry. Your engineers talk the same language and use the same slide rules as ours do. They visit us at Muscle Shoals, and are encouraged to inspect these public plants and laboratories. Frequently they ask for blueprints and specifications and usually they get what they ask for. They tell us and write us that our research has been useful to them. Recently they have begun to prove this by utilizing our technical developments and processes in whole or in part.

If more of the fertilizer and chemical industries will study the results and discoveries of this research—as some of you are doing—and if you can adopt and adapt these results in your program to expand production, we believe you may put yourself in a position for the first time to serve adequately the tremendous, the almost unlimited soil-fertility needs and requirements of the Nation's breadbasket—the Central West.

The problems on which the TVA is working at Muscle Shoals are your problems and the Nation's problems. They are problems that involve the future of the Nation's agriculture and the security and survival of our people.

If these problems are to be solved, if the fertilizer needs of the Central West are to be supplied and the western phosphate reserves are to be utilized, it will take the best efforts of industry and Government to do it. When I say Government I do not mean just the TVA; the land-grant colleges, the Extension Services, and many other agencies of Government are committed to the solution of these problems.

Here, then, I think, is where we find a natural and hopeful ground for agreement and cooperation with your industry. For its part the TVA is wholly committed to a cooperative policy with industry, with farmers, and with other agencies of Government. There are great and challenging tasks ahead. I think it is our mutual duty and obligation to work together and approach these tasks with courage and imagination.

Victory Day Talk of Gen. George C. Kenney

EXTENSION OF REMARKS

OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, January 7, 1949

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an address delivered by Gen. George C. Kenney, on the occasion of the Victory Day luncheon of the Memphis Post, No. 1, American Legion, at Memphis, Tenn., on November 11 last.

General Kenney has long enjoyed a distinguished military career, and his speech, delivered before a very large and representative audience, was well and favorably received.

The address follows:

Thirty years ago we observed our first Armistice Day. Since that November 11 in 1918, this day has become an occasion when we not only commemorate an achievement in our history, but we commemorate the individual Americans, living and dead, who by their sacrifices made that victory and other victories possible.

Each year, for one brief minute, we stand in silent homage to those heroes whose lives have paid for the maintenance and security of this country so that we may enjoy it.

Today we are paying special homage to those American soldiers, sailors, and airmen of World War II who made the supreme sacrifice to preserve this country, its ideals and its way of life. We owe them a debt that we cannot repay.

Today we are simply acknowledging that debt.

But isn't there something else we can do? Those rows of white crosses scattered around the world, from the Arctic to the Antarctic, on every continent and on the islands of the seven seas, should remind us of something besides mere acknowledgment of a debt.

Did those men think that their deaths were simply part of a series of inevitable catastrophes that were to plague us every generation? I don't think so. I believe that the vast majority of them hoped and believed that by their sacrifice peace would return and that we, the living, would see to it that never again would we allow our national defense insurance policy to lapse.

They realized that our unpreparedness had invited the attack by an aggressor confident of victory and scorning our capability to resist.

They realized too that while we had survived the initial blood bath, our very unpreparedness and the long process of rebuilding our armed forces were prolonging the day when we could force our opponents to accept defeat. Each additional day of warfare had its additional casualty list.

They hoped and believed that we would, in future, remember that 5,000 years of history shows that a defenseless nation is the nation most subject to attack.

I believe that our veterans of World War II, living and dead, expected something like that. We are paying tribute to over three hundred thousand of them today, who cannot speak for themselves; but I believe that they still expect us to keep faith with them. They saved this country and this generation. They have a right to expect us to look after this country and future generations.

Mere homage does not mean much unless it is accompanied by our firm resolve that every resource of our power, wealth, industry, and science will be used to secure the safety of this country and to preserve the principles and ideals that we have come to call our American way of life. We like our way of life, and I firmly believe that if there are any improvements to be made in it we intend to make them ourselves, without any help from anyone else.

We have fought two world wars in the past 30 years for our principles, and if necessary we will fight again to preserve them.

We sincerely want peace. We have and will continue to go to almost any length to have peace. We are not a warlike nation. We want to avoid war; but not at the expense of our freedom.

We want the kind of peace that goes with "government of the people, by the people, and for the people;" not a peace imposed

upon us by some alien conqueror and enforced by fear of the firing squad and the concentration camp.

We want to remain free men and women. We want a government that recognizes that we are human beings and not soulless cogs in a state machine.

I have spoken of ideals. What are those ideals? They are freedom, justice, fair play, honesty, decency—not just a lot of words, but things that make us the nation we are. As long as we keep them, we are a thinking, living, progressive, and driving force toward a better world—a better world for ourselves and a better world for all mankind. If we lose them, we lose our way of life, our freedom, our civilization. We must keep our ideals. We must guard them. We must be alert and prepared to defend them.

Eternal vigilance is still the price of liberty. Apathy still brings the penalty of defeat and the slave-labor camp.

We must not shirk our obligations and our responsibilities as citizens of this country. It is one of the countries of the world in which we may live our lives according to the dictates of our consciences, speak our thoughts according to the dictates of our hearts, and worship at our altars according to the dictates of our faiths. Let us keep it that way.

After World War I we lost interest in our national defense. On December 7, 1941, Pearl Harbor woke us up when it ushered in World War II. We are already beginning to forget that our margin of victory in that struggle was dangerously slim. We must not lose interest again, for if we again relax our vigilance and neglect our defenses, the probability is that the United States, as we now know it, will cease to exist. If war comes again, we will not have a couple of years to get started on production of weapons and war materials so that we can begin to fight. If we are not ready to fight at the beginning, we may not be able to fight at all.

As General Eisenhower pointed out in his final report as Army Chief of Staff, and I quote:

"What we are able or not able to do within the first 60 days of another war will be decisive in the determination of our ability to carry the war to a successful conclusion. If war comes, no amount of feverish activity, or great expenditure, can build our defenses in a day. Our chances of survival in any future war would depend on our state of readiness at its beginning."

Just a few years ago that statement would have been hailed as visionary and calculated to produce headlines for the tabloids. It would have been sensational, but few people would have taken it seriously. Today it is generally accepted as a true and realistic analysis of the situation confronting this country and the world. Aggressors have found that a comparatively small, well-prepared, hard-hitting, fast-moving force, striking without warning, gains a tremendous initial advantage. Sometimes that initial blow has gained the decision. Poland, Denmark, Norway, Holland, Belgium, and France can give us some excellent testimony to that effect.

During both World War I and World War II the aggressor dispensed with the formality of declaring war and attacked without warning. To do it according to the old established procedure requires several days. During that time a small neighbor can be overcome and occupied; a Pearl Harbor can take place; another greater or a hundred greater Hiroshimas can smash the resistance of a surprised victim.

The blitzkrieg of World War II would look like a snail's pace compared with the superblitz of a world war III.

In a few years we will no longer be the sole possessor of the atomic bomb. When that day arrives we will have to face the fact that a fairly modest force of bombers with atomic bombs can cause more damage and snuff out more lives in a single attack than was accomplished by all the TNT-loaded bombs throughout World War II. We must accept the possibility that a blow of this nature could gain the decision if we are unprepared to counter it and instantly strike back.

In this troubled world of ours today an adequate, effective, well-organized, and intelligent Military Establishment is our best guaranty of peace, peace which calls for respect of nations for the rights of others, for international law and order.

We need such an establishment just as this city or any city needs an adequate, effective, well-organized, and intelligent police force, to guarantee respect of individuals for the rights of others, for community law and order.

When banks are not adequately guarded thieves break in.

We will not have peace if we are too weak to fight for it.

We do not need that military establishment because we covet anything belonging to any other nation or because we seek new political or new economic aggrandizement. On the other hand, without any thought of political or economic concessions we are pouring billions into a devastated, hungry, disheartened Europe to give those peoples a chance to live, to give them some hope for the future, and to permit them to stand on their own feet again as free peoples.

In spite of the terrific obstacles of international jealousies and distrusts we are trying desperately to make the United Nations work. But it will not work unless we can furnish the moral leadership that the vast majority of its members look to us for. That leadership, in turn, cannot be exercised unless we are ready to back it up. It may be unfortunate, but it is nevertheless true, that in this world today, at the councils of nations the strong are listened to, the weak are largely ignored. We are the only hope of nations daily living in fear of aggression. They know and any would-be world conqueror knows, that with the United States defeated the conquest of the rest of the world would be easy. Western Christian civilization itself would perish.

We daily face new challenges. They are challenges to our national integrity and challenges to the general principles for which we have fought since 1775. If we resolve to meet those challenges now, with the courage of our national convictions, secure in the knowledge that our motives are unselfish, and determined to exercise our power to preserve peace, I believe that we have little cause to fear another international conflict.

Since 1775 a million Americans have given their lives for this country. They have given us a heritage which I believe they expect us to preserve and to hand down to our children and our children's children. I believe if they could speak today they would express profound concern both for our future security and the survival of civilization.

We must not disappoint them. We must not let them down. We must keep faith.

Why Georgians Have Faith

EXTENSION OF REMARKS

OF

HON. PRINCE H. PRESTON, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 7, 1949

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Wellington Wright from the Atlanta Constitution for January 2, 1949:

WHY GEORGIANS HAVE FAITH—KILOWATTS KEY THE ECONOMIC MARCH OF GEORGIA'S REVOLUTION AS '49 DAWNS

(By Wellington Wright)

At the threshold of 1949—and Georgia is on the march.

That's the outlook for this New Year and for many other New Years which are to follow it; the outlook for Georgia in the throes of an economic revolution—the Georgia revolution.

It's an epic of progress in both industry and agriculture, the economic fronts which reveal ever so clearly the material aspects of this revolution. But the greatest progress of all—and by far the most important—is on still another front, that immaterial realm of the spirit which determines the way the people of Georgia think and feel about Georgia.

On this far-flung psychological front, the spirit of economic defeatism, heritage of another era, has vanished into the limbo of painful memories. In its place, another spirit has appeared, such a spirit as whispers eternally to Georgians that they have nothing to fear except fear itself.

All over Georgia, there are signs to prove that the people of Georgia are beginning to have faith in this new vision and to act upon what it tells them. New industries, new jobs, new pay rolls, new wealth. All these, along with an expanding program of diversified agriculture, are the earmarks of Georgia's progress—heralds of the Georgia revolution.

Thus, through the hard lessons of experience, Georgians all over Georgia now have learned that with vision, courage, and unity of effort nothing can stop them and nothing can beat them. And that's why at long last Georgia is on the march again.

So the economic revolution is under way in Georgia—the Georgia revolution. It is a State-wide movement—a movement born of faith, courage, and a vision.

Yes; it has a slogan:

"Have faith in Georgia."

And that's the story of Georgia for 1948.

And what of 1949 and after?

Signs of economic progress lie in every direction throughout Georgia. They are the barometers which surely foretell the economic future of the State, yet perhaps the best barometer of all is in the index of the increasing demand for electric power in Georgia.

Throughout the United States as a whole, experts predict with assurance that the demand for electric power will double within the next 10 years. But in Georgia they say the demand is going to double within 6 years * * * nearly twice as fast as in the Nation as a whole, and they say, too, that such a fact alone is sufficient proof of the Georgia revolution.

But some of the details of that increasing demand for electricity in Georgia furnish even more convincing proof of the economic revolution now under way in Georgia.

For example, the Georgia Power Co. distributes electricity throughout 85 percent of the area of the State, and it reports that the demand for electric power in its area of Georgia is now increasing at the rate of more than 500,000,000 kilowatt-hours a year. The same reports also come from companies which serve other areas of the State.

And there are still other figures to confirm these reports:

In 1947 the Georgia Power Co. alone sold 8,229,000,000 kilowatt-hours of electric power.

In 1951 this company expects to sell 4,814,000 kilowatt-hours—a figure which represents a 50-percent increase over 1947.

And the approximate figures for 1948 indicate the sale of 500,000,000 kilowatt-hours more than in 1947.

With the economic revolution in Georgia now well under way, where will Georgia get the electric power it is going to need in the

coming years to supply the demands of agricultural and industrial expansion?

On this score both private and public agencies have done much thinking and planning. At this moment they are working on a $200,000,000 program to expand the electric-power facilities of the State. Of this amount, the Georgia Power Co. is spending about $85,000,000. The Federal Government plans to spend the rest of it to harness the vast waterway resources of Georgia.

Yet even this vast program looks no further ahead than 1952. After that there will be other programs and there are people at work on plans for them now. The Georgia Power Co. alone expects to have to spend $20,000,000 a year for an indefinite number of years, and the plans of the Federal Government call for a much greater and more comprehensive program.

To supply the future demand, the Georgia Power Co. already has planned, or under construction, two new plants—Plant Yates, on the Chattahoochee River near Newnan, and the Furman Shoals plant, on the Oconee River, near Milledgeville.

Plant Yates, scheduled for completion in 1950, will have an initial steam-generating capacity of about 750,000,000 kilowatt-hours a year. Ultimately, the company plans to double the capacity of this plant.

The Furman Shoals plant will be a hydroelectric plant and will have a capacity of 15,000 kilowatts, or about 100,000,000 kilowatt-hours a year. The company expects to have it in operation in 1951.

On another front, the plans of the Corps of Engineers for projects which will generate electric power in the Georgia area are even more vast. They are:

Allatoona Dam, on the Etowah River, near Cartersville, scheduled for completion in the fall of 1949. This dam will generate 160,000,000 kilowatt-hours of electric power a year. It will cost about $17,500,000.

Jim Woodruff Dam, on the Apalachicola River, in Decatur County, Ga., a $30,000,000 project which will generate 208,000,000 kilowatt-hours of electric power. Scheduled for completion late in 1951.

Clarks Hill Dam, on the Savannah River, near Augusta, is a $26,500,000 structure in a $60,000,000 project. It will generate more than 700,000,000 kilowatt-hours and is scheduled for completion early in 1952.

Buford Dam, on the Upper Chattahoochee River, near Atlanta, a $22,500,000 project will generate 170,000,000 kilowatt-hours of electric power. Work has not yet started on the dam itself and thus there is no date fixed for its completion.

In addition, the Corps of Engineers has plans for other dams on the waterways of Georgia. In fact, when the Corps of Engineers completes its plans for this area, its dams will generate 2,100,000 kilowatts of electric power, or more than 18,000,000,000 kilowatt-hours a year. And by that time this low-cost electric power will have made Georgia the center of one of the greatest industrial and agricultural areas in the world.

Thus, the economic revolution in Georgia—the Georgia revolution. And that's the reason why the people of Georgia have renewed faith in Georgia.

End of Globaloney?

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 7, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news letter by Hon. Samuel B. Pettengill, former Representative from Indiana:

END OF GLOBALONEY?

The frosty reception of Mme. Chiang Kai-shek in Washington indicates that the dreamers of global utopias are beginning to climb down from the clouds. Theories have collided with facts. Dreamers have gotten cold feet. Mr. Roosevelt's great design for one world is broken in many pieces. There isn't even one Germany, one Greece, one India, one Palestine, one China.

As Mr. Will Shakespeare wrote: "Our revels now are ended and * * * leave not a rack behind."

Woodrow Wilson said: "It is the discovery of what they cannot do and ought not to attempt that transforms reformers into statesmen."

Although President Truman has not explicitly repudiated the Roosevelt fantasy of an alliance of communism and freedom, he is doing so in fact. The Truman plan for Greece 2 years ago marked his break from the policies of his predecessor. The President then announced an extension of the Monroe Doctrine to include the world. It then became our policy to contain communism and help everybody, everywhere, to resist aggression. This new policy was globaloney, also, and has now bounced back on Mr. Truman in China that now asks for the same prescription he gave the Greeks.

The President has just reported to Congress on Greece where we have sent $170,000,000 of guns, munitions, and military equipment in addition to civilian relief. It is a sad story. The Greek guerrilla forces have increased. We have lost ground. And guns we sent the Greeks have apparently been resold to other forces behind the iron curtain.

Something of the same sort has happened to Marshall plan aluminum and lead. It now comes out that aluminum bought by Great Britain at 16 cents a pound, with money we supplied, has been resold to American buyers for 24 cents—thus netting the Attlee government a nice little profit on our own money.

Now comes Hon. SOL BLOOM, who, in the next Congress, will be the chairman of the House Foreign Affairs Committee. He is reported to favor immediate aid to China "that would not involve the United States in war." We have heard that before.

China does not want "aid short of war." She wants aid to win a war. Not only guns, but American commanders and organizers of her retreating armies. In short, men.

When will we stop kidding ourselves? When lend-lease was before Congress in the spring of 1941, only one or two men, urging lend-lease had the uncommon honesty to admit that when a Government supplies military equipment to a belligerent, it commits an act of war under every principle of international law known to men.

We are on a hot spot today. Shall we plunge deeper into China or pull out? Can we get deeper in without finding ourselves up to the neck in world war III? That is the question. I do not know the answer, and know no one who does.

A couple of years ago, President Truman on two occasions favored a shotgun wedding of the Nationalist and Communist forces in China. He sent Secretary Marshall to China to bring that about. That was when we were told that the Chinese Communists were not Communists at all, but poor peace-loving peasants fighting their landlords.

Since VJ-day, we have poured $3,000,000,000 into China and now we are asked for more tools and more men. Our hush-hush bipartisan foreign policy which was not to be debated while our master minds blundered on, has brought us to this tragic pass.

SAMUEL B. PETTENGILL.

Love for His Fellow Man Marks Sol Bloom

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 7, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Alice Dixon Bond from the Boston Herald of November 28, 1948:

LOVE FOR HIS FELLOW MAN MARKS SOL BLOOM

(By Alice Dixon Bond)

Even Horatio Alger did not dream up such a man as SOL BLOOM. The "rags to riches" are there, the goodness and the quick wit, but Mr. BLOOM goes far beyond these in his innate kindliness, in understanding, in shrewd intelligence and generosity and his genuine love for his fellow man, which he translates into deeds, rather than words.

The youngest of the six children of Polish immigrants, SOL went to work in a factory in San Francisco when he was only 7 years old. Sixty-eight years later, a little more than a month after his seventy-fifth birthday, the man who had been that boy stood on the balcony leading from his room at the Fairmont Hotel in that same city and gazed out across its beauty.

IMPRESSIVE TASK

But he was not thinking about the things he could see. In a few days, the representatives of 51 nations would meet here in San Francisco to begin the task of drafting a charter. He had been sent, one of seven American delegates, to help write this instrument which men of good will everywhere in the world hoped would be the foundation for a future free of wars and destruction—the United Nations Charter. And he thought—"This must be all a dream."

For the man on the balcony was again the kid who had washed windows and swept floors and run errands in a brush factory down there on Sacramento Street. He was only the little Jewish boy who had peddled violets on Market Street near Lotta's Fountain, who had quit school forever after only 1 day because he lacked money to buy a single book.

The images of his early years in California crowded his memory. The boy who had daily trod the wooden sidewalks and cobblestoned streets carrying a lunch box on his way home from house to factory, where he had earned a dollar and a quarter a week, now the man chosen to draft the preamble for the document of the United Nations, the man who knew that, "We the people," was the way it must begin, whatever else it might include.

INCREDIBLE STORY

In between that boy and his moment is the incredible story of the lad who, at 19, had made enough money to start on a tour around the world, a tour which ended in Paris, which, he told himself, was equivalent to such a universal tour since all the world came to that city; the story of a theatrical manager, who became counselor to four Presidents; of a high-powered real estate operator, who emerged as chairman of the House of Representatives Committee on Foreign Affairs to guide the most important legislation in connection with World War II; of a sometime song writer and publisher who was chosen to draft the preamble to the Charter of the United Nations; the story of many careers; of San Francisco in the seventies and eighties; of his sainted mother who, even when they literally lacked a penny of

their own, would gather up the coins in their charity box and give them to someone who had still less; the story of his own wife and daughter and the multiple ramifications of a full and useful life; all of which he has told in a recently published book, which is gay, wise, and engrossing and which, with characteristic simplicity, and straightforwardness he calls merely The Autobiography of SOL BLOOM (Putnam's $3.50).

I saw SOL BLOOM in New York the other day, an unpretentious gentleman, at ease in his comfortable suite at the Madison, wearing a gray lounging coat trimmed in red, his eyeglasses hanging from the inevitable black ribbon.

WARM AND FRIENDLY

Yet, because he was in it, the room became a gracious place, the atmosphere warm and friendly. Flowers were everywhere, some sent from his own beautiful gardens in Washington. They stood as they always do, before the picture of his lovely wife, who died in 1941, as well as in front of the photograph of his father and mother, without both of which he never travels.

We had been speaking of his own 26 years as Congressman and of the elections; of his attempts to explain the different issues connected with them to various audiences and of the listener who demanded to know if it would not be terrible if Dewey were elected and the Congress should turn out to be Democratic.

"My answer," he said, "was simply: 'It would not be terrible if Congress was made up of Americans.' "

"God will take care of this country," he continued, "if civilization is big enough to give us such a thing as the atomic bomb, it will not allow it (the bomb) to destroy us. If we teach a boy how to write, he can forge a check or write a poem. Automobiles kill many people, but there is no reason why we should do away with them. We must use care.

"As we look backward or forward, we find that everything has its place and that the good will always prevail over the bad—or evil. No word in the dictionary is stronger than the word truth—but with it we must have love.

"CONFIDENCE OF PEOPLE

"I tell the truth even against the legislation for which I am working, for one must have the confidence of the people, which can only be based on your integrity.

"The late President Roosevelt said to me once: 'SOL, did you say I did not have the right to pack the Supreme Court?' My reply was: 'You may have the right to do something, but you must then ask yourself if it is the right thing to do.'

"I believe that we should keep people up to our own level and not go down to the gutter to lift them up.

"You get from life only what you put into it," he added, "and there is no sense in pretending you are something you are not. A cat wants to impress a dog with the fact that he is a big animal, so he puts up his tail and fluffs out his fur. But all the time he is the same size cat, and the dog is bound to find that out.

"So we can never make ourselves bigger than we are. I have found, also, that we can never lick a person if we drive him away from us. He isn't there.

"My mother taught me two great things. The first was to read with understanding, the second to desire to know.

"My dearest wife never allowed even for the possibility of failure in any undertaking she considered worth the effort of beginning."

There has been no starting or stopping with SOL BLOOM, either. Direction has been and is his; that, and courage and faith, hope, and an all-embracing charity.

Northwest Hit by Most Acute Power Lack in History

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, January 7, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Rural Electrification magazine for January 1949:

NORTHWEST HIT BY MOST ACUTE POWER LACK IN HISTORY

As 1948 drew near an end the entire economy of the Northwest was being strangled by a power shortage which multiplied the crisis felt in the area the previous year.

Industrial plants had been asked to end their day shift at 4:30 instead of 5 to conserve power, switches had been pulled on lines serving four aluminum plants, some factories had been requested to postpone certain operations until late at night.

The effects of the power shortage did not stop with industry, but reached down into the homes of the area. Thousands of dollars were spent on advertisements urging private citizens to cut their power consumption. Space heating was banned in some areas. But the lights still dimmed in numerous homes. Late in December the only remaining answer was to start pulling switches.

Oregon was worried. An official of the State chamber of commerce reported that "we're losing new industries every day because of the power situation."

The Northwest saw little hope for an easing of the shortage in the near future, as over-all studies indicate insufficient power in the area at least well into the 1950's.

Even when generator facilities now planned or under construction are completed, the spiraling demands for power will be far from filled.

Blairs Creek Dam, Shannon County, Mo.

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, January 7, 1949

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SECURITY LAND & ABSTRACT CO., INC.,
Eminence, Mo., December 31, 1948.

Hon. A. S. J. CARNAHAN,
Congressman, Eighth Missouri District, New House Office Building, Washington, D. C.

DEAR MR. CARNAHAN: From talking with my acquaintances, I believe that a great many, in fact a majority of the citizens of this section, feel as I do: That the proposed Blairs Creek Dam on the Current River in Shannon County, Mo., is a tragic disaster threatening the homes and property, and our beloved way of life here. We feel helpless and that it is probably useless to protest since it appears that forces far removed from us and more powerful than anything we can muster, have made this decision which will irrevocably affect us now, and the future of our children and all those who are to come after us.

It would be less than honest for me to pretend that my opposing this proposition has nothing to do with sentiment. My father's family came here before the War Between the States, and the seventh generation of my mother's family now lives along the Jacks Fork and Current Rivers. The clear waters of these streams are like the blood in my veins and the beauty of their valleys and the splendor of the giant springs which feed them are a part of my heart. Infinitely more precious to me is the manner of living in the villages and rural communities along these rivers. Here a woof of leisurely contentment and independence of spirit is woven with a warp of neighborly kindness, human tolerance, and friendly good will to form a tapestry of fine living, which is not duplicated in any other place on earth. It is a truly American way of life with a native flavor which distinguishes it to all who have ever lived here. We furnished our quota of fighting men in the recent war, and it is my conviction that when these men were fighting and dying in foreign lands, they strove for the broader ideals of all America, but that primarily they fought to preserve those things so dear to their hearts which the waters of this dam would sweep away forever. To those who came back it is a sickening betrayal that what they struggled so bitterly to keep is to be destroyed by the very powers they secured in that conflict.

From a practical point of view, we have seen the results of Bagnell and Wappapello Dams on the economic life in the sections where they are located, and it seems that opinion is strengthening every day that it is not good. They have, for the most part, failed to accomplish their promised objectives; the finest farm lands are finally destroyed; the most valued improvements are lost; and the people who had built up these things and created solid community life are a scattered, disbanded, and in many cases, a wandering, drifting people.

I fully realize that I am only one very, very small voice, indeed, but for what it is worth, I suggest that the millions of dollars proposed for the Blairs Creek Dam be diverted to a soil-conservation and erosion-control program, combined with good forestry practices, with well-placed small dams along many of our tributary streams. This will effect the desired flood control while leaving intact our fine farm lands along the streams and the more intangible asset of a settled worth-while population. It will also leave unravaged beautiful Round Spring, Alley Spring, Pulltight Spring, and their lovely surroundings.

Mr. CARNAHAN, if I could have one wish fulfilled, it would be that those who are bringing about the construction of this dam would make a trip through this entire area during the spring and summer or in the colorful weeks of autumn. I feel sure that in bringing about this wholesale destruction of natural beauty, which is surely as bountiful as can be found in all the world, "they know not what they do."

Very truly yours,
LENA WILLIAMS LAMKINS.

Uncle Sam: Trustee

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 7, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the

Bristol (Pa.) Courier for January 6, 1949:

UNCLE SAM: TRUSTEE

So much emphasis has been put on the spending functions of Government, during recent years, that many people have lost sight of the fact that one of Uncle Sam's most important jobs is to serve as trustee of the assets and resources of the American people.

Of course all governments—down to the boroughs and townships—are the trustees of the funds they collect in taxes. A proper sense of this stewardship is a basic duty of public officials. Waste of the people's money is a crime which is nearly as serious as letting it be stolen.

But Uncle Sam has a responsibility of trusteeship which is much broader than merely over the tax moneys which pass through his hands. The United States Government, through its policies, determines the stability, the value, of all privately owned property in the country.

Real estate prices today are the result of what the Federal Government has done in the fields of housing and rent controls. The United States Treasury's interest rates dominate all interest rates. Government openly fixes the price of the milk you buy. Indirectly, but just as definitely, it is responsible for whatever prices you pay for meat, bread, and many other foods not directly under Government control.

It is the policies of the National Government which determine whether values rise or fall over a period of time, whether investments continue to be sound or "turn sour," whether industry shall be flourishing or sluggish, whether jobs shall be numerous or few.

In the long run, prosperity is the fruit of wise Government policies, and depression the result of unwise ones.

As Alexander Hamilton pointed out long ago, the Federal Government is trustee for the national economy, just as clearly as for the money which goes into and out of the National Treasury.

That didn't mean Uncle Sam really owns the national economy, or that he has any right to the title and control of the private property which you possess. A trustee isn't an owner; quite the opposite. A trustee handles property which definitely belongs to someone else.

If the time comes when the American people don't see this distinction, and assume that because Uncle Sam is trustee for the Nation's wealth, the Government owns it and can spend it as the national officers wish—then we will no longer be a free republic. We will have moved bodily over into socialism. It is Communist Russia, for example, that believes the state owns everything, its citizens nothing.

The matter of Uncle Sam's trusteeship becomes especially important during times like the present. We are far along in inflation. Prices of everything are far above normal; some of them three times or more what they were only 3 or 4 years ago.

There is great uneasiness about the future. Many signs exist that we are about to undergo a readjustment, in which there will be a general decline of these inflated prices. Most everyone agrees that we need some measure of deflation as an antidote for the rapid inflation since the end of the war.

Now, when it comes to Government spending—or to spending by anyone, and especially those who are trustees for others—there are excellent financial arguments for postponing anything which can be delayed, so that it may be bought or built for considerably less money sometime in the future.

Current reports out of Wall Street are that many industrial corporations have pushed off plans for expansion, waiting to see whether these cannot be made for much less capital expenditure at some future date.

There is every sign that the public itself has made the same decision—for example, with regard to housing. Demand for new homes has fallen way off in the face of present high prices. Obviously, many who want homes are waiting for what they feel is inevitable—a chance to buy the dwellings at a large reduction from present prices.

In private affairs, a trustee who bought at the top of the market, when he could have bought for much less merely by waiting a while, would be severely criticized for his negligence.

Does the same principle apply to government?

It is not being applied to the National Government by President Truman. He has not retrenched Federal spending. The higher prices go, the more he spends. Federal spending has become one of the biggest of the inflationary factors—every time we have approached a sufficiency of any scarce commodity, the Government has bought it up and thus re-created the scarcity.

The coming Truman budget is expected to be the biggest budget yet. A great deal of it is devoted to long-range programs, which, if delayed a year or two, would make no great difference.

If the Government were to hold these over, the resulting savings might run far into the billions of tax dollars. Moreover, the mere fact that Uncle Sam was doing something tangible to stop the inflationary cycle would be the strongest reinforcement to our weakening national credit which it is possible to imagine.

If the White House concept of the National Government's first job was that of being a trustee for the resources of the American people, there is no question that Uncle Sam would be waiting out the present high prices—that he would postpone all nonemergency spending until costs come down.

But that is not the White House concept of the Government's responsibility. The Truman emphasis is on spending—on the Keynesian idea of pouring out government appropriations as a means of keeping inflation alive.

It is argued at Washington that any curtailing of Government spending would be deflationary. Of course it would. But how, except by deflation, are we ever going to get away from continued inflation?

This Government spending policy, in its present form, was introduced by the New Deal between 1934 and 1936. It was first called pump-priming.

It was no secret then that overspending by Uncle Sam was inflationary—that's what it was intended to be.

Now, at the peak of inflation, we are witnessing constantly increased Government spending—at the very moment when our leaders are declaiming about how badly they want to hold the line against further inflation.

This doesn't make sense. It's as silly as someone who had started a fire with kerosene, trying to put it out by pouring on still more kerosene.

As the American people are going to find out to their sorrow one of these days, Uncle Sam has been making a botch of his job as trustee of their resources.

Future generations especially are not going to be satisfied with any accounting of stewardship which can ever be rendered on behalf of the present National Government.

The heritage of Americans—their wealth and their freedoms—are in process of being despoiled.

Security and liberalism today—and bankruptcy tomorrow.

Attendance of Marine Band at Final Encampment of the Grand Army of the Republic

EXTENSION OF REMARKS
OF
HON. ANDREW JACOBS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 7, 1949

Mr. JACOBS. Mr. Speaker, this morning I introduced a bill to send the United States Marine Band to the final encampment of the Grand Army of the Republic.

The few remaining Boys in Blue will meet for the last time—in this world—where they first met at Indianapolis.

They are our last representatives of a stalwart army of men who so loved their country that, as teen-age boys, they proffered their lives to preserve the Union.

It is a fitting tribute to them that the music that resounded at the Halls of Montezuma should measure their tread as they march in this, their last encampment.

I am honored to make this request on their behalf.

My district is also honored as is my State. In fact, all of my Indiana colleagues, on both sides of the aisle, are joining me in spirit in sponsoring this bill.

Had the rules permitted, Mr. MADDEN, Mr. HALLECK, Mr. CROOK, Mr. KRUSE, Mr. WALSH, Mrs. HARDEN, Mr. NOLAND, Mr. DENTON, Mr. WILSON, and Mr. HARVEY would have been cosponsors of this bill.

All of us in the Eighty-first Congress are honored with the rare opportunity to make this last and final salute to the Grand Army of the Republic.

Meaning of Free Enterprise

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, January 7, 1949

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Malcolm W. Bingay from the Akron Beacon-Journal for January 3, 1949:

PROFESSOR BINGAY TEACHES LITTLE BUSINESSMAN A LESSON ON MEANING OF FREE ENTERPRISE

(By Malcolm W. Bingay)

I am told that I must read an article by DeWitt Emery, president of the National Small-Business Men's Association. I am told that free enterprise has been the backbone of our economic life for 150 years and that in this essay Mr. Emery makes vividly clear what's wrong with us. His article in part reads:

"The other evening my son, who is in his first year of high school, asked me to help him write a piece on free enterprise. I

told him I would be glad to help but that I was not going to write it for him.

"About a half hour later he said, 'Dad, I can't find anything at all on free enterprise in the encyclopedia.' I couldn't believe that so I looked too. He was right.

"In the end, and between us, we worked out the following: 'Free enterprise is, first, the right of each individual to decide for himself what his occupation shall be and to change occupations whenever he wishes; and, second, the private ownership and management of the tools and other means of production and distribution.'

"We also had a little discussion about free enterprise, how it was guaranteed by the Constitution of the United States.

"The next morning my secretary went over to the public library, one of the largest and best in the world, and asked where she could find a definition for free enterprise.

"The librarian in the reference section said she could find it and confidently pulled out White's Political Dictionary. There was nothing. She was surprised but went on to a volume of American political terms and from there to a set of political encyclopedias and then even to a book of law terms. She found nothing.

"If I had my way, a clear and simple understanding of freedom of enterprise would be included as a must in the curriculum of every school in America, even if imparted to our youngsters merely through one lesson or through a paper such as my boy had to write.

"No wonder the Reds and other radicals are able to create so much confusion in the minds of so many Americans concerning our economic system when none of our reference books contain a definition of what free enterprise is, how it works, who benefits, and why. This is a serious oversight. Yes; it is a colossal oversight which all publishers of encyclopedias, dictionaries, and other reference books should correct immediately."

I would say that what this country needs is business leaders who have better understanding of government and economics than Mr. Emery reveals in this naive story.

Free enterprise is not guaranteed by the Constitution. There never was any such thing as "free enterprise" anywhere or at any time unless we go back to the jungle life of our aborigines before they had developed codes of laws.

"Free enterprise" is English for "laissez faire," which means "keep hands off, let things alone, don't interfere with business."

The first laws ever enacted by the United States Congress were for the control of business. The first law was a tariff bill in favor of American shipping, the second was the establishment of a Federal bank, and the third voted bounties to New England fisheries.

There never was a time when the United States Government was not regulating and controlling business with grants or restraints.

If Mr. Emery wants to talk about "private enterprise," that is something else again. The expression "free enterprise" is meaningless and tautological. Men who write dictionaries have to know the meaning of words and all dictionaries agree on the meaning of "enterprise," which is, "A project which requires initiative, courage, vision, and perseverance." Of necessity such an adventurous spirit is free.

When our business leaders quit worshipping catch phrases a good many of our national problems will solve themselves.

As for "free enterprise," you will not find such poor English in any good dictionary, Mr. Emery. But you will find "free enterprise" as a synonym for laissez faire in every textbook on economics.

Personally I recommend to you a brochure written by Father Benjamin L. Massee, S. J., entitled "Economic Liberalism and Free Enterprise." It is published by the America Press, 70 East Forty-fifth Street, New York 17.

Then you will not be saying that the country is going to hell in a hand basket because it has not got something it never had and which has never existed.

For Economic Democracy

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, January 7, 1949

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun-Times for January 6, 1949.

FOR ECONOMIC DEMOCRACY

President Truman, in his message to Congress yesterday, proposed a charter for American economic democracy.

With complete fidelity to the ideas he propounded during the campaign, he called upon Congress—and upon all elements of the country—to work with him for the realization of those ideas.

He made the call with a new sense of confidence and strength. He could say with quiet conviction:

"We have rejected the discredited theory that the fortunes of the Nation should be in the hands of a privileged few. We have abandoned the 'trickle-down' concept of national prosperity. Instead, we believe that our economic system should rest on a democratic foundation and that wealth should be created for the benefit of all."

The President could add, with equal sincerity, something that Congress should keep in mind:

"The recent election shows that the American people are in favor of this kind of society and want to go on improving it."

The idea of economic democracy is not new.

Thomas Jefferson expressed it, in terms appropriate to another age, when he set this Nation on the path of a native American liberalism.

Andrew Jackson expressed it in his struggle against an all-powerful private bank.

Abraham Lincoln expressed it by leading a war against human chattelhood.

Grover Cleveland spurned the idea that the Government shall take care of the rich, while the rich shall take care of the poor.

Theodore Roosevelt's crusades for conservation and against the trusts; Woodrow Wilson's New Freedom; Franklin D. Roosevelt's New Deal—each in the spirit of its time proclaimed the ultimate sovereignty of the people over their own economic fortunes.

President Truman planted himself squarely in that tradition—one which progressive Americans will always regard as the pure strain of our history, shining through the dross and alloys of occasional reaction.

What is new about the Truman program is not its basic principle, but its courageous application of the progressive idea to the needs of America midway in the twentieth century.

The President believes that the people, acting together through their Government, should strike out boldly to protect their welfare as individuals.

Therefore he proposes a system of national medical insurance to bring the best medical care within the reach of all. Therefore he asks Federal aid to improve education. Therefore he asks broader social security, a vigorous housing program, unyielding dedication to civil rights.

The President also believes that the people should act together to protect their welfare as members of economic groups.

Therefore he proposes a fair statute of labor relations; therefore, a farm program to give agriculture a fair share of the national income; therefore, steps to invigorate a competitive business economy.

Finally, the President believes that the people should act together to protect their welfare as members of a great democratic society in which all share a common stake. He urges a tax program to balance the budget and combat inflation; the development of natural resources to encourage expanding production; the imposition of price ceilings and material allocations where necessary to safeguard the Nation from a runaway boom or collapse.

This is not a prolabor program, a profarm program, or an antibusiness program. It is a program which seeks justice for the people as individuals; justice for the people as workers, farmers, businessmen or consumers; both rights and responsibilities for the people as citizens.

Perhaps the key to the whole message is the President's determination to bring about expansion of productive capacity in such industries as steel—whether by Government loans, or direct Government construction of plants.

The steel corporations, in resisting pressure for expansion, have been betting on a decline in demand at some future date—in other words, a depression. Mr. Truman asks them to bet on an expanding economy instead. He adds that if they won't do it, the Government will.

What this means, in sum, is that the basic decision on our national steel capacity shall rest with the United States people, rather than with United States Steel. It means, in sum, economic democracy.

Economic democracy—an idea as old as America, but one which demands new applications for twentieth century America—that is Mr. Truman's message. We believe he has the people behind him in proclaiming it.

A Ghastly National Mistake

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 7, 1949

Mr. LEMKE. Mr. Speaker, under the unanimous consent granted to me, I herewith include as part of my remarks a letter by Norbert O'Leary, of Garden City, Kans., which appeared in the Garden City (Kans.) Daily Telegram on October 16, 1948.

The time has come that we stop committing national suicide—destroying our Nation—by depleting its natural resources. The time has come that we give up the idiotic idea that we were divinely ordained to police the world. The time has come to return to the ideals of the founders of our Nation.

The letter speaks for itself. Here it is:

DEAR EDITOR: As a free American citizen I want to exercise my rights of free speech by

publicly expressing the following ideas and opinions.

The maximum military preparedness within our power, is the right national policy to pursue. And if we are ever attacked in our own country, our American fighting forces and our American people can be depended upon to defend our homes with all that we have got. That will be genuine self-defense, and we can do it successfully if our money and our fighting forces are not scattered all over the world, even to the shores of Greece and China, where civil wars are raging.

But mixing in the politics of Europe and Asia is a ghastly national mistake. What do we gain by it? The saving of face as the Chinese call it? The saving of our dignity, self-esteem, and national pride, and of our so-called world leadership?

All of those things put together are certainly not worth the ghastly price of a further impoverishment by taxation of the rank and file of our citizens, a further piling up of a crushing interest-bearing national debt, a possible destruction of many of our cities, including the cities of Washington and New York, and the blinding, maiming, and death of hundreds of thousands, perhaps millions, of our citizens—perhaps including you who are reading this—all of which would be the natural and probable fruits of a third world war.

Have you ever stopped to think this through?

Have we forgotten the wise advice of the Father of our Country, George Washington, who warned us against engaging in foreign entangling alliances?

President Truman has been quoted as talking about working out constructive and peaceful solutions of our problems abroad.

The best way to solve our problems abroad is not to have any. That could be done by withdrawing into our own country and minding our own business, letting the people of Europe and Asia attend to theirs in their own way. If they don't like the way they are governed, they will change it themselves.

Our ancestors did that when they didn't like the way an English king was governing them, or trying to. The people of Russia did likewise a generation ago when they did not like the way the czar and his appointees were governing them.

And the people of Europe and Asia no doubt can work out their own problems in their own way, without our money, our blood, and our butting in. Or if, on the other hand, they, or the majority of them, like the way their respective countries are being run, that is their business and not ours.

The alleged unity which professional politicians talk about is not as important as democracy, which means control by our people of the policies of our own country. How much control do the people have over our State Department, and its policies, as they are being formulated and carried out today?

The administration and the State Department have given us their own opinions. But with the radio and printing press, and all the modern facilities which could be used by the common citizens generally if they were open and available to them to discuss public issues; how much have they sought for our opinions, the opinions of our citizens, and provided facilities for free discussion and free expression by the people themselves on the question of whether the American people want a third world war in the hope of thereby being able to control the affairs and regulate the politics of Europe and Asia?

Managing our own country, with its inflation and strikes, is a big enough job for us without attempting to manage the world.

Human nature is such that there are always wide differences of opinion on national policies if people are free to express themselves.

Of course if war comes we will have unity then—the unity harassed and endangered humanity endeavoring to save themselves, their country, and their possessions from destruction.

But otherwise the only way unity of opinion can be had on national issues, or rather apparent unity, is by un-American and undemocratic methods of making people afraid to speak their minds.

And much more important than any such alleged unity is the preservation of true democracy, real freedom of opinion and speech, and healthy prosperity, in our own country.

NORBERT O'LEARY.

Code for Investigators

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 7, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post for January 6, 1949.

CODE FOR INVESTIGATORS

It is especially gratifying to this newspaper to note that Majority Leader LUCAS in the Senate and Majority Leader MCCORMACK in the House are introducing a resolution to set up a code of fair procedure for congressional investigations. Just a year ago we launched a campaign to bring about the adoption of such a code after carefully studying the conduct of congressional investigations and the feasibility of laying down rules for the investigators. We have since supported every constructive step in that direction. We confess, therefore, an extraordinary interest in this reform, which appears to be coming to fruition even sooner than we had hoped.

The Lucas-McCormack resolution would substantially clarify the status of witnesses before congressional committees and in large measure protect them against false and malicious accusations. Every witness subpenaed could be accompanied by counsel and would have the right to file a sworn statement or make an oral statement in his own behalf at the end of his testimony. Persons believing their reputations to have been damaged by testimony before an investigating committee would have the right to testify personally, to file a sworn reply which would be made part of the record, to present witnesses in their behalf, and to cross-examine their accusers for not more than an hour. Accused persons would have to be given a chance to reply before the committee could issue a report reflecting upon them. And no reports of investigations could be published until approved by a majority vote of the full committee at a meeting called on proper notice.

Every one of these points was recommended to Congress in our series of editorials entitled "Turning on the Light." Some other suggestions in those editorials and in the more recent code of fair procedure sponsored by the New York City bar have not been included in the Lucas-McCormack resolution, but so far as it goes it is both sensible and constructive. Congress has been shamed by the manner in which its investigative powers have frequently been used. We suspect that a great majority of its Members will now see the necessity of throwing safeguards around this great power of compelling witnesses to testify for the enlightenment of Congress and the public. The power of turning on the light in a democracy is too vital to be entrusted to those who abuse it. We hope that congressional investigators will never feel free to substitute the smear for the careful unearthing and verification of facts.

Labor Policy

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, January 7, 1949

Mr. LEFEVRE. Mr. Speaker, under leave to extend my remarks, I include an editorial from the New York Herald Tribune. Many of us during the last campaign supported the Taft-Hartley Act and recalled for the benefit of our constituents the deplorable conditions in our country in January 1947 when the Eightieth Congress convened. We all have to admit that the Taft-Hartley law corrected that unhealthy situation in a large degree which resulted in fewer strikes and a great increase in production. We also stated during the last campaign that we realized the Taft-Hartley Act was not perfect and that the law would have to be amended in a world where conditions are ever changing to keep labor and capital in proper balance.

It is encouraging to learn through the following editorial that Mr. Philip Murray believes labor and management groups can reach substantial agreement through the framework of the President's message. I wonder whether that statement can really be depended upon. I think it is high time that our Chief Executive brings another very important segment of our country into the picture when he decides to have a conference on this vital issue, and that is the public. It has been stated that the Chief Executive plans to have a conference in Washington of top representatives of labor and management. We can recall a similar conference held 4 years ago called by President Roosevelt. This conference lasted for weeks and ended in a stalemate. Both labor and management took uncompromising positions and the conference ended in failure. If a stalemate resulted 4 years ago, what is to stop it from happening again? For this reason I hope the administration realizes how essential it is to have all three groups represented, labor, management, and the public.

Everyone wants labor legislation equitable and fair to all segments of our citizens. We must have industrial peace if we are to accomplish all that we hope for—so why not, Mr. President, call a conference which would receive the confidence of the entire country?

The editorial from today's New York Herald Tribune follows:

LABOR POLICY

That the President in his message should have advocated repeal of the Taft-Hartley Act was expected and inevitable; in view of his

campaign promises he could hardly have done less. There will be few, even among those who have considered the act a forward step, who will wish to take their stand four-square against his recommendation. The problem of adjusting the relations between labor and management is a delicate one, with only a brief legislative history, and with much still to be learned by trial and error. The Taft-Hartley Act is admittedly experimental, and in any circumstances would have been due for amendment. To insist that changes be incorporated in the present act, rather than that a new act be framed, would be to take a stand on a secondary point—and, in view of the recent elections, on a hopelessly unrealistic one.

What is important is the substance of a new labor law. In his message President Truman defined the problem constructively; and the offers of cooperation which have come from labor leaders give reason to hope that a valid solution can be adopted. The President stated the need for curbs on jurisdictional strikes, on certain forms of secondary boycotts, on the use of economic power in the interpretation of existing contracts, and above all on strikes in vital industries affecting the public welfare. To ask as much is to recognize very definitely that labor's powers must be adjusted in the modern community so as to make them consonant with the general interest; it is to reaffirm the principle, and indeed to reenact many of the details, of the present law. Philip Murray, president of the Congress of Industrial Organizations, has said that "both labor and management groups, meeting within the spirit and the framework of the President's message, can reach substantial agreement." If he really means that, and if his colleagues in the labor movement will back him up, a new and more hopeful chapter in labor legislation has opened.

The immediate question, of course, is whether the new law is to be achieved in one legislative step, or whether repeal of the Taft-Hartley Act is to reinstate the Wagner Act, with changes and amendments being worked out subsequently. It is easy to conceive the gratification and sense of triumph which labor would experience in outright repeal; nor is there need to question the good faith of those who promise that the Wagner Act will be swiftly modified. Yet there will be strong temptations to delay after the first step, and the danger of advancing through even a short period without some control over nationally disruptive strikes is great. Mr. Green objects to the immediate framing of a new act on the ground that there will be dickering and horse-trading in the Congress. Yet it is precisely by such a process, with the interest of all groups being represented, that laws are made in a democracy. The importance of the present problem, as well as the widespread interest which centers upon it, should enable Congress to formulate with reasonable speed a constructive and acceptable law.

Don't Blame the Doctors

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, January 7, 1949

Mr. HORAN. Mr. Speaker, the earnest effort of national leaders to provide adequate medical care for all Americans suffers at the hands of public opinion whenever the advocates of socialized medicine desert sound argument in favor of berating the medical profession for its legitimate opposition to the program.

There is much we can do to increase our health facilities, but we gain nothing by taking out our impatience on one of our most overworked professions. Accordingly, it is refreshing to find a newspaper editor who gives credit where due and searches for solutions to the problem in accord with established American principles. For that reason, I include in the RECORD the following article by Mr. Fred C. Koch, of Wenatchee, which will bear some thought.

I might add that my State of Washington has made an important move in the right direction this year by opening a new medical school as part of the State University of Seattle, to train doctors badly needed in the Pacific Northwest. Also, the medical profession of the State of Washington, through its county medical associations, now provides a practical form of health insurance to over 300,000 individuals. Certainly any health-insurance proposal should fully recognize the work of these groups.

The article follows:

[From the East Wenatchee (Wash.) Journal of December 16, 1948]

(By Fred C. Koch)

There's not much conflict in the open yet, but the undercurrents portend a real knockdown, drag-out fight when the socialized-medicine issue hits the floors of Congress. It'll be a fight that will make the oleo battle of the last Congress look like a skimmed-milk party.

The American Medical Association's plan to raise $3,500,000 to combat the nationalization of the medical profession is drawing harsh criticism—and fingers are being readied to point out the program as the lobby of lobbies.

Thought seeds are being allowed to fall among the gullible who immediately connect such a large war chest with big-stick tactics (and maybe even a little palm softening here and there).

The medics need to spend a percentage of such a war chest on a good public-relations man who should correct these embryonic misconceptions—if the war-chest plan is adopted.

If the medical profession wants to spend $25 per member to defend and protect its position in the society of American democracy, that's a cheap price. But it has been suggested this money should be used in support of local health causes, etc., instead.

The fact is this: The average doctor probably spends 10 times that much every year on public-health causes—and he probably writes off his books enough every year on the account of people unable to pay their bills to make that proposed $25 look like a Sunday-school donation.

In Wenatchee doctors wrote off probably 30 percent during the bad years. They took it on the chin as individuals.

If Uncle Sam had been the doctor, the taxpayer would have taken that 30 percent on the chin.

What most people don't know is that doctors as a rule do a great deal of charity work—and they would rather do it that way than to have a GP (Government Petrillo) back there in Washington looking down their collective throats.

To me, welfare of the medical profession as such is of no concern; the medics can, and no doubt will, look after themselves as free Americans.

But the principle is something else again. The principle of socialized medicine is just one more step—a tremendous step—away from American free enterprise, American initiative of profession and enterprise. It's just another step into foils of state socialism that sooner or later becomes nothing more nor less than fascism.

If the white knights want to do something worth while about public health and medical services, let them initiate a program for creation of more medical-school facilities. It's about as hard for a candidate to get into a medical school today as it is for a recruit to get into West Point.

If the "people" want to change something let them work on a change in that situation—but let's leave basic American principles alone, because they're the principles that made this the healthiest, happiest, and most prosperous nation in the world today.

United States Foreign Policy Is Frying in Greece

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 7, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, if the people of the United States want evidence of the failure of the Truman doctrine in Greece, they should read his last report to Congress on this subject. It is common knowledge in Washington that resistance to the present government in Athens is increasing every day, not by Communist guerrillas, as is charged, but by patriotic and loyal Greek people who distrust the Government. Obviously we are supporting the wrong crowd. It is time to examine this situation very thoroughly.

In this connection the Christian Century, December 22, 1948, contained the following pertinent editorial:

MR. TRUMAN CHANGES HIS MIND ABOUT GREECE

By this time the American public should be accustomed to extraordinarily sudden changes in President Truman's foreign policy. Yet even past experience had hardly prepared us for the remarkable about-face which the President performed when reporting to Congress on what happened in Greece during the 3 months that ended September 30. Early in October, when the campaign required that the Truman doctrine should be regarded as a notable achievement, the President told Congress that the first year's operation of that doctrine in Greece had been a conspicuous success. On December 6, with Madame Chiang Kai-shek camping on his doorstep asking for money and military advisers to defeat the Chinese Communists, Mr. Truman sent Congress another report on Greece which was a confession of almost complete failure. Despite $170,000,000 worth of American arms and the advice of an American military mission headed by a four-star general, a military stalemate exists and the number of Communist guerrillas has actually increased from 15,000 to 22,000. This much Mr. Truman now openly admits. He might also, had complete candor been his purpose, have told of the increase of civilian refugees from 100,000 at the time Truman doctrine aid was voted to almost 700,000 at present, of the precipitous drop in the value of the

drachma during the same period, and of the way in which funds originally earmarked for reconstruction purposes have had to be fed into the insatiable military maw. In his latest report Mr. Truman blames this sorry outcome on the Greek Army's lack of fighting spirit. Maybe so. But maybe also Ambassador J. Leighton Stuart was speaking for more than Asia when he told the Cincinnati meeting of the Federal Council that "no Asiatic government can hereafter hope to neutralize the Communist menace unless it is able to concern itself with the welfare of the common people as has never been done in the past."

Things To Be Thoughtful About in the Present World Situation

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address which I delivered December 8, 1948, at the Mission Inn, Riverside, Calif., under the auspices of the Institute of World Affairs of the University of Southern California, entitled "Things To Be Thoughtful About in the Present World Situation."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THINGS TO BE THOUGHTFUL ABOUT IN THE PRESENT WORLD SITUATION

If I remember my history aright, at the celebration held by the people of Philadelphia in 1787 in honor of the writing of the Constitution, two toasts were drunk—first, "to the United States of America," a fact which had been projected into the world; and second, "to freedom and liberty to all mankind," an idea which inevitably followed the reasoning, the philosophy, and the argumentative words which were uttered by those who took part in the discussions which brought our Constitution into existence. In a sense the toast to the United States of America represented a toast to something accomplished. The second, to freedom and liberty for all mankind, represented a toast to a theory. The first represented the practical, the necessary, that which had to be done if the fruits of the Revolutionary War were to be realized. The second represented faith, an idea as great and as broad as was ever uttered by a group of men believing in the ultimate purposefulness of man's life in the earth, an idealization of the justification of what had been done. This was to grow and become the American spirit. Throughout our history this purpose for America's existence has dominated the writings of our leaders and has reflected the heart of that America which promises the possibility of a democratic world and furnishes the fundamental belief in the wisdom of popular sovereignty. These two toasts do not actually reflect two systems of thought, but they are idealizations of the conflicting spirits which are in the world today—one represents that which is, the other that which is hoped for. Our words are words of hope and faith and trust. Our acts are sometimes acts which display that practicality which ultimately destroys faith, hope, and trust. We have it in all of us. "Trust in the Lord and pass the ammunition" is the type of blending of the practical with the ideal that America loves so well.

In a late magazine I was attracted by a picture of one of our great war leaders who pointed out the books he had been reading. The new ones that he listed will probably never be turned to for a second reading. But he turned to others for the fourth or fifth reading. Those he reread contain hopes and aspirations for a better world. The new ones mentioned are stories of what the writer had helped to accomplish. But in none is there the spirit of the toast to liberty and freedom for all mankind.

The age in which we live and this immediate year drawing to a close witnessed a non-Christian, who believed in Christianity more sincerely than most Christians, stricken down by the practicality of a mind and an action which thought that if we got rid of idealism the world would go further in its practical way. We are today, in our attempts to bring about a lasting peace, turning to the techniques which make peace impossible. We are talking again of balances of power, offensive and defensive alliances, the rebuilding of armaments on such a grand scale that every other nation will be frightened of us and thereby the peace will be kept. One of our secretaries testifying before us in advocating the European recovery program said that we must restore a balance of power in order to have peace in the world. When in the history of mankind was peace assured by a balance of power? A balance of power is ultimately impossible because the minute the balance ends, fear, distrust, and suspicion take hold of the souls of men.

We want, of course, to see unity in Europe. But unity cannot come to Europe as long as fear, distrust, and suspicion hold the hearts of men there. And any arrangement of nations such as a balance of power destroys unity. We should be thoughtful about the past. Study the lives of Mussolini, of Hitler, and advantage-taking philosophy of any self-seeker of a single-will and you find a person who is attempting a forced unity. Forced unity will always depend on oppression which invites disunity. If we build a united Europe as a result of the hatred of some other part of the world it will be impossible to ever drive fear and suspicion from any part of the world. Hatred, fear are elements that divide. It is trust that makes for unity.

It is all right for us to make fun of Calvin Coolidge who reflected so well the practical of a past generation when he said, "They hired the money, didn't they?" It is all right for us to make fun of the weakness of a Chamberlain who uttered, "Peace in our time." Both were practical men. When we smile at them let us at least know the reasons why they failed. We may though, while we smile, be making their mistakes if we act without knowing why. Each made a compromise which we all know now destroyed peace. The fact of the hiring of the money was the big thought in Coolidge's mind, not the purposes behind the lending. "Peace in our time" to Chamberlain seemed an end in itself, but how could there be peace with those who existed for the purpose of destroying all peace. There is no peace for the man who must sleep, eat, and work with loaded pistols in each hand.

Some old expressions are becoming current again. Some of us are justifying what we are doing in Europe on the basis of national self-interest. Can national self-interest ever be worth anything if we have got to be reconciled to everlastingly making alliances with the wrongdoer and the advantage-taker in the nations of the world? If we are going to justify ourselves on our movements for peace in the world on the basis solely of national self-interest in the good old Bismarckian sense, we must expect the results which Bismarck produced.

Let me show you how this works by giving you a practical illustration of what we have done and see whether you are proud of what we have done. I shall speak of the invention of the atomic bomb. Some of us were told of developing before Hitler could what was thought to be his unknown weapon. The rivals in our political life were satisfied to live a life of trust while the bomb was being perfected. But as soon as it was discovered when I said in my weak way that $2,000,000,000 of the people's money had been spent in the perfecting of the bomb and the discovery of a new energy and that the blessings which were to flow from the discovery of that new energy must remain in the hands of the people whose money brought it into existence, I was condemned. I was condemned by the practical minds who uttered national self-interest with the same fire of Bismarck and who since have tried to confine the growth and development of the new energy to wholly warlike purposes. Look at the struggle for the science bill and discover the conflicting spirits. Oh, we have faith in peace as long as we force the peace. Oh, we have faith in democracy as long as we control democracy. Oh, we have faith in freedom of thought and freedom of the press as long as we control the mind and the press. But we, the good, the wise, must control. But why? Not to make the good better or the wise wiser, but to see that no one else be wise like us or good like us. Thus, distrust begets distrust, as hate begets hate.

I want a strong America because America actually and really is the only hope left mankind in the world to have that liberty and freedom our fathers toasted. But I do not want an America strong only because of our ability to destroy. There is a strength that comes from justice. There is a power that comes from right. What makes America strong? It is the strength of our youth. It is the belief that democracy rests upon a trained citizenry. It is the knowledge that the four freedoms whether they be the Jeffersonian freedoms or the Rooseveltian freedoms are the bases of any real democracy. Strong America does not mean the curbing of the soul of America by those who would support the will of the people for the perpetuation of a national self-interest along the lines we have heard so much of late. An alliance with wrongdoing, injustice, the lending of our strength to perpetuate wrong will result only in evil. The world needs the political ethics of a Jefferson who said he knew but one code of morals for men and nations. Is it asking too much to insist that money given to feed the starving be used to feed the starving? Is it asking too much to insist that money given to restore a destroyed bridge be used to restore the bridge? Is it asking too much if we take dollars from honest taxation to restore a national economy that it be as honestly spent as it was honestly taken from the people's earnings? If we cannot teach some decent trade habits it is better not to restore trade. I am told I am asking too much. I am reminded that everyone knows that our American Government is the only one on earth which exists for the benefit of the people and not for the benefit of the Government and that to insist upon our standards is to expect the impossible. If impossible, why attempt it? "Let's restore Europe and Asia and leave reform to another day." That has been said. If we do not do some reforming we'll merely rebuild for more war. Build America on the basis of hate, on the theory of suspicion, on the foundation of distrust, and upon a nationalism built upon expediency which compromises every ideal of honesty upon an altar of dealing with and sup-

porting the dishonest and corrupt in governments out of self-interest and America very soon will reflect the ideals of the dishonest with whom we deal.

If we cannot bring about some reforms in thinking, in habits, and simple ways of doing things, all that we are spending and all that we are giving will be as naught, and European and Asiatic recovery will turn themselves into a series of operation ratholes. We cannot build the economy of Asia on "squeeze." The Chinese did, but see the results. We cannot rebuild the economy of Europe on the notions of preserving the advantage taker. Some say that the old Europe developed on the basis of advantage-taking, but what did they build?

Long before what we call the Marshall plan was announced by our great general during his afternoon at Harvard these things were said by others who, I think, were thinking straight. In 1922 I wrote that administrators should base their actions in government on virtue and the people functioning as thoughtful individuals whose natures are good should be the makers of the standards of political virtue. In 1944 I wrote: Bit by bit before the war ends many details in the peacemaking will have been worked out. In the interim period between war and peace when chaos in many countries might make peace impossible, it is for us in this country to take relief and rehabilitation out of the class of charity and give the nations of the world a chance to help themselves. To help other nations restore the world to stability is our task and it is a task which we must do. The liberated countries can help themselves if we attend to the real business of America, which is to build civilization everywhere. * * * In no union can responsibility be delegated to one party while others merely enjoy the advantages. When we made our peace with Germany in 1921 we demanded all the advantages of the peace treaty of 1919, but refused to assume any of its obligations. The peace left America internationally in a state of drift, and we were swept with the world current into conditions which made war inevitable. Peace is hard; like civilization, it must be built. If the coming peace is to last, it must be based on a generous resolution to share America's social, political, and economic security with the world. We know that security, even on a small scale, does not come cheaply. Still less will international security be easily won. I am not afraid to be an American, although I acknowledge the heavy obligations of our national position. Nor am I afraid to have all men enjoy the freedoms we enjoy here in America. The only peace worthy of our tradition will be one where men choose freedom, knowing the demands it imposes, but knowing, too, its infinite blessings.

These statements did not receive the praise of the European press. They are just the impractical mutterings of a man who believed in the fundamentals of American democracy and who accepted the words of our leaders as being the basis of our American thought. When we think of the fact that we have not yet been bold enough to administer our plan in accordance with clean-cut principles of what we call free enterprise, American honesty makes me wonder if we are being taken for another of those rides in world politics. Is it time for another Will Rogers to rise up and say, "America has never lost a war, but she has never won a peace"? Is it time for the cynical again to control our thinking? Or is it time for us to renew our faith in the basic principles that have made America what she is and to turn our backs upon every political technique used by the advantage-taker in the world and to say that the basis of all proper economic relations is trust, that the basis of all democratic action rests upon faith in one another, honest dealing, telling of the truth, and common consent; that American wealth will never be used in forcing an idea against the will of a people, but will only be used on a basis of mutuality and cooperative endeavor?

If we continue operating our export licenses on the basis of taking care of our national interest then other nations will operate their import licenses on the basis of taking care of their national interest and we will have a condition so much worse than that resulting from the high tariff which destroyed the trade of the world and then the peace in the last generation that there will be no comparison. Can we, who at least maintain that we believe in honest money and in a taxation system which at least attempts to equalize the burden, long remain free with a nation that believes in imposing taxation on the many for the protection of the few? Can we long support the use of depreciating a money in order to avoid taxation without inviting what the world calls communism as a way out from an unjust, advantage-taking governmental action?

We have the gold and the silver of the world now. We have an economy built upon debt. Are we going to preserve the savings of our children, the profits of our workers? Are we going to see to it that the $250,000,000,000 worth of war bonds retain their value, or are we going to do the easy thing—use depreciation, use inflation, use our gold or knowledge of a newly discovered energy in building up and making strong our people, or are we going to dissipate it and become expedient?

Some nations of the world vote even more universally than we do. Hitler's "Ja" elections showed more people voting than voted in our last election. Where are the civilizations, the cultures of the governments of strength in the earth today? Does not the British imperial strength at this very moment rest firmly upon the democracies of the Commonwealth nations rather than upon the old imperialism of the empire based upon the strength of the British Navy. Are we going to destroy ourselves by accepting the thesis of the victors or the neutrals or the vanquished nations of Europe. France and Britain have won two world wars. Look at them. Holland and Norway, Sweden and Spain have been neutrals in two world wars. Look at them. Russia was on the side of the victors of the First World War only to find herself crushed by her own revolution. Look at her. Japan became one of the Big Five of the world but learned the lesson of national self-interest to such an extent that we had to buy her off in the Shantung settlement. Look at her. The Philippines, with the strength of America behind her, has seen defeat, misery, but starts a new life of hope. Look at her. Look at the new Pacific based entirely upon friendship between the commonwealth nations and the honest promise of an American trusteeship, with a new world law which says that the people of dependent territories shall no longer be exploited, but shall be developed for the benefit of the people who live in those territories. Look at them. Here is a new Japan allowed to work out her salvation on the theory that war shall not be used as a medium of national policy. Look at her. Russia and China, one suffered from the stagnation of squeeze and exploitation of the nation within, the other cursed by the iniquities of a single will which destroys the freedom of thought and information and thus crushes the souls of workingmen. For what reason have we supported China and opposed Russia? Is it because of national self-interest or is it because we honestly believe that an unhampered democracy based upon a trained citizenry with guaranties of property ownership results in the best type of life? Or is it because if Italy and France and Greece and Turkey become communistic we ourselves may become engulfed? If the latter, how are we to survive?

Are we in favor of the Monroe Doctrine because we believe that the spread of autocracy to American continents would endanger our own democracy or are we in favor of our western defense and the building up of our friendship in the Americas merely as a means of national self-interest? In other words, are the people and all that people aspire for worth while? Or shall we build our strength upon guns, navies, alliances with those who have lost faith or who join up in order to preserve the advantages which they have?

America has always been at the crossroads. That is no new thing. Shall we have faith in the dreams of our founding fathers, in the notion that liberty is worth while and that a nation conceived in liberty shall not perish from the earth, or shall we live by national self-interest and allow ourselves, with the advantage-takers, the weak, and those who have tried to preserve themselves and their systems in the world by arms, by alliances and by advantage-taking restrictions upon trade, upon money, upon the very liberties of men? The decisions must rest with us. Were the dreams of our fathers worth while? Shall we fight two world wars, the first to save democracy and then to become engulfed in cynicism; the second to restore democracy and now to give ourselves over to the techniques of force, or shall we remain American? The easy way is to give ourselves over to the techniques of force. War is simple. It is easy. Hitler convinced his people that arms were better than butter. Mussolini convinced his people that if they would surrender all their liberties he would make the trains run on time. And he did. Stalin does not yet let the Soviet Constitution function. He believes in the single will. The American people have been invited to accept the philosophy of the single will.

The articulate among us, the powerful among us, the powerful of the press were never so united in the whole history of America as they were on the first day of November 1948. The people spoke as one. Did they speak with wisdom? Did they speak with hope and faith in America, or did they speak with fear? Did they show unity of fear, or did they show a unity of trust? No one can answer that question and it all remains to be seen.

But I have this to say to you; that as Bismarck failed; that as the Kaiser failed; as Hitler failed; and as Mussolini failed, we, too, will fail if we lose faith in ourselves, our liberty, and our freedom. Do you want the single will in America? You say "No," because at this moment you hate the thing that is called communism and Russia today, as she is practicing the techniques of the single will.

The peoples of Europe have lost their faith in themselves. They are divided. They are uncertain. They need leadership. They will follow a Hitler again as they did before if they are not freed from the despair they suffer. But if we offer the helping hand with the spirit of a Bismarck, we cannot help but develop the techniques he developed. What we must preserve is the America of a Franklin, a Jefferson, a Lincoln, and a Wilson, who more often than anything else realized and said that liberty and freedom are the important things. How to build liberty and freedom? Build it by building men, men who think, men who aspire, men who have the right to come and go, men who have the right to change their avocation in life, men

who have the right to have and to hold, men who have strength because they are free from fear and free from want, men who are not afraid of the soldier-education bill. Believe it or not, but within the last month while I attended an international conference after I had praised the soldier-education bill, because the new leadership of America was being trained to the tune of 1,400,000 soldier boys and girls reaping the benefits of that bill for the purpose of building leadership in America, I was astounded to be asked, What are you going to do with such a trained mass, and how are you going to find places for so many leaders? Ladies and gentlemen, I can tell you that few people in the world have grasped the meaning of what we call America.

Freedom House Award for 1948

EXTENSION OF REMARKS
OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1949

Mr. IVES. Mr. President, each year Freedom House, in New York City, gives an award to that outstanding American who in the judgment of Freedom House has done for that year the most for world peace and freedom. In 1948 that award very justifiably and very naturally was bestowed upon one of our own distinguished Members, the great senior Senator from Michigan [Mr. VANDENBERG]. In bestowing the award Freedom House conferred the following citation:

Above party and ambition he led a united American people in the service of a free world.

I know that every Member of the Senate fully concurs in that citation, and fully approves the bestowal of the award upon the Senator from Michigan.

At this time, in connection with these remarks I ask unanimous consent to have inserted in the Appendix of the RECORD, because I think it is more apt to be read there, the great address which the Senator from Michigan delivered upon the occasion to which I refer.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. ARTHUR H. VANDENBERG, OF MICHIGAN

I am indebted to Freedom House for the overgenerous consideration which inspires this award and this reception. My immediate reaction is a sense of responsibility to try to justify the addition of my name to those of the six distinguished Americans who have preceded me on your annual honor roll. This reaction is emphasized by the gracious presentation in your behalf by my cherished friend, Sumner Welles, who has personified the finest ideals of service in his own public career.

I feel bound to reiterate what I said to your award committee last July. I do not believe that any one citizen can possibly deserve this accolade. The heroic and unselfish dedication of our whole people to peace with justice and to human rights and fundamental freedoms is a universal epic which crowns the Nation with universal glory in which uncounted millions have a right to equal share.

I am intimately reminded of a parallel. When I was a quarter century younger than I am tonight, the enthusiasm of impetuous youth impelled me to undertake, historically, the identification of Alexander Hamilton, all things considered, as the greatest American. With a pontifical assurance which has mellowed with the years, I bravely wrote a book under that title to prove that point. But with no less appreciation of my youthful hero, I have lived to learn that there is no one "greatest American." I should say now that "the greatest American" is a composite type and not an individual. He is the average citizen, at the hearthstone of his home, who lives his unsung loyalties to God and country and to the honorable tasks which build the free life of all our people. As Lincoln said—and praise be to heaven that, as usual, he spoke the truth—"God must have loved them, because he made so many of them."

ACCLAIMS UNITED POLICY

The recital of this incident pretends no personal analogy in connection with tonight's award. Yet it points a moral to adorn my tale. In this award we confront a concept which depends for its validity upon the extent of its general acceptance and support. The important thing to celebrate tonight is the fact that in the last 3 years as the result of constructive collaboration we have produced to a remarkable extent a united, unpartisan voice for America at the water's edge in defense of those elemental ideals of justice and of liberty by which free men live, here and everywhere. Despite fragmentary and often pitiful discords, we have spoken as the United and not the disUnited States.

I frankly confess that in my lexicon this unity is the equivalent of many an armed division upon the land, many a flight of eagles in the sky, and many a fleet of ships upon the sea in terms of national security.

This is saying a great deal, because the Berlin air lift is one of the most impressive demonstrations of superb military efficiency in the whole history of the whole world.

This does not mean that we have silenced our traditional process of democratic debate—nor should it. It does not mean that we have surrendered to rubber-stamp dictation as is the totalitarian fate of communized countries whose people live by sufferance rather than by right. It does not mean that we all agree upon all the pattern we pursue.

SEES STEP TO PEACE

But it does mean that, regardless of partisan politics, through full and free discussion we strive for common ground where our minds substantially can meet upon solid, basic attitudes. Then these attitudes, through predominating unity, can give American authority the moral power best calculated to lead us and the world away from the tragedy of new aggression and the unutterably ugly consequence of war.

It has been my privilege to participate in this labor. But the thing I am trying to say is that all such labors are vain without the widest sharing of these concepts.

Therefore, it is only in this spirit that I could accept your personal award tonight. I acccept it as a symbol. It is a symbol of the work of many others. It is a symbol, for primary example, of the work of the Senate Foreign Relations Committee—and please mark this well—where seven Republicans and six Democrats, after long travail and often after drastic editing, voted unanimously (13 to 0) upon 49 treaties, agreements, bills, and resolutions, many of transcendent importance, in the Eightieth Congress.

We unanimously closed ranks 49 times. I do not disguise my pride in that unique record of service at a moment when America's opponents are waiting to divide and conquer us both at home and abroad. Every member of that committee is entitled to this award.

Nor is that all. This substantial unity has carried on into heavy, unpartisan majorities in the Congress itself. It has dominated the final court of American public opinion. So, I say tonight let our acknowledgments be universal. Let our prayers ask for a legitimate and justified continuation of this benediction no matter who is President of the United States. Nothing finally matters but our country.

Your citation speaks of "service to a free world." America has rendered—and continues to render—that service in prodigal degree. Its like is not to be found in history. We are doing it in a spirit which puts to shame the miserable slanders that selfish imperialism is our aim. Our chief foreign critics upon that score would do well to consult a mirror. That's where they will see imperialism on the march. The humanities, not conquest, are our goal. If stabilities and honorable peace shall fail, it will not be for want of our devoted trying.

We are not dodging the finger of responsibility which destiny points at this most powerful, free nation on the globe. Free souls and self-government are the precious stakes, here and everywhere. Dark horizons are the alternative. Ours in an obligation of leadership and example. The Statue of Liberty is miles high tonight in New York Harbor. We dare not foreshorten its spiritual altitude. We dare not dim its moral flame.

As long as 40 years ago the new pattern began to take its shape. Following the Spanish-American War, President Theodore Roosevelt then said of us:

"We have no choice, we the people of the United States, as to whether or not we shall play a great role in the world. That has been determined for us by fate, by the march of events. We have to play that part. All that we can decide is whether we shall play it well or ill."

If that was so in 1908, its truth—underscored through the intervening years—is even greater in 1948. I think we have made the great decision. We have decided, God willing, to "play it well."

EACH STEP CALLED RISK

The difficulty is that often we must "play by ear." There is no sure course. Each step is a calculated risk. No man can say with finality: "This is the way." Yet some axioms are obvious. One is that peace without justice is only an uneasy truce. Another is that the appeasement of aggressors only multiples the hazards from which we seek escape. Another is that we never voluntarily exchange the council chamber for the battlefield except as an unescapable last resort. Another is that we always scrupulously respect the rights of others with the same fair consideration which we demand for our own. Another is that we say what we mean and mean what we say.

The need for this candor and this resolute purpose is well put by one contemporary sentence in an article by Hamilton Fish Armstrong in the magazine Foreign Affairs.

"The danger that Soviet Russia will deliberately choose to make war on the west does not at the moment seem so strong as the danger that credulity and arrogance to which all dictatorships are prey will mislead her as to the limits of our tolerance and that in her ignorance she will commit an act so little different from aggresison that we shall inevitably adopt countermeasures with unpredictable results."

I vote for candor and resolution against credulity and arrogance. I believe I thus vote for peace—unless it has been blackballed in the Kremlin.

But the vital point I want to make to our own people in respect to this service to a free world is this. Let us never for an instant forget that in this service we indispensably serve our own American welfare and security and the free institutions which we hold dear. This is not a fuzzy excursion into dreamland. It is the bare bones of reality. It is a common cause. Indeed, it seems to me that it involves practical considerations where the so-called internationalist and the so-called nationalist can agree.

In all realism and humility let us never forget—with thankfulness to God and a just regard for others—that one of the reasons for our relative eminence today is the fact that not one bomb fell on the continental United States in two world wars. This does not discount the immensity of the magnificent fighting effort which we brought triumphantly to bear upon our own and the Allied victory. But it recognizes our advantage in having had those allies, including Russia. We could not expect a similiar immunity again. But simple, common sense tells us that our strength multiplies in proportion to other like-thinking, peace-loving peoples can persevere in their independence and their ideals. Our own strength thus multiplies for peace and our own peace thus multiplies its strength against a war which not even the victor can afford to win, and which sanity will prevent—if this sanity is reciprocal.

This is not the world of yesterday when the oceans were moats around our ramparts. Science has annihilated time and space and made of the earth an overnight community. Progress in the swift, grim business of mass destruction has been appalling. New shadows of subversion and aggression cross the paths of all free governments. Simple, common sense warns us that these new conditions demand the widest possible pursuit of international cooperation and collective security for peace for the sake of all independent governments, our own emphatically included. For example, world disarmament, with automatic disciplines against bad faith, can only be a partnership affair. So too with effective warnings to aggressors that their piracy is not going to be allowed to pay. Furthermore western civilization cannot safely be left to precarious survival on any one isolated island even though it be our own.

CANDOR NEEDED AT HOME

We shall keep our powder dry. We shall not lean upon illusions. But let us never forget that we powerfully serve ourselves when we help others to help themselves to stand upon their own free and independent feet.

I have spoken of the need for candor. This need equally exists at home. It also exists in dealing with our friends abroad.

At home, our people need continuously to know the truth. While diplomatic negotiations cannot always proceed in a goldfish bowl, diplomatic commitments are the business of the whole people of the United States. Open covenants are the only instruments we can tolerate. Suspicions to the contrary sap morale. Belated disclosures stay confidence. Anxiety and confusion stay unity. When possessed of adequate information, American public opinion can be trusted to come up with the right answers. Misinformed or uninformed, it can grievously blunder through no fault of its own. Iron curtains are dangerous anywhere.

Another thing. Our people need to confidently know that we use prudence in these matters as well as courage. There are limits to our resources. There are boundaries to our miracles. The fondest hope of our adversaries is that we shall defeat ourselves not only through disunity but through overextension and through collapse from our own exhaustion. That suicide would be the greatest possible "disservice to a free world."

Those who count upon this sinister expectation are going to be disappointed. We shall match our ideals to our abilities. I remind you that Congress wrote this specific mandate into the Marshall plan.

It wrote another important mandate—and again candor, this time with our friends abroad, is elementary wisdom. It said that our cooperation under the Marshall plan shall be continuously contingent upon self-help and mutual aid among the 16 participating nations in western Europe. That, too, means precisely what it says. Our overriding aim is not to contain Russia. Our purpose is not to Americanize Europe. Our objective is to return Europe to the Europeans—and take them off the dole. When this is done, our objective is to retire from a Europe which has restabilized itself.

If our purposes excite any contrary suspicion in Moscow, and if it is feared that our anxiety to reestablish German autonomy portends an ultimate resurgence of Axis aggression, let there be an immediate renewal of our proposal for an automatic Big Four power alliance of defense against any such resurgence for 50 years—a proposal which Moscow has thus far spurned.

This depends far more upon self-help and mutual cooperation than it can possibly depend on us. We speak of the need of unity over here. There is just as great a need of unity over there. It is difficult. The habits of the centuries resist. The clash of ideologies intrudes. But the goal is indispensable. We must not be too impatient. But we must be firm for their sakes as well as ours. They can never recover economic health or independent security in 16 airtight competitive compartments. It is not for us to dictate the formula. It is for them to find it in their own intelligent self-interest. They are making progress. Much has been courageously done. Brave plans are on the trestleboard. We cheer these planners and these pioneers. But I am sure it lies within the jurisdiction of a proven friend of the Marshall plan to urge them that they must get on with the realities of this vital job. A very critical moment for all of us approaches when the next American Congress audits the record to determine the telltale values which self-help and mutual aid have produced. This will be the acid test. Concrete results are required to tip the scales.

UN'S LIMITATIONS

Now, my fellow countrymen, the theme I am discussing—service to a free world—involves so many problems in this critical era of universal flux that I would wear out my welcome if I prolonged the inventory. I have only scratched the surface. But there is one, final consideration to which I must advert.

The United Nations was born with the prayers, the blessings, and the hopes of a war-weary world, including the overwhelming benediction of the people of the United States. We all recognized its limitations. No one thought it perfect, least of all those of us who struggled at San Francisco to make it as sound as possible in the light of previous commitment and in the presence of unfolding Soviet intransigence. It was not intended to make but to keep a peace that never has been made. But no sooner was it launched—and long before its essential implements were provided—it became the seething core of the cold calculated controversy through which the Soviets deliberately have made peace impossible.

It was asked to run before it had even learned to walk. The wonder is not that it has stumbled. The wonder is that it has kept its feet at all. The wonder is that it continues to be the central reliance of those peace-loving nations of the earth who prefer to talk things out rather than shoot them out. It continues to be the town meeting of the world where the conscience of mankind can speak those moral verdicts which some day will have a powerful impact on events. Despite its handicaps, its limitations, and its failures, I hesitate to think what would have happened in the last 2 years if its forum and its restraints, however feeble, had been unavailable. And that goes for this present critically dangerous hour, come what may. The greater the world's rifts the greater the world's need for an umpire.

CITES BERLIN ISSUES

I have just referred to the present dangerous hour, I am thinking obviously of Berlin. The Charter of the United Nations requires its members to seek amicable settlement of their disagreements. We have done so. France has done so. Britain has done so. With a patience which I hope has not been misunderstood, we have sought a fair working formula with the Soviets to end a Berlin blockade which violates our rights in Germany as an occupying power, which is a famine siege aimed at millions of defenseless Germans for whom we are responsible, and which is a threat to international peace and security.

Our negotiations have come to naught. What seemed to be initial progress with Stalin subsequently collapsed in a complete Soviet reversal in the Allied Council in Berlin. Further direct discussion became a transparent futility in the presence of this tricky, provocative, and insidious Soviet run-around.

We did not resort to force as might too easily have been the recourse in other days. We have resorted to organized reason and to the conscience of human kind in the United Nations forum. The Soviets cannot ignore this forum in such a situation unless they are prepared to present the world with conclusive confession that they are incapable of allegiance to the most fundamental of all peace pledges to which any nation can subscribe.

WE'LL STAY IN BERLIN

I believe it entirely possible that the Security Council can restore this problem to the basis of pacific negotiation. Of course there are some things we cannot negotiate. We are in Berlin by right. We shall not be driven out. We shall not negotiate under duress, but if there is any reciprocity answering our will for peace, there is every reason why the Security Council should be able to lift the blockade, establish realistic negotiations on related problems, and proceed to a conclusion in civilized fashion.

But now that we have gone to the United Nations, we must intelligently avoid any unilateral independent action on our own account lest we confuse our friendly associates, cramp the Security Council, and encourage our opponents to think our appeal to the United Nations is either timid or insincere. I must say we have just had a narrow escape upon this score at Washington.

The Soviet vetos inside the United Nations have disclosed the same world split which exists outside the United Nations. Peace with justice looks down a gun barrel in both instances. As a result there is wide discussion among our people regarding new procedures to make the United Nations more competent to deal with wrecking crews. It is significant that this discussion rarely proposes to abandon collective peace. It is significant that almost all proposals hunt for more effective power to deal with them.

This is neither the time nor the place to explore these alternatives. Suffice it to say for myself that I favor the trial of curative devices within the charter rather than the more ambitious—and I fear less practicable—plans which hold less hope for prompt results. Specifically, I favor the maximum trial of article 51 as a basis for developing the regional cohesion of nations with a common peace interest—always subordinate, of course, to the obligations of the parent

charter. I favor the thesis endorsed June 11 last, by the overwhelming vote of the United States Senate which recommended progressive development of regional and other collective arrangements for individual and collective self-defense in accordance with the purposes, principles, and provisions of the charter.

Mr. Chairman, I conclude as I began, I want America to live in a free world of freemen. I want it ever to be free itself. I believe in justice under the law for nations as well as people. I believe in a live-and-let-live world which recognizes the independent right of self-determination. I do not believe it can be gained by surrender to conquest or appeasement. I believe that collective action is necessary to a peace worth keeping. I believe this peace is possible. I believe our united American leadership, within its means, is indispensable to these achievements. I believe its exercise is inseparable from our own self-interest. I believe in a strong America on land and sea and in the air pending those happier days when peace through reason is a dependable concept. I believe in a strong America at those councils where this concept is relentlessly pursued by the moral and spiritual forces of humankind.

Ladies and gentlemen, again I thank you for your very kind consideration.

America's Domestic Problems

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, January 10, 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by my colleague the junior Senator from Maine [Mrs. SMITH] on Saturday night at the National Women's Press dinner in Washington, D. C. The address deals with the domestic problems of our country. I venture to ask its insertion in the RECORD since the Senate is now approaching the point where it must consider for the first time on this side, or as has been said, in the history of our country, the admission to this august body of a woman who comes here entirely under her own steam, and her analysis of our problems and her presentation of viewpoints regarding them, which I am sure will be extremely helpful as in some degree being the voice of the women of America, regarding the problems with which Congress must now deal.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In this first week of the Eighty-first Congress—in this first week of mine in the United States Senate—I have experienced the sharp impact of clashing political philosophies. During the 9 years that I served in the House, I was subjected to the many pressures of opposing political views—not of the Republican or Democratic variety but rather of the reactionary or radical tinge or the conservative or liberal tone.

I experienced this in my campaign for election as United States Senator. The reactionaries called me a Communist and a traitor to my party because I had shown political independence on such votes as the proposed budget cut. I was labeled as a tool of labor because I voted against the Smith-Connally Act and the Case bill. But almost in the same breath, I was called a tool of reactionary management because I voted for the Taft-Hartley Act. They said that I was a militarist when I voted in committee for universal military training. Yet when I said that Reserve legislation rated priority over universal military training, I was accused of being a pacifist.

And I am not unmindful that there have been those who have predicted that the 6-year Senatorial tenure will make my voting record more liberal according to the prophets' self-chosen standards of liberalism. And an equal number of political phophets have said that I would swing to the conservative side.

Because of the publicized so-called rebellion of the original 12 self-styled liberal Republican Senators, I realized that my votes in the Republican conference meeting Monday morning would be interpreted as the beginning of a swing to the liberal or conservative side. If I didn't go along with the 12 rebels then it would be said that I was taking orders from the very people who opposed my candidacy in Maine.

The vote on the chairmanship of the Senate Republican Policy Committee was heralded as separating the conservatives from the liberals. Although the vote was by secret ballot, I had no hesitancy to reveal that I had voted for Senator TAFT because I knew that he had sponsored certain liberal legislation in the past and would in the future and those opposing him did not offer any positive substitutes but only negative proposals.

I am glad to see that many editors and columnists share my belief that this was not a test vote of liberalism and observed that on liberal legislation Senator TAFT's voting record compares favorably with those of many of his opponents. One liberal columnist summarized the issue in his Tuesday column with the observation:

"Yet it was Senator TAFT, more than any other man, who gave the Senate in the Eightieth Congress a relatively liberal tinge as compared to the House. He strove manfully, and successfully so far as the Senate was concerned, for better housing, education, and health, only to see his work nullified by the House. His record, all in all, is quite as good as most of those now labelling themselves liberals. He even had the distinction, which few of the others could claim, of being called a Communist by the real estate lobby.

"Assuming, however, that the 'young Republican liberals' are right and it is time for a change, they should make sure that it is a change for the better."

These are quotes from a columnist who is considered a New Deal champion by several of the young Republican liberals. From reading his column and other editorial comment, I would like to suspect that they had taken their lead observations from my own previous press release on the matter.

But the point that I am attempting to make is that our democracy has become so much of a pressure-group government that it is a matter of all or nothing at all with the pressure groups. You can't be like Ivory soap with them, 99 44/100 percent pure. You must vote nothing less than 100 percent of the time the way they want you to vote, or they call you an anti—99 percent is not acceptable.

I'm afraid that I don't vote 100 percent of the time in favor of any pressure group. This is probably because I don't believe that any one side is 100 percent right all of the time or that any one side is 100 percent wrong all of the time. I didn't even vote 100 percent with the so-called conservative block in the conference Monday.

So that when I am asked, as I was on the Meet the Press radio forum a few weeks ago, as to what I am, liberal or conservative, I answer by saying that I like to think of myself as being a moderate. The question is "What is a moderate?" The best answer I have is one who does not go to either extreme, one who adopts and supports what he or she conceives to be the good of both sides—one who takes something from the liberal viewpoint and something from the conservative viewpoint.

I am pleased to see that since I used the word "moderate" on the Meet the Press program it is appearing in the press with increasing frequency. It seems to be replacing the term "middle of the road." I conceive a moderate to be one who is somewhat more liberal and somewhat less conservative than one in the past category of "middle of the road."

But a policy of moderation must avoid the weakness of pseudo-liberals who attempt to be all things to all men all of the time. It must not be mistaken for straddling that rightfully results in political suicide.

There is a growing friction that the Democratic Party is the party of labor and that the Republican Party is the party of big business. The fact is that both parties are essentially parties of the people. They have to be in order to receive 49 percent and 45 percent of the total vote. Just because the Democratic Party received 49 percent of the 1948 national vote, it does not mean that the American people are 49 percent labor. Nor does the 45 percent vote for the Republican Party mean that America is 45 percent big business.

Basically there is no difference between the rank and file of the Democrats and the rank and file of the Republicans in this country. Equally there is no difference between the consciences and morals of big labor and those of big business. Control of a political party by either big labor or big business is equally wrong and should be opposed by the people. The political parties belong to all the people, not just the more articulate pressure groups.

This does not mean that we cannot have honest differences in ideologies and philosophies. But too often ideological differences are made cloaks that hide selfishness, greed, and the desire to push other people around. We must recognize that there is a true liberalism that cannot be characterized as leftist just as much as there is an intelligent conservatism that cannot be classified as rightist.

In proposing the moderate view, I do not mean to suggest unabated compromise. Our country and our Republic were founded on compromise. America has grown to become the greatest power on earth because of our operation and administration of compromise. One way of describing American democracy is as a constant, living compromise. But again in the application of moderation, the creed of a moderate, we cannot go to extremes even in compromise. There can be no compromise between right and wrong. Nor can we accept a compromise between security and insecurity. We may live between security and insecurity as we have ever since the war but we cannot compromise our efforts toward security.

Your security, my security, the individual security of the citizen call for a positive approach by the Government. That is why I did not vote with the so-called liberals on the chairmanship of the Senate Republican Policy Committee. Their approach was a negative one. They had no positive substitute for that which they opposed.

The United States is a prosperous and productive Nation today because of individual initiative. Our risk capital system, which has encouraged maximum individual initiative, has given us the most powerful military potential in the world. Without this military potential we would not enjoy even the limited individual and national security that we have today.

We Americans have the best standard of living at the lowest cost; something that has been produced not by fascism, communism, or state capitalism, but rather by a system of risk capitalism, free labor, and free press, in which private initiative and free competition has been encouraged.

You and I know that some in public life are solely dominated and motivated by personal ambition just as there are men in business and in labor who would exploit the rank and file of the voters through propaganda of distortion. It is imperative that the truth about our economic affairs be exposed in order that public policies may be adopted that do not brush aside the wishes of any such number as the nearly 22,000,000 voters who voted on the losing side.

Beyond question the election strongly indicated that the mood of Americans, that is the 55 percent who made the effort to vote, is definitely proliberal. But this doesn't justify granting special privilege to particular groups any more than it means that Americans are in favor of public spending to the point of insolvency. It doesn't mean that Americans have lost faith in the American business system or that they believe anybody who is successful in business is necessarily a conservative or rightist.

Americans are essentially fair. They want economic soundness. But they believe that the leadership for that economic soundness can be found inside as well as outside government. They believe that what is good for Republicans is also good for Democrats, and vice versa. They do not believe that there are rules of thumb by which the Democrats can be lined up on one side and Republicans on the other with respect either to economic security proposals or social legislation.

The Republican Party has lost five consecutive Presidential elections because too many Republican leaders have clung steadfastly to the notion that it is not the business of the Federal Government to intervene in the economic affairs of the people. They have refused to recognize a simple principle of politics.

Nor is this a mere question of expediency for the little fellow has a right to economic security just as the big man wishes to protect his own interests when he requests legislation beneficial to his business.

But the Government doesn't owe anyone a living. There is no need for the Government to support the citizen. Such would mean surrender of the individual to the supremacy of state socialism. Instead the Government must encourage self-reliance, self-help, and self-control. The privilege of individual freedom carries with it the responsibility of individual restraint and independence of thought. But that independence of thought must always be mindful of the interdependence of us all. When we glory in our individual freedom, we must think of the other fellow and realize that the manner in which we exercise and enjoy that freedom affects all the rest of us.

We must be more cognizant of the fact that there are some things which cannot be done by individuals alone. The third party to every public issue, the public itself, has always demanded that certain areas of regulation and aid are the proper concern of government. Increasingly the Government assumes the role of referee—of protector of the public interest.

Where then is the line between public and private control areas to be drawn. The increasing complexity of our economic problems stems from our growing population. And the greater the complexity, the less the ability of individuals to solve the problems. The inevitable result is an increase in the duties of government. But this in itself emphasizes the necessity for our politics to be approached by both parties with the same unswerving interest in individual security.

Moderation can influence the future of both parties. It can become the public policy of the Nation as a whole for just as no one pressure group owns either party, no combination of pressure groups owns this Nation. Extremes in the form of special privileges granted by either party to any pressure group would not be permissible under a policy of moderation. This concept of moderation cannot be without vigor. It must be based upon fervent desire to conserve the life and energies of the people against waste and exploitation. It must require exposure of true facts about our financial and economic resources. It must mean prudence and a sense of responsibility in handling public funds.

It must mean that the economic system as a whole be permitted to operate so that as far as possible all may share equitably in its benefits—or the too forgotten corollary, that all may bear equitably its reverses.

When the people of America are given the truth and understand fully the advantages of a system of free enterprise—when businessmen who believe in monopolies or cartels see the light—when labor leaders who believe in closed shops and other forms of monopoly, including denial of the civil right to work, are converted to an intelligent moderation—then, and only then, will America have obtained the desired true liberalism that so many talk so glibly of and do so little about.

The handwriting on the political wall should be clear enough to both major parties. The Republican Party has lost five consecutive Presidential elections because, rightly or wrongly, it had the reputation of being the party of big business. The Democratic Party won this last time with the lowest winning edge in 36 years—the first minority President since 1913. This winning edge is too thinly cut to permit the Democratic Party to be identified as the labor party. The people have clearly shown that they don't want a big business Republican Party or a labor Democratic Party.

The people want moderation with each group having a fair share instead of unfair privileges for special groups. They want equality and not extremes. They want the traditional compromise of the greatest good for the greatest number—but without compromise of principle in right and wrong.

Yes, the people want moderation—they don't want the extreme right or the extreme left. A policy of moderation can achieve an overwhelming majority. The party that first identifies itself in the eyes of the public as the moderate party will achieve that overwhelming victory—because it will have acceded to the will of the people rather than to any special groups.

Reply by Hon. Elbert D. Thomas, of Utah, to New York Times Editorial of October 3, 1948

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1949

Mr. THOMAS of Utah. Mr. President, in the October 3, 1948, edition of the New York Times there appeared an editorial which started as follows:

The New York Times, which supported Mr. Roosevelt against Mr. Dewey in 1944, now supports Mr. Dewey against Mr. Truman.

Then followed the New York Times' full and frank statement. On October 6, 1948, I answered the New York Times editorial. Because of its general interest I ask unanimous consent that my reply be inserted in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OCTOBER 6, 1948.

To the EDITOR,
The New York Times,
New York, N. Y.

DEAR SIR: Your thoughtful and thought-provoking announcement last Sunday of support of Mr. Dewey against Mr. Truman is an exercise of the right of every newspaper to make known its conclusions about the Presidential campaign. To such an expression no reader is entitled to make any more extended comment than "I agree" or "I disagree."

The second paragraph of your editorial, however, gives the announcement a different status from that of mere expression of opinion. When you wrote that "A full and frank statement of the considerations which have led us to this choice is due our readers," you recognized publicly that the exercise of your right entailed a corresponding responsibility. Unfortunately the statement in three important respects is neither full nor entirely frank, in my opinion. In such circumstances it seems to me legitimate for your readers to point out these deficiencies, so that others may become aware of them, and so that you may clarify your position, if you care to do so. I want to assure you that I do not question the sincerity or earnest intention of your statement. My thought is that as opinions are subjective, so a personal explanation of their causes is likely to lack some objectivity.

Summarized, the three deficiencies in your statement are:

1. You give the impression, probably unintentionally but no less definitely because of this, that the actions and domestic policies of President Truman as an individual have played a large part in determining your support of Governor Dewey, when the specific facts cited by you, as well as the whole editorial position of the New York Times over the years, show that this is not the case.

2. Your description of Republican domestic policies as largely in agreement with basic New Deal or Roosevelt-Truman policies is inadequate and fundamentally inaccurate, even regarding the specific reforms you mention.

3. Your failure to mention the major issue of this campaign, which also was the major issue of all four of Franklin Roosevelt's campaigns, is remarkable. This issue is the charge that Republican policies are determined by a small group of individuals whose desires and actions conflict with the interests of the whole American people.

Regarding the first deficiency, the opening sentence of your statement says dramatically: "The New York Times, which supported Mr. Roosevelt against Mr. Dewey in 1944, now supports Mr. Dewey against Mr. Truman." This salvo, when coupled with a later estimate of President Truman in his domestic program as vacillating, contradictory, inept, slipshod, and disorganized, gives the distinct impression that your newspaper has reversed in 1948 a political policy of long standing because of Mr. Truman's alleged faults. And this is buttressed by the implication that in domestic policies the Republican Party has adopted all that is good in the New Deal.

Yet an examination of your statement shows that you supported Roosevelt in 1944 only because you believed that foreign policy was "the great overriding issue of the campaign." Your statement fails to mention

that you opposed Roosevelt in 1940, supporting Wendell Willkie instead. It also fails to mention that, though you supported Roosevelt in 1932 and 1936, your editorial comment on specific New Deal issues was very largely if not entirely adverse during the greater part of Roosevelt's incumbency. More than this, your statement points out in some detail that the alleged changes in Mr. Dewey's attitude toward foreign policy are the real reason for your support of him—that you believe that he is no longer "the Mr. Dewey of 8 years ago, who in 1940 denounced the interventionists and expressed his faith that the United States could find security in isolation," nor "the Mr. Dewey of 1944 * * *" who "had deliberately avoided discussion of foreign policy after 1942."

The impression, therefore, that your opposition to President Truman is a newly born result of his individual actions in the field of domestic policy is obviously false, and I am sure you did not intend to give such an impression. Your statement and your editorial record show conclusively that you would today oppose Roosevelt himself or any other Democratic candidate supporting the domestic policies of the New Deal, provided you had faith in the foreign policies of the Republican candidate.

The second deficiency in your statement is more startling and more important. Let me quote in full this paragraph: "Mr. Dewey is now running on a platform that takes for granted the survival and continuation of all the major reforms and innovations of the first Roosevelt administration. There is no good reason to question the sincerity of this position. Times have changed; the early hysteria has died away, and even the extreme right wing of the Republican Party knows that such Roosevelt measures as social security and the Fair Labor Standards Act, the SEC, and TVA are here to stay."

I think you will agree after consideration that the casual reader of this paragraph will hardly notice your careful restriction of major reforms and innovations to the period of 1933–1936, which was that of the first Roosevelt administration. Instead he is likely to think you refer to all major reforms and innovations of the past 16 years. And many a careful reader, noticing the restriction, will still be hard put to it to recall exactly which measures came within that period.

You yourself were apparently confused in this regard, for of the four measures you mention, the Fair Labor Standards Act was enacted in 1938, and the legislation creating one of the three major activities of the SEC was passed in 1939.

So, as in the case of the first deficiency in your statement, an erroneous impression is created. But the deficiency is greater than creating a false impression. Even granting your time restrictions as to measures taken for granted by Republicans, one needs only to examine your news columns for the past 2 years to find abundant evidence that every New Deal major measure has been under strong and fundamental attack by the Republican Party. For these 2 years I have sat in Senate committee meetings and on the Senate floor and have watched a violent, systematic, almost continuous effort to undermine or obliterate every trace of the progressive measures of the Democratic Party since 1933.

To revert to the four measures you mention, I have witnessed a successful assault on social security by which almost a million persons have been deprived of its benefits. I have seen the hamstringing of the Fair Labor Standards Act by the Republican refusal either to support bringing its minimum-wage provisions up to date or to permit the Congress to vote on the revised measure. I have watched the ingenious technicalities by which the onslaught on the power of the SEC to protect American investors has proceeded. I have observed with melancholy heart the manipulations of appropriation measures and the efforts to disrupt the morale and efficiency of administrators and employees which have marked the determined march to destroy the TVA.

The American people did not believe the "me-too" promises of Governor Landon in 1936, nor of Wendell Willkie in 1940, nor of Governor Dewey in 1944. Now, that even the promises are not being made by the Republican candidate and that the plain record of 2 years of performance by Republicans is open for all to see, should your readers be asked to believe the outworn fictional claim?

I have already called the third deficiency in your statement remarkable. This is your failure to mention the major issue of this campaign among the considerations which led you to your choice for the Presidency. It is your right to accept or to reject the charge and the thesis which make up this issue, and it is outside my province in this communication to urge either course upon you. But for you to ignore the issue completely—to act as if it did not exist—smacks of having made your decision in a vacuum or in a dream world. If the charge and the thesis are correct, this issue outweighs all others in importance, including that of foreign policy, for the liberty, prosperity, and even the existence of our Nation revolve about it.

The issue has two phases. The first is that the policies and actions of the Republican Party have been dominated for approximately 52 years, beginning with the Mark Hanna era in 1896 and continuing through what may be called the Grundy era of today, by a small group of individuals possessing so much power that the identity and personal beliefs of specific Presidential candidates and other Republican officials have been relatively unimportant. Even the most forthright, independent, and courageous of the Republican Presidents in this period, Theodore Roosevelt, found himself first shackled and made almost impotent as President, and later ousted in toto from party authority and leadership. Republican stalwarts like the elder Robert La Follette and George Norris, to whom our Nation owes an eternal debt of gratitude, found themselves doomed to disgrace and excommunication by those who dominated—and today dominate—the Republican Party. If this belief is true, then the personal views and lofty intentions of Mr. Dewey are of little practical consequence in the scheme of things. Besides, his nomination with the approval and support of the dominating group when more popular and progressive candidates were available, plus his refusal up to this time to reveal his specific program, make him suspect as a member in good standing of this group.

The second phase of this issue is that the plans and actions of the dominating group of the Republican Party are in direct conflict with the interests of the whole American people. As promoters of monopoly, dispensers of special privilege, grabbers of excessive profits, engineers of inflation and of depression, the members of this group necessarily oppose all moves to stem their power. There is nothing new in their being exposed, nor in holding their policies and actions in public view. From the stirring cry of more than half a century ago, "Shall mankind be crucified upon a cross of gold?" through the denunciatory descriptions, "malefactors of great wealth" by Theodore Roosevelt, "economic royalists" by Franklin Roosevelt, and "gluttons of privilege" by President Truman, this half century has echoed with the protests and the prayers of the defenders of the basic rights of the American people. And since 1933 Franklin Roosevelt and President Truman have continuously kept the issue before the Nation.

There is no need and this is not the place to elaborate on the issue. Mr. Truman is taking it to the people by day and by night. The fact that Mr. Dewey chooses to ignore it does not keep it from being an issue; it simply makes it an issue that Mr. Dewey prefers not to talk about, and the American people can express their own view in the privacy of their polling booths next month. My only point here is that Governor Dewey's silence in the matter is understandable, but that your own is not, for you are not running for office. You are trying, like the honest newspaper that you are, to tell your readers honestly what you think and why you think it, with nothing to hide.

Since I first ran for the Senate in 1932 I have been called almost everything disagreeable by political opponents. I think, though, that you will agree with those who know me that I am not a hysterial figure nor a sensation monger. It is in a spirit of sober, friendly interest that I appeal to you to carry out fully your sincere intention to make clear the reasons for your political choice.

Most sincerely yours,

ELBERT D. THOMAS,
United States Senator from Utah.

Political Stabilization in China: United States Interest In

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, January 10, 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD for the information of the Congress and the country certain articles dealing, in two instances, with our foreign and, in one instance, with our domestic affairs.

First I ask to have printed in the RECORD an address on the far eastern situation. It deals with political stabilization in China. The address was delivered by Stanley K. Hornbeck, at the meeting of the American Political Science Association in Chicago on December 28, 1948. Mr. Hornbeck was formerly in charge of foreign affairs in our State Department, and subsequently was the Ambassador to the Netherlands. He is a gentleman who speaks with great knowledge and authority from a background of 25 years of experience. I think everyone may well read his address dealing with the Chinese situation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POLITICAL STABILIZATION IN CHINA: UNITED STATES INTEREST IN

(By Stanley K. Hornbeck, at American Political Science Association meeting, Chicago, December 28, 1948)

The foreign policy of the United States was for more than a century rooted in attitudes and concepts which were by and large common to and among our people. Typically expressive of those attitudes and concepts were (and are) the pertinent parts of President Monroe's message of 1823 and the substantive portions of the Nine Power Treaty of Washington of 1922, relating to

principles and policies to be followed in matters concerning China.

The United States did not at all times and in all instances live up to all of its principles or every letter of our commitments, but in general it was guided by them, and on the whole it made a good record.

Even so, and partly in consequence of failure to live up to the full implications of our principles, we were drawn in 1917 into a World War and again in 1941 into another.

We are today being subjected to probably the greatest test of our capacities that has ever been imposed upon us.

We have become a party to, and we are a combatant in, a third world conflict: communism versus democracy, or the Kremlin versus free peoples: a global conflict which is being fought on many fronts in terms thus far of cold war but on some fronts in terms already of hot war.

Communism, under the Red flag and militant, is the challenger. All non-Communist nations and states are under attack. The conflict may be expected to continue until either the Kremlin desists from the policy and the practices of conquest to which it is committed or the United States, beaten on all fronts, including the home front, capitulates to communism and, along with all the other once-free states, becomes a satellite of Russia. In other words, you cannot compromise with militant communism activated from the Kremlin.

Today the dictator-headed oligarchy which governs Russia and controls her satellites is fully committed to the objectives of (a) destroying bourgeois regimes wherever such exist and (b) establishing a Communist regime or regimes (Moscow-manipulated) throughout the world. The Government and the people of the United States are committed to the objectives of (a) preserving the independence of the United States, (b) making the world safe for the way of life in which we believe, and (c) toward those ends, resisting and pushing back the tide of communism.

In pursuance of their course of aggression Russia's rulers are employing every method and means conceivably useful, including violence, toward achievement of their objectives. In pursuance of our objectives the Government of the United States has adopted a policy of strengthening our agencies of defense and giving moral and material assistance to other countries, toward general economic recovery, and a common resistance to the spread of communism.

In two countries, Greece and China, resistance to the spread of communism has reached the stage of "hot" war.

In the conflict between communism and democracy, and therefore between Russia and the United States, China would perhaps be of negligible importance if she were or could be fenced out, be a neutral quantity. But that she cannot be. China is important because of her location, her size, her resources (including the number and character of her people), her place in history, her influence in the politics of Asia, her actual part and her potential weight in world politics.

China will be an asset either to the United States, on the side of democracy, or to Russia, on the side of communism. As China goes, so in all probability will go all of eastern Asia. This view is expressed not alone in China but in Korea, in Japan, and even by an apparent majority of the many people in the United States, who seem to regard the Communist advance in China with complacency.

It is therefore highly desirable, as an American interest, that resistance in China to the spread of communism be continued, and that efforts toward stabilization of the situation in China continue to be efforts favorable to the cause of the democracies.

At Cairo in 1943 President Roosevelt made to Generalissimo Chiang Kai-shek certain important commitments. At Yalta in 1945 President Roosevelt made to Generalissimo Stalin concessions inconsistent with earlier American commitments and with his own Cairo pledges. Thereafter the American Government made itself the go-between toward causing the Chinese Government to assent to the concessions, unfavorable to China, made by President Roosevelt to Russia. American official action at Yalta affected the course of United States foreign policy in three imporant respects:

(1) A deviation from traditional principles;

(2) A disregard of existing commitments;

(3) A creation of a moral obligation as an underwriter of the agreement consequently concluded between China and Russia.

Briefly stated, decisions made at Yalta by three governments, the Russian, the British, and the American, weakened the position of China's National Government; and those decisions plus Russian action in the aftermath greatly increased the physical strength and the morale of China's Communists.

With the sequel, thus far, all here present are familiar, Russian armies occupied Manchuria; Russia has kept none of her pledges to China; Russia, for practical purposes, set the Chinese Communists up in business in Manchuria, gave them enormous quantities of arms, equipment, and supplies captured from the Japanese, and thus made possible the vigor with which the Communist armies have since then conducted campaigns toward overthrow of the Nationalist Government.

In December of 1945 the American Government proclaimed its commitment to a new policy regarding China. It announced that the United States would be inclined to give aid to China if and as China made progress toward unity and peace. In pursuance with that policy and toward trying to stabilize the situation in China, it sent General Marshall to urge compromise and coalition. The new policy was conceived and General Marshall's mission was conducted on a basis of false assumptions. The simple facts were: There could be, and there can be, no real progress by China toward unity and peace by any route other than that of victories either by the armies of the National Government or the armies of the Communists. Compromise and cooperation between mortal enemies, if achievable, are mere truces and do not lead toward unity, enduring peace, or stability.

It is not an end objective of the Chinese Communists to achieve admission to positions in and with the Nationalist Government. It is their objective to establish a Communist regime. They wish to oust Chiang Kai-shek, disrupt and destroy the Kuomintang, and themselves govern China. This was true in 1946. It has been true for 20 years. It is true now.

The American Government's announcement of its new policy weakened the position of the Chinese National Government. The operations of the Marshall mission further weakened the position of the National Government. The American Government's placing of an embargo on export of arms to China and its statements when the failure of the Marshall mission had become obvious still further weakened the position of the National Government. And all these developments were, conversely, good grist for the mills of the Chinese Communists.

In its formulation in 1947 of the Marshall plan, the executive branch of the American Government wished to exclude China. At that point the Congress intervened. It decided in February 1948 that an operation toward stabilizing situations abroad and stopping communism should include aid to China and should provide, for China, both economic aid and military aid. The amount appropriated for aid to China was, however, relatively small, 2 years of time had been lost, and deliveries thereunder have gone forward belatedly.

An objective study of the so-called aid which the United States has supplied to China since VJ-day—to which some observers have given an exaggerated evaluation of as much as $3,000,000,000—shows that much of what we have sent has in no way been warrantably chargeable as aid to the National Government or as contribution to the war chest of that government in its battle against Communists.

Weighing the aid we have given the National Government against the contributions which we have consciously or unconsciously made to the cause of the Communists in China, since 1945, it may well be asked: into which pan of the scales has the weight of our influence really been thrown. On balance have we really given the National Government, since the time of the Yalta agreement, and in and for its battle against the Communists, any aid at all?

It now looks as though, unless there goes further aid from the United States to the Nationalist Government, the Communists may soon be in control—at least as regards a substantially major part of China.

However, Chiang Kai-shek has not yet given up, nor has the National Government. More, they are far from being politically finished.

I do not know what the future may hold, nor do some people know who think they know. I am moved to recall a long line of prognosticators who in another situation thought they knew. Soon after the Japanese attack at the Marco Polo bridge, in 1937, the line began to form. From then, for eight long years, scarcely a day went by without someone, someone who was sure that he knew, telling me that within 3 or 4 months, 6 at the most, the Chinese Government would capitulate and the Japanese be masters of China. Well, Japan's armies took the Chinese Capital, Nanking, but the Chinese National Government did not capitulate and finally it was the Japanese who did that.

Conditions in China, both political and economic, are indeed chaotic, distressful and distressing beyond words. But no one man and no one government has made them what they are. No one government could have prevented their being substantially what they are. Innumerable factors, some indigenous, many entirely external, most of them connected with aggressions and resistance thereto, have brought upon China the misery and apprehensions which afflict her people today. And no one government, no matter who might be its head and no matter what the ability and probity of its personnel, would or will be able, until the world has been made safe for free peoples, to do very much toward improving the lot of the Chinese people and giving China stability.

A Communist victory in China, if achieved, will not do it—there or anywhere. It might contribute, in the long run, to the development in China of a stability such as prevails in Russia, a stability of totalitarianism, but not to a kind that would be agreeable to us and tend to make us secure.

If the Communists gain control in China, the natural sequel will be successes for Communism in areas to the south, to the west, and to the east of China; the influence of the democracies (Western Europe and North America) will be diminished, Russian influence will flourish, and the interests, investments and commitments of the United States in particular, in the Philippines, in Korea and in Japan will be endangered. At what point or exactly how these or other developments would lead to our being involved in war, one cannot know.

The question of adding to or discontinuing United States aid to China, i. e. aid to the National government, is not a question of aiding or not aiding a government the qualities and deserts of which are subjects of debate. It is a question of making or not making a further effort toward preventing a development which, if consummated, would tend to wipe out all the advantages that have accrued to us—and to the peoples of Asia—from a hundred years of our investment of democratic influence in the field of Far Eastern affairs.

There is no warrant for an assumption that a Communist regime in China could or would be friendly or helpful to the United States. Leaders in such a regime might at the outset express a desire and give indication of an intention to have amicable and reciprocally profitable relations with us; but communism is by nature intolerant of democracy, and the Chinese Communists are avowedly committed no less than is the Russian Government to the objective of overthrowing all capitalistic or bourgeois governments and making the victory of communism universal. Their leaders have declared that Chiang Kai-shek is their enemy No. 1 and the United States their enemy No. 2. They've copied the Russian pattern; they use the Russian methods; they follow the Moscow line. Once in control in China, they should be expected to conduct themselves, toward consolidation of their position, just as their counterparts or prototypes in other countries have done.

It is a great mistake to believe that the Russians are not supporting and will not support the Chinese Communists. Over the years, they have alternately given support and withheld support according to varying local circumstances and needs of varying international situations. Since VJ-day they have given substantial material support—in Manchuria—and, recently, official blessings. They do not need to be giving currently, for more is not currently needed. But should the Chinese Communists for any reason suffer severe reverses there is ample warrant for expecting Russian support again to be forthcoming. This is a universal belief in China. And China has had more experience with Russia and with communism than have we.

As a result of a hundred years of good neighborliness on the part of the United States there exists both on the part of the Chinese people and on that of the National Government a feeling of respect for the United States and of confidence in us. Even in moments of tension and of possible doubts, reciprocally, they regard us as a people upon whose will to be friendly and helpful they can rely. In international matters they have, except on rare occasions, followed our lead and given us their support.

These facts should not be overlooked in our accountings, estimates, and calculations.

If now, in this moment of crisis, we, persuading ourselves that the situation in China is beyond redemption, listening to those who tell us that the National Government is utterly bad and that the Chinese Communists are different, arguing that we must not intervene (whereas we already have intervened and are intervening not only in China but wherever our foreign-aid program is in operation), and that we cannot afford aid both in Europe and to China, abandon in regard to China the policies which we long have pursued; and if the National Government then goes under and the Chinese Communists take over, we shall stand to lose almost at once all that we have with over a century of effort gained throughout eastern Asia, including the relief which we gained at a great price from the threat to our security which was all along implicit in Japan's policy of expansion by force. Still more, we shall stand to see our losses become Russia's gain.

The authors and factors of the Marshall plan speak of the foreign-aid program as an investment conceived and operated on a basis of calculated risk. The pros and cons of aid to Europe without aid to China have been debated and will be debated. I shan't go over that ground here. One thing is certain, Europe cannot make a full economic recovery without access to the resources and trade of eastern Asia. And another, the more the gains of communism in Asia, the greater the likehood of the conflict with Russia reaching the phase of hot war and our investment in aid to Europe being lost to us and becoming an asset to the Russians. Defeat for our side on the Asiatic front will greatly increase the risk feature of our investment on the European front.

The National Government of China is today asking of the United States two things, moral support and material aid.

The cost to the United States of giving that Government moral support would be nil. We are already committed to a policy of intervention—wherever we are giving aid toward opposing communism. We would not by giving such support lose the good will of the Chinese Communists; we have never had that and we cannot ever have it. We might retain the good will of the Nationalists.

The cost to the United States of giving the National Government further material assistance might ultimately run to several billion dollars. Absolutely viewed, this would be a large expenditure. Relatively viewed, by comparison with the whole amount that we are going to have to spend if we intend to make our foreign-aid program effective, or with the expenditure which we are likely to have to make later if we do not make that program effective, it would be a small amount.

The real question with regard to our giving further aid to the National Government is, not can we afford to give it, but can we afford not to give it.

Yes, the hour is late. But the National Government still is fighting; and it is the only independent and indigenous government in all of Asia that is thus resisting the Communist advance. If we are making gains, as reported, in Europe, why jeopardize our investment there and chance losing all that we have in Asia, by an abandoning of a friendly government, to the fashioning of whose predicament we have contributed, while that government still lives and still is resisting a common enemy? Would that be discouraging to the Kremlin? Would it be encouraging to other free nations whom we exhort to stand with us in a common effort to produce conditions of security and stability?

Our recent deviations from the dictates of our traditional policies have been bad enough. If, having done in and to China as we have done, we now, recoiling from estimates of possible dollar costs and looking at the clock, do this, wash our hands of China, we will have gone from bad to worse. It will in the long run cost us dearly.

Only by making global and unlimited our policy of resistance to the spread of communism, and giving maximum of support to other peoples resisting it and most hard pressed, will we really contribute toward stabilizing any situation anywhere.

The condition precedent to progress toward stability in China, in Korea, in Japan, in all of Asia, in Europe, and even in America, is, that free people by common effort make it impossible for communism to advance or the will of the Kremlin to be imposed anywhere by use of armed force.

Structure of Peace

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, January 10, 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address which I delivered October 3, 1948, at the Brigham Young University, Provo, Utah, under the auspices of the Brigham Young University Women's Auxiliary Organization, entitled "Structure of Peace."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STRUCTURE OF PEACE

Over two decades ago I taught my first class to university women. It is good to be back before such a group again. It is good to be back in an atmosphere of purely academic speculation. In such an atmosphere one finds freedom of speech at its best. No one cares what I say or how I say it. If any of you are awake and still here at the end of my remarks that will be sufficient reward.

That idea is not wholly and completely mine. It comes from a statement made by the late Chief Justice Hughes, who, as president of the American Society of International Law, was one of my greatest personal inspirers. He came down from the Capitol—the Supreme Court Building was not then finished—to one of the business meetings of the society and as he left the Capitol he told Mr. Justice Holmes where he was going and Mr. Holmes said, "Go down, talk your head off freely. No one will pay any attention to what you say down there, but if you breathe up here the heavens may fall." This is Sunday. There isn't anyone who cares a hang what I say within 100 miles, so here goes.

The most significant bit of history in the making and in a sense the most terrifying to us is the three revolutions that are rampant in the earth. They are responsible for most of our fears and our uncertainties, but if we can become optimistic in the face of them we shall reflect a faith in the fundamental unfoldment of God's purposes for man here on earth which cannot be shattered by even the burst of an atomic bomb. These revolutions are, of course, the Russian, the Indian, and the Chinese. The rest of the world is hesitant and uncertain about the effects of these three revolutions.

Now what is the significance of the three great revolutions and why is it they produce to the thoughtful of the earth a misgiving, even an actual fear. The underlying unifying fact is that behind these revolutions is the breaking of the shackles of centuries which held men in an attitude stronger than an iron band.

Only 30 years ago the people of all Asia and nearly all of Russia in Europe were caught by a fatalistic assumption that so many of their fellowmen must starve each year and that nothing could be done about it. Then almost simultaneously Lenin, Sun Yat-sen, and Gandhi told their peoples that this was not necessary. Sun Yat-sen said if we can develop a transportation system in China starvation can be overcome, and he designed a complete change of Chinese industry based upon a nation-wide railroad distribution

system. Gandhi said if we will all work during our idle moments and produce more and in greater variety starvation will be overcome and he set the example by working at the spinning wheel even while he prayed. Lenin, harsher and more brutal, was to save his people by a revolutionary process which would crush skulls and kill, and he said, "No matter if three-quarters of mankind disappear; the important thing is that what is left should finally be incorporated in communism." He was going to save his people by the Communist revolution.

The point I would make is this. Before Gandhi, Sun Yat-sen, and Lenin three-quarters of the world was made up of small farmers who could produce only enough to feed 80 percent of their fellow men and who were resigned to the fact that 20 percent of them must starve to death each year. Then Gandhi, Sun Yat-sen, and Lenin broke the bonds of fatalism. Through work, planning, and distribution a new world was built; a world released from fatalism.

Through reading history, we have found that new ideas have been more shattering than earthquakes. Never were three ideas turned into unifying action among so many people in the world at the same time as what has occurred since Sun Yat-sen, Gandhi, and Lenin started their revolutions.

World-wide movements cannot be stopped by just being against them. You might just as well try to level the Rocky Mountains by being against them as to stop the onrush of these great revolutions merely by being against them. By this, please do not get the idea that I accept the thesis of Spengler's Decline of the West. I talked against that thesis years ago. Please do not think that I accept the thesis that the end of European civilization has come and that the onrush of Asia has hit, for I do not fear the yellow peril as Emperor Wilhelm did or as our modernists assume today. I do not even believe that the end of the 400 years of the white man spreading himself over the earth has come. And as for the break-up of Christian-Hebrew-Greek philosophy, based upon the worth of the individual and the ideal of democracy and the power of people to unite for their own good under democratic auspices in government, I do not see their end.

Foreboding as is the present, a brighter future is almost around the corner if man will but look and accept the inspiration of its promise. And what is this promise? It is this. Man today is more the master of the nature in which he lives than he ever was before. He is more capable of bringing about the suicide of the human race than he ever was before. But he is not going to do it. Man still knows little about himself. Up until the present, he has not given much thought to this. There is still not a satisfactory definition of man. Thought of individually, there have been men who seem to be almost gods. But a general mass is still a general mass. Judging from what it has done to itself mankind seems to be a great beast. While we still have not a definition of man there are many definitions that have been used throughout the ages that have implied much. Aristotle called him a political animal and Seneca thought of him as a social animal who lived by reason. Buddha thought of him as something not worth while and that the sooner the eternal element in man got rid of the body of man the better. Our own religionists have thought of him as a son of God and have dignified the greatest of all men as the Son of Man. But the mere description of us as children of God does not in reality tell much about us. We are still struggling with the question as to whether the individual is free or whether he is a victim of his environment.

Mankind goes on making the same mistakes he has always made and the judgment of man's success seems to turn on the question as to how many of his fellowmen he can or has destroyed. "Saul has killed his thousands, but David has killed his ten thousands." Just as the greatness of the state has always been its strength in time of war so the test of greatness of individual man has generally been the power he could exercise over his fellow men. In other words, the history of mankind's success has been the history of war and mastery. Now and again we have had a Washington who stands first in peace as well as in war. But the average man today does not know whether to be happy or sad that we know as much as we do of what we call atomic energy. As of today, it is a thing to fear rather than something to rejoice over. But even with that recital one need not be any more pessimistic than I have been.

Socially we do know how to make a better world if individual man had sense enough to make the right decision in regard to building a better world. We all know that we cannot have world-wide peace without some type of world-wide government. We know, too, that we cannot have world-wide government and still have complete and absolute sovereignty in each particular part of the world.

Today we feel certain that if the Russians would just reform and see things as we see them everything would be all right. And judging from what we are constantly saying and reading, all that is wrong with the Russians is one or two men—Stalin and Molotov. But it is time for us to stop and think and not live by headlines. The world had fears long before there were any Stalins, Trotskys, and Lenins. It is a long time since Cato first declared, "Carthago delenda est." And Carthage has been destroyed. But the destruction of Carthage did not bring peace to the world. And the blowing up of Russia with two or three thousand atomic bombs would not bring peace to the world. We can no more become free from fear through killing than could Cain ever free himself from the fear of guilt. The law of life which we learn from the story of Cain that the blood of his brother cried up from the earth seems to be a rule which applies quite as readily to nations as to individuals. Cain thought he was going to be free if he got rid of Abel. He did free himself of Abel but he took on the fear of all mankind.

In one of the executive sessions of the Foreign Relations Committee, when Mr. Hoffman was being considered for Director of the European Recovery Program, someone remarked that even America could not stand a defeat. I asked, Can she stand another victory, because victory after world-wide war brings its obligations and uncertainties quite as much as defeat brings its misery and frustration. England has won two world wars in a generation and so has France, and Holland has remained neutral throughout two and so has Denmark. Look at them.

In the last months of the war with Japan, when I was attempting to deliver my messages to the Japanese people in such a way as to bring about a constitutional surrender in order to avoid anarchy and the type of defeat we had imposed upon Germany, one great United States Admiral said that anarchy in Japan would not matter. We brought a surrender of 4,000,000 well-armed and well-equipped soldiers who had learned how to live on the land they were occupying and who had never shot a bullet at an enemy, because by appeals to their hearts and to their minds we convinced them they were defeated and that they could surrender with honor. Had we not done this our boys would still be chasing guerillas over much of China. Still men think that it is the nature of the American people, as judged from our conduct during and after two great world wars, that while we give our whole energy toward attempting to kill our enemies, when once they are defeated we do our best to feed them. I repeat, our economy cannot afford another world-wide victory. But when I say that I do not wish to even imply that we must not have another war because it is going to be so destructive. I have no sympathy for those pleas that another war will destroy civilization.

In the history of this world civilization and war have never been separate things. Our civilization is a civilization of war. Nor do I even think we will have peace because war can be made so destructive or so costly or so terrible. We are not going to go into a period of peace from fear of the atomic bomb. If we do, someone is going to use the bomb on us.

Now, I seem to have talked myself into admitting that this thing we call man and this thing we call civilization are both pretty damnable propositions. But both can be cured by a changed attitude and by making slightly different decisions. I merely look at the history of our own country to prove that. It wasn't because Franklin said, "We had better hang together, or we will hang separately," that developed our union and instituted the American substitute of law for war and ballots for bullets. We had law and we had ballots, but still we had a Civil War. And after the cost of the Civil War and the loss of a million lives, we just decided that the whole was greater than any of its parts. After the cost of two world wars and the loss of millions of lives we have still not decided anything. I am sure that that law of physics was understood before 1865, but it had not been applied to the fundamental law of American politics. We have yet to apply it to the fundamental law of world politics.

Now the world is greater than any of its parts. The sovereignty of the people of the world is greater than the sovereignty of the people of any nation. If the individual is a thing of dignity then the individual, wherever he is found, is a thing of dignity. That does not make yellow or black men white. But if in law within one sovereignty, we consider all men and women, whether black, white, or yellow, persons and give them certain rights as persons, why cannot it be done for all persons everywhere?

Am I dreaming dreams that have never been thought of? Of course I am not. Men today are struggling for a bill of rights for all mankind. We are talking now of a school of world law. Most of the nations of the world have accepted a treaty outlawing war. These same nations, though, did not provide an enforcement agency. Men have been hanged for committing war crimes against humanity so there is a new type of law in the world. Whether it lasts remains to be seen. That law was not just international law. The courts that imposed it were not merely international courts. The men who were hanged were not hanged by the order of one nation or a group of nations. The court seemed to represent the outraged justice of mankind. A sovereignty of the people of the whole world seemed to be speaking.

When God asked Cain, "Where is thy brother?" and Cain answered, "Am I my brother's keeper?" God did not say "yes" and he did not say "no." Neither answer would have been correct. But he did say, for what you have done you are not worthy of living with your fellowmen and therefore I will put a mark on you. Conscious of becoming a vagabond wherever he went, Cain protested that this was more than he could bear and told the Lord that those who sought him would kill him. But the Lord laid down the great rule that the crime against Abel was a crime against society and put a mark on Cain so that people would not slay him. Thus was established not only the great rule in law that society and not individuals should

punish the wrongdoer but also the great rule of life that vengeance belongs to no man and therefore to no nation. Leave punishments against society to society to rectify and society will rectify such punishments if it will but follow the rule laid down by Jefferson where he said he recognized but one law of morals for both men and nations. If nations would accept the theory of moral law for states, the world would be a changed world almost overnight. Yet the acceptance of such a rule is today such a little thing, comparatively speaking, after the struggle for it for so many years.

The killing of Abel was not just an offense against Abel, but was an offense against all men, and from that day until the present murder has been an offense against the state. Is there not such a thing as an offense against humanity? Cannot war be made an offense against all mankind? When once the consciousness of the sovereignty of all men is recognized the judgment can be enforced.

It doesn't hurt us in America to realize that we are subject to many jurisdictions. In a sense, therefore, all of us in America have a plurality of citizenship and our Constitution says that we do, for all men born in the United States or under its jurisdiction are citizens of the United States and of the State wherein they reside. No one denies the sovereignty of the State of Utah and the sovereignty of the United States. And no one yet has questioned the right of the outraged nations of the earth to pass judgment on the men who have been hung because they waged war against humanity. Can we not take the next step? We can and it has been proved by the growth of the Federal system in the United States. We can take all of the steps without marring in any way life within the States or within the Nation. Life within the United States is almost as complex as life throughout the civilized world when we analyze that life, person by person wherever we see those persons. Thus when man once becomes thoughtful of himself, his nature, and exactly what he is in this world, something he has not yet seriously done, and when he makes decisions as a result of the discoveries about himself, I have no fear for the future. As we discover what man is we will learn to appreciate his individuality, but we will find that that individuality only becomes important as it develops a social conscience. Man in society is an individual of dignity only when he is moved and controlled by a social conscience.

We have now delved into our physical surroundings. We can blow mankind to smithereens. We have photographed this earth we live on from 100 miles up in the sky and we discovered that when we get even that little distance away that not even a single thing man has built upon this earth is visible or recognizable. The camera that took the picture of our globe from 100 miles out was able to get within its focus 200,000 square miles. We used to say that the Chinese wall was the only thing on the earth made by man which is discernible from Mars, but that occurred before we took this 100-mile-up photograph. In other words, when you get 100 miles away from this earth all that man is and all that he has done is not discernible, but that which can be seen is not life in its fullest. We know that that which man has done is important in his life and in his history. Imperfect as we have pictured man, he who lives by faith and he who accepts the philosophy that there is a purpose behind nature and a reason for things knows that the day will come when judgments and decisions will be made so that justice in the big will be recognized, that the bond which we call religion which ties every man to the past and to the future will in time make all those men persons who can live in the past and project themselves into the future to such an extent that their decisions will be based not upon the reason of their own individual experience, nor based upon the reason of their own national experience, but based upon the reason of man's eternal experience. Man thus discovered will make decisions which will in reality prove him to be partners with God in working out the eternal purposes. That day will come. It may be closer than we think. Its spirit is here. Its actuality may not be apparent. The way to its realization is in the world. Whether man will tread that path or not remains to be seen.

New Year's Message by Rev. Frederick Brown Harris, D. D.

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1949

Mr. HILL. Mr. President, Dr. Frederick Brown Harris, the former eloquent and beloved Chaplain of the Senate, writes a column for the Washington Sunday Star. His column for Sunday, January 2, was particularly challenging, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GUIDANCE—AND YOUR LEVEL BEST

A NEW YEAR'S MESSAGE ON PERSONAL ENDEAVOR PLUS DIVINE HELP IN MEETING LIFE'S PROBLEMS

(By Rev. Frederick Brown Harris, D. D., Litt. D.)

With democracy throughout this seething planet being tested in a fiery furnace seven times hotter than ever before, this first week of 1949 will witness solemn scenes enacted under the white dome of the Nation's Capitol. Newly elected Members of the Senate and the House of Representatives will take the oath to defend and preserve the Constitution of the United States of America. In this desperate and dangerous day that instrument of government is the chief bulwark against ruthless tyranny masquerading in the garments of democracy.

Not only in Washington, but in the capitals of various States and in county seats across the Nation, executive, legislative, and judicial leaders will assume the duties of public office. Among those who, at the convening of the Senate, will stand with uplifted hand to take the oath of office, will be one already tried and tested as a worthy servant of his State and of the Republic. This Senator-elect replying to a letter of congratulation from a friend penned words more golden than gold. Here they are, on this first Sunday of January, offered as suggesting an all-inclusive New Year's resolution to readers of this column: "I am indeed humble when I realize the weight of responsibility that comes with the office to which I have been elected. It frightens me when I realize how difficult it is going to be to justify even a small part of the belief that these wonderful friends have in me. All I can say is that with guidance I shall do my level best to justify their faith."

Any sensitive and contrite heart, greeting the new, unknown year, solemnized by its challenge, will face its 365 new chances with the consciousness which Daniel Webster declared was the greatest thought which ever entered his mind—"Personal responsibility to Almighty God." In the white light of that revealing conception, with all other voices hushed save that of conscience, what more appropriate New Year's dedication could be conceived or coined than this, "I resolve to seek guidance and to do my level best, in every circumstance and relationship"?

Now, guidance is never forced upon any man. It diligently must be sought. As Dean Inge keenly observes, "If we spend 16 hours daily of our waking life in thinking about the affairs of the world and about 5 minutes in thinking about God, it is quite natural and inevitable that the world will appear more than 200 times more real than God." But if any man, lacking wisdom, ask of God, and if the kindly light illuminating the next step is followed patiently and humbly and selflessly, the sincere pilgrim shall be led on, o'er moor and fen and crag and torrent, to the desired haven. The formula always is guidance and one's level best.

Depending on guidance alone is never a substitute for our own utmost effort. Once when the famous evangelist Dwight L. Moody joined a circle of farmers seeking for guidance with regard to what they ought to do about their church debt, he was asked to offer prayer. Knowing that these well-to-do farmers had the ample wherewithal to easily answer their own prayers, Mr. Moody blurted out: "I wouldn't bother God about this mortgage, if I were you; I'd just pay it." And they did.

God takes over when we are at wit's end: That is, man's extremity is God's opportunity. That does not mean that wit's end is the only place we meet God or need Him. We need Him when, in crucial or humdrum tasks, we are just doing our best. When one of the most celebrated of surgeons had been invited to operate before a distinguished group of fellow surgeons he was asked afterward how he could possibly work with such a crowd around him. "Well," he said, "it is like this. There are just three people in the theater when I operate—the patient and myself." "Three," said his friend, "but that is only two. Who is the other?" And the surgeon answered, "God."

It is lamentable that a man should go on working year in and year out and never see the thing he toils at with the light of the Divine upon it. That light touching into glory even the commonest toil and the trivial round gives for every task a strength that does not bend or break, even in a crisis. It gives the kind of stamina that cannot be bowled over by calamity. It gives the kind of faith that falters not, though pressed by every foe. It gives the kind of purity of heart that sees God and the Godlike everywhere.

This is the only way to true greatness: The humble acceptance of responsibilities, not dodging them but grappling them; trusting God and doing our best, and then, at last, greeting the unseen with a cheer.

Guidance—and our level best, this is a combination which will solve every problem, surmount every obstacle, dissolve every doubt and, in all the give-and-take of life, bring beauty for ashes. Our best is the pavement over which God hastens to our help.

Guidance—and his level best, that was ever Robert Browning's secret. And so he sings:

"Be sure that God
Ne'er dooms to waste the strength he deigns impart.
I see my way as birds their trackless way.
I shall arrive—what time, what circuit first,
I ask not; * * *
In some time, His good time, I shall arrive:
He guides me and the bird. In His good time."

A Good Message

EXTENSION OF REMARKS
OF
HON. PHIL J. WELCH
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. WELCH of Missouri. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the St. Joseph (Mo.) News-Press of January 6, 1949:

A GOOD MESSAGE

A chastened opposition, a contrite press struck its collective breast when the miracle man did it November 2. To the consternation of the critics of the administration and in the face of contradictory predictions by poll and press, the man from Missouri confounded his opponents. He was elected to the White House in his own right, when just a few short weeks before, for instance, when he addressed a one-third filled auditorium in Omaha, nobody gave him a chance.

Yesterday Harry S. Truman gave his constitutionally required address to the Congress on the state of the Union.

Let the Nation, let the opposition, let the press, consider that address in the same spirit the press had when it saw the returns from the general election.

The message was a good one. It was what should have been expected. It was conservative, exceedingly so, in view of what one or more radio commentators have been telling us he would deliver. The best reaction to a Presidential message is in that mercurial and temperamental institution, the stock market. Yesterday, after that speech, the stock market went up. Business reaction was not unfavorable.

The President went strong; yes. What else did we expect after the promises he made in that campaign? For our part we admire him for sticking to his guns. His request for repeal of Taft-Hartley was softened by asking for safeguards against labor recklessness. His request for national health insurance did not include all the far-reaching socialized medicine eccentricities our medical friends have been crying against.

Corporation taxes always are abominable to corporations, but all taxes are offensive. No matter in what direction the President hit in talking on taxes he would be criticized. Let us wait and see what will happen.

The President's speech represents the wishes of a man who amazed the Nation by his election. True, he is not a majority President. Half a million more people voted against Mr. Truman than voted for him. But do not harp on that. That half million, for the most part, represented voters whose ideology—thinking now of the Ten Commandments and the Golden Rule—is faulty. In view of the Red-Wallace defection and the anti-civil-rights southern defection, Mr. Truman can be proud he is a minority President.

Therefore, for all practical purposes, let us heed and pay respect to the word of Harry S. Truman, the humble Missourian, as if he carried a mandate from a large majority over all his opponents.

There will be criticism that Mr. Truman asked for too much. Turn back history's pages. That snappy March day in 1905 when Theodore Roosevelt addressed the Congress on the state of the Union after his first election in his own right, the reactionaries cried to heaven. T. R. shook the ground from under the feet of the Aldriches and the Cannons and their plutocratic company. Other Presidential messages could be cited. Presidents ask for much, but they learn—especially when they are on their final term and need cajole no lunatic fringe—to veer to the right.

After those long and harrowing years of Franklin Roosevelt, we accept the Missourian's message with complacency. We cannot concur with everything he recommends to the Congress. But the speech lacked wild-eyed recklessness or slipshod inaccuracies that have at times marked his predecessors. On the whole we of Missouri are prouder of our President today than we have been at any time since he astounded a nation that thought he had been buried in oblivion.

Let us hope for what Mr. Truman asked—understanding and cooperation between the White House and the Congress. Neither can get its own way in everything, but this Nation has become great by compromise.

The state of the Union speech of President Truman January 5, 1949, will rank high above the husting speeches of Candidate Truman last summer and fall.

European Countries With Free Economic System Make Greatest Postwar Progress

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an article by Edgar Ansel Mowrer, a lifelong and sympathetic student of events in Europe. It reports the hard fact that European socialism is not working out according to the predictions of its advocates. At a time when there is so much sentiment in this country for moving toward more and more Government controls over our economic life, surely it is the part of wisdom to examine carefully what actually happens under such a system. Let us at least look before we leap.

EUROPEAN COUNTRIES WITH FREE ECONOMIC SYSTEM MAKE GREATEST POSTWAR PROGRESS

(By Edgar Ansel Mowrer)

WASHINGTON.—Over in Europe more and more people agree with American Ambassador Lewis Douglas: "Only rich countries can afford socialism and only poor countries adopt it."

Back here at home, in the midst of a universal luxury beside which most of Europe still looks shabby, I am amazed at the number of people who consider planned economy to represent economic progress. For the European experience seems to show just the opposite.

Now first of all a parenthesis: I am not opposed to planned economy—in principle. If it can demonstrate its ability to provide a richer spiritual and material life—more freedom and more goods—I shall embrace it wholeheartedly.

The fact is that in Europe, where during the last 3 years it has in varying degrees been tried, it has produced less freedom and fewer goods.

THE EXAMPLE OF ENGLAND

Last September I sat with a Dutch economist at a cafe in the city of Luxemburg. With a wide gesture he embraced the entire prosperous country. "It's wonderful," he said, "what economic freedom can do for a country."

"Tell me," I urged, "what countries in Europe now enjoy the highest standard of living in comparison to prewar?"

He smiled. "That's easy. Belgium, with Luxemburg, and Switzerland."

"And the lowest?" I asked.

"England."

"Largely owing to the loss of income from overseas investments, I suppose?"

He looked at me quizzically. "Nonsense. How you say in America—nuts! Britain's income from overseas investments was, in 1946, only £55,000,000 smaller than in 1938. Just over £1 a head. Would that account for the catastrophic fall in Britain's living standard?"

"But one-third of the English people are living better than they did before the war."

"Yes. And two-thirds are living worse."

THE CASE OF BELGIUM

"But the poorest are being taken care of. Isn't it true that in Belgium the apparently high standard is being maintained at the expense of the workers?'

"It is not true. You want the facts? I'll give you the facts. In 1938 wages and salaries in Belgium represented about 48 percent of the national income and profits 22 percent. In 1947 wages and salaries had risen to nearly 54 percent while profits had sunk to just over 10 percent. Does that look like exploitation of labor?"

"No," I admitted. "Does the same thing hold for Switzerland?"

"I haven't got the Swiss figures. I know that certain types of skilled labor in Switzerland receive salaries almost on an American level. I know that the relations between labor and capital have never been so good."

"And you attribute this Belgian and Swiss prosperity to reliance upon classical economics and capitalism?"

EXAMPLES OF FRANCE AND ITALY

"Principally, yes. And I'll tell you more: The Socialist and Catholic Parties in Belgium owe their continued popularity to the fact they insisted upon a sound financial and economic policy at the time of liberation. In France, where they went in for planning under the direct influence of the Communists, they have both dwindled to the place where De Gaulle may almost wipe them out at the next election. In Italy it would be the same except that the Italians have not produced a De Gaulle and therefore have to count upon the Catholics to save them from Moscow."

I thought hard. "You tell an unusual story. If you were an American, just what would you do to hasten European rehabilitation?"

"That's easy. I would induce the European governments to take off all exchange control and let every single currency find its own level. Then the peoples would know whether they are or are not living above their means. If so, they would correct their spending—unless, of course, you Americans intend to run a permanent orphan asylum for European allies."

"I doubt that," I answered. "But would such action not cut the European countries off from precisely those American products which they need in order to recover?"

The Dutch economist hesitated. "In my judgment, it would not. It would compel every European government to put its disordered house in order and cut subsidies, import controls, and the like. Once this were done, each country could get what it needed from you on private credit, if necessary guaranteed under the Marshall plan by your Government. Believe me, by 1952 Europe would be much further along than it is going to be if the present socialistic experiments continue."

"You seem to have very positive views about the failure of socialism," I countered.

He smiled, "I ought to. I used to be a Socialist myself."

Decision of Supreme Court on Closed Shops

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, January 10, 1949

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD a very illuminating editorial in the January 5, 1949, edition of the Milwaukee Journal. This editorial relates to the Supreme Court's recent decision upholding the right of States to ban closed shops if they choose.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATES CAN BAN CLOSED SHOPS

The United States Supreme Court has unanimously held that States may ban the closed shop, if they choose.

The decision, written by Justice Black, says that the "States have power to legislate against what are found to be injurious practices in their internal commercial and business affairs, so long as their laws do not run afoul some specific constitutional prohibition, or some valid Federal law."

At present the Taft-Hartley law specifically bans the closed shop and regulates terms of establishing a union shop—whatever State laws say, or don't say, about these matters. If the Taft-Hartley ban on closed shops should be repealed, however, then the State bans would still be effective, according to this decision.

The Supreme Court decision is important, also, because it provides a simple approach to the closed-shop problem in States that choose to ban them. The NLRB procedure is slow and cumbersome; the NLRB is overloaded. Enforcement of the closed-shop ban under the Taft-Hartley act is not simple.

Under State laws, however, it is merely necessary to bring a suit and the suit is tried. Relief, or enforcement, is relatively simple to obtain.

Twelve States now ban closed shops. Wisconsin does not. It is among the States that regulate conditions under which a union shop, and, by implication, a closed shop, may be established.

The Court holds that if a State can prevent discrimination against union labor, it can also prevent discrimination against nonunion labor; if it can protect the rights of members of unions, it can protect the rights of nonmembers. The decision says:

"There was a period in which labor union members who wanted to get and hold jobs were the victims of widespread employer discrimination practices. Contracts between employers and their employees were used by employers to accomplish this antiunion employment discrimination. Before hiring workers, employers required them to sign agreements stating that the workers were not and would not become labor union members. Such antiunion practices were so obnoxious to workers that they gave these required agreements the name of 'yellow dog contracts.' This hostility of workers also prompted passage of State and Federal laws to ban employer discrimination against union members and to outlaw yellow dog contracts."

The court drives its point home by saying that just as it has held that States may protect the rights of union members, "we now hold that legislative protection can be afforded nonunion workers."

In this instance, at least, the Supreme Court is enunciating a principle too long neglected—especially in the days of the Wagner Act and the old biased NLRB. That principle is that the Constitution and the laws should protect all the people, regardless of color, religion, political belief—or even membership or nonmembership in labor unions.

Our Free Press Asks No Subsidy

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, January 10, 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our Free Press Asks No Subsidy," published in the Worcester, Mass., Sunday Telegram of December 19, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR FREE PRESS ASKS NO SUBSIDY

Certain do-gooders, and those who know a lot about nothing, are preparing for their regular romp at the expense of the American press in attacking what they call a subsidy in the form of low second-class mail rates.

The occasion is Postmaster General Donaldson's recent announcement that he will ask Congress to increase all postal rates, except first class, to offset part of an estimated $550,000,000 deficit. Only first-class mail, Mr. Donaldson said, pays its way. He estimated the second-class deficit at $207,000,000, the third class at $129,000,000, and fourth class at $85,000,000.

To the general public, burdened by high governmental costs, these deficit figures may sound alarming. To understand these recurrent fusses about postal deficits and rates, and to see through the propaganda smoke that inevitably rises, it is, however, necessary to take a close look at Post Office Department operations. It is important to know the basis of the historical development of the postal routes as a public service, begun in Colonial times to build a nation. The public should recognize just what these various mail classifications are, and who really does benefit from the postal rates.

It may be said immediately that the idea that the American newspapers of this modern age benefit greatly from any so-called second-class rate subsidy is a myth. It is part and parcel with the do-gooders' legend that advertisers control the press. The early era when daily newspapers used the mails extensively has long since gone. Mail service is too slow for the daily today.

The Worcester Telegram, the Sunday Telegram, and the Evening Gazette, to be specific, do have the second-class mailing privilege. These newspapers, because they are published regularly by an accredited publisher to disseminate information to a list of subscribers, are delivered free in county areas where there is no letter-carrier service—in actuality, very few these days. Where there is a carrier service in the county, the charge is 1 cent a copy. Outside the county, rates are determined by zones and by the proportionate amounts of space the publisher gives to news and advertising in his publication.

Second-class postal rates represent only an infinitesimal fraction of the cost of delivering your Telegram and Gazette. These daily newspapers, like most modern ones, are rushed within minutes after they come from the press by a fleet of trucks carrying them to distributors. They are, for the most part, home delivered by carrier boys. Only a very few copies are sent by mail.

There is certainly no subsidy here for these newspapers. Indeed, it is immaterial to the publisher of the Telegram and Gazette whether second-class rates are raised or not. In fact, he believes they should be.

Cranston Williams, general manager of the American Newspaper Publishers' Association, says he has not talked with a single publisher, large or small, who wants any kind of a subsidy from the Post Office Department or anyone else. Subsidies are repulsive to American newspaper publishers, who know well enough the danger to a free press inherent in them. The venal French press of prewar years resulted largely from governmental subsidies.

Magazines weighing considerably more than newspapers and circulated largely by mail to points across the Nation are, of course, the main cause of whatever deficit may exist in second class. This was emphasized by the Postmaster General. He said the major part of any increase in rates should be borne by the magazines because it is far more costly to handle magazines than newspapers.

This whole issue is of major importance to the general public. The question far transcends the importance of the relatively few dollars any increase in second-class rates would cost newspaper publishers. It poses the interesting question whether the Post Office Department is to serve the public or not in the sense that other Government agencies do.

For just why should the Post Office Department make a profit anyway? Just why should the Post Office Department even meet expenses? There is an annual hullabaloo over the postal deficit, with rising demands from officials and some others that rates must be raised—a bill, incidentally, that would add millions to the cost of living. Yet no one expects the Coast and Geodetic Survey, the Forestry Service, the Interior Department or the Labor Department to pay their own way. These, and the myriad of other Washington agencies, furnish a public service paid for out of the general treasury—from taxes. Just why, then, should so much point be made of an occasional deficit in the Post Office?

Postal service was established historically in this country as a necessary public service. The early Colonists quickly saw the urgency of establishing communication if the wilderness was to be conquered, and a nation developed. Highways were pushed to open up the frontiers. In 1639 the General Court of Massachusetts first asked for the start of a formal postal service. In 1692 Thomas Neale was granted a patent by the Crown to establish post offices in the young Colonies. An era of pamphleteers. Independence. The Constitution. The encouragement of small newspapers to carry news to the people. The act of 1792—the first after adoption of the Constitution—recognized letters, packets, and newspapers as mail matter. Magazines and pamphlets were recognized in 1799, circulars and handbills in 1845, and books in 1851. It was the intent through the years to encourage newspaper and magazine distribution through the mails for the good of the country. The pound rate for second class was established in 1874; the present system of four classes was set up in 1879.

If it is granted that larger expenditures do justify some increase in postal rates—and this may be argued, as we have said—these newspapers support increases in the second- and third-class categories only. Third-class mail includes circulars, catalogs, manuscripts, drawings, photographs, merchandise, seeds, plants, and hotel keys.

These newspapers oppose any increase in the fourth-class rate. This is the familiar parcel post, which takes mailable matter exceeding 8 ounces and not exceeding 70 pounds in weight. This service is one of the cornerstones of our domestic economy, enabling merchants, manufacturers, and individuals to ship packages quickly and at reasonable rates. To increase these charges would place too great a burden on the public. On first-class mail, the sending of ordinary letters, there has been no suggestion of a rate increase.

Economy, as in all departments, should be the watchword of the postal service. Its free services contribute greatly to its over-all deficit. In 1946, for instance, it handled 2,000,000,000 pieces of mail free of charge for the Government. This included some 18,000,000 pieces of registered mail sent by Government agencies. The handling of savings bond sales, documentary stamps, civil-service exam notifications, and migratory-bird stamps contribute to the deficit. The Department's bookkeeping system is the one established in 1836, and there is no real basis for ascertaining costs against any particular class of mail, anyway.

We and other newspapers, recognize these problems. We object, however, to this annual habit of making the American press the goat for a propaganda barrage that the postal rates for mailing newspapers are responsible for a big deficit. The press wants no subsidy; actually, in fact, it hasn't any now.

How Can We Aid China?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a statement made over the Mutual Network News Round-up on December 28, 1948:

Question. What can we do immediately to aid China?

Mr. JUDD. The first essential is to determine our objectives. If it still is important from the standpoint of the security of the United States, as it was in 1941, that China remain independent and friendly to ourselves, and that the spread of Communist totalitarian rule in Asia be checked, then the first thing is to say so frankly. More than anything else the Chinese—exhausted from 11 years of war and invasion, discouraged because of betrayals by their allies—need moral support, the same sort of support we have given to the Italians, Turks, and others in Europe engaged in an exactly similar fight to prevent being taken over by Communists and made Soviet satellites.

Second, is military aid to enable the Chinese to hold the Yangtze River line—one of the best natural barriers in the world; or, if it should prove too late to hold that, then the strong natural line through the mountains dividing south China from central China.

Military aid means munitions, including light field equipment for guerrilla warfare and ammunition for the heavier American equipment supplied to China during the war against Japan. It also includes a top-flight American military spark plug in China with adequate staff to train and advise the Chinese armed forces at all levels—and in strategy, tactics, and operations. Without such American advisory personnel—not combat troops—the aid cannot be successful. China doesn't have a single military leader with adequate training or experience to handle more than one army in the field—or even on the maps. The military men we have had there since the last war have been forbidden by directive from Washington to participate in actual planning of operations—although they have been permitted to do so in other countries. Munitions without such advice and assistance in their use cannot succeed; just as advice without munitions cannot succeed.

Only if we are prepared to give such moral and military aid is there justification for economic and financial aid to help stabilize the Chinese currency and get their productive enterprise going again south of the Yangtze—factories, coal mines, power plants, and so on.

We who have lived in China and built institutions there in the past know that if well handled in terms of ancient Chinese customs and practices you can get as much for your dollar there as in any other foreign country. That fact has recently been demonstrated afresh. UNRRA was loaded with theorists who refused to make adequate use of persons experienced in China. It became a scandal. But even governments learn, and the sound practices adopted by our post-UNRRA relief mission in China and Paul Hoffman's men carrying out the relief aspects of the present program there, have already dispensed millions of dollars' worth of goods without criticism from either Chinese or American sources.

The key essential in China as elsewhere is the will to win. Until our administration decides it is imperative for our own interests to keep Asia free and on our side, nothing will avail. If it does so decide, before too much longer, then at least the southern half of China can be retrieved, and our position in Japan, the Philippines, and southeast Asia and Alaska—as well as in Europe and the Middle East—be greatly eased.

Almost all our top military and naval people agree with this view. The outcome depends on whether it will be accepted in time by the policy makers in our State Department.

Dave Shapiro

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. GRANT. Mr. Speaker, in these frenzied times, when so much emphasis is being properly placed on youthful delinquency, it is extremely gratifying to find an occasion when emphasis may properly be placed upon youthful integrity and fortitude.

I am prompted in this thought by newspaper accounts of the highly laudable action of young Dave Shapiro, of the George Washington University basketball team, in reporting to the authorities the vicious gamblers who sought to corrupt him for their greedy benefit. His course of action is most commendable and I am sure that the Members of this House, as lovers of clean sport, all hail him and proudly say, "Well done, Dave. You have the stuff of real manhood."

It was no easy thing this young man did. Those who tried to bribe him are evil persons to whom any crime might well mean less than selfish gain. Yet he unhesitatingly placed his own well-being in jeopardy in order to defend the good name of the game he loved—to protect the cause of clean sport everywhere.

I offer you Dave Shapiro as an examplar of clean, young American manhood—living testimony as to what American youth may and should be. I recommend him as a splendid example for youth, teen-agers and all-agers, to earnestly strive to emulate.

Zionist Memorandum on British Role in War Against Israel

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, January 10, 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement was issued, the developments over Hillel Silver, head of the Zionist Emergency Council, dealing with the Palestine situation. Even since the statement was issued the developments over the week end have pointed up in very telling fashion the implications of the analysis which Dr. Silver has made, and which I trust are going to result in our State Department and those responsible for our foreign policy giving the most urgent consideration to what seems to be a most threatening and menacing affair.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ZIONIST MEMORANDUM ON BRITISH ROLE IN WAR AGAINST ISRAEL CHARGES BRITISH GOVERNMENT IS ACTIVE ALLY OF ARAB STATES—BRITISH THREAT OF UNILATERAL ACTION IN SUPPORT OF EGYPT IS DESIGNED TO INDUCE UNITED STATES INTO JOINING SANCTIONS MOVE AGAINST ISRAEL, ZIONIST COUNCIL DECLARES

The American Zionist Emergency Council today released the text of a memorandum charging that "the most recent actions of Great Britain with regard to Israel have established conclusively that the British Government is in fact an active ally of the Arab states in their war against Israel." The council is headed by Dr. Abba Hillel Silver, chairman, and represents all Zionist organizations in the United States.

The memorandum, which is being submitted to Members of Congress and other leaders of American public opinion, assails the British Government's threat of unilateral action in support of Egyptian warfare with Israel and declares: "Great Britain obviously hopes to induce the United States into joining a renewed British attempt to bring about the imposition of sanctions against Israel by the Security Council, and in order to achieve this, Britain warns that if she fails to bring about the international action she desires she will be 'compelled' to act unilaterally in support of Egypt."

Noting that Israeli accusations concerning British troop movements to the port of Aqaba in Transjordan have now been confirmed by British sources, the memorandum states: "Having committed itself to the support of Egyptian warfare against Israel, it would seem that the British Government is

now concerned lest peace materialize between Transjordan and Israel. If the British-officered, British-supplied, and British-financed Transjordan Arab Legion should reenter the war at any time in the future, it will be generally understood that Great Britain alone will be responsible."

Declaring that "at this time the American Government and people would profit from a review of the British record in the war against Israel," the memorandum presents a six-point outline of that record, as follows:

"1. Immediately after the adoption of the partition resolution by the United Nations General Assembly on November 29, 1947, the British authorities in Palestine systematically and deliberately opened the frontiers of that country to armed Arab bands entering for the express purpose of engaging in a military struggle with the Jews in order to upset the decision of the United Nations by force of arms. At the same time, British representatives in Arab countries incited and encouraged the Arab States to greater efforts against the Jews and the United Nations resolution.

"2. Britain also actively participated in this aggression by supplying the Arab States with financial aid, by creating a stock pile of war supplies and equipment for the Arabs, by providing officers and administrative help to the invaders. Simultaneously, Britain made every effort to prevent the Jews from arming for their own defense.

"3. When—despite all of these British maneuvers—the Arab attacks did not succeed in overcoming Jewish resistance and the State of Israel was proclaimed on May 14, 1948, Great Britain encouraged the Arab governments to launch full-scale military invasions of Palestine with the declared aim of overrunning and subjugating Israel. The attack was led by the Transjordan Arab Legion, a military force completely equipped, financed, and officered by Great Britain.

"4. In the early days of the war, when the invaders were on the move, Great Britain did nothing to bring hostilities to a halt but, on the contrary, maneuvered ceaselessly in the Security Council to keep the Arab States from being punished as aggressors. At that time Great Britain saw no violation of the United Nations Charter, although the action of the Arab States in invading Palestine was explicitly denounced as international aggression by United States Delegate Warren Austin (May 22, 1948). Then the British worked indefatigably to induce the Security Council to refrain from taking the action which was clearly indicated.

"5. However, when the tide turned and the Israeli Army turned back the aggressors, there were immediate British moves for truces, Israeli troop withdrawals, and, finally, the bitterest irony, sanctions against Israel for successfully defending its own territory.

"6. Now that Israel has inflicted a series of decisive defeats on the Arab armies and has, in the course of one military engagement, attacked legitimate military objectives on Egyptian soil, Great Britain threatens unilateral military action against the Jewish state."

Pointing out that the United Nations truce is being used by Egypt as a mere device to continue in occupation of territory outside the national boundaries of Egypt, the memorandum states: "In the circumstances, the Israeli Government is naturally concerned with the need to eliminate the aggression within its territory and the threat to its existence. Any military action undertaken by Israeli authorities and designed to expel the Egyptian invaders from its national territory and to eliminate this threat is a lawful and necessary exercise of sovereignty and is fully consonant with the fundamental right of self-defense accorded under international law to all sovereign states and referred to in article 51 of the Charter of the United Nations.

"As long as the necessity for such self-defense has not passed, it would be unjust and unfair to interfere with the conduct of military operations by one party only, permitting the Egyptian forces to occupy parts of Palestine but prohibiting Israel from taking action against the bases of the enemy's attack. If this attitude were sanctioned, it would amount to nothing less than assurance to the aggressor that he may indefinitely continue his attack in the knowledge that he will never suffer a counterattack on his home grounds.

"We cannot believe that the Government of the United States or the American people would for one moment sanction so biased and unfair an approach.

"It is generally understood today, despite the distortions and misrepresentations of British propagandists, that Israel has no designs on the territory of any of its neighbors and retains but one objective in its current defense of its political and territorial integrity—peace. The prolongation of the conflict and the resulting strain on the young state's economy has created an unendurable situation for Israel and its people—a situation which cannot be further continued if Israel is to maintain itself economically. It has no alternative but to compel Egypt to negotiate peace—and this all-important fact must be considered in connection with Israeli military operations in the Negev.

"Finally, it is respectfully suggested that the Government of the United States should refuse to lend itself, either directly or indirectly, either in its diplomatic relations with the parties to the Palestine controversy or as a member of the General Assembly, the Security Council, and the Palestine Conciliation Commission of the United Nations, to any attempt to restrict the freedom of Israel to eject the Egyptian invaders. Instead, it is respectfully suggested that the Government of the United States, both in its direct relations with the parties to the controversy and as a member of the United Nations, should pursue the aim of achieving an armistice and peace between Egypt and Israel on the basis of mutual respect of the respective territories of the two states."

Inaugural Housing Committee

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to the following information which I have received from the Inaugural Housing Committee.

It is good to know that people from all parts of the country are planning to come to the inauguration of President Truman on January 20. Although most of the Washington hotel rooms are reserved by now, persons may contact the Inaugural Housing Bureau, 509 Fourteenth Street NW., in the Nation's Capital, for advance reservations in private homes. Those working on the Inaugural Housing Committee are to be commended in the thorough job they are doing.

The Inaugural Housing Bureau has been busy for the past few weeks prevailing upon private householders in the Washington area to rent their rooms to out-of-town visitors. Rooms are reasonable in price, and it is important to write for reservations in advance.

Many of the events of the inauguration, as well as the many interesting sights of the Nation's Capital, can be seen either free or for a nominal sum. There are still some grandstand seats for sale for the parade, but this, too, can be seen free from the vantage point of any street along the route.

The Inaugural Committee considers the inauguration an event for all Americans, just as the election was an election for all the people in the country.

Postmaster General's Case Shows Federal Pay Injustice

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. MILLER of California. Mr. Speaker, I am extending my remarks by including an article of Jerry Kluttz that appeared in the Washington Post under date of January 9, 1949.

I commend its reading to my colleagues in the Congress.

The necessity of retaining competent executives and administrators in the Government service is axiomatic. It is just as important that we also make Government service attractive enough to retain the potential good executives and administrators who now are serving their apprenticeships in less publicized positions in Government.

POSTMASTER GENERAL'S CASE SHOWS FEDERAL PAY INJUSTICE

(By Jerry Kluttz)

Congress has permitted an accident of circumstance to do to the Federal service something it would never attempt by legislation.

You couldn't get a single Member of Congress to take seriously a bill that would limit the holding of high Government office to:

1. Men who have independent private wealth and incomes;

2. Mediocre people for whom even comparatively low Federal executive salaries are high in comparison with what they could make in private business;

3. Individuals who are willing to jump in and out of Government at personal financial sacrifice, and finally,

4. To deny executive jobs to able career people coming up through civil-service ranks because they do not have the necessary private income to afford the jobs.

Yet, a combination of inflation, high taxes, and an executive salary structure that hasn't been changed in years has brought about a situation in which this is about true.

This is a prize example of what I have in mind.

Not long ago I went in to see Jesse M. Donaldson, the Postmaster General, who is unquestionably the outstanding career man in Government. The "General" happened to be in a retrospective mood about his beloved postal service and his amazing career. But he chilled me when he said:

"I'm terribly sorry to say it, but if I had my life to live over again I wouldn't enter the postal service. The rewards, the com-

pensations, are too meager." Then he slowly added:

"I love my job, and it is a great personal satisfaction to me to hold it, but, frankly, I can barely afford to be the Postmaster General. This position requires money. I have been in the Federal service all of my working life, and I haven't had the opportunity to accumulate it."

Here's a man whose career has followed the best American traditions. He entered the postal service as a $50 a month mail messenger more than 40 years ago. He has literally worked his way up the ladder through sheer ability and merit to take over a Cabinet post that had been reserved exclusively in recent years for the chairman of the political party in power.

Donaldson's down-to-earth views on his remarkable career would be akin to a degree if something similar were said by Charles Wilson of General Electric, Louis B. Mayer of M-G-M, and Winthrop Aldrich of Chase National Bank.

But it would be a much smaller degree, as the postal service is so much larger than any private business and the responsibility on the Postmaster General is so much greater. The Post Office Department is the largest single and the most extensive business in the world, which took in $1,700,000,000 last year.

It's also the largest single employer, savings bank, real-estate owner and renter, etc.

Executives of private business a fraction the size of the postal service are paid many times more than Donaldson's $15,000 a year. And that isn't a net figure for the Postmaster General. His associates in the Department estimate he must spend around $2,500 a year out of his salary on legitimate expenses of his office, such as travel, etc.

Business long ago learned it was good business to pay its executives good salaries. The biggest business of them all—the Government—has yet to learn the lesson.

It is no exaggeration to say that Donaldson daily must make decisions involving millions of the public's dollars, but when it comes to his personal finances he must concern himself with dollars and cents. The Cabinet member is frank to say that he must use care to stretch his salary check to cover the needs of his family and to do the many things his official position requires.

Taken by itself, Donaldson's personal affairs are relatively unimportant. The issues at stake, however, are of vital concern to those of us who want an effective and efficient Government—a Government operated by the best qualified people.

The President himself is the authority for the thought-provoking statements that the inadequate executive salary scale has definitely impaired the Federal service, and that it now constitutes a serious threat to the efficiency of government. He made the statements in a letter to congressional leaders several days ago appealing for prompt approval for the bill that would raise executive salaries.

As the President also explained in his message, it is most difficult for him to attract and to hold the best qualified people. But this dangerous condition will multiply as time goes on unless Congress acts to correct it. Here's why:

The big group of able career civil servants, of which Donaldson is the leader, are sticking to their jobs out of intense and stubborn loyalty to their country and their President.

But the potential Donaldsons of 5 and 10 years hence who have been inspired by the recognition of career people to top-rank jobs are becoming discouraged and are dropping out of the Federal service. They wonder if it's worth the effort unless some measure of financial security goes with it.

Religious Persecution in Hungary

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1949

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the RECORD the text of a statement which I have sent to Milwaukeeans of Hungarian extraction joining my protest with the protests of many other men of good will against the terrible religious persecution in Hungary. I ask that following my statement there be printed the telegram which I have received from two of the leading clergymen of Hungarian extraction of my State.

There being no objection, the statement and telegram were ordered to be printed in the RECORD, as follows:

PROTEST OVER PERSECUTION OF HUNGARIAN CHURCHMEN

(Statement by Hon. ALEXANDER WILEY, of Wisconsin)

I want to add my fervent expression of protest to the sincere protests which have already come from men of good will throughout the Nation whose conscience has been outraged by the persecution of Hungarian church leaders by the Red Government in that unhappy Communist-controlled land. The arrest of Josef Cardinal Mindszenty is one more sinful indication of the ruthless determination of the Soviet Government and of its satellite puppets in trying to exterminate the spiritual leadership of the Catholic Church and indeed, of religion everywhere throughout the world.

The Soviet Government may believe that its long record of diabolic intimidation and persecution of religion has become so commonplace in the eyes of the world that we have almost become complacent and indifferent in noting these repeated Red outrages. Such a Red belief is, however, entirely wrong, because the American people and all decent people throughout the earth feel more deeply than ever before a righteous and wrathful indignation over the shocking persecution by the Red authorities.

Josef Cardinal Mindszenty, who was arrested by the Nazis—by the Fascists of the Right—has now been imprisoned by the Communists—the Fascists of the Left. This valiant churchman will not, however, surrender to the anti-Christ principalities of evil and will not abandon his principles any more than his devoted associates and followers will abandon their adherence to God and to the concepts of their spiritual faith.

I believe that the State Department should continue to make the most vigorous representations to the Red authorities to let them know in no uncertain terms the anger and the disgust of the American people at this newest of the Red outrages against man's conscience. The American Government and the American people have always spoken frankly and freely in righteous protest against persecution of religion or of race wherever it has occurred in this so-called civilized globe. We must continue to do so and must use every means of pressure at our command to fight the godlessness manifested by the arrest of the primate of Hungary.

Americans of Hungarian descent with their rich background of love of freedom and pride in the heritage of their forefathers, are joined by all Americans of all types of backgrounds in proclaiming to the Soviet fanatics this: We will do all that is within our power in protest against the persecution of religious leaders in the land of Kossuth and elsewhere.

I understand that the Vatican radio has forthrightly rejected a Red offer to negotiate a so-called settlement of church-state differences in Hungary. It is obvious that this rejection by the Holy See is sound from the standpoint of all the peoples on earth who prize religious freedom. There can be no compromise with evil, no phony agreement with those who regard agreements as mere scraps of paper. Cardinal Mindszenty's courageous stand will be an inspiration to the members of his faith throughout the world, to all men and women of Hungarian descent, and to the men of all religious faiths.

(The telegram addressed to Mr. WILEY is as follows:)

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: Americans of Hungarian extraction of the State of Wisconsin protested at mass meeting today against persecution of Cardinal Mindszenty and Lutheran Bishop Ordass. We respectfully ask your help for intervention in these shameful persecutions.

Respectfully yours,
Rev. JULIAN FUZER.
Rev. RAYMOND DOBAY.

MILWAUKEE, WIS.

Not Funny

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an effective editorial, Not Funny, that appeared in the December 18, 1948, issue of the Pilot, the officials news organ of the Archdiocese of Boston:

NOT FUNNY

The Pilot has had occasion many times to point out that a great deal of material available for sale on newsstands is of a decidedly unhealthy nature. In several sections of our country there have been organized recently drives to remedy this situation by persuading news dealers to refuse unseemly publications and not to present them for sale at all. Mothers of families, especially, have been happy to join in a crusade of this sort because they look upon it as a requirement of our times for the protection of their children. There are for example, many comic books published for children which treat in a graphic manner the most atrocious crimes that can be imagined by lewd and unprincipled authors. As the children grow into young manhood and womanhood they are urged to improve their taste by buying the various assortments of lurid confessions and love tales. There is, it seems, an appeal for every age and the more impressionable the better.

This has been a national scandal about which all thinking citizens have long been

anxious. There has recently come to us evidence that it is now about to become an international scandal.

It is now suggested that with funds guaranteed by the Economic Cooperation Act we should make available to the German people these products of the least worthy section of American life. No one will quarrel with the idea that we should send to Germany, or anywhere, journals of lasting interest and significance. Thus scientific, literary, religious, or news magazines will readily find a place on such a list. It is however, preposterous that we should export as an American product a commodity that is at home a national shame. It is, at least incongruous that we who are pretending to educate against crime should export the most lurid descriptions of all kinds of gross conduct. Let us share by all means with all peoples the enlightenment with which, under God, America has been blessed but let us not pretend that matters which at home provide a worry for those preoccupied with the care of youth are in any way suitable for export.

The family and most especially the child in it, is of prime importance in confirming the vigor of our own Nation and rebuilding the lost strength of other nations. Whatever title may be given to the expression of attacks on this basic unit, they definitely are not funny.

The Bipartisan Foreign Policy

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a series of editorials on the question of the bipartisan foreign policy, and the undermining of that bipartisan foreign policy by a change in the ratio on the Foreign Relations Committee of the Senate.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Inquirer of January 6, 1948]

ONE-WAY BIPARTISANSHIP

The picayune politics which entered into the composition of the Committee on Foreign Relations in the new Senate provides ample cause for alarm about the future of the bipartisan foreign policy.

When the Republicans controlled the Senate, they took seven places on the committee, leaving the Democrats six, as an illustration of the common determination that foreign policy would not be subject to partisan wrangles. Most of the committee votes on major questions were unanimous.

Now the Democrats have changed all that. They took eight places, and gave the Republicans five. Senator VANDENBERG, former chairman of the committee, rightly objects.

The explanation of Vice-President-elect BARKLEY that the eight places were allotted Democrats to work out certain problems in that party is alarming in itself. If one of the elements of bipartisanship is to be junked to satisfy demands of a few Senators for prestige, what assurance is there that the bipartisan approach itself won't be discarded on equally frivolous grounds?

Bipartisanship in foreign policy means just what the word says. It's not one thing when the Republicans are in control, another when the Democrats have a majority. It will be maintained with a little more difficulty because of this sample of petty partisanship.

[From the Washington (D. C.) Post of January 7, 1949]

SMASHING A SYMBOL

There was a drop of anger and an ocean of anguish in what Senators VANDENBERG, MORSE, and SMITH had to say Wednesday about the change of party ratio in the Senate Foreign Relations Committee. What had been a 7-to-6 division in the Eightieth Congress was altered to an 8-to-5 spread. And there was more than a little wind in Senator BARKLEY's explanation of why it was done. The steering committee's right to make this change cannot be questioned, but the decision to do it has most disturbing connotations for the bipartisan approach to foreign policy.

A party division as nearly equal as possible in the Foreign Relations Committee is not, of course, a cornerstone or even a necessity of bipartisanship. Conceivably a completely lopsided committee could function in bipartisan fashion. And, conversely, the most equal committee division guarantees nothing unless the administration, too, is dedicated to real bipartisanship. But the 7-to-6 division of the Foreign Relations Committee in the last session was assuredly a symbol of bipartisanship. And the unnecessary departure from that symbol in the present Congress inevitably appears to have its own symbolism. The dismal implications of this change stand out all the more sharply because the steering committee at the same time altered the party ratio on the Interior and Insular Affairs Committee in exactly the opposite way.

Bipartisanship in foreign policy, a longtime goal in the United States, achieved its closest approximation to reality during the past 2 years under Republican control of Congress. We see no compelling reason why the new Democratic majority should have abandoned even the forms of that achievement. In our opinion, the Democratic steering committee has called a misplay, the consequences of which will be impossible to repair unless the decision is immediately reversed.

[From the Christian Science Monitor, Boston, Mass., of January 7, 1949]

STATE OF THE NATION

BYPASSING BIPARTISANSHIP

(By Roscoe Drummond)

WASHINGTON.—Fortunately, Senator VANDENBERG is big enough not to let the administration's finagling with the Senate Foreign Relations Committee impair his support of bipartisan foreign policy.

The offense of putting an 8-to-5 Democratic majority on the committee is not horrendous. It is a partisan action which easily can be exaggerated. But after that much has been said there is no escaping the fact that it is at once unfair, unwise, and unnecessary.

It is unfair because the 8-to-5 party ratio shows the administration giving the Senate Foreign Relations Committee a larger partisan majority than six other Senate committees. Here is the committee above all committees which should be treated bipartisanly, yet the administration has cut from it more Republicans and added to it more Democrats than it has to Armed Services, Executive Expenditures, Finance, Interior, Labor, and Senate Rules Committees.

The action is unwise because it is an evident—though perhaps not an intended—affront to Senator VANDENBERG, whose initiative, prestige, and freedom from partisanship steered all of President Truman's foreign policies through the Republican Eightieth Congress. What wisdom can there be in undercutting Senator VANDENBERG's influence in his own party at a time when he can do more than any single administration figure to keep Congress and the White House at one on the vital foreign-affairs decisions which soon will be coming up?

It is unnecessary because the record of the Senate Foreign Relations Committee during the past 2 years proves that there is no need whatsoever for the administration to give this committee a larger Democratic majority than it has given six other Senate committees. What reason is there to think that the Democratic majority needs eight Democrats to get what it wants out of the Foreign Relations Committee but needs only six Democrats to get what it wants out of the Labor Committee?

And what is the record of the Foreign Relations Committee during the 2-year chairmanship of Senator VANDENBERG?

Over this extended and critical period the committee has acted upon 47 important matters—and every action was by unanimous vote. Week in and week out, the committee stood 13 to 0 on every vital issue. On the committee then were seven Republicans and six Democrats. Now the administration cuts off two Republican members from a committee which, under the most effective bipartisan leadership conceivable, has been its perpetual and total ally.

No wonder the administration's most valuable Republican supporter in bipartisan foreign policy, Senator VANDENBERG, is a little annoyed, quite a little concerned. He says that the new partisan ratio carries the implication to the country that the administration does not consider the Republican Senators quite trustworthy. Has President Truman ever had a Democratic committee in a Democratic Congress which ever gave him unanimous backing on even one thing, let alone on everything?

Senator VANDENBERG is careful to make clear that this single action is relatively insignificant in itself. He hopes it is not and warns that it cannot safely be an omen for the future, because, as he says, "we are still in the grip of those times * * * when in respect to foreign relations we must think of our country first and our party second."

In reducing the Republican membership to five instead of six, the administration denies a post on it to Senator WAYNE MORSE, of Oregon. In consequence, the committee will have no west-coast representation of any kind.

Senator BARKLEY, in answer, gave the Senate the best that could be said on the other side. He avowed that the administration acted without partisan thought. That is a welcome assurance, and it can be accepted in good faith. The administration leaders were subjected to great pressure of competition for seats on the Foreign Relations Committee, and yielded to it. That is the explanation—and not a very good one.

Obviously, it doesn't make sense to have a larger one-party representation on the most bipartisan committee dealing with the most nonpartisan issues before Congress.

[From the Washington (D. C.) Post]

MATTER OF FACT

(By Stewart Alsop)

ACHESON, TRUMAN, AND VANDENBERG

In the American Government a new appointment as important as that of Secretary of State is like the introduction of a new and powerful chemical into a complicated and delicately balanced formula. All sorts of subsidiary reactions are bound to take place. The most interesting and important of the reactions to the appointment of Dean G. Acheson will be its effects on the White House and on the Congress.

Acheson is distinctly the personal choice of President Harry S. Truman for Secretary of State. In part, of course, the appointment

was a consequence of a process of elimination—the choice of Chief Justice Fred M. Vinson or of Justice William O. Douglas would have disrupted the Supreme Court, and W. Averell Harriman's Wall Street background was thought to be a political disadvantage. In part, too, the objective conclusion was reached that Acheson, by experience and ability, was preeminently fitted for the post.

But an even more compelling reason, according to those who should know, was simply that the President likes Acheson very much personally, admires him greatly, and is certain that he can work with him closely and successfully. This in itself suggests one change which is likely to take place in the relationship between the White House and the State Department.

Until now, Truman's role in the making of foreign policy has been with few exceptions confined to an almost automatic approval of what his Secretary of State was doing. This will be so no longer. Truman has no intention of becoming his own Secretary of State. But he does intend that the final authority should be definitely and clearly his. And it was largely for this reason that he appointed as Secretary a man with whom he was certain that a successful working relationship could be established.

This does not mean, of ccurse, that the basic direction of American policy will be altered. Aside from Truman's own testimony and the appointment of Acheson, himself one of the chief architects of the policy of firmness toward the Soviet Union, the most striking evidence on this point is Truman's attitude toward Secretary of Defense James Forrestal.

Forrestal has been one of the chief targets of those who have been calling on the President to "stop the cold war" by turning over most of the world to the Soviet Union. Reports have emanated from these sources that Forrestal will be asked to resign soon after Marshall leaves. It fact, it can be stated on undoubted authority that Truman has let Forrestal know that he is deeply grateful for the service Forrestal has rendered, and that he wants Forrestal to stay as long as he can be prevailed upon to do so.

Yet, though the President is in no mood for appeasing either the Soviet Union or the admirers of Henry Wallace, the appointment of Acheson is fortunate for the country, in view of Truman's well-known impulsiveness. For Acheson has a deep and hard-earned understanding of the real nature of the conflict between the Soviet Union and the western world. The President occasionally seems tempted to believe that he can resolve the conflict by pulling a rabbit out of his hat. Acheson knows that he cannot, and the President is pretty certain to rely on Acheson's judgment, in which he has great confidence.

Yet there is no assurance that the successful relationship which seems to be in prospect between the State Department and the White House will also evolve between the State Department and the Congress. Two great issues will soon confront the Congress. One is the North Atlantic Pact, designed to form the keystone of American foreign policy. The other is the rearmament of western Europe, without which the pact will have no meaning.

Clearly both measures will require Republican support. Yet the plain fact is that the bipartisan basis of foreign policy has been most gravely weakened. One reason is simply the imminent departure of Marshall and Robert A. Lovett, with whom the Republican foreign-policy leaders, and especially Senator ARTHUR VANDENBERG, have developed an intimate understanding. By contrast, the relationship between VANDENBERG and Acheson, who have had serious policy differences in the past, is one of mutual, but distinctly chilly, respect.

Bipartisanship has always been weakened by the small-minded action of the Senate Democrats in reducing the Republican representation on the Senate Foreign Affairs Committee. This has caused the Republicans angrily to suspect that the administration has decided since the election to freeze them out of foreign policy. In fact, it can be said with assurance that Truman has no such intention, and that the White House had absolutely nothing to do with the Foreign Affairs Committee action. Even so, Acheson will certainly need all his energy and ability to rebuild and preserve the structure and bipartisanship which has been one of the major achievements of those great public servants, George C. Marshall, Robert A. Lovett, and Arthur Vandenberg.

[From the Christian Science Monitor, Boston, Mass., of January 8, 1949]

NEW LOOK FOR FOREIGN POLICY

Hasty, oversimplified appraisal of the shift in the State Department calls it a reversal of American foreign policy. We hope Moscow will not make that mistake. It has doubtless heard the story that President Truman is fighting a battle within his own Cabinet to soften policy toward Russia. But even without the President's emphatic denial, there is plenty of reason to believe that the Marshall-to-Acheson shift involves at most a reassessment, not a reversal, of policy.

Put another way, this is not a change of policy so much as a change of dress. Something new has been added. Dean Acheson is no advocate of softness, no friend of communism. He has urged firm resistance to Soviet domination. He does not believe concessions can halt Soviet policy. But he believes the policy is defeating itself. He points out that despite its expansive efforts Russia has not pushed beyond the lines held by its armies in Europe at war's end, and meanwhile the Marshall plan is promoting recovery and pushing back Soviet influence. And he would keep the door of negotiations open.

Right here may be the most notable feature of the new look at the State Department. Secretary Marshall has been negotiating—negotiating month after month—but at times it has appeared that American patience was exhausted. That is not unnatural. But diplomacy's role is never to give up, never to become rigid. At times in recent months the State Department has appeared more military than diplomatic. It has been as if Washington, finding that the language of power was best understood in the Kremlin, was forgetting other tongues.

Possibly a fresh negotiating team, like a fresh team on the football field, will be able to break the deadlock. Mr. Acheson is known as a man of wit and imagination. He is also noted for objective judgment and skill in argument. The surprise naming of James Webb as Under Secretary indicates that another reorganization of the State Department, not on policy lines but for efficiency, is coming. But this move tends to make more than ever necessary the retention of other top-bracket men who are experienced in policy, such as Charles Bohlen and George Kennan.

If such advisers remain, the essential continuity of policy will be emphasized, whatever its new dress. And it should be remembered that foreign policy in its main directions is not a one-man affair, subject to overnight change. Even if Mr. Truman intends now to make policy, he will have to build on the past. And if Mr. Acheson can give a more flexible and imaginative turn to it, he will succeed only because of good work that has prepared the way.

It would be ungrateful and inaccurate for Americans to fail to appreciate the unselfish devotion and tremendous services of Secretary Marshall and Under Secretary Lovett. If Moscow is soon brought to a point where it sees the value of less militant tactics in pursuit of its long-range strategy, much of the credit must go to their work. The combination of firmness, expressed especially in American rearmament and effective economic aid to free countries, expressed in the Marshall plan, have turned the tide in Europe and may well have laid the foundations for a workable truce, not a basic peace, with Russia.

Support of H. R. 49 To Provide Immediate Statehood for Hawaii Asked by Hawaii Statehood Commission

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of a letter addressed to Members of the Eighty-first Congress by the Hawaii Statehood Commission in support of immediate statehood for Hawaii.

The Commission is an agency created by act of the Legislature of the Territory of Hawaii and entirely financed by public funds.

The legislation for which the commission asks support was introduced by myself as Delegate to Congress from Hawaii on the opening day of this Congress.

This bill has again been designated as H. R. 49, as it was in the last Congress, and has been referred to the Public Lands Committee of the House.

The letter follows:

In extending our congratulations to you as a Member of the Eighty-first Congress, may we call to your attention one of the important matters which will be before you for decision. We refer to statehood for Hawaii.

On June 30, 1947, the House passed an enabling act, H. R. 49, which the Public Lands Committee, after thorough study, had reported favorably by unanimous vote. In the Senate, action was postponed by the Committee on Interior and Insular Affairs to enable its members to conduct a further investigation.

When Congress reconvenes new bills will be introduced to carry out the pledge of statehood contained in both party platforms. In the Larcade report (H. Rept. No. 1620, 79th Cong. 2d sess), the committee report (No. 194, 80th Cong., 1st sess.), and the Cordon report (Senate Committee of the Interior and Insular Affairs, 80th Cong. 2d sess.), you will find set forth reasons why Congress should without further delay authorize our fellow citizens in Hawaii to proceed to draft and submit for approval a constitution for the new State.

More than 50 years ago Hawaii voluntarily surrendered its status as an independent sovereignty to be incorporated into the United States as an integral part thereof. The organic act established a territorial government to continue until the people of Hawaii qualify themselves to pass from second-class citizenship into full-fledged Americans. We feel certain that when you have examined the record you will concur in the practically unanimous judgment of the large number of

your present colleagues and former associates who have journeyed to the Territory for personal investigation. They returned with the firm conviction that Hawaii now meets every proper test for immediate statehood.

The war established the complete loyalty of Hawaii's people to America. In Hawaii a system of public education, the keystone to the success of democratic government, ranks with the best on the mainland. Its courts of justice, its free press, its devotion to religious liberty and civil rights are second to none. Its economy and business structure are sound. There is awareness of the danger of subversive influences and a clear determination to hold them in check. In no state is there a higher percentage of participation in voting and in the exercise of the other privileges of citizenship in a democracy. It is not too much to say that the people of Hawaii have demonstrated a remarkable genius in governmental affairs.

Such a people have earned the right to pass out of trusteeship and to become in truth free men; to choose their own governing officials; to have a voice in selecting their President; to no longer be taxed without representation (Hawaii now pays more annual taxes into the Federal Treasury than any one of 12 States); to send to Congress able spokesmen who will have full power of participation in the molding of legislative policy.

The Second World War greatly enhanced Hawaii's position as the gateway to the Pacific. In the years ahead America will have large and constantly increasing interests, permanent in nature, throughout this whole vast area. Prompt action now in welcoming into the Union on terms of full equality with the 48 States this Territory, where people of diverse racial stocks have demonstrated that they can live and work in peace and harmony, will add immeasurably to our stature and prestige among the millions who inhabit the areas of the far Pacific.

This letter is addressed to you by the Hawaii Statehood Commission, which was established by the Territorial legislature to advance the cause of statehood to which all but a minor fraction of its people are devoted. We want to become better acquainted with you and we hope that you will consider it worthwhile to learn more about this American community in the Pacific. If there is any information you want or if you care to express an opinion, we suggest that you communicate with our Washington representatives who will be pleased to serve you in any way. They are: George H. McLane, executive secretary, Hawaii Statehood Commission, suite 907, 704 Eleventh Street NW., phone, Executive 5632; Edward R. Burke, legal adviser, Hawaii Statehood Commission, 514 Southern Building, phone, National 7259.

We earnestly solicit your active support in what we sincerely believe to be a just and righteous cause.

Most respectfully yours,

HAWAII STATEHOOD COMMISSION,
A. T. LONGLEY, *Chairman.*

The Welfare State

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 7, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend, I am inserting in the RECORD as a part of my remarks an article by Dorothy Thompson which appeared in the Evening Star of Monday, January 10, 1949:

ON THE RECORD—TRUMAN SEEN CREATING WELFARE STATE WHICH WILL STIFLE LIBERTY, INITIATIVE

(By Dorothy Thompson)

Since President Truman can make the most revolutionary statements sound like an address to the Kiwanis Club, the full text of his state of the Union message had to be read to be fully appreciated.

If he has a docile majority in Congress we now are full steam ahead toward the welfare state which, in modern times, President Roosevelt started here, Bismarck in Europe, and which has engulfed western civilization.

This state tends toward a condition in which creative forces are drained out of society and paralyzed within the state; in which those who take no personal risks and suffer no personal losses become the master class; in which the earnings of the people are expropriated and returned to them (minus a high commission) in the form of services they may or may not want or need; in which independence is discouraged, and docility and emotional immaturity fostered in the people; and out of which, finally, dictatorship inevitably emerges as social vitality decays and the monster state is bankrupted through the anemia of society.

MASSES' APPROVAL SEEN

The masses of the people will hail it because they cannot foresee the consequences, are unaware of what a departure it is from the political philosophy which has made this country great, and because they will not link the welfare state with the decline and fall of Europe.

Big business publicly will fight it, but actually will make an alliance with it, as the biggest big business always has done. Under it monopoly will increase, not diminish, as it increased under the wartime extensions of state economic power. Despite President Truman's call for strengthening the antitrust laws, it won't work out that way because it can't. Those who will feel the squeeze and go under will be small business and the professional classes, who eventually will become employees of the state or of business big enough to ally itself with the state without going under.

The program, in general, is the triumph of European state ideas—especially German state ideas—over the American revolution, and exactly when Europe is in ruins.

The greatest contribution which America, especially, made to political science through Jefferson and on down through all the authentic American radicals, notably Henry George, was the clear recognition that the state is the enemy of society, and that when you extend the police power (which is the essence of the state) into overexpanding areas of social and economic life, stagnation sets in.

LIBERTIES SEEN DIMINISHED

Insofar as the state has a function in economic life—so argues the authentic American philosophy—it is to protect the widest liberties of the people in their spheres, and relentlessly prevent their encroachment upon the liberties of others, while holding and conserving the legitimate public domain.

But when it extends its powers to assuming responsibility for the lives of all, it expropriates the people's liberties, for no matter how you cut the design, liberty consists of the right to make one's own bed and lie in it. Children are not free because they are not responsible for themselves. The welfare state reduces adults to semi-infantile condition.

It does not create opportunities for independence. It aggrandizes all opportunities to itself. And once the independence of the people is destroyed, it is never restored until the huge structure pyramided on their backs breaks down into anarchy, either through war or by its own weight—as it invariably has.

There is nothing new about the development. The posthumous history of all great states shows this graph. It never has been a sign of youth but of senility, nor of progress but of decay.

But, as things are, such words are whistlings into the wind.

Socialized Medicine

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, I do not believe in what is roughly called socialized medicine, and I have not the slightest intention of voting for any plan which will force upon our people something they do not individually want, which will extend the power of the Federal Government.

If this country gets socialized medicine, in my humble opinion, it will be due to the attitude of the medical profession. There is a shortage of doctors, no question about it; and, as so often happens, a very few are taking advantage of the situation, creating a lot of ill will. The Government drafted medical students when it should have exempted them.

We are told, but I have no proof of the statement, that relatives of doctors are being favored when applications are made for admission to medical schools.

So that the doctors may know how some folks feel about some of the methods of a few doctors, inserted herewith is a letter just received:

JANUARY 6, 1949.

Hon. CLARE E. HOFFMAN,
House of Representatives,
Washington, D. C.

DEAR MR. HOFFMAN: Unfortunately, President Truman is right on all counts on the medical and dental situation.

I wanted medicine myself, but couldn't go to school because I had my parents to care for. My daughter, however, is halfway through nurse's training and is going beyond regular requirements, into the field of diagnosis and therapeutics, because she is so interested.

If you investigated by closed hearings, you would find such as the following facts—things that have happened to us and to our friends:

——— went to Kalamazoo hospital, where our daughter is in training, for an X-ray. While waiting, said the daughter to her mother, "See that fellow going there, he gets $25 for an office call—and no medicine."

I need dental work. Extractions and two plates start at $250. My teeth are tough to pull, however. It's the work of an oral surgeon, then to a dentist for teeth.

I happened to know that it cost $5 per plate to make common plates before the war.

A physician friend of mine, who really works, and charges a modest fee, had this to say: "The bunch that makes me boil are the eye doctors. I have two old ladies that need attention badly, and do you suppose I can get them in? Not for 3 months; and when they do get in, he'll charge them such an outrageous fee that I won't see them again for 6 months," and added, "the situation is pitiful."

As this is being written, our phone rang. Our daughter has made an appointment with a physician for one Mrs. ———. This is the lady's first attention for what daughter (still in training) believes to be a cancer.

——— has two boys in school. Husband has low income. The Lord have mercy upon her, and deliver her from the evil of illness, and is it too much to add, from the evil of the medical profession also?

Instead of the American Medical Association, pounding the doors of Congress, crying, "save me from the wicked socialized medicine idea," they could apply their time and money by knocking at the doors of their membership, presenting a copy of Christ's Sermon on the Mount and a good-sized book on morals.

The profession has much dirty linen to wash, and they could throw their souls in for the cleaning process.

Meanwhile the masses suffer, physically, mentally, and financially.

The President is right; something should be done, and quickly.

If it isn't too much to ask, please send this to Senator VANDENBERG.

The Late Thomas M. Owen, Jr.

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. GRANT. Mr. Speaker, my heart was saddened recently by the untimely passing of Mr. Thomas M. Owen, Jr., an Alabamian of distinguished lineage and outstanding service to the people of the State of Alabama and of the Nation.

Mr. Owen was the grandson of Senator John H. Bankhead, the nephew of the second Senator John H. Bankhead, as well as of our illustrious former Speaker, Hon. William B. Bankhead. Mr. Owen's mother is Mrs. Marie Bankhead Owen, who has long served the State of Alabama as director of the department of archives and history. Under her guidance, Tom became interested in similar work, and, after leaving Alabama in 1933, for 15 years was a responsible member of the staff of the National Archives here in Washington. During these years he was also national historian of the American Legion and served the members of the Legion long and faithfully. Tom Owen loved his fellow man.

It is a privilege for me to pay this small tribute to his memory and I am happy to make a part of it the statement below, which concerns him and which was issued by Hon. Wayne C. Grover, Archivist of the United States, and addressed to all of the employees of the National Archives:

The death of Thomas M. Owen, Jr., a retired member of the staff of the National Archives, occurred at the Bethesda Naval Medical Center on December 5, 1948, after several months illness.

In point of service, Mr. Owen was one of the oldest employees of the National Archives. He was appointed Chief of the Division of Accessions on May 14, 1935. When the Division of Veterans' Administration Records was created in June of 1938, Mr. Owen became its Chief. Although changes subsequently occurred in the name of that division, Mr. Owen continued to serve as its Chief until March 1948, when he was compelled by his physical condition to give up active work. He retired because of physical disability on August 20, 1948.

Mr. Owen was a graduate of the University of Alabama. He served as an officer in the field artillery during World War I and thereafter was active in organizing the American Legion in Alabama. For some years prior to joining the National Archives staff he served as assistant director of the department of archives and history of the State of Alabama. In 1933 Mr. Owen was elected national historian of the American Legion and he served in that capacity until his death.

As a veteran himself and as a national officer of the American Legion, Mr. Owen was intensely interested in the welfare of veterans and particularly in the preservation and administration of veterans' records in a manner that would facilitate their use for the benefit of veterans and their dependents. Because of this interest and by reason of his previous archival experience, Mr. Owen, during the decade in which he had charge of the noncurrent pension records of our Government, contributed immensely to the work of the National Archives by providing for the adequate preservation of these valuable records and by making them, year by year, more and more readily available for use by veterans and their dependents and by others.

Tom Owen was not only a capable and faithful employee, but he was a kind, friendly, and considerate man who had an abiding faith in his fellow men. He loved people and was genuinely interested in them, their problems, and their successes. The welfare of employees under his supervision was a matter of real and continuing concern to him. He will be missed by a wide circle of friends.

The National Archives is grateful for the faithful and efficient manner in which Tom Owen performed his duties and is glad that it had on its staff a man of such outstanding good will.

WAYNE C. GROVER,
Archivist of the United States.

Communism in China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a letter sent to President Truman on December 20, 1948, by Common Cause, Inc. The letter deals with the acute Chinese crisis, which is of such grave importance to the United States, and was signed by officers and directors of the national anti-Communist organization. Among the signers were Mrs. Natalie Wales Paine, president; Christopher Emmet, chairman of the board; the Reverend Robert I. Gannon, S. J.; Dorothy Thompson; Arthur Bliss Lane; William Henry Chamberlin; and Eugene Lyons.

The letter follows:

COMMON CAUSE, INC., CALLS ON PRESIDENT TRUMAN TO MAKE A STATEMENT SUPPORTING ANTICOMMUNIST FORCES IN CHINA

In common with all other Americans and with friends of freedom everywhere, we are deeply concerned over the developments in China, which threaten the loss of a great part of the human race to totalitarian communism.

We fully realize that America's resources are not unlimited, that we must not abandon our commitments in Europe, and that the situation in Asia is partly the fault of the Chinese Government. We do not attempt to prescribe the exact amount of American aid which it is wise or possible to give. But we do submit that certain basic facts are clear and that certain basic principles must be preserved.

1. The United States cannot oppose the advance of aggressive communism in Europe while passively accepting it in Asia. Our policy must be consistent and it must be honorable. It must not discriminate against the majority of the human race who live in Asia.

2. We are disturbed by the statement attributed to Mr. Paul Hoffman, Director of the ECA, that the United States would continue to aid a coalition government in China in which the Communists took part, provided such a coalition government would agree to preserve freedom. We believe such a formula to be a contradiction in terms, for we know that coalition governments with the Communists have always led to loss of freedom. The experience of Europe proves that the Communists are willing to proceed mildly until American aid has helped consolidate their power and that they can then use this power to establish dictatorship.

There is no reason to hope that the Chinese Communists will prove independent of Moscow, even to the extent recently shown by Marshal Tito, and Tito himself has restored none of the freedoms to Yugoslavia. The Chinese Communist leader, Mao Tse Tung, has repeatedly denounced Tito for his heresy toward the Politburo, and recently Mao again praised the Soviet Union as "the leader of the Communist world revolution" in the Cominform Bulletin in Bucharest. He has been a member of the executive committee of the Communist International, and we believe still is. It was Foreign Minister Molotov who told Donald Nelson that the Chinese Communists were only agrarian reformers.

However inaccurate the report of Mr. Hoffman's statement in China may have been, it has been widely published throughout the world, and it suggested a return to a disastrous policy of appeasement. Hence, despite Mr. Hoffman's partial disavowal, we fear that it may not only raise doubts about America's firmness in China but in Europe as well, until the impression is removed by a clear-cut statement on China of your own.

3. In China, as in Europe, it is not a question of personalities but of principles. Our interest is not tied to the personal fate of the President of China, but it is tied to the fate of the legitimate Nationalist Government of China, which is fighting to preserve the unity and independence of the Chinese people.

4. The more aid we give the more it will be possible for us to promote reforms in China, such as your aid program has achieved at least with some success in Greece, where the same problems exist on a smaller scale. In recent years we have not helped China enough to have the right or the power to insist on such improvements.

5. We are not concerned with recriminations about the past, but for the sake of the future we must state that it is wrong to say that a policy of vast American aid to China has been tried and failed. The lend-lease delivered to the Chinese during the war was only 2 percent of the total, although they had been fighting the longest. We delivered $47 in UNRRA supplies to Greece, on a per capita basis, and $1.16, on a per capita basis, to China. We have actually delivered $220,000,000 worth of military supplies to Greece in the last 2 years, whereas only $60,000,000 worth have been shipped

to China, parts of which have not yet arrived. We realize that this apparent neglect of China was partly due to factors beyond our control, nevertheless, in fairness the facts should be recognized.

We cite all this not to criticize our aid to Greece under the Truman doctrine, which you so wisely proclaimed and which on the whole has been so successful, but these figures do prove that our aid to China has been too little and too late. Above all it has been too uncertain, hence the results even of moderate aid have never been tested. And because of the poverty, inefficiency, and devastation of China there is reason to believe that a comparatively little aid, under American direction, might go further than anywhere else.

We do not question that Europe's greater military and industrial resources justify some priority in aid to Europe over China, but we do think that priority has been excessive.

6. For all these reasons it is dangerous defeatism to assume that China is already lost. Manchuria had been lost to the Japanese ever since 1931. It was lost again after the war, through no fault of the Chinese Government, due to our concessions to Russia at Yalta, and due to Russia's direct violation of her treaty pledges in turning over vast stores of Japanese arms and ammunition to Chinese Communist armies, and by refusing entry to government troops until the damage had been done.

Manchuria was the arsenal of Japan in Asia and it became the Communist arsenal. The defeat of the Nationalist armies in other parts of China has been partly due to the immense effort which President Chiang Kai-shek made to preserve Chinese rights in Manchuria, over impossible lines of communication. There some of his best armies, hampered by Russian control of the chief ports as well as by her arming of the Communists, were isolated and worn down. Perhaps it was a strategic mistake for Chiang to attempt to hold his few hard-won Manchurian bases, but at least it was a forgiveable mistake, since China has fought for 7 years to regain her richest province.

But regardless of this tragedy, three-fourths of China outside Manchuria is still in Government hands. Those who say it is now too late to help the Chinese Government are mostly the same people who have opposed such aid all along. If it is too late it would be largely their fault, but their judgment may be as unreliable now as it was before.

The collapse of the same Chinese Government which is still fighting now was unanimously predicted by the experts in 1937, in 1942, and again in 1944, yet it held on. That Government holds a far larger area of China now than it did in any of those years; and even if the Yangtze Valley is lost, the Communist weakness in sea and air power compared to Japan should make it far easier this time to hold the great cities of Canton and Chungking.

7. In any case, every day the Chinese anti-Communists continue to resist and every bit of territory they hold preserves just that much more of the area of freedom and reduces by that much the Communist threat to all Asia. It is cheaper in money and in lives to defend than it is to reconquer, and everything lost in China would have to be regained later at the cost of American dollars, and perhaps of American lives. General MacArthur estimates that the fall of China would necessitate six more divisions and a proportionate increase in sea and air power to defend Japan. The creation and maintenance of these divisions would cost more each year than the billion dollars in aid which China has asked.

The complacent belief that the Chinese may eventually assimilate the Communists is irrelevant to the present crisis, when the future of civilization will be determined either by the peaceful triumph of freedom or by the cataclysm of an atomic war. It took the Chinese 268 years to overthrow the small band of Manchus who dominated the country and set up in 1644 the reactionary Manchu dynasty which ruled over the whole of China.

8. The Nine Power Treaty binds us and the other democratic signatories to do everything in our power to preserve China's independence and integrity. We owe an obligation to the legitimate Chinese Government for its faithfulness to our side during the war, when Japan made repeated offers of a separate peace. The provisions of that treaty, the promises at the Cairo Conference, the principles of the Atlantic Charter and our mistakes at Yalta, all place an inescapable obligation of honor to help the Chinese Government now.

9. It is for you, Mr. President, in the light of your knowledge to decide in agreement with Congress how much material aid we can give, but it certainly lies within your power to give the incalculable moral aid which a clear-cut statement of America's intentions would provide. For the demoralization and defeatism in non-Communist China has been partly due to the uncertainties of American policy as well as to our delays in carrying it out.

The 30,000,000 refugees from Communist China show that the people do not welcome communism, but many of them have lost faith in the possibility of defeating it. That loss of faith is partly our fault and it is in your power to restore it. For few doubt the ultimate capacity of America and the rest of the free world to triumph over communism, whatever the limitations on our immediate ability to act.

It is our will, not our power, which is questioned, and you, and you alone, can set those doubts at rest. As the leader of America, freely chosen in your recent victorious election, you are the spokesman for the free world.

We therefore beg you not only to give all the aid which is possible but to proclaim the steadfast principles on which that aid is based. We believe such a statement would be worth many divisions to the hard-pressed people of China.

Warsaw Wars on Private Enterprise

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 7, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an article which appeared in the Christian Science Monitor, Boston, Thursday, January 6, 1949, written by Ann Su Cardwell, relating to the action of the Polish Communist regime with reference to the liquidation of private enterprise in Poland:

WARSAW WARS ON PRIVATE ENTERPRISE

(By Ann Su Cardwell)

The Polish Communist regime by its pronouncements and by its daily acts has convinced even the few remaining optimistic Poles that a deliberate attempt is being made to liquidate private enterprise in Poland. Most observers consider this as basic a part of Polish Communist policy as it was of Russian Bolshevik policy.

Indeed, the Polish drive against private enterprise follows the pattern set by the Soviet Union in the 1920's. Polish economists throughout the world who are following developments foresee the extirpation of the middle class, small firms, independent artisans, merchants, and the free professions.

Tax laws and regulations have been manipulated to force many thousands out of business. A special commission was appointed with full authority to go into any place of business at any time and ascertain the amount of cash on hand as well as the prices asked for all articles. Inspections have taken place almost daily, in some instances lasting hours, interfering seriously with business and having extremely damaging effects upon owners and helpers.

HOW SYSTEM WORKS

As an example of the work of this commission, a Polish commentator now in London writes: "In a restaurant, which is run by a man and his wife without other help, the wife went out to market, taking 3,000 zlotys ($3) from the cash and leaving no note of so doing. While she was out, members of the special commission appeared, and although she returned before they had completed their inspection and had her purchases and the receipted bills with her, she was charged with breaking the law and fined.

"Thousands of such instances could be cited," the Polish writer continues. "A friend of mine lent an acquaintance 1,000 zlotys and when it was repaid he dropped the small sum into the firm's cash box instead of putting it into his pocket, and by so doing made very serious trouble for himself. * * *

"Here is a further example of the special commission's procedure. At the request of a purveyor, a merchant agreed to accept delivery of certain merchandise on a Saturday after closing hours. The bill was to be presented early Monday morning. Apparently some employee, a Communist Party member, learned of this and reported it. Before opening time on Monday members of the special commission were waiting at the door. For merchandise valued at 5,000 zlotys ($5) the fine and costs amounted to more than 50,000 zlotys, although in this case as in that of the restaurant owners, the bill was presented while the commission was at work." Thus wrote a person recently in Poland.

INCOME-TAX DECREE

A government decree of October 25 strikes at private enterprise by what is labeled a "tax on general income." The hitherto progressive tax has been superseded by a tax according to the source of income, the sources being listed in five groups.

A regime paper, Rzeczpospolita, on November 3 writes in connection with this tax: "It is no secret that up to today private enterprise provides incomparably greater income than can be earned as an employee, whether the work is physical or mental. The social injustice in this stands out too clearly to necessitate our pointing it out; and yet arguments are offered—arguments brought up in defense of this state of affairs in capitalist countries—that these are the rewards for private initiative, for inventiveness, for energy, and for the capital invested. We shall fight such private initiative with all the forces at our command."

For a proper understanding of the editorial one should remember that salaries and wages are fixed by the regime and that employees and workers have no means of getting them raised. Neither strikes nor appeals are permitted. Average wages, according to latest reports, are from 8,000 to 15,000 zlotys a month, while the minimum required for the satisfactory maintenance of a family of three is 20,000, and this does not include allowance for clothing and shoes.

FOOD COSTS SOAR

Food prices have been mounting steadily, the continued shipment of food to Russia being reported the cause. Bread prices at the end of November were 45 zlotys a kilogram (2.2 pounds), eggs 25 to 30 zlotys each, one kilogram of beef 220 zlotys, of sausage 500 zlotys, a liter of milk 60 zlotys, a bar of soap 350. While the official rate for the dollar is 400 zlotys, on the black market it is now 1,200 to 1,500.

Commenting further on the October 25 decree, Rzeczpospolita states that the Government has a very significant means of controlling private capital. This is interpreted to mean that if the source of income does not lie in party institutions or state-owned enterprises, it will be listed as fifth category, in which the income tax has been raised 25 percent and where there are a whole series of special taxes.

The degree of success already achieved in the drive to liquidate private enterprise is indicated by figures given by the president of the Central Planning Office (CUP) in a recent speech before a conference of activists of the Social Party. In 1946, private enterprise and hand workers accounted for 363,000 employed; state-owned enterprises and cooperatives, for 1,111,000. In 1948 the latter had risen to 2,170,000, the former to only 466,000.

STRICT HOUSING EDICT

In connection with the Government's attitude toward private enterprise, recent changes in housing control should be noted. First there was a rise up to 1,000 percent in rents, according to reports from Warsaw. Individuals who had their workshops or little places of business located in their apartments, or, perhaps better stated, combined living quarters with places of business, found themselves compelled to give up their dwelling, which was rented again at a higher rate. However, the owner of the building did not profit from the rent increase. He got 15 percent of it, which was immediately burdened by an additional tax, and the state collected almost the whole of the 85 percent as a fund for building purposes.

This rent rise was followed by a startling action on the part of the administration. Owners of buildings who had succeeded in rebuilding or putting into repair their partly destroyed homes are being evicted and the places taken over by party members.

This is altogether contrary to the promises made after the Communist regime came to power. At that time it did everything possible to encourage the rebuilding and repairing of ruined buildings. Since owners were fearful that their investments would be lost and all property nationalized, the Government issued a declaration in 1945 to the effect that an owner who rebuilt in whole or in part a ruined building would be exempt from anything like nationalization for a long period of time.

Trusting in this declaration, a great many owners devoted their funds and their energies to such rebuilding, believing that at any rate they and their families were assured a roof over their heads. But on November 23, Mayor Tolwinski of Warsaw issued an order nullifying that promise.

Certain conditions are named under which owners may be allowed to remain, but these are so elastic that in practice they are of no value. Any apartment or house that is wanted by a Communist can be taken. And since early in December a committee consisting of three Communists has been making the rounds of the places that had received permits to rebuild or repair. The purpose of the inspection is to establish reasons for the eviction of the owners and for the installation of other persons or groups.

Congressional Council for the Second Massachusetts District

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

M. FURCOLO. Mr. Speaker, I respectfully call the attention of Members of the Congress to something new that I have inaugurated in the Second Congressional District of Massachusetts. Several of the Congressmen who have asked me for details of the plan have suggested that I bring it to the attention of all the Members at the opening of this session of the Congress.

I have established a Congressional Council for the Second Massachusetts District. It is an experiment in democracy that is intended to give the people a greater voice in Government than they now have. The Congressional Council is basically and fundamentally the creation of a people's lobby. It is aimed to subject the Congressman to the only type of lobbying power he is not subjected to at the present time: a lobbying power of the average, everyday citizens who are the constituents we represent.

We all know that every Congressman is constantly lobbied by various interests and pressure groups. I do not use the word "lobby" in its sinister or underhanded connotation because a great part of the lobbying that is done is carried on openly and publicly. Most so-called lobbying is simply an attempt by certain interests to persuade the Congressman to think and vote along certain lines. That is the function of those who lobby for farmers, labor unions, manufacturers and industrialists, veterans, old-age groups, and so on.

A great part of the legislation passed by Congress, both good and bad, has been written or promoted by lobbyists. The influence lobbyists may have on our legislation is perhaps indicated by statistics which show that in the last Congress over a thousand registered lobbyists spent over a reported $6,000,000 in their attempts to show why certain legislation should be passed or defeated. There were, of course, other unregistered lobbyists who spent unreported sums of money for the same purpose.

Lobbying can be both beneficial and harmful. It is beneficial when it brings to the Congressman's attention certain facts and arguments showing why certain legislation will be good or bad. That educational phase of lobbying is advantageous to the country. Lobbying is harmful when it does not disclose all the material facts to those who must vote on legislation that will affect all the people. Unfortunately, the average lobbyist's function is merely to represent his particular client's side of the story. He skillfully performs that duty without feeling any obligation to ascertain or inform the Congressman of the effect of that legislation upon other groups or segments of the population whose interests may be adverse or conflicting to the lobbying influence.

I assume that lobbying either should not or cannot be abolished. Its educational benefits should certainly be retained. While its deleterious effects can probably never be completely suppressed, they should at least be controlled. Is there any reasonably practicable way to achieve that result?

I can merely outline my own suggestion, which, to the best of my knowledge, has never before been tried. Briefly it is this: I have called upon many of the leading citizens of my district to form what I have termed a congressional council. The group is nonpartisan and nonpolitical and has not been handpicked by me. Of the 45 members, only 5 were selected by me. The rest were chosen by their own organizations or by virtue of their election by the people.

My district is composed of 3 cities and 17 towns and has the usual segments of population in all walks of life and varieties of occupations. The cooperation that has been extended to me by the citizens in accepting the duties of membership on the congressional council is perhaps best illustrated by a quick breakdown of the membership of the council.

Members from the local town and city governments include the 3 mayors and 14 selectmen, 1 from each town. The boards of selectmen of three towns did not accept my invitation to send a representative to the council. The three large labor organizations in my district, the A. F. of L., the CIO, and the Brotherhood of Railroad Trainmen, each sent a representative selected by the organization itself and not chosen by me. The same is true of the veterans of World Wars I and II, each group sending a veteran. The chamber of commerce has a representative as does the local association of employers, the nearest approach to the NAM in my district. Farming interests are represented by an editor of the National Grange publication and by a small farmer who is not a member of the Grange. There is also a small-business man and a nonunion workingman. The council has one member who is fairly representative of the needs and wants of the aged. The high schools have cooperated by sending two seniors who have the point of view of the coming generation. A representative of the fish and game and wildlife conservation interests is also on the council because my district has thousands of people who are outdoor-life enthusiasts. There being several institutions of higher learning in the district, the council also has a professor of economics and a professor of government among its membership. Education is also further represented by the presence on the council of the author of the nationally known Springfield plan, which is the local school system's answer to the racial problem. Four of the five large newspapers in the district have sent representatives as have the two radio stations. These representatives are not there in any reportorial capacity but

rather from the public service viewpoint. Incidentally, the council's meetings are public and are covered by reporters who are not members. Two representatives from the State legislature, known in Massachusetts as the general court, are also on the council. We also have at least one white-collar office worker, a Federal employee, and three housewives, one of whom is a widow with two small children. I selected the housewives myself because, at least to date, we don't have any organization of housewives, whether that is fortunate or unfortunate. However, I felt it was important to have the viewpoint of women who have to do the buying and run a home on the pay envelope.

I probably have not mentioned all the membership of the Congressional Council but what I have said should indicate the general make-up. It is a cross-section of my district. I believe that anyone in the district who looks at that Congressional Council can feel that someone in his walk of life, with his general problems and needs, and with his viewpoint, is on the council.

Geographically, the council includes people from every section of the district; politically, it is divided about equally between Democrats and Republicans. With people of every race, creed, and color, the Congressional Council is truly an experiment in democracy conducted in the melting pot of the world.

The functions of the Congressional Council are many and varied and, because there is no precedent for it, we are of necessity proceeding by trial and error method. Probably its primary function is to enable the Congressman to rapidly obtain a cross-section opinion on the effect of legislation upon his district. He knows how legislation will help or hurt because the members of the council, who are representative of the walks of life from which they come, keep him posted. Of course he is not bound in any way by their opinions—but he at least knows their opinions and then acts as he himself sees fit, having their opinions in mind.

Secondly, the council knows what is going on. It keeps a constant check on the activities of the Congressman and thus brings the Government closer to the people and the people closer to the Government. I think that is a worth-while goal, especially in a democracy we want to keep. Experience in other parts of the world proves that when the people get away from the government it is not long before the government gets away from the people.

Thirdly, the existence of the council makes it almost impossible for a Congressman to be lobbied without the knowledge of the people of his district—and it insures the Congressman that he will always get all sides of the story. He is sure of that because someone who knows a different side of the problem is on the council, comprised as it is of representatives of manufacturers, farmers, labor—both union and nonunion—small business, landlords, tenants, taxpayers, employers, veterans, education, Federal employees, housewives, town, city, and State officials, the aged, youth, and so on.

Fourthly, the Congressional Council should be helpful to the district even in noncongressional matters. It brings together in one body all the leading officials of the towns and cities in the district, which should tend toward greater cooperation by the local governments of the district. It also brings into one group many of the outstanding civic leaders and public-spirited citizens of the district, making possible joint action by influential people that should benefit the residents of the district

Fifthly, it provides an ideal sounding board for various nonmember organizations and groups which wish to create a public opinion for or against some project.

Unquestionably, there are, of course, certain disadvantages from the purely personal point of view of a Congressman. The Congressional Council can be politically dangerous to a Congressman if the members seek to use it for political obstructionism and other partisan tactics. I am confident no one in the group in my district has accepted membership with that aim in mind. However, in my opinion, even the possibility of that happening is unworthy of consideration when weighed against the tremendous good that can be accomplished for the district by a Congressional Council.

Secondly, let no Congressman adopt the Congressional Council plan through any desire to ease the burdens of his office. It increases the burden. It will keep a Congressman alert and of necessity make him better informed because the council wants to know more than just a vote. It will also want to know the why and wherefore of that vote.

As one who has not yet earned his spurs in the Halls of Congress, I have been hesitant and reluctant to present this topic to those who have already won respect and admiration for their legislative service. I do so only because of the urgings of those Members to whom I have described the Congressional Council plan and who feel that it should be brought to the attention of all the Members of the Congress.

I cannot give any proof that a Congressional Council will succeed admirably or fail miserably in its purposes. I can merely briefly outline its machinery and goals. I repeat that, to the best of my knowledge, the plan has never before been tried any place. Consequently, the Congressional Council in my district is proceeding by trial and error method. There will undoubtedly be changes in its membership, procedure, and functions, as the passage of time proves the need.

The Congressional Council is purely a voluntary plan, not created by legislation. Strictly speaking, it has no legislative function. Yet I believe that if each Congressman adopted what I have termed the Congressional Council plan, it would help promote more good legislation and prevent more bad legislation than anything I can think of. I offer it for the consideration of Members of the Congress.

Farm Commodity Prices

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. H. CARL ANDERSEN. Mr. Speaker, a very interesting common sense editorial appeared in today's Washington Times-Herald entitled "How High Are Those Prices." This editorial states that the only scientific way to measure prices is by comparing whatever you want to buy with the hours you have to work to earn enough to pay for it. Some of the country's leading economists find that in 1914 the average wage earner had to spend 30 hours on the job to buy a week's supply of food for his household. They also discovered that in 1948 while that same family-sized basket of food costs quite a few dollars more than it did in 1914, the average wage earner earns money enough to pay for it by only 12 hours work. I congratulate the Times-Herald, Mr. Speaker, on its approach to this very important problem of prices. In accordance with permission heretofore granted, I include the editorial as part of my remarks:

HOW HIGH ARE THOSE PRICES?

We've enjoyed complaining, as loudly as anybody, about prices which we've had to pay for food and other necessities, the past few years. Many of these high price tags, we have noted, were brought about deliberately by our New Deal masters, in accordance with their standing policy of fattening up the voting-age farmer, at the expense of the average American consumer and taxpayer.

Our good housewives have had considerable to say also in recent years about politicians who plow under good food and kerosene grade-A potatoes, and we've applauded every indignant girlish yelp.

Nevertheless, we're now wondering about prices in general. Many of them were needlessly high, of course. But were they, even in record smashing 1948, so high as to be completely out of line with our American economy?

As it happens, some of the country's leading economists have been busying themselves with just that question.

YARDSTICK FOR PRICES

One of the best recent roundups on prices has just been completed by the economists and statisticians of the National Industrial Conference Board, and we'll try to boil down a few of their points to fit this space.

First of all, these experts say, we shouldn't think of prices in terms of mere dollars. Dollars have a tricky habit of changing their own value in times of inflation and depression. In the United States today, for instance, $5 would be much too high a price for a one-passenger steak. But in China, using inflated Chinese money, the same grub would be a bargain, maybe, at $5,000,000.

The only scientific way to measure prices, the economists say, is by comparing whatever you want to buy with the hours you'd have to work to earn it.

Using that yardstick, you'd probably consider an egg cheap if you could get it by working for, say, just 1 minute. But if you were to be charged a whole hour's labor for that one egg you'd probably switch to spinach.

Employing this system of comparison, NICB statisticians have gone back for a third of a century, checking scores of United States food prices against the average wages per hour of that particular year. And most of their answers seem to prove that today's groceries, despite the high dollar price tags, are even cheaper than they were in the good old days of, say, 1914.

Back in 1914 they found, if you were an average wage earner with an average-sized and average-hungry family, you had to spend 30 hours on the job to buy a week's supply of food for your household.

In 1948 you were doing considerably better, by comparison. That same family-sized basket of food costs you quite a few more dollars than it would have in 1914. But you earn it by only 12 hours' work, instead of 30.

CHICKEN ON THE TABLE

Take a 5-pound roasting chicken as an example. In 1914 a factory worker would have had to labor for more than 4 hours to get the bird. The same weight roaster costs a 1949 worker just a bit more than 1½ hours on the job.

It's the same story with other modern consumer commodities, especially foods. The price of round steak, as any housewife knows, is away up there in dollars and cents. In fact, round steak in 1948 was a whopping 370 percent higher than it was in 1914. But hourly wages have gone up even more. In terms of work-hours, that piece of round is now down approximately 40 percent.

So that's the economists' story about some prices today, and we think their way of reckoning is not only cheerful but sound. By improving his efficiency and letting machinery do as much of his work as possible, the average American has achieved the world's highest real living standard, no matter what the price tags say.

In other lands that's not the story. In Pal Joe's workers' utopia, for instance, Ivan still sweats 70 minutes to get the loaf of bread an American earns in 7½. And Ivan works 10½ hours for a pound of butter, which is worth half an hour's labor here.

Maybe, before we let out our next yelps about those outrageous pork-chop prices, or whatever, we'd better try figuring out the bill by the price-wage system.

Frankly Socialistic

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a statement by Gould Lincoln appearing in the Washington Evening Star January 6, 1949. This statement conveys clearly the socialistic tendencies of the President as expressed in his state-of-the-Union message.

The shortest definition I know for socialism is that it is Government ownership. That philosophy is repugnant to every principle upon which this Nation stands. If this country is to build, if it is to grow, and if it is to live, the principle of private ownership and the free competitive enterprise system must be preserved. The President's philosophy would destroy it.

TRUMAN MESSAGE HELD FRANKLY SOCIALISTIC—LITTLE CONGRESS ENTHUSIASM SEEN FOR MANY OF HIS PROPOSALS

(By Gould Lincoln)

Judging from the reception given President Truman's state-of-the-Union message, the Chief Executive may find it easier to lead this Democratic Congress to the trough than to make it drink. While Congress gave the President personal recognition—because of his great fight for election—when he appeared before it, its enthusiasm for many of his proposals was at most restrained. The very size and character of his program, with the huge costs it may entail, made some of his own party gasp.

In addition, Mr. Truman's message was the most frankly socialistic ever presented by a President of the United States. At the very outset he said that: "We have abandoned the trickle-down concept of national prosperity. Instead, we believe that our economic system should rest on a democratic foundation and that wealth should be created for the benefit of all." The trickling down in the future will come from Washington as it pursues the already well-established Democratic custom of Government hand-outs. His statement is construed as the very foundation of a system under which the Government takes wealth from the people—all the people, for all pay taxes in one form or another—and redistributes it as it sees fit.

"RED HERRING" SEEN

The President requested Congress to authorize an immediate survey of the adequacy of production facilities, particularly of steel, for the purpose of authorizing Government loans for the expansion of production and of authorizing Government construction if action by private industry fails "to meet our needs." This may have been made at the request of CIO President Philip Murray, whose steel workers will be interested, but it proposes a long step toward the socialization of industry. Yet the President continues, in his message, to proclaim his affection for the free-enterprise system, and in so doing seems to be dragging a "red herring" himself.

Except for this proposal to have the Government go into the steel business, if necessary, the myriad recommendations submitted by the President are not new, from the repeal of the Taft-Hartley labor law down to providing stand-by authority to impose price and wage controls.

Apparently the President recognizes that the program is going to cost more money, for he recommends an increase in taxes designed to bring in an additional $4,000,000,000 revenue. That, however, might be a mere drop in the bucket if the entire Truman program were carried out. His tax recommendations are designed to fall upon the medium well-to-do and the wealthy rather than upon the great mass of workers. But even so, the sound of increased taxes, in peacetime, does not sit well even upon members of his own political party.

OTHER DISCREPANCIES NOTED

How long Mr. Truman will be able to make such recommendations as contained in his message and not openly commit himself to state socialism remains to be seen. Already British and other foreign commentators are interpreting his present remarks as lining him up, on all fours, with the socialistic governments of Europe. They can see little difference, for example, between Mr. Truman's proposals and those of the Socialist government in Britain. One cynic remarked that, at any rate, if the Truman program goes through, the American people will be so busy paying for their own socialistic measures they will not have money to spare to continue support of the British system.

Mr. Truman's devotion to the free-enterprise system while offering a socialistic program is not the only discrepancy in his message. His determination to keep up farm prices and wages of industrial labor and at the same time bring about a reduction in the cost of living will be a good trick, if he can work it. He opened his message with a statement that he was happy to report the state of the Union is good and then listed a long series of ills from which the American people are suffering.

Also Mr. Truman's message sounded just as optimistic as that of President Hoover in 1929, in that Mr. Truman said the American people, and himself, have decided that poverty is just as wasteful and just as unnecessary as preventable disease. Mr. Hoover spoke of a chicken in every pot and the elimination of poverty.

Polish Socialist Party Swallowed Up After Purges

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 7, 1949

Mr. REED of New York. Mr. Speaker, this country seems to be proceeding step by step to change our government under the pattern of Karl Marx, who in his manifesto of 1848 recommended to the workers of the world definite means of destroying free enterprise and the capitalistic system as follows:

First. A heavy progressive or graduated income tax;

Second. Abolition of all right of inheritance;

Third. Centralization of credit in the hands of the state, by means of a national bank with state capital and an exclusive monopoly.

Fourth. Centralization of the means of communication and transport in the hands of the state;

Fifth. Extension of factories and instruments of production owned by the state.

Under leave to extend my remarks in the RECORD, I am inserting an article which appeared in the Christian Science Monitor on Thursday, January 6, 1949, which tells what is occurring in Poland under the leadership of the communistic power and communistic ideology:

WIDENS COMMUNIST GRIP—POLISH SOCIALIST PARTY SWALLOWED UP AFTER PURGES

ZURICH.—Formal merger of the Polish Socialist and Communist Parties has served to register before the world a fact that already had been achieved and may be accepted as a proclamation that Communist power and Communist ideology are to dominate in Poland.

A special manifesto, which was issued on the eve of the congress at which the merger was formally effected and was presented as the product of both Communist and Socialist headquarters, declared that the new United Workers Party would put an end to the breach which has existed for more than 50 years in the ranks of the Polish working class and bring the final victory of Marxism-Leninism over reformism and nationalism.

FIFTY-YEAR SETBACK?

One can hardly escape the conclusion that the fusion terminates Socialist influence in Poland for the time being. A half century's

work seems to have been wiped out. Ever since its inception at the end of the nineteenth century, the Polish Socialist Party has been fighting for liberty, freedom, and independence for Poland on the lines and fundamentals of western democracy. It also fought against communism. This will cease completely, apparently, as communism becomes the all-embracing force in the country.

The merger took place after ruthless and bitter purges in both the Communist and Socialist Parties. No figures are available, but those in the know maintain that altogether more than 100,000 members of the Socialist Party were expelled in the course of a few weeks. The number of Communists expelled was much smaller but also included many who had played a prominent role in party affairs.

Like those expelled from the Socialist Party, these are living in constant dread of arrest and persecution. It is reported that several hundred Socialist purge victims already have been arrested. Some are to be tried shortly on various charges, according to information from reliable sources.

COMMUNIST TAG AVOIDED

The Communist leaders have avoided the word "Communist" in connection with the merged party, because they are conscious of the unpopularity of communism among Poles and of the widespread popular hostility to the present rulers of Poland. That is why they call the new organization the United Workers Party.

But very few Poles are deceived. Practically all know very well what the fusion means. They are aware that although some good Socialists remain in the fused party for various reasons, everything will be run as the Communists dictate.

Leaders of the other progovernment parties that are still allowed to function in a vestigial form are hastening to get on the band wagon. They give their blessings to the merger and hail it as a great achievement in Polish history.

ABRUPT ABOUT-FACE

Thus the leaders of the Polish Peasant Party, along with those of the Democratic Party and even the Roman Catholic Party, made declarations welcoming the merger. Special representatives of all these parties attended the congress to demonstrate their joy at this historic event.

Nothing probably shows more clearly the debasement of political affairs in eastern Europe than these laudatory speeches and articles by leaders of parties known formerly for their hostility to communism—today they are overreaching each other in praise of it.

On the eve of the congress, both President Bierut as secretary general of the Communist Party and Premier Joseph Cyrankiewicz as leader of the Polish Socialists issued statements outlining the immediate purpose of the merger and laying down fundamentals for the future.

SOVIET PATTERN SET

Mr. Bierut formulated an 8-point program the main item in which declares that the new party, "enriched by the experience of watching the building of a Socialist state in the U. S. S. R.," will aspire to construct a socialistic Poland on the same fundamentals. Similarly Mr. Cyrankiewicz, who now has dropped his Socialist mask, openly supports the same policy as the Communists.

While the leaders disport themselves as though filled with joy, the people at large look on with much apprehension and anxiety. Only here and there has some enthusiasm been demonstrated. The workers in the factories held mass meetings as an anticipatory celebration of the merger. In nearly all cases Communists organized these meetings and drew up the congratulatory cables to the leaders.

In the Polish countryside silence prevails. There not even the Communists as yet have dared to organize a welcome for the merger. The Polish peasant is clearly aware that the first step after the merger will be the organization of collective agricultural cooperatives in the villages.

COLLECTIVES DREADED

He dreads this more than anything else.

Government spokesmen have been urging such cooperatives for months, and the Polish peasant realizes that the Communists are going to start putting this policy into effect without much more delay. "The United Party," says the precongress manifesto, "will be the supreme form of the working class organization and will express the interests of the working people in the cities and villages."

How strong will be the emerging United Workers Party? About 6 months ago the two emerging parties claimed to have had a membership of nearly 1,000,000 each. Taking into consideration the recent purges, it is believed that the new organization will number about 1,750,000. This does not take into account the new united youth organization, numbering well over 1,000,000. It is also Communist led.

TEMPORARY GAIN

In a nation of 24,000,000, which the Poles number today, this certainly could constitute a very strong Communist preponderance—but only superficially. Merger or no merger, most Poles will tell you that, were it not for fear of losing their jobs or suffering discrimination, the vast majority of the membership in the Communist and pro-Communist organizations would desert in a single day.

The few thousand fanatics would be helpless and ineffective. The merger of the Polish Socialists with the Communists is unquestionably a victory for the Communists and for communism, but most Poles are inclined to regard it as temporary.

Housing Legislation Is First Need

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, it is no fault of uncounted thousands of American families that they are in acute distress on account of lack of available dwellings. But it would be the serious fault of this Congress if legislative action is not taken immediately. There is the problem of the would-be home buyer who finds the cost, the down payment, and installment payments out of range of his pocketbook and his earnings. There is the even graver problem of the renter in communities where no rental properties are available. There is the problem of the young married veteran who finds that all his GI benefits are of no aid to him in finding a home for his family. In the city of Detroit for example, it is almost a miracle if one can find a house to rent. The rent control law still permits evictions for many reasons, even where the tenant is paying his rent. Judgments of eviction in scores of such cases are being rendered every day with a hopeless outlook for the evicted tenant who can not find a place to rent and has to break up and disperse his family letting them find shelter where they may.

There is a crying challenge to this Congress in this situation. We Democrats have taken over the reins of authority and responsibility in this Congress just because hopeful millions throughout this Nation turned to us in their despair at legislative lassitude and neglect. Let us not follow the example which brought the Republican Party to an untimely end of their regime after a scant 2 years of congressional majority and responsibility. Ample hearings have been had. The voters have decisively expressed themselves. Let us get to the earliest possible consideration of such legislation as H. R. 525, the National Housing Act of 1949 and enact it into law and put the resources and vigor of this country into making it possible for these hundreds of thousands of American families to live in homes.

Medical Care for Miners

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an Associated Press article as it appeared in the Washington Post of Sunday, January 9, 1949. While this story refers to the soft-coal fields, a separate fund is being used for the great anthracite-coal field workers to the same wonderful purpose. Here, indeed, is a milestone of progress in American social and industrial history.

MEDICAL CARE PLAN FOR MINERS BEGINS

(By the Associated Press)

John L. Lewis began yesterday to put into operation the United Mine Workers' far-reaching program of free hospital and medical service to ailing coal miners.

The service will be provided by the UMW welfare and retirement fund, of which Lewis is chief trustee. A 20-cent royalty on each ton of coal finances the fund, now building up at $100,000,000 a year.

From this, Lewis, the union's president, has announced he plans eventually to finance all medical and hospital care for the 400,000 soft coal miners. A separate fund is being used for Pennsylvania's 80,000 hard coal diggers.

As a start, activities will be directed to the hospitalization of miners who are already receiving disability benefits and pensions. These men, because they are not working, are unable to obtain services through an existing wage check-off system.

Also among the first to be cared for will be those with serious ailments who are unable to get adequate treatment in their communities.

Besides the hospital and medical program, the huge welfare fund finances monthly pensions of $100 to 62-year-old miners who have worked 20 years.

The medical and hospital program is headed by Dr. Warren F. Draper, former Deputy Surgeon General of the United States Public Health Service. Dr. Draper was major general in charge of the Public

Health Branch at Supreme Headquarters, Allied Expeditionary Forces, during World War II. He also was former State health commissioner of Virginia.

Dr. Draper announced today the establishment of 10 area offices, with a physician in charge of each, to serve the 24 union districts in the soft coal fields.

Agriculture and the Public

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am happy to include an article by Mr. Harry J. Beermink, general manager of the Washington Cooperative Egg and Poultry Association. This article deals with the general principle behind price supports and is an excellent example of the fairness of the thing of one of the ablest leaders in agriculture.

AGRICULTURE AND THE PUBLIC

I am going to discuss with you in this message today a subject which needs to be told to every consumer in the cities, and is a story which farm leaders among cooperatives, the Grange, the Farm Bureau, and other farm organizations are telling before city groups at every opportunity. It is a story that every member could well be conscious of and when opportunity presents carry the message to friends in the cities.

We are living in a time when agriculture is in the spotlight and in a world that is food conscious. We hear rumors from some sources again advocating Government price controls and rationing. Farmers know the clumsy hand of Government controls, which spells dislocations, black markets, and fails to reflect the sensitive balances between supply and demand.

The city housewife, pressed to make her dollar stretch, frequently accuses the farmer of profiteering at her expense when prices are high. The facts are that the farmer receives approximately one-half of the consumer's dollar, averaging during the past year from 50 cents to 53 cents, varying between commodities. The farmer's share of the consumer's dollar is highest for poultry, turkeys, meats, dairy products, and eggs, ranging from 62 cents to 77 cents, and the lowest for vegetables, cereals, and fruits, ranging from 16 cents to 50 cents.

The difference between the price the farmer receives and the consumer pays in the city—which the farmer and the consumer both frequently question as being too high—represents jobs off the farms in the processing, wholesaling, retailing, transportation, advertising, packaging material, electrical energy, gasoline, rubber, taxes, interest, telephone, and other costs. These off-the-farm jobs in the handling and processing of food and fiber provide employment to approximately 25 percent of the people in America, and from that standpoint materially help our economy, including markets for agricultural commodities. When the city dweller understands these facts she is in a much better position to appreciate that when farm prices drop, everyone suffers.

Many people are under the erroneous impression that the prices of meats, turkeys, eggs, and many other commodities are the result of Government hand-outs to farmers. As an example, the Government support price for eggs is 35 cents to the producer, which has little or no effect on the price the consumer pays. The same could be said for meats, turkeys, and poultry—and the support price for wheat has little if any effect on the cost of a loaf of bread in the city.

Unfortunately, city people do not know these facts, and as a result farmers and agriculture in general fail to develop good public relations. Farmers need to produce. They are happiest when they can produce to capacity, but by the same token they need customers. Therein lies the importance of good will and friendly relations between people in the rural areas and the people in the cities.

We have a story to tell. A constructive, interesting, and wholesome story. All of us working together can be far more productive and effective, so, when you see your friends in the cities take advantage of the opportunity of creating good will and understanding, which is in the interest of farmers as well as consumers.

Washington Spy Case

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, January 10, 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Washington Spy Case May Tax Imagination, But It Happened, and Can Happen Again," published in a recent issue of the Salt Lake Tribune.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WASHINGTON SPY CASE MAY TAX IMAGINATION, BUT IT HAPPENED, AND CAN HAPPEN AGAIN

In a letter to a Washington newspaper recently a noted Harvard professor condemned the House Un-American Activities Committee in strong language. His scholarly diatribe was based on the premise that the whole spy case was a perverse dream whipped up for a political circus and all connected with it were innocent. He did not entertain for a moment the possibility that anybody could be guilty.

Perhaps his letter represented a segment of current American thinking. After all, it is difficult for the average loyal citizen to conceive that a trusted official high in Government circles would actually steal confidential state papers to have them passed to a foreign power.

Beyond the imagination or not, absolute proof has been brought forth, and now the plain facts should be recognized and action taken to prevent such a thing from continuing.

A careful summary of what happened has been written by Roscoe Drummond, authoritative Washington correspondent for the Christian Science Monitor. Here it is:

1. As far back as 10 years ago, when Russia was getting ready to collaborate with Hitler, the United States Government began to be infiltrated with American Communist espionage agents who succeeded in stealing some 200 secret dispatches.

2. The security provisions were so loose and lax in the State Department at the time that there can be no assurance that many more confidential papers did not find their way into the hands of Communist agents. While security procedures of a decade ago have been strengthened greatly, they are not spyproof, certainly not from spies able to work from within today.

3. The probable spy ring within the State Department very likely was larger than the Chambers-Hiss case by itself suggests. It should not be overlooked that a year ago the State Department discharged 11 employees because they were found to be bad security risks, and all of them, in varying degrees, were implicated in the Communist apparatus operating within the Government.

4. Latest developments, including the indictment of Alger Hiss, probably insure the continuance of the House Un-American Activities Committee, which suffered badly in the recent election and very likely would be on the way out today if it had not succeeded in bringing to the surface evidence which eluded other agencies of the Government for several years.

Hostile critics point out that the first batch of Whittaker Chambers' microfilms was unearthed not by the committee, but by the pre-trial Chambers-Hiss libel hearing in Baltimore. The catch there is that there would have been no Chambers-Hiss libel hearing to bring out these microfilms but the evidence which came out in the committee hearings.

Furthermore, the stolen State Department documents were only a part of the cache. But the FBI and the Justice Department apparently did nothing about tracking down the rest of them.

Fortunately, the administration is beginning to disbelieve its own red herring propaganda enough to give serious attention to strengthening the Nation's espionage laws.

Note that the innocent-until-proved-guilty Mr. Hiss is indicted not on a charge of turning over secret Government documents to a confessed Communist spy; he is just being indicted for saying he didn't do it.

In other words, he is indicted for perjury only, because the espionage law permits any peacetime traitor who tampers with American security to go free if he can conceal his crime for 3 years.

How Is Our Income Distributed?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 7, 1949

Mr. REED of New York. Mr. Speaker, under unanimous consent, I am inserting in the Appendix of the CONGRESSIONAL RECORD an article by William Hard which appeared in the December 1948 issue of the Reader's Digest:

HOW IS AMERICAN INCOME DISTRIBUTED?

(By William Hard)

Preachers and teachers are among America's most forceful influences. As a group they feel their social responsibility. They are interested in "economic justice." Large numbers of them believe that our present distribution of income is grossly unjust. They express that view in the pulpit, in the classroom, in their writings. Their sincerity cannot be successfully assailed.

One question, though, can properly be asked: How accurately are they informed about the true facts of income distribution in this country?

The American Economic Foundation has attempted to find an answer to that question. It employed the Opinion Research Corp., of Princeton, N. J.—Dr. Claude Robinson, president—to make a poll of representative clergymen and teachers in communities

of more than 2,500 population. The clergymen were Protestant, Catholic, Jewish. The teachers were social-science teachers.

Among the questions asked by Dr. Robinson's trained interviewers were three that had to do with the general national distribution of the following forms of income: (a) Wages and salaries; (b) dividends and interest; (c) rents.

In each case the person interviewed was asked: "What proportion of this form of income do you think goes to people whose total income is under $5,000 a year? And what proportion do you think goes to people whose total income is $5,000 or more?"

The answers showed clearly that these preachers and teachers, as a group, gravely overestimated the income payments going to the upper brackets and gravely underestimated the income payments going to the lower brackets. Let us grant that our present income distribution contains many flaws. Surely, though, it is desirable that our spiritual and intellectual leaders know the facts about it.

On the point of wages and salaries, the answers given in the poll averaged out to the following estimate: Only 66 percent of wages and salaries goes to the people with total income under $5,000.

This answer is at great variance with the facts. These facts are disclosed in a pamphlet published last year on the national income and its distribution by the Rev. Edward A. Keller, director of the bureau of economic research of the University of Notre Dame. Father Keller took the official figures, as issued by the United States Department of Commerce and by the Treasury Department, and broke them down into tables showing the actual distribution of all the main forms of income.

The tables showed that our $5,000-and-over group gets only 10.2 percent of our total of wages and salaries, while our under-$5,000 group gets not 66 percent, as Dr. Robinson's preachers and teachers think, but 89.8 percent.

Moreover, when the people in the $5,000-and-over group get through paying Federal income taxes, their proportion of all wages and salaries shrinks to 5.5 percent. There is not enough fat any more on these "bloated" individuals to make a meal of any heartiness for the rest of the population, even if they were swallowed whole.

Let us look at dividends and interest. The people in the $5,000-and-over group own large quantities of corporation stocks and bonds. On the other hand, the people in the under-$5,000 groups own millions of savings-bank deposits and insurance policies and shares in building and loan associations, on all of which there are interest payments. So how does it come out?

Dr. Robinson's preachers and teachers—on the average—think that the people in the under $5,000 group get only about 29 percent of the total of dividends and interest. The fact is that they get 69.4 percent of it. The people in the $5,000-and-over group get only 30.6 percent of it. And, after Federal income taxes, they get only 17.3 percent.

Now dividends and interest are the supremely capitalistic form of income. They represent a return on investment. They represent profit. Is profit disgraceful? It often seems to be thought so. Then let it be understood that the overwhelming bulk of this disgrace goes to Americans with incomes under $5,000 a year. That is American capitalism as it actually is.

Now let us consider a character who in many minds is particularly obnoxious. Let us consider the landlord. That last syllable of his title indicates his descent from medieval times, when there were lords and serfs. He still retains his feudal reputation for arbitrary grasping behavior. So today we have special Federal legislation controlling rents on behalf of the tenant, who is by definition deserving, against the landlord, who is by definition predatory. Who, then, are these peculiarly predatory Americans?

Dr. Robinson's preachers and teachers, on the average, think that the people in the under $5,000 group get about 30 percent of the total of all income from rents. The fact is that they get 83.1 percent of it. The people in the $5,000-and-over group get only 16.9 percent of it. And, after Federal income taxes, they get only 9.6 percent.

In many countries landlordism is a habit of the few. In the United States it is a habit of millions.

The fact is that, partly by a natural American process and partly through certain artificialities of taxation, the millions in this country are steadily getting a larger and larger proportion of the total national income from all sources. And what has happened to the few citizens who have incomes of $25,000 a year and over—the former economic royalists who are now gluttons of privilege? Father Keller's calculations exhibit their fate from 1917 to 1944.

In 1917, after paying Federal income taxes, they had 6.7 percent of all national income distributed to individuals. In 1932—under President Hoover—they sank to 3.4 percent of the national income. Under President Roosevelt they continued sinking. In 1938 their share of the national income was 3 percent. In 1941 it was 2.5 percent. In 1944 after paying their fantastic uppermost-bracket taxes, they garnered into their privileged pockets, as their proportion of the national income of the American people, just 1.3 percent. And Father Keller's studies of subsequent years convince him that no substantial change has occurred since 1944 in the distribution of income between higher- and lower-income groups, except perhaps in favor of the lower groups.

It is often said—and especially by the men of Moscow—that our whole American economic life is controlled by a handful of monopoly-capitalists—that is, by persons among those in the income group above $25,000 a year. If such persons do indeed control our whole American economic life, how big hearted they are. Of their own free will they have deliberately reduced the share of their group in our total national income to one-fifth of what it was in 1917.

The fact is, of course, that forces far beyond the control of our monopoly-capitalists are reshaping the distribution of our national income, in some ways for the better, in some ways for the worse. Our central effort now should be to cease the abuse of one group by another and to come to agreement on the facts.

Some statistics issued by some corporations are misleading. Equally so are some statistics issued by some unions. If there could be agreement on statistics, one of the great causes of conflict between corporations and unions in the course of their collective-bargaining negotiations would be removed.

That point has been strongly stressed by Fred G. Clark, general chairman of the American Economic Foundation. He has earnestly suggested: In a labor dispute let all the arithmetic of both sides be checked by impartial accountants. Let agreed figures be accepted by both sides. Management then could not be accused of hiding profits. Union leaders could not be accused of distorting them. Negotiations could proceed not on suspicions but on facts.

If Mr. Clark could ever get total agreement on identical facts for corporation executives and union leaders and agricultural leaders and Government politicians to use in their controversies with one another, he would certainly be one of America's greatest benefactors. We would make national progress much faster. We would cooperate for that progress much more fraternally.

In any free society there must always be freely expressed tensions between group and group. The only way to ease those tensions is through facts accepted by all groups. In the United States today there is no group—not the preachers, not the teachers, not the businessmen, not the labor men, not the farmers, not the politicians, not the journalists—that could truly say:

"As a group we have a comprehensive and clear image in our minds of the interlocking rights and wrongs and of the interlocking activities and ambitions of all the various segments of the American economy."

We must travel far before we really understand this America of ours in its economic workings. But let us start traveling, and traveling fast, lest the present tensions between our groups split us apart into chaos.

Imitation of Butter

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include the following joint statement by the National Cooperative Milk Producers Federation, the American Butter Institute, and the National Creameries Association:

A JOINT STATEMENT

The National Cooperative Milk Producers Federation, the American Butter Institute, and the National Creameries Association believe that the time has come to urge Federal and State legislators to prohibit the imitation of butter through the commercial manufacture or sale of oleomargarine colored yellow in semblance of butter.

Impartial surveys in public eating places indicate widespread fraud and deception in the sale of yellow substitutes for butter. When the public asks for and pays for butter in stores or public eating places it is entitled to get real butter—not a product artificially colored to resemble butter.

The major Federal curb on "butterleggers" has been exercised in the past through the power to tax oleomargarine. Recent Supreme Court decisions now appear, however, to extend and strengthen the Federal Government's power to cover those intrastate activities which may affect interstate commerce.

Such decisions would seem to authorize a ban on oleomargarine colored yellow in imitation or semblance of butter, and should enable the Government to do away with the present commodity taxes and license fees on retailers, wholesalers, and manufacturers.

We, therefore, propose that the commercial imitation of butter be prohibited for the protection of consumer and dairy farmer alike, with adequate funds for enforcement by the Food and Drug Administration and appropriate State agencies.

Under this plan consumers will be able to buy all the oleo they want in its most economical, uncolored form without the payment of any taxes whatever. Retailers, wholesalers, and manufacturers would be freed of all burdensome bookkeeping and reporting requirements. Hospitals and other institutions would be enabled to serve uncolored oleo without license or tax.

WHY THIS POLICY?

With yellow oleomargarine readily available in semblance of butter, dairy farmers believe that consumer fraud and deception in retail outlets would increase.

There is every incentive to pass off imitations of butter as real butter—the difference in cost; the huge volume of sales involved; and the ease of substitution. No other basic food is so easily copied. There is no such thing as an imitation potato, for instance, or imitation bread.

Butter's naturally yellow color is the only key by which real butter can be identified at sight. And butter is the balance wheel of a dairy industry which supplies about 40 percent of our beef and veal as well as all of our milk. Proper soil conservation and a due regard for diversified agriculture require that butter outlets be maintained.

For the protection of dairy farmer and consumer alike, therefore, three leading dairy organizations believe that removal of taxes and other controls on oleomargarine should be accompanied by a flat ban on the commercial imitation of butter in stores and public eating places. The policy of the National Grange is in harmony with this viewpoint.

It's fair to consumers. No more taxes—free choice of spreads.

It's fair to retailers and wholesalers. No more license fees, withdrawal records or reports.

It's fair to 2,750,000 dairy farmers and dairy industry workers. It protects them and their customers from fraudulent competition.

It's fair to oleo manufacturers. It offers complete distribution through unrestricted retail outlets.

And it's supported by farmers the Nation over.

Community Contribution to National Defense

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. KEATING. Mr. Speaker, on January 14, the city of Rochester, N. Y., will again lead the country, as it has so often done in the past, in a new field of activity. This time it is in the matter of national defense, specifically in connection with the recruitment of a class of 40 aviation cadets.

Sparked by the Rochester Democrat and Chronicle and the Rochester Times-Union, Rochester will set an example of unification at work when this celebration is held, involving the cooperation and active participation of all regular and reserve components in the area.

Under leave to extend my remarks, I include a letter which I have received from Mr. Ira C. Sapozink, executive secretary, Rochester's All-Services Review, and associated with the department of public relations of the Gannett newspapers, outlining some of the plans and objectives of this celebration:

ROCHESTER TIMES-UNION,
DEMOCRAT AND CHRONICLE,
December 29, 1948.

Congressman KENNETH B. KEATING,
Fortieth District, New York,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: Just about a year ago this past November, Maj. Gen. Robert F. Webster, commanding general of the First Air Force, addressed a group in Rochester interested in aviation, and told of the need for procuring aviation cadets. Herbert W. Cruickshank, general business manager of the Gannett newspapers, was the toastmaster.

Inspired by the general's talk, Mr. Cruickshank took up the challenge of the First Air Force chief by announcing an all-out drive for aviation cadets in the Rochester area. General Webster at that point invited Mr. Cruickshank to act as chairman of an aviation cadet procurement committee in the Rochester area.

A few months passed during which time the machinery was set into motion to procure cadets for a July 1948 class. With the prime objective to stimulate recruiting interest, the Democrat and Chronicle and the Rochester Times-Union of the Gannett newspaper group launched an effective promotion and publicity campaign under the supervision of Mr. Cruickshank which resulted in the procurement of 26 cadets for the July class. This was termed by Air Force leaders as a remarkable feat and great tribute was showered the Rochester Gannett newspapers for their outstanding interest in the development of America's much needed air might today.

Following the successful procurement of the summer class, Col. Henry L. Barrett, acting for Major General Webster, invited Mr. Cruickshank and the Rochester Gannett newspapers to attempt to procure 40 cadets for the 1949 March class. Presently this campaign is under way with a most unique approach.

We have heard many stories about general unification of the armed forces. Well, Rochester is a community with great belief—Rochester manufactured means quality. This holds true in the promotion of public-service campaigns, too. In the challenge facing Rochester for the procurement of 40 cadets, Mr. Cruickshank called a meeting a few weeks ago of all of the commanding officers of the reserve components of the armed forces in the Rochester area including the National Guard, Naval Reserves, and Marine Reserves, as well as the regular Rochester area Army and Air Force recruiting commander to plan a military night in Rochester to be called the Rochester all-services review.

On January 14 between 5,000–6,000 Rochester area citizens and prospective candidates for military services are expected to attend the all-services review which will be held in the Main Street East Armory in Rochester, N. Y.

Chairman Cruickshank in a special announcement in the Democrat and Chronicle and Rochester Times-Union pointed out that the main reasons for the all-services review are as follows:

1. To honor United States Air Forces and to stimulate the procurement of aviation cadets in the Rochester area.

2. To stimulate recruiting of men for the Rochester area reserve units participating in the show.

3. To make citizens or Rochester more conscious of our need for national defense.

Highlight of the Air Forces night in Rochester will be the Five Hundred and Eighty-first Air Force Band which will be flown up to Rochester for the occasion through the personal interest of General Webster.

High ranking Army, Air Force, National Guard, Naval, Marine, and Organized Reserve officers have accepted an invitation to take the review.

I am writing you this letter to point out the general promotion support being given the Army and Air Force Recruiting Office, National Guard, Naval Reserves, Marine Reserves, and Organized Reserve in their recruiting efforts by the Democrat and Chronicle and the Rochester Times-Union, and to also emphasize the unity and harmony existing among the Reserve components in the Rochester area.

This information I thought would be of interest not only to you but to all of the Members of the House of Representatives.

Cordially,

IRA C. SAPOZINK,
Executive Secretary,
Rochester's All-Services Review.

The Seattle Air Tragedy

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written to Mr. Joseph J. O'Connell, Chairman of the Civil Aeronautics Board, by one of Seattle's leading and most civic-minded citizens, Mr. Lawrence M. Arnold. The self-explanatory letter relates to the tragic airplane disaster in Seattle on the night of January 2, in which 11 young college students were killed. Along with Mr. Arnold's letter I ask that an editorial from the Seattle (Wash.) Post-Intelligencer of January 5, 1949, be printed, as well as a news column from the Seattle (Wash.) Times of January 5, 1949, written by Mr. Ross Cunningham, associate editor of that newspaper. Both news items deal with this plane crash.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

SEATTLE, WASH., *January 6, 1949.*

Mr. JOSEPH J. O'CONNELL,
Chairman, Civil Aeronautics Board,
Washington, D. C.

DEAR MR. O'CONNELL: In all likelihood, you will probably not hear directly from any of the saddened, bereaved, and grief-stricken mothers and fathers of the 11 Yale students who were unnecessarily killed, and the many others who were critically injured and burned in the crash of a nonscheduled and charted DC-3 plane at Boeing Airport in Seattle on Sunday night, January 2, which plane was unable to leave the runways. You are, however, going to hear about it from many other sources and from me, not because my own son, a Yale student, barely missed taking this same flight, but because I have known most intimately many of these boys since childhood, and am one of the many thousands of incensed citizens who places the blame for this tragedy on the Civil Aeronautics Administration for lack of regulatory procedure at the airport.

The Seattle newspapers have carried headlines and photographs for 3 or 4 days about the tragedy and that its causes were being investigated in the usual manner by the officials of the CAA. Irrespective of all of the charges and counter charges, there was obviously only one cause for the incident, and that is that there was no one in authority to prevent the flight from taking place. The local newspapers, airport and CAA officials, and other observers have stated that:

1. The field was very icy and a fog was hanging over it.

2. Both visibility and ceiling were below the minimums required for a take-off.

3. Regularly scheduled air lines had canceled flights in and out of Boeing Field due to poor flying weather at that particular time.

4. Emmett G. Flood, Jr., who was to have piloted the plane, refused the flight, for reasons he failed to disclose, and a substitute pilot, William Chavers, agreed to take the flight.

5. William Chavers, the pilot, was warned twice that conditions were "below minimum," which was tantamount to telling him that the field was closed.

6. Ice, which had presumably been washed from the wings, not with hot water, but with an alcohol solution, had again formed before the plane took off.

7. All scheduled air lines serving the Nation are under strict company and civil aeronautic regulations, and are not permitted to take a plane in the air under field minimums, etc.

8. There must be a prompt and sweeping investigation of allegations that emergency equipment available at the airport was most inadequate.

9. Regulations must be changed to make sure that planes are not permitted to take off under weather conditions of the kind which prevailed at the time of the crash.

I think that most people realize that nonscheduled flights are not subject to the usual regulations and restrictions which are imposed on the regular air lines, but such chartered planes are, nevertheless, public carriers, and under your jurisdiction, and should be similarly safeguarded in every respect. I feel confident, however, that the public is unaware that such nonscheduled flights cannot be properly serviced because adequate facilities are not available to them. The local press has stated for instance, that all United and Northwest Airlines' planes out of Seattle earlier and later that same evening, had obviously been most thoroughly de-iced before departure.

There can be, therefore, no justification whatsoever for the inexcusable and virtually deliberate slaughter of these fine young boys, all of whom are from prominent Northwest families, and the only comment one hears is that, "they never should have permitted the flight to take off." I am sure that the public feels it is your responsibility, above all others, to provide safe air travel at all times, whether it is in nonscheduled or scheduled flights. I think the public furthermore appreciates the fact that the so-called nonscheduled flight business in the United States is providing employment to many World War II veterans and many others, but there have been so many catastrophes in nonscheduled flights that you, more than anyone else, must realize that the confidence of the public in plane travel generally, becomes much impaired as the result of such tragedies. To permit such a condition to continue is, among other things, grossly unfair and detrimental to our major air lines, most of which, as the result of proper regulation, provide an excellent service. It would seem, therefore, if regulatory legislation is needed to prevent such outrageous incidents from occurring in the future, that the CAA would seek it immediately.

I am addressing a copy of this letter to each member of the Civil Aeronautics Board, to several members of the Cabinet, to our entire congressional delegation from the State of Washington, as well as to certain other Members in Congress. I am also forwarding copies of this letter to the Seattle Times and Seattle Post Intelligencer with the request that these newspapers continue to give this very unnecessary catastrophe all of the unfavorable publicity which it deserves, such as the article enclosed herewith.

If the Federal and local supervisory authorities do not take every possible measure to safeguard nonscheduled air travel, and prevent similar occurrences, I am sure that the public will censor them severely and feel that they are not only derelict in their responsibilities but are unworthy of a public trust, which is to safeguard the lives of our citizens.

In conclusion, may I say that I would very much appreciate a response from you, indicating how, in your opinion, such measures can best be taken.

Very sincerely yours,

LAWRENCE M. ARNOLD.

[From the Seattle Post-Intelligencer of January 5, 1949]

AIRPLANE DISASTER POINTS TWO LESSONS

There is considerable controversy over the cause of the disastrous airplane accident at Boeing Field Sunday night which resulted in the death of 14 young men.

That was to be expected, under the circumstances, and the public should not form any final judgment in the matter until all the charges and counter charges have been thoroughly sifted.

But out of the welter of confusion which invariably surrounds such tragic incidents two facts emerge crystal clear:

1. There must be a prompt and sweeping investigation of allegations that the emergency equipment available at the airport was inadequate.

2. Regulations must be changed if necessary to make sure that airplanes are not permitted to take off under weather conditions of the kind which prevailed at the time of the crash.

The assertion that fire-fighting and ambulance equipment at both Boeing Field and the Seattle-Tacoma Airport at Bow Lake is deficient is particularly ironical.

Only a few days ago the whole world was thrilled by the rescue of a dozen Americans who were marooned on the Greenland ice cap. Both the Air Force and the Navy threw all their resources into the effort and they kept at it until every man was safe. The cost came to approximately half a million dollars, but no one questioned the expenditure because human lives were at stake.

Yet here we have a case, in the same country, in which it is alleged that a far greater number of lives are being jeopardized every day for lack of equipment which would cost only a fraction of half a million dollars. That just doesn't make sense.

It is obviously the duty of the county commissioners, who have jurisdiction over Boeing Field, and the port commissioners, who operate Bow Lake, to get together with the companies using the two airports and see to it that any deficiencies in the way of equipment are remedied without delay.

It would seem that there must be considerably more than local action to keep planes grounded when weather conditions are as hazardous as they were Sunday night.

There is a dispute over just what conversation took place between the operator of the control tower at Boeing Field and the pilot of the plane immediately before the take-off. A Civil Aeronautics Administration official says the pilot was warned twice that visibility was below minimum and was advised that it would be illegal if he left the ground. On the other hand, an attorney representing the independent company which operated the charter plane maintains that there was a clearance for take-off.

Regardless of which version is correct, it appears that the operator of the control tower lacked the absolute authority to forbid a flight. He can keep a plane grounded if it would endanger other planes in the air or on the field, but he acts only in an advisory capacity as far as weather is concerned. The pilot has the final responsibility. If he makes an illegal take-off, a complaint can be filed against him subsequently—but that is palpably too late to do any good if his plane has already crashed.

Clearly someone—and the control-tower operator is the logical person—should have the power to keep a plane from taking off under any circumstances which endanger the lives of those aboard.

Pilots employed by the commercial air lines operating regular schedules do not make a practice of ignoring warnings from the control-tower operator.

But there are others who do not have the same sense of responsibility and they must be restrained.

[From the Seattle Times of January 5, 1949]

SCHEDULED AIR LINES USUALLY MORE CAUTIOUS

(By Ross Cunningham)

The crash of the Yale students' plane at Boeing Field Sunday night focuses attention on the question of the relative safety of the scheduled and nonscheduled air carriers. Both types of carriers operate under the safety standards prescribed by the Civil Aeronautics Administration—but the fact remains that there are a good many veteran air passengers who follow a rule of staying out of nonscheduled planes.

Most of the insurance companies recognize a distinction because many policies remain in force if the insured travels in a scheduled carrier but are void if he goes aloft in a nonscheduled carrier.

There is the case of the woman who accompanied her nephew to Boeing Field Sunday night to see him off on the Yale special, but for some reason she induced him to board a scheduled plane instead.

A scheduled air carrier is one that operates regularly over routes certified by the Civil Aeronautics Board; a nonscheduled carrier—known in the trade as a nonsked—is one that operates on a charter basis when a pay load can be drummed up.

The two types of carriers often are in competition—and the scheduled carriers would like the CAB to drive the nonskeds off the routes. The nonskeds usually charge lower fares and are troublesome competition for the regular carriers, particularly in the Alaska trade.

The nonskeds have the sympathy of being underdogs because they are small, usually are operated by veterans and some of them have made outstanding records for safety and performance.

But an air passenger can walk into the office of a scheduled carrier's office and buy a ticket with complete assurance that every last precaution is being taken for his safety.

Unless the passenger is familiar with the nonsked he buys a ticket from, he may find himself going aloft in a craft whose mechanical condition and ground-crew support barely meet Civil Aeronautics Administration standards. Or he may travel in a plane as safe as the best.

The big carriers have learned over the years that they must maintain extensive ground facilities to hold accidents to a minimum. There are the mechanical crews, meteorologists, supervisory personnel, and dispatchers. When a scheduled air carrier is about to go aloft, the power of veto of the flight rests with at least two persons—the pilot and the dispatcher. If either is uncertain about safety the trip is off.

There is no financial consideration on the part of the dispatcher for a scheduled operator; he gets the same pay whether the plane flies or not. The pilot gets a fixed base pay plus additional pay for air mileage. Pilots have been heard to grumble that the dispatchers are too cautious. The policy from central headquarters of big air carriers is to keep the planes on the ground when in doubt.

There appears to have been a disagreement Sunday night between ground personnel and the plane's crew over the advisability of the flight; the decision to take off was

made by the plane's crew. If it had been a scheduled carrier, its dispatcher's veto would have halted the flight.

Some of those studying the crash have decided this is what happened: The efficiency of a wing is reduced if it has any amount of ice or frost. (Some pilots like to be able to read the wing numbers in take-off; because it assures them the wing is clear—sometimes ground crews follow the plane to the end of the runway to clear its wings before it makes its run to go aloft). The Yale special had just enough frozen moisture on the wings to hamper its efficiency and it fell off to the right in a stall and an attempted correction by the pilot dug the left wing into the runway and it crashed into the hangar, according to the theory advanced.

The Need for a Single Supply Catalog for the Armed Forces

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. ANDERSON of California. Mr. Speaker, the bill entitled "National Defense Catalog Act" or H. R. 321 may be the key to unification of the services that the Congress prescribed in the National Security Act of 1947. It could be used as a pattern for the manner in which all the functions performed by the services may be organized and handled and it so affects every other operation of the services that in solving this single problem the way is open for the solution of many others.

When a log jam blocks the movement of logs down the stream, keen eyes search the log jam for the key log. When this is dynamited out, the log jam is broken and the logs resume their steady course down the stream.

Passage of H. R. 321, by solving the supply catalog problem, will remove the key obstacle that has been holding up unification.

Among other things the bill provides for the following:

The Secretary of Defense is directed to establish a single supply catalog to be used by all units of the National Military Establishment and is empowered to issue the necessary directives to the services to see that this is done. Apparently the National Security Act is lacking in this authority.

The Secretary of Defense is authorized to delegate this authority to the Chairman of the Munitions Board who is directed to assign this authority to a single competent person, a Director, who shall report directly to the Chairman. This eliminates the "administration by debate" that is hamstringing the entire Military Establishment.

The qualifications of the Director should be carefully considered. A big name or a brass hat will not achieve a workable catalog system—that has been tried in the past.

What is needed is a man having a knowledge of industry, of military supply and cataloging, and who, if possible, is an engineer. Perhaps the appointment of the Director should have the approval of Congress.

Under the Secretary of Defense and the Chairman of the Munitions Board the Director will be responsible for establishing all policies and for seeing that all operations pertaining to cataloging are carried out properly and efficiently.

A National Defense Catalog Agency is established within the National Military Establishment on the staff of the Chairman of the Munitions Board whose organization shall be determined by the Director.

Cataloging is defined for the first time. At the present time every unit of the National Military Establishment has a different idea of cataloging. This is about the same situation that would result if the term "widgeon" meant to one person five elephants, to another one cow, to another a flock of geese, and so forth. It is almost impossible to discuss over-all cataloging in the services because of the confusion as to terms and definitions.

As in any well-run organization, the top staff will establish policies and procedures and resolve differences arising in the operations units.

All operations are to be delegated to operations agencies to be established with the approval of the Secretary of Defense in the supply services and bureaus or in any common supply agency established by the Secretary of Defense, such as the Army-Navy Procurement Agency. The head of such operating agency will be appointed with the approval of the Director of the National Defense Catalog Agency and will report only to the head of the supply service or bureau.

This is extremely important because catalog operations, if they are to be of the greatest service to supply operations, must be carried on so that both appear to be one great operation.

If it were possible for desks of the two men charged respectively with supply and cataloging to be placed next to each other, the maximum efficiency and economy would be achieved in supply operations. One of the principal reasons for the failure of catalog operations carried on by the Government has been the separation of supply and catalog operations.

To insure that the policies and schedules of cataloging are coordinated within each department, the Secretary of the Army, Navy, and Air Force are directed to designate a staff officer whose sole responsibility will be to perform these functions and advise the Secretary as to the status of cataloging operations. This officer will not perform any actual operations; consequently will not need a large staff.

One of the most important and far-reaching provisions is that which directs the head of the National Defense Catalog Agency to assign each item of supply carried on the records of any supply activity of the National Military Establishment to one and only one of the catalog operations group where all catalog operations will be performed on it, including identification, writing descriptions, establishing standards, and publishing the information in the catalog. This information when published will be used by all supply activities of the armed forces. Although the same criteria used to assign catalog responsibility could be used to assign procurement responsibility, no attempt is being made at this time to assign item procurement responsibility.

The benefits to be derived from establishing a single catalog system for the armed forces are so great that it is believed best not to attempt to assign procurement responsibility at the same time. After the catalog system is operating, it would then be comparatively easy to assign procurement responsibility.

In order to provide an incentive to the services to cooperate in the establishing of the catalog system, it has been directed that no item may be used by or procured for the use of the services unless the catalog agency has had a chance to analyze it and catalog it. The Director is empowered to determine after what period items cannot be used by or procured for the services until they have been cataloged. This will be done in such a manner as to prevent delay in supply operations.

An Advisory Council is provided whose representation includes the officers on the staffs of the Secretary of the Army, of the Secretary of the Navy, and of the Air Force; also it includes representatives from industry, from other interested Government departments, and perhaps from allied nations. This Council will be purely advisory and will in no way detract from the responsibility of the Director. Additional specialized representation from industry, from other technical services or bureaus, or from other interested departments may be provided as an advisory committee assisting the head of each catalog-operations division. Industry has yet another channel of contact through the inspection or quality-control service.

With the authority to assign items and functions to catalog operating agencies must go the authority to consult upon, advise, and approve the budget of any catalog-operating agency before it is submitted to the budget officer of the department.

In this way I believe it is possible for Congress to assist the National Military Establishment in achieving unification, assist industry by simplifying the multiplicity of Government specifications and regulations, and, above all, reducing the tremendous waste and inefficiency of military supply operations.

Amputee Automobile Bill

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, I have introduced legislation, H. R. 283, to permit the furnishing of automobiles with special equipment for amputees of World War II. The bill I

am offering is identical to the bill that passed the Senate in 1947 and extends the benefits of the present law to those who have suffered the loss or the loss of the use of one or both hands and/or permanent impairment of vision. The present authority is restricted to those who have lost the use of one or both feet.

There are a number of veterans who have sustained the loss of the use of one or both hands who are disabled to a greater degree than those who are now qualified for benefits. Amputees of all classes have found it most difficult to travel in public-transportation facilities and maintain their balance making transfers, change, and other necessary adjustments for their safety and welfare.

The furnishing of cars to this group is in every sense of the word a prosthetic appliance needed for the rehabilitation of this group of veterans who have given so much for their country.

The Government would contribute, under my bill, not more than $1,600 per car, and if the total purchase price was in excess of that amount, it would have to be paid through an arrangement agreed upon by the seller and the veteran purchaser. The benefits of the bill are limited to 3 years after the date of enactment or 3 years after the veteran's discharge, if such discharge does not occur until on or after such effective date.

Some 22,500 cars have been furnished under this program since it was first started in the Seventy-ninth Congress. The men who have been fortunate enough to obtain cars have reported great success and many of them have established businesses of their own.

The latest figures which I have obtained from the Veterans' Administration show that some 7,610 veterans would be eligible for the benefits of this legislation by the passage of my bill. Based on previous experience, approximately two-thirds of this number will ultimately receive cars. This means that the cost as a result of this bill will be something in the neighborhood of $8,000,000. This figure might be further reduced by use of unexpended balance. Surely this is not too much to ask in a day when we spend billions for the relief and rehabilitation of people overseas. So that we may have a complete history of this legislation, I include at this point the following excerpts from the public laws which authorize the furnishing of cars for amputees:

PUBLIC LAW 663, SEVENTY-NINTH CONGRESS; VETERANS' ADMINISTRATION

"Automobiles and other conveyances for disabled veterans: To enable the Administrator of Veterans' Affairs to provide an automobile or other conveyance, at a cost per vehicle or conveyance of not to exceed $1,600, including equipment with such special attachments and devices as the Administrator may deem necessary, for each veteran of World War II who is entitled to compensation for the loss, or loss of use of one or both legs at or above the ankle under the laws administered by the Veterans' Administration, $30,000,000: *Provided*, That no part of the money appropriated by this paragraph shall be used for the repair, maintenance, or replacement of any such automobile or other conveyance and no veteran shall be given an automobile or other conveyance under the provisions of this paragraph until it is established to the satisfaction of the Administrator that such veteran will be able to operate such automobile or other conveyance in a manenr consistent with his own safety and the safety of others and will be licensed to operate such automobile or other conveyance by the State of his residence or other proper licensing authority: *Provided further*, That under such regulations as the Administrator may prescribe the furnishing of such automobile or other conveyance shall be accomplished by the Administrator paying the total purchase price to the seller from whom the veteran is purchasing under sales agreement between the seller and the veteran.

"SEC. 303. This act may be cited as the "First Supplemental Appropriation Act, 1947."

"Approved August 8, 1946."

EMERGENCY APPROPRIATION ACT, 1948; PUBLIC LAW 161, EIGHTIETH CONGRESS; CHAPTER 206, FIRST SESSION

"The Administrator of Veterans' Affairs is hereby authorized to disburse, during the month of July 1947, one-twelfth of the amount provided in each appropriation for the Veterans' Administration included in H. R. 3839 as passed by the House of Representatives and there are hereby appropriated such amounts as may be necessary for such disbursements: *Provided*, That amounts expended hereunder shall be deducted from such appropriation for 1948 when H. R. 3839 is enacted into law.

"Automobiles and other conveyances for disabled veterans: The authority and funds provided under this heading in the First Supplemental Appropriation Act, 1947 (Public Law 663, 79th Cong.), are hereby continued available until June 30, 1948."

THE SUPPLEMENTAL APPROPRIATION ACT, 1948; PUBLIC LAW 271, EIGHTIETH CONGRESS

"Automobiles and other conveyances for disabled veterans: For an additional amount for "Automobiles and other conveyances for disabled veterans," $5,000,000 to be available for the purposes specified under this head in the act of August 8, 1946 (Public Law 663)—$5,000,000."

SECOND DEFICIENCY APPROPRIATION ACT, 1948; PUBLIC LAW 785, EIGHTIETH CONGRESS; VETERANS' ADMINISTRATION

"Automobiles and other conveyances for disabled veterans: For an additional amount for 'Automobiles and other conveyances for disabled veterans,' $1,500,000, to be derived by transfer from the appropriation 'Administration, medical, hospital, and domiciliary services,' and to be available until June 30, 1949, for the purposes specified under this head in the act of August 8, 1946 (Public Law 663), as extended by the Emergency Appropriation Act, 1948."

SUPPLEMENTAL APPROPRIATION ACT, 1949; PUBLIC LAW 904, EIGHTIETH CONGRESS; VETERANS' ADMINISTRATION—AUTOMOBILES FOR DISABLED VETERANS

For an additional amount for "Automobiles and other conveyances for disabled veterans," $5,000,000.

Bevin Strikes in Blind Frustration

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. CELLER. Mr. Speaker, the sending of British planes over Palestine by Mr. Bevin is a wicked act. It is a violation of the UN Charter and a violation of international law as well. Mr. Bevin acted deliberately to prejudice the peace talks between Egypt and Israel at Rhodes. It is an act without justification and is provocative of war. The Israelis had no recourse but to shoot them down. Mr. Bevin wants to drive the Israelis out of the Negev and stops at nothing to accomplish this end, despite the fact that the Negev is Israeli territory and that the presence of Egyptian forces therein is a clear-cut act of aggression on the part of Egypt. This violation of the UN Charter and of international law on the part of Britain call for protest of the United States.

Israel has stepped on Bevin's pet corn and he strikes out in blind, wild frustration.

The Present Administration Is Antidairy in Attitude

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the present administration that now calls itself the Fair Deal has not bothered to be too fair with the dairy industry. When the oleo-versus-butter controversy was at its height, a certain incident took place which is shown in the following letters:

AUGUST 2, 1948.

Secretary CHARLES F. BRANNAN,
United States Department of Agriculture, Washington, D. C.

DEAR MR. BRANNAN: On the last day of the session an attorney for some firm called me off the floor and said that his plant wished to import butter from Denmark which cost 62 cents a pound laid down in New York. His story was that it was not to be used for domestic consumption, but was to be reexported. I was so busy keeping track of what was going on in the oleomargarine business that I did not go into too much detail and told him that I did not know anything about the situation.

He said that he could not bring this butter in as a result of an embargo or that he could not get permission to do so. In thinking this over since, I have wondered if there was an embargo on imports of any products. I am not taking the position that there should or should not be, but I wish to have the facts about the situation.

Sincerely yours,

REID F. MURRAY,
Member of Congress.

DEPARTMENT OF AGRICULTURE,
Washington, August 16, 1948.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in reply to your letter of August 2 concerning import restrictions on butter from Denmark.

A brief review of the policies which have been in effect with respect to trade in butter may be summarized as follows:

1. In view of world-wide shortages of butter and other fats and oils, the United States has continued to maintain restrictions on exports and imports of butter and other fats and oils. In this connection, it is necessary

for exporters to secure export licenses before making export shipments, and for importers to secure import licenses before arranging for shipments of butter to this country from foreign supplies.

2. Exports of butter from the United States are being limited almost entirely to Western Hemisphere countries and the Philippine Islands. These areas have normally depended upon United States supplies. Such exports, however, do not exceed 1 percent of United States supplies.

3. Imports of butter are not being authorized at this time. The principal reason for restricting such imports is because the United States is currently shipping substantial quantities of fats and oils to deficit countries in Europe. In this connection, it is apparent that imports of Danish butter would reduce supplies available for other European countries with the result that the United States would be requested to make compensating shipments of either butter or other fats and oils. Furthermore, fats and oils are under international allocation and supplies of butter are taken into account in such allocations.

4. Since it is the declared policy of the United States to assist economic recovery in Europe, we have considered it inadvisable to authorize United States importers to bid on foreign supplies of butter intended for European countries. If such bidding were permitted, it is probable that world prices would be further stimulated.

5. If imports of butter into the United States were to be authorized in substantial quantities, it is believed that considerable difficulty would be encountered in continuing restrictions on exports. The United States butter industry would be confronted with competition of imported foreign butter while at the same time it would not be able to sell freely in foreign markets.

6. With respect to imports of butter for subsequent reexport, we have followed a practice of permitting ordinary transshipments. We have not, however, permitted United States firms to import butter to be placed in storage warehouses awaiting the development of export sales.

7. Recently we have requested the State Department and Economic Cooperation Administration to review the Danish butter situation in relation to United States import policies for the purpose of determining whether the economy of the European countries would be helped or hindered if the United States were to authorize very limited imports for ships' stores and reexport. The problem is now under consideration by Mr. Harriman and the ECA coordinating committee in Paris.

In view of the foregoing considerations, we do not believe that any substantial change in import or export policies with respect to butter would be in the interests of the United States.

Sincerely yours,

A. J. LOVELAND,
Under Secretary.

The points to note are these:

First. That this administration prevented butter from being laid down in New York at 62 cents per pound at a time the oleo forces were using the price of butter at $1 per pound as a talking point for passing the Rivers bill.

Second. It may not have made economic sense to import butterfat in the form of butter when millions of tons of cattle feed were being exported, but if that is the situation, why have imports of butterfat in the form of cheese been so acceptable? Imports of butterfat in the form of cheese from Italy even has not seemed to disturb the administration.

This is just one more piece of evidence showing that the President has had the power, authority, and money to control prices—whether high or low prices—and in this case he gave aid and comfort to the oleo interests who were trying to make legislative capital out of the higher butter prices.

Surely so long as this administration furnishes even the children in the school-lunch program with skim milk—although not in Wisconsin—it does not make good sense to be furnishing feed to others so that they can send butterfat to us.

This was also at a time when the armed forces were trying to break down the requiring of butter being served in the Army and Navy in order to save a few dollars to put more brass on the brass hats.

The Air Corps uses butter because they know that eyesight is protected by the vitamin A contained in butter and they do not wish to use a fish-oil product for their supply of vitamin A.

Dams on Current River, Mo.

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

BIRCH TREE, MO., *January 5, 1949.*
Hon. A. S. J. CARNAHAN,
House of Representatives,
Washington, D. C.

DEAR MR. CARNAHAN: I have just listened to the good state of the Union address by President Truman, and am much pleased with his recommendations to the new Congress. I am especially pleased with the part regarding the continued harnessing of our abundant water power to provide electricity and flood control.

It is my understanding that the Congress will soon be called upon to give consideration to the matter of making or refusing to make authorization for the two dams on Current River. You will no doubt be in a key position in this matter, and I want to assure you that at least 80 percent of the people in Shannon County, including the people in the affected area, do want to see these dams built and we would be much pleased to know that you favor them. It is our understanding that failure to make authorization for them now may mean that we may never again have the opportunity to secure such a great improvement in our section. Recent articles carried by St. Louis and other papers against these dams do not convey the sentiment of our local people who must remain here and pay taxes in future years. Taxes, as you know, have just about doubled in the last few years and, with our economy at its present level, they are not such a burden but with a few bad years down here and with but very little industry to employ our idle people, it will be next to impossible to pay our taxes.

If a true survey of the sentiment of all the people in Shannon County could be had, I am sure my estimate of 80 percent would be conservative. The sentiment in Shannon County is: Let's get this huge amount of improvement while we can, with the hope that it might bring into this section small or large manufacturing plants to employ the many good people here who must have outside employment or Government aid to exist. Many believe that if these lakes were built, it would expedite the completion into our section of higher-type highways in order to handle the additional traffic.

Sincerely,

J. L. WEBB.

Radio Address of Hon. Gerald R. Ford, Jr., of Michigan

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. POTTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast of my colleague, Hon. GERALD R. FORD, JR., Fifth District of Michigan, delivered January 9, 1949, to his constituents:

This is the first edition of your radio congressional report. Each week in the next 2 years while Congress is in session I, as your Representative from Ottawa and Kent Counties, plan to make a 5-minute report on just what has been going on in the Nation's Capital. When the President speaks to a joint session of the Senate and House, as he did this week, I will analyze his words as they pertain to our district. Important pending legislation will also be discussed, pro and con. When local citizens are in Washington they will appear on the program with me. Please remember this is your program, just as I am your Representative. With suggestions and comment from you, both the program and I will benefit.

The Eighty-first Congress convened at noon on Monday, January 3. After the individual roll call by States the majority party nominated Representative SAM RAYBURN, of Texas, as Speaker of the House. The Republicans in turn nominated Representative JOE MARTIN. The result was a foregone conclusion but the procedure is apparently carried out each 2 years, regardless of the known result beforehand. Mr. MARTIN remains as Republican minority leader.

After Mr. RAYBURN assumed the Speaker's chair the first real battle took place. During the last 2 years there has been considerable criticism of the manner in which legislation was bottled up in the House Rules Committee. For example, the Taft-Ellender-Wagner housing bill and the universal military training proposal were held up and died in the Rules Committee even though acted favorably upon previously by the House Banking and Currency Committee and the Armed Services Committee. Many Republicans and Democrats both in Washington and at home objected to this apparent arbitrary action by the Rules Committee in preventing a vote on these and other measures on the floor of the House.

To make it easier to get legislation before the House of Representatives, Mr. SABATH, of Illinois, proposed that the rules of the Eightieth Congress be adopted with an amendment providing that if the Rules Committee fails to act on a bill within 21 days the chairman of the committee which originally handled the bill can move to have it brought up for House action. A sufficient number of Representatives of both parties,

including myself, voted in favor of this change.

On Wednesday, January 5, the President gave his state of the Union address to a joint session and before a packed gallery. It was a most impressive ceremony to see the President escorted to the rostrum by three of the leading Members of the Senate and a like number from the House. Mr. Truman stated that "the state of the Union is good," and then launched into his proposed program and indicated that he would seek favorable action on all of the legislation advocated in his party's platform. This includes outright repeal of the Taft-Hartley Act and the readoption of the old Wagner Act with some amendments. He also asked that the Labor Department be strengthened and the minimum wage increased to at least 75 cents an hour. He likewise hopes to keep the budget in balance and reduce the national debt by increasing individual income taxes in the middle- and high-income groups and by increasing taxes on corporate earnings. He reaffirmed his stand on civil rights but failed to spell out any specific proposals in this regard.

He charged that prices are too high, production too low, and that natural resources were being wasted. He asked for strict controls on American business and suggested that the Government build industrial plants to augment the steel supply if action by private industry fails to meet our needs.

It was an all-inclusive and a rather general message with a promise that he would appear before us in the future with specific programs. Perhaps the most interesting observations I can make would be to tell you of the response from the Members of Congress as the President mentioned certain legislation. Mr. Truman's comments on foreign policy received practically a unanimous ovation. In contrast, the southern Democrats did not applaud when he talked of civil rights while most Republicans and the Democrats from the North did approve enthusiastically this suggestion. When Mr. Truman spoke of balancing the budget everyone applauded, but when he mentioned how this was to be accomplished the response was mixed and hardly unanimous.

In the cloakrooms following the recess it was interesting to note the comments on his speech. As this session progresses I feel you will appreciate the great diversity of feeling among the elected Representatives on the various legislative proposals. Party lines will be split on many issues.

Thanks for listening, and I welcome your suggestions and comments.

In a Nation as Rich as Ours

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

• OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of January 8, 1949:

IN A NATION AS RICH AS OURS

This week President Truman outlined the program which he promised in his campaign for reelection.

Filled with words like "must," his message demanded that Congress "cooperate." He made quite clear that his idea of Congress's cooperation is to give him everything he wants, in a hurry, and with no back talk.

His proposals make up the most costly program which any national President ever laid before the American Congress—or, for that matter, any other ruler in history ever laid before any legislative body.

Carried out, this program would presently push Federal spending into two or three times its present level, which already is four times what President Roosevelt spent in his palmiest prewar years, and 10 times what was considered normal the last time the Republicans were in control.

In 10 years, the Truman program would dwarf all the gigantic overspending of the World War period.

Quite aside from the merits or demerits in his proposals, the immediate question arises:

Where's the money coming from?

Mr. Truman devoted little time to such a question, which he made clear he would consider to be frivolous, obstructive, and noncooperative.

"In a nation as rich as ours," were his words.

That raises the next question, which is the jack-pot question of the present generation:

Is Uncle Sam rich?

Mr. Truman says so, and apparently thinks so. But on what grounds?

Is it right to call anyone rich who owes more than he owns? The national debt, which is the visible debt of the United States Government, stands at $252,000,000,000. Outstanding paper currency, which is also a public debt, stands at about $32,000,000,000. Add these two together, and the total visible debt owed by the Government is $284,000,000,000, which is nearly equal to the entire total of all assets and resources of all the American people together—estimated at $300,000,000,000.

But that isn't all the debt. Uncle Sam has assumed countless other liabilities, obligations, etc., which would capitalize over two or three times more.

This Nation owes in debts and obligations about three times its total valuation.

How can we be rich when that is our condition?

Saying, as the New Dealers often do, that this kind of debt doesn't count because we owe it to ourselves, is double talk.

This great bulk of this money is owed by Mr. Truman's government to the American people. They turned their earnings over to Uncle Sam in exchange for war bonds. They are entitled to get their money back—and to get it back, incidentally, at face value; not in 50-cent dollars.

It's the Government which owes this money—Mr. Truman's government. What does the Government own with which to pay it back?

Under the system set up by our Constitution, the Government owns very little—a chain of post offices, some battleships and airplanes, scattered parks, public buildings, etc. You can't use this sort of thing to pay debts. Government spending isn't done with what the Government owns, but with what the people own. The Government takes away part of their earnings and savings—about 25 percent of it at present. That's what the Government spends. And the people have to be able to earn money to be taxed, before the Government can collect taxes to be spent.

As to the Government's own resources available for repayment of the debts it has incurred, there is no mystery about them.

Uncle Sam issued two reports at frequent intervals which are his financial statements. They list his assets and his visible debts. (As to the invisible ones, the Government just pretends they don't exist.)

One of these financial reports is the daily statement of the United States Treasury. Turn to it and you will find listed the major liability against the public credit the aforesaid national debt, $252,000,000,000.

As a resource to balance against this debt, there is listed the sum of $24,000,000,000 in gold.

Considering that President Truman, as head of the Government, is also head of the United States Treasury, isn't that a beautiful financial showing for a man who says "we are rich?"

Debts, $252,000,000,000; assets, $24,000,000,000—less than 10 cents on the dollar available to liquidate the liabilities.

The other principal financial report of Uncle Sam is that of the Federal Reserve Bank System. Turn to this, and you find, as a principal liability against the public credit, the sum of $28,000,000,000 in paper currency. (Four billions of paper dollars are in other than reserve notes—principally silver notes.)

Listed as an asset against this is $24,000,000,000 in gold.

But it's the same gold.

A private businessman who hypothecated the same assets for two different debts would be guilty of fraud—but when the Government does it, that's statesmanship.

Combining these two principal financial reports of Uncle Sam, and you find: Visible debt, $280,000,000,000; tangible assets, $24,000,000,000.

Actually, the balance sheet is even worse that shows. The $24,000,000,000 valuation for gold is a purely arbitrary figure, "marked up" back in 1934, and pegged there simply because Uncle Sam has held his corner on gold. What it would bring in an open market, or in a distress sale, no one can guess—probably not more than half of its purported value.

Meanwhile, inflation is surging on to the run-away stage. The value of the American dollar steadily declines, it becomes harder and harder to bolster up the Nation's credit.

Since all private assets are involved with the Government's financial jugglery, if there should be a crack, we then would be much less likely to have merely a panic than to suffer the worst collapse and crash in history—in which all the American people would be rendered destitute.

Is anyone rich who is only a hop, skip, and jump away from receivership and the poorhouse?

The most sensational part of Mr. Truman's address Wednesday wasn't his fantastic socialistic scheme of vast new Federal spending—but his announcement that, despite our debts, watered currency, and overstrained credit, we are rich.

In weighing the Truman program, the first step Congress should take is to call upon President Truman to prove it.

Devastating Freezes in Southern California

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. McDONOUGH. Mr. Speaker, southern California has just experienced one of the most devastating freezes in its history. It has resulted in extensive damage to our citrus fruit throughout that area which is one of the major producing sections for citrus fruits in the Nation.

The losses to citrus groves have been estimated up to $60,000,000 and will have a shattering effect on the economy of southern California, and this disaster

will wipe out hundreds of small growers if action is not taken immediately to extend assistance to them.

The Reconstruction Finance Corporation has extended loans to many industries in times of financial stress, and I believe it would be proper for the RFC to extend financial aid to our California citrus growers at this time of need, and that the Department of Agriculture should also help in any way possible to save the citrus fruit industry from widespread ruin as the result of the recent freeze.

The following is a resolution adopted by the city council of Los Angeles, Calif., urging that the Reconstruction Finance Corporation and the Department of Agriculture give sympathetic consideration to the proposals for assistance to the citrus growers of southern California:

Whereas the biggest freeze in California's history has brought disaster to the southern California citrus growers, many of whom have already counted their entire groves as a total loss; and

Whereas this citrus-grove loss, which has been estimated all the way up to $60,000,000, will have a shattering effect on the economy of southern California, and is being reflected already in increased prices of citrus fruits to the consumer; and

Whereas this shocking disaster, the worst since 1937, will undoubtedly wipe out completely hundreds of small growers already burdened with bank loans on their destroyed crops; and

Whereas the present administration at Washington is committed to a program of protection for various divisions of agriculture in the form of price controls, crop-storage facilities for the farmers, etc.; and

Whereas the Reconstruction Finance Corporation has extended a helping hand in the form of loans to many industries in times of financial stress: Now, therefore, be it

Resolved, That the City Council of Los Angeles, the legislative body that represents the largest number of people outside of the State government, does by the passage of this resolution respectfully urge that the Reconstruction Finance Corporation and the Department of Agriculture give sympathetic consideration to the proposals for assistance to the citrus growers of southern California, which will be presented by the California congressional Representatives, to the end that hundreds of growers who annually pledge their savings and their borrowing power in the citrus industry, so important to the economy of our State and the health of our Nation, might, through RFC long-term loans, survive the devastation of their present heavy losses.

JANUARY 6, 1949.

Address Before National Conference of Catholic Charities and Society of St. Vincent de Paul

---

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the dinner meeting of the thirty-fourth national conference of Catholic Charities and Society of St. Vincent de Paul at Hotel Statler, Boston, October 12, 1948:

Mr. Toastmaster, Most Reverend Archbishop of Boston, Most Reverend Archbishop of Washington, most reverend bishops, right reverend and very reverend monsignors, reverend fathers, ladies and gentlemen, in a sermon delivered on September 19, in St. Peter's Church in Lowell, Mass., our beloved forward-looking spiritual leader of the Boston archdiocese, Archbishop Cushing, said, in part:

"The clenched fist of communism against the rich and the closed fist of the capitalist against the poor can learn a better and happier way from Christ and St. Vincent de Paul."

And he then made the following dramatic and forceful statement, the truth of which cannot be denied.

"The cry of the poor is that which rocks the whole world today and prepares the way for atheistic communism."

The cry of the poor, as he well said, meaning thereby economic insecurity on the part of too many.

In those two statements our beloved archbishop analyzed and stated the causes of our present world upheaval. For it was leaders of nations abroad in years of the past, not too remotely removed from the present, who failed to heed and follow Christ and St. Vincent de Paul, and left in their wake misery, suffering, starvation, hopelessness, and despair on the part of their people, and in desperation the seething millions listened to the voices of the false prophets in the hope of bread and food, and as in the case of Russia, produced a Lenin and a Stalin, and the dreadful results that have followed.

The answer to the challenge of atheistic communism is forward-looking, courageous leadership in the field of religion, of government, in all walks of human activity, and particularly where the closed fist of the capitalist exists, a small percentage, true, but a contagious percentage, with its soulless actions and aspects affecting the lives of millions, for such person or persons to realize either voluntarily or by law that they can learn a better and happier way from Christ and St. Vincent de Paul.

For after all, the first duty of government is to assure justice to its people, a duty that covers many fields. This is constantly changing obligation in accordance with existing conditions. It is when there is a rapidly changing economic system that serious political problems arise. This duty must be performed with a sound and proper regard for the welfare of a nation and a people as a whole, and no segment of society should be destroyed or discriminated against, nevertheless, in practical operation government should and must give special consideration to the weak, the poor, the sick, the exploited, those facing or undergoing economic insecurity. For in practical operation, government must function for the weak. The strong do not need its assistance or protection.

This has particular emphasis in this machine era of mass production, with the existence of an economic system that is pressing in its demands and its influence upon the life and outlook of every individual. The leadership that undertakes to meet and solve, as far as possible, and in a sound way, the needs and demands of social security or as it might well otherwise be termed economic insecurity, here and abroad, is the type of affirmative leadership that will help to effectively meet and defeat communism, and its attempt to enslave and dominate the world.

It is not negative leadership based on defeatism, or status quo or backward-looking leadership, but everywhere, affirmative, courageous, sound leadership following Christ and St. Vincent de Paul which will receive the respect and confidence of the masses that constitute the answer to the challenge now existing or that may exist at any future time.

COMMUNISM BREEDS ON HUMAN SUFFERING AND DISTRESS, ON HUMAN MISERY

There is no moral or political appeal to communism. It's appeal is in the economic field where widespread poverty and distress exists.

While legislation may be necessary to make unlawful and criminal certain acts not contemplated in the past, the real answer is the right kind of leadership. The observations I have made have a direct bearing on the subject, Looking Ahead in Social Security.

By this is meant in a sense the methods employed by our Government, as well as the extent to which it goes, in establishing a social-security program consistent with our way of life as the means of meeting in our country the problem of economic insecurity.

As we know, this problem covers a wide field in the life of human beings; unemployment, sickness, accidents, medical care, old age, the handicapped, housing, slum clearance, delinquency, health, are mainly the considerations. A sound social-security program is the affirmative means used to meet these serious problems that exist so intensely in this age of mass production.

CHANGING CONCEPT OF SOCIAL SECURITY

The Social Security Act was originally passed in 1935 and expanded in 1939. Important amendments to the act were made in 1946, 1947, and 1948.

The object of the social-security program is to help prevent poverty and want. Its purpose is to serve as a defense for the individual, the family, the community, and the Nation.

The original Social Security Act of 1935 was based on the idea of protecting the family and the Nation by providing benefits to the individual wage earner. The insurance benefits were limited to the risks of old age and unemployment. In recent years a broadened concept has developed. In 1939 Congress amended the then old-age insurance law to provide monthly benefits to the wife of an insured individual and to the widow, orphans, and dependent parents. Four States, including Massachusetts, now provide for the payment of additional unemployment benefits in those cases where the unemployed wage earner has dependents. Three States provide for payments to the individual when he or she is out of work because of sickness. Thus in recent years the emphasis in the social-security program has shifted from an individual basis to a family basis and to recognizing the need for protecting not only the individual but also the family in connection with new risks.

It is important that this fact be constantly kept in mind. Since the family is the foundation of our entire society, we must always see to it that the amount and the type of benefits provided under the social-security program are designed to assure effective family security. If we promote family security then we can be sure we are promoting national security.

THREE TYPES OF SOCIAL-SECURITY PROGRAMS

There are three main ways in which our social-security system helps individuals and families:

1. Social insurance for individuals and their families is a way of spreading over a large group of people who may be affected at one time or another the losses that some of them suffer at any particular time. We now have social insurance in this country covering workmen's compensation, unemployment, old-age and premature death. We do not have any Nation-wide program covering the risk of sickness or disability or the cost of medical care.

2. Public assistance is a method by which the Federal Government and the States use tax money to make payments to needy persons. At the present time Federal money can only be used to help the aged, the blind, and certain classes of dependent children. Federal money cannot be used, however, to take care of the handicapped, the medical needs of most needy people, and for many other types of cases in connection with dependent children or chronically sick people.

3. The third part of the social-security program includes efforts to extend public services to improve health and well-being, especially the health and welfare of mothers and children. The present program, however, does not cover all cases of crippled and neglected children that should be aided.

OLD-AGE AND SURVIVORS INSURANCE

At the present time some 25,000,000 persons gainfully employed for a living are not included under the present old-age and survivors insurance program. Moreover, the benefits are grossly inadequate not only for the aged people but also for the widows, the orphans, and dependent parents. While benefits are paid in case a person becomes 65, or to his survivors if he dies, no payments are made whatsoever if he becomes permanent and totally disabled. An advisory council of 17 distinguished citizens, under the chairmanship of former Secretary of State Edward Stettinius, has recently reported to the Congress recommending extension of coverage of the insurance program to persons not now covered, liberalization of the benefits, and the addition of permanent total disability benefits. These same recommendations have been made on several previous occasions by President Truman.

PRESIDENT TRUMAN'S SOCIAL-SECURITY RECOMMENDATIONS

On May 24 of this year President Truman sent to the Congress a five-point program for improving the social-security system. His five recommendations were as follows:

1. More adequate benefits under old-age and survivors insurance.

2. Extended coverage for old-age and survivors insurance.

3. Extended coverage for unemployment insurance.

4. Insurance against loss of earnings due to sickness or disability.

5. Improved public assistance for the needy.

One of the most important areas for extension of social security is insurance against loss of income from permanent and total disability. According to the report to the Senate Committee on Finance from the Advisory Council on Social Security on permanent- and total-disability insurance, there are about 2,000,000 persons on an average day who are kept from gainful work by disabilities which have continued for more than 6 months. A surprising fact is that the cost of combining disability insurance with old-age and survivors insurance would not be greater than one-quarter of 1 percent of total pay rolls. Since such protection is already provided for civil-service and railroad employees, it would seem to be a logical extension of the social-security system. Protection against loss of income from temporary disability or sickness would still be reserved to the States.

PRESIDENT TRUMAN'S HEALTH PROPOSALS

On several occasions President Truman has sent to the Congress recommendations for improving the health of the Nation as essential steps in assuring family security. His five recommendations were as follows:

1. Construction of hospitals and related facilities.

2. Expansion of public health, maternal and child health services.

3. Additional funds for medical research and medical education.

4. Health insurance for the employed person and his family.

5. Insurance against loss of earnings due to sickness or disability.

SOCIAL-SECURITY CHANGES

A number of the provisions of existing social-security laws discriminate against the family, particularly against wives, mothers, and orphans who must seek gainful employment. The old-age and survivors insurance program, for instance, now prohibits payment of benefits to the children of an employed woman when she dies leaving a dependent disabled husband. Some wives and some children cannot draw their insurance benefits because of technical provisions in some State marriage laws. This is due to the anomaly that Federal law provides that the insurance benefits are dependent upon the varying provisions of State law with respect to the determination of family relationships.

Some State unemployment insurance laws do not pay benefits to unemployed women when their unemployment occurs within a certain period following childbirth. Other States disqualify women from receiving unemployment benefits when they are unemployed after having taken care of a sick husband or child. Two of the three State laws covering temporary disability do not pay sickness benefits to an insured woman during periods of childbirth. These provisions should be changed in order that adequate protection be given to assuring family security.

Massachusetts is one of the five States in the Union which provide additional unemployment insurance benefits on behalf of the dependents of an unemployed person. Similar provisions should be included in the unemployment insurance law of every State in the Union.

As our courageous President has rightly said: "Over the last 12 years we have erected a sound framework of social-security legislation. Many millions of our citizens are now protected against the loss of income which can come with unemployment, old age or the death of wage earners.

"Our ultimate aim must be a comprehensive insurance system to protect all our people equally against insecurity and ill health.

"The recommended broadening of social insurance would increase the receipt and expenditures of the trust accounts over what they would have been.

"There are now more than 10,000,000 people in the United States, about 8 percent of the total population, who have reached the age of 65, but our systems of protection against the economic hazards of old age and dependency are still inadequate. The coverage of old age and survivors insurance should be extended, and benefits should be adjusted upward with a higher limit upon earnings which may be received after retirement.

"About 4,000,000 people now depend on public assistance, in part because existing social insurances, particularly old-age and survivors insurance, are deficient and because there is no national health insurance program and expansion of social insurance will decrease the need for public assistance expenditures."

At the present time there are over 2,000,000 individuals now receiving monthly benefit checks under the provisions of the old-age and survivors insurance provisions of the law. This number includes men and women over 65, who have retired from gainful employment, and the surviving widows and children of insured wage earners. More than $530,000,000 a year are now being paid to these individuals out of the trust funds accumulated from the contributions collected under the law and this amount will increase substantially in the years ahead.

Approximately half a billion dollars is being paid annually to the States of the Nation to assist them in meeting the financial costs of their public assistance programs—State old-age assistance, aid to dependent children, and aid to the needy blind. About 44,000,000 wage earners are now covered by the unemployment compensation program. More than a billion dollars in unemployment compensation benefits has been paid to those wage earners unemployed through no fault of their own. The unemployment compensation trust fund amounts to about $7,000,000,000 and the old-age and survivors insurance trust fund amounts to about $10,000,000,000. These two funds are sufficient to meet any demands that may be made upon them in the foreseeable future.

If the recommendations for expansion of coverage and increase in benefit payments, disability insurance and a well-considered program for health and medical care, would come into being so that we might have an integrated social-security program for the benefit of all the people, what a wonderful future social security could look ahead to.

But with all that has been said—and coming back to the main subject of this address—only the Congress can determine what the future of social security will be. Unless the majority of the membership of the next Congress and future Congresses shall be imbued with the same degree of progressiveness that moved the majority Membership of the Congress which created, nurtured, and brought the combination of program purposes to their position of success today attained, I am fearful of any substantial progress until the people are in pain again as a result of another depression.

We cannot overemphasize the importance of the family life. It is the oldest of our social institutions.

It is the basis of society, a strong family life means a sound government: weak family life means weak government.

It is where weak family life exists in this world of ours due to insecurity that the dictator with his false promises prospers.

Economic insecurity to any degree, but particularly where it affects an appreciable or substantial part of a people, has marked disintegrating effects upon the family unit and, therefore, on government itself. A sound social-security program has a stimulating and strengthening effect. It preserves and strengthens.

It is a wise government that plans ahead to strengthen * * * by taking necessary and proper steps to prevent the disintegration of its family life, rather than to wait until the forces of decay have started into operation.

Comprehensive Veterans' Housing Bill

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, I have introduced H. R. 777, a bill designed to enable World War II veterans to acquire homes and farms at prices and rentals which the great bulk of veterans can afford. To achieve this broad purpose, the bill provides aid to veterans through two major channels: First, to build homes at actual cost for veterans through Government loans to veterans' housing associations; and, second, to bolster the present consumer

credit supports available under the Servicemen's Readjustment Act to veterans who need such aid to buy homes and farms. This new bill is closely patterned after H. R. 4488, veterans' homestead bill, which was unanimously reported by the Committee on Veterans' Affairs during the Eightieth Congress.

Veterans' housing associations can build homes at prices and rentals within the average veterans' ability to pay, through the elimination of speculative profits, of profits presently realized by inflated allowances for contingency costs, of landlord profits, through Federal contributions to public facilities necessary for housing, through lower interest rates, and through longer amortization periods.

The preservation of the advantages of the GI loan at the present 4-percent interest rate is aided by supplementing the ability of private lending institutions to make these loans, by affording Government secondary market support, by supplying money for GI home loans to lending institutions through the Home Loan Bank Board and for farm loans to Federal land banks and to the Farmers Home Administration, and by providing direct 4-percent loans to individual veterans who are unable to obtain them from private lenders.

These objectives can be realized under the proposed bill at far less direct or indirect cost to the Government than the costs involved in any alternative housing proposal of comparable scope which has yet been advanced. At the same time the proposed measure is designed in a manner calculated to temper the inflationary aspects usually attendant upon Government credit supports.

Of all members of our citizenry, the veteran and his family are unquestionably the hardest hit by the current housing shortage. Despite the efforts of the home-building industry in achieving the current level of house production, there is abundant evidence that the great majority of veterans are not able to meet the prices of these homes, and further, these veterans who can meet them are experiencing great difficulty in obtaining favorable financing terms. Any legislation aimed at alleviating this shortage must, in all fairness, give real meaning to veterans' preference by giving veterans an effective competitive position in their attempts to buy or rent suitable shelter.

The initial attempt of the Congress to afford a housing credit assistance to veterans, through title III of the Servicemen's Readjustment Act, has until recently proved to be the greatest single housing aid which the Government has made available to veterans. Almost 1,400,000 World War II veterans have solved their housing problem by purchasing homes under the Servicemen's Readjustment Act. Since the fall of 1947, however, the GI loan program has been progressively hampered by an increasing tightening of credit and by excessive housing costs and prices, caused at least in part by the diversion of materials and labor into upper-bracket housing priced far above the ability to pay of the vast majority of prospective veteran purchasers.

This bill is designed to reverse these trends and to put the veteran once again in the housing market. It will help the veteran help himself.

OPERATION OF BILL LIMITED TO 2-YEAR PERIOD

The chief objection to the veterans' homestead bill introduced during the Eightieth Congress hinged upon the money expenditures which that bill involved. There was little concern over the final costs to the Government of the bill because the great bulk of the expenditures called for by the original homestead bill represented self-liquidating loans which would be repaid to the Government with interest. There was concern, however, over the large cash outlays which the original bill authorized over a 10-year period. These outlays would have totaled approximately $10,000,000,000, a sum which critics of the bill contended would aggravate the inflation problem.

To meet this objection, the veterans' housing bill of 1949 has been revised, on a 2-year basis. All of the advantages to veterans in the original proposal have been retained, but the operation of the bill has been shortened to a 2-year term, and the loan authorizations and cash outlays have been reduced accordingly.

Such an approach has a number of compelling advantages: First, it will keep Federal cash outlays to a minimum, thus dispelling apprehension over the inflation problem; second, it will give the bill a chance to prove what it can do for veterans' housing; and, third, if the housing shortage has been met at the end of the 2-year period the Government will not be committed for a longer time.

EXPLANATION OF THE BILL BY SECTIONS

SECTION 512. HOMESTEAD ASSOCIATIONS

Section 512 authorizes the Administrator of Veterans' Affairs to grant charters in nonprofit veterans' housing associations for the purpose of acquiring or constructing housing for sale or rent at actual cost to veterans. Charters would be granted only to associations which offer a reasonable prospect for success in the judgment of the Administration. Such associations would be authorized to borrow money from the Administrator of Veterans' Affairs at an interest rate one-quarter of 1 percent in excess of the cost of the money to the Government. Loans to the associations would be repayable to the Administrator on either a short-term or a long-term basis. Long-term loans would be amortized over a period of 40 years if the housing constructed or acquired is held by the associations for rental to veterans. The associations would be empowered to construct single-family dwellings, either urban or rural, for sale to individual veterans, but individual purchasers would be required to finance such purchases through local financing institutions, and the associations would be required to apply the proceeds of such sales upon the indebtedness of the association to the Administrator. Where units in multiunit structure are sold or held on a cooperative or mutual ownership basis, the associations would be permitted to finance the cost over a 32-year period. Veterans purchasing single-unit housing from an association could obtain loans guaranteed by the Administrator under title III of the Servicemen's Readjustment Act amortizable over a 32-year period.

The estimated cost of units to be constructed or acquired by an association could not average more than $10,000 per unit, and the associations would be compelled to sell or rent such units at prices reasonably representing the cost to the association. The associations would be regulated and supervised by the Administrator of Veterans' Affairs. Approval would be denied for the purchase or construction of units in excess of local veteran demand, or involving a cost found to be too high locally in comparison with the current price or rental of similar units.

Membership in associations would be limited to veterans of World War II and each association could otherwise prescribe its own bylaws defining eligibility to membership in the particular association. Each veteran desiring to become a member would be required to deposit $100 with the association and to file with the Administrator an affidavit to the effect that he is not a Communist and does not belong to any subversive organization.

The net incomes of associations would be exempt from Federal taxation and State and local taxing authorities would be precluded from imposing any taxes upon associations greater than taxes imposed in the locality upon similar nonprofit corporations—similar authority now exists for Federal savings and loan associations. Associations would, however, be required to pay normal property taxes. Associations could be dissolved or placed in receivership by the Administrator, if necessary, by suit in the Federal courts. Upon dissolution of any association the net assets of the association remaining after payment of its obligations would be covered into the United States Treasury as miscellaneous receipts. Authority to charter associations and to make loan commitments to them would expire June 30, 1951.

It is expected that an association will actually undertake its construction through private building contractors, but that through the award of firm contracts, the elimination of speculative profits, the cutback or recapture of contingency margins, the advantageous financing, the land-development grants, and the elimination of sales expenses, the net cost to the association of each unit constructed will be substantially lower than the price of any comparable units which could otherwise be made available to veterans. Once completed, the monthly carrying cost or rental of the individual units, due first, to the lower initial cost, and second, to the longer repayment periods in conjunction with low interest rates, will be substantially less than veterans could obtain under either existing facilities or those contemplated by other pending legislation. Prior review and approval by the Administrator of each project proposed by an association will insure against unwise or unsound activity. Annual audit of the associations' accounts and records will, with other proper regulatory and procedural requirements, supply needed safeguards to assure against improvident or inefficient operations.

SECTION 513. GRANTS FOR PUBLIC FACILITIES

As an integral part of this broad attack on the veterans' housing shortage,

section 513 is intended to offset the present scarcity and high cost of improved land. It authorizes the Federal Works Administrator to aid State and local governments or associations by 50 percent grants for streets, water, and sewer and other similar facilities wherever the Veterans' Administrator finds such community facilities necessary for effective use of the housing provided under section 512 of the bill. Subsections (c) and (d) contain safeguards to assure that the public facilities will conform to local standards and will be adequately maintained, as well as that the veterans and their families will receive the benefits extended. Where the grant is made to an association, the bill provides for the transfer of the completed public facilities to the appropriate local government.

This section will substantially lower the first cost of the home as well as the annual assessments and other charges usually imposed on home owners for public facilities. It will also assure that those vital facilities are ready to serve the veteran when he moves into his home.

Perhaps the $50,000,000 here authorized is not enough to finance all the community facilities that may be required for the new housing under the bill. It will, however, fulfill the most urgent needs. It is contemplated that the remainder will be provided through usual channels without Federal aid.

Federal aid for local community facilities has ample precedent. During the war, more than $300,000,000 was granted by the Federal Government to local public bodies for public facilities related to housing for industrial workers. Surely we have as great an obligation to our veterans.

SECTION 514. INVESTMENTS IN LENDING INSTITUTIONS

Section 514 authorizes the Home Loan Bank Board to make investments in savings banks, cooperative banks, and institutions (savings or building and loan associations, etc.) that are members of the Federal Home Loan Bank system or insured by the Federal Savings and Loan Insurance Corporation. For this purpose the bill would make available to the board such sums, up to $750,000,000, as the board may request.

This section is designed (1) to relieve the current shortage of capital for loans to veterans for the purposes of section 501 of title III, since the inability of veterans to obtain financing under the present provisions of title III in many localities is daily becoming more acute; (2) to assure that mortgage money will be available to permit the financing through private institutions of homes constructed by veterans' housing associations under section 512 (e) (1) of title III as added to the act by this bill.

Funds provided under this section may be used by the specified classes of institutions only for loans not over $9,000 which are made for the purposes of section 501 of title III (purchase, construction, improvement, and repair of homes) which are guaranteed or insured under that title. A limitation of $9,000 on loans made with such financing, is placed in the bill to provide an incentive to builders to provide homes for veterans within that amount, and to channel these funds into housing the purchase price of which is realistically within the repayment ability of the great bulk of veterans. Preference must be given by the Board to institutions in areas where money for veterans' loans is otherwise scarce. The institutions in which the money is invested will pay dividends or interest to the Government, just as they do to private investors. Rates currently paid by these institutions average between 2 and 2½ percent per year, and are generally more than the average cost of money to the Government.

This provision will relieve credit stringencies throughout the country by the use of the facilities of existing privately owned and managed institutions the staffs of which are already well experienced in the same type of lending, and which in fact originated up to 80 percent of all veterans' home loans in the earlier stages of the title III program. Assurance is provided to institutions which accept these funds for investment that precipitous governmental action in demanding withdrawal will not upset their normal cash position. This assurance is given in the provision limiting required payments in any one year to not more than 4 percent of the total amount thus invested in the institution; however, any investment may be voluntarily repaid to the Government in whole or part at any dividend or interest date.

There is ample precedent for the making of such investments in these institutions. By a provision added in 1935 to the Home Owners' Loan Act of 1933, the Home Owners' Loan Corporation was authorized to make investments in shares of Federal savings and loan associations and in shares, deposits, and investment certificates of any member of a Federal home-loan bank or any institution insured under Title IV of the National Housing Act. The statute provided that $300,000,000 of the total authorized bond issue of the Corporation should be eligible for purposes including these investments. One of the major purposes of the provision was to increase the funds then available for home financing.

The Home Owners' Loan Corporation and the United States Treasury made such investments in a total amount of about $275,000,000. These investments have been most satisfactory, and repayments have been well in advance of schedule. The outstanding balance of these investments has been reduced to about $6,000,000 and about $55,000,000 has been received by the Government as dividends.

SECTION 515. FARM LOANS

Section 515 is designed to make farm credit available to veterans on favorable terms. Funds for farm loans at so low a rate as 4 percent are limited in many agricultural areas and as a result many World War II veterans qualified to succeed in farming have been unable to find any lender to make them guaranteed or insured loans.

Federal land banks are authorized by this section to make farm real estate loans to veterans under title III without regard to certain of the limitations and restrictions under the Federal Farm Loan Act and other statutes. It also authorizes the Federal land banks to purchase such loans made by other lenders and to pledge loans so made or purchased as security for farm loan or other bonds and to issue or to cause to be issued farm loan or other bonds secured thereby.

The Federal Farm Loan Act limits the ratio of all loans made by the Federal land banks to 65 percent of the normal agricultural value of the farm real estate and authorizes the issuance of bonds secured by such loans. Section 500 (d) of the amended Servicemen's Readjustment Act removed somewhat similar restrictions from national banks and other lenders in the case of GI loans but did not remove restrictions on Federal land banks. Federal land banks are a large factor in farm real estate lending and are now prevented by restrictions, which this section seeks to remove, from being of service to World War II veterans in connection with guaranteed or insured loans. This section and section 518 (f) provide methods by which Federal land banks can obtain funds for these loans.

This section also authorizes loans to veterans under the Farmers Home Administration Act in that loans so made are to be charged by the Administrator to the veterans' gratuity entitlement and the 4-percent gratuity payment is to be made thereon just as if guaranteed or insured.

Private lending institutions are also encouraged to make guaranteed or insured farm loans to World War II veterans through the secondary market facilities under section 516.

SECTION 516. SECONDARY MARKET

Section 516 establishes a long-range Government secondary market for home and farm loans which are guaranteed or insured under the Servicemen's Readjustment Act of 1944, as amended. The secondary market is designed to correct the inadequacies and imperfections of the secondary market now existing in the Federal National Mortgage Association.

The problem is by no means confined to lenders in rural communities where there is a dearth of mortgage money, nor to those lenders which have reached a saturation point in their ability to make additional GI loans in the absence of assured secondary market support for a portion of their further commitments. The incentive for lending institutions in urban areas as well to invest in 4-percent GI mortgages has been greatly weakened apace with the recent firming of yields in the money market. The effects of the lack of an adequate secondary market are evident in Veterans' Administration statistics showing the trend of GI home-loan applications received during recent months. The number of home-loan applications has declined sharply since September 1947. During September and October 1948 receipts were more than 50 percent below the September 1947 level. The phenomenon of a decline in GI home-loan activity during a period when new-home completions have been approaching a near-record peak is partly attributable to the aggravation of the secondary-market problem.

The secondary market provided for in section 516 of this bill is designed to in-

clude safeguards ample to prevent abuse of the market and to encourage lenders to sell GI loans to the Government only in case of acute future need.

The major provisions of the market and the supporting reasons for the inclusion of each provision are these:

First. A market for farm loans, which were not eligible for sale to the Reconstruction Finance Corporation Mortgage Company market, and which are only eligible in theory under the present FNMA market, is established. The extension of the market to include farm loans will fill a conspicuous void and, by encouraging private lending institutions to make farm loans at the 4-percent maximum interest rate permitted by the Servicemen's Readjustment Act, will enable veterans to obtain liberal financing from lending institutions in their local communities.

Second. Only loans made after December 31, 1948, are eligible for purchase by the market. Inasmuch as the purpose for creating the Government secondary market is to provide additional GI home- and farm-loan credit where it is now nonexistent or difficult to obtain, the market does not and should not apply retroactively to loans already made to veterans.

Third. Loans are eligible for sale to the market for a term of 5 years from the date of origination of the loan. This provision is deemed necessary to prevent the recurrence of a flurry to sell GI loans such as the one which took place just prior to the termination of the Reconstruction Finance Corporation secondary market by Congress on June 30, 1947, and more important, to introduce a stabilizing influence upon the mortgage portfolios of lending institutions. The firm assurance to the lender that he may sell a fixed percentage of his loans at any time during the 5-year period after origination should encourage him to hold his GI loans as earning assets and to sell them only in case of real need.

Fourth. Each lender is limited in the amount he can sell to the market. He can sell no more than 50 percent of the original amount of his future loans at par, and an additional 25 percent at a discount of 1½ percent, i. e., at 98½ percent of the outstanding balance. This provision will require that the lender retain a substantial proportion of his GI loan portfolio and will prevent entry into the program of lenders with slender capital who would count on selling 100 percent of their loans to the market as fast as turn-over would permit.

Fifth. The Administrator is directed to refuse to purchase any loan which, in his judgment, does not reflect acceptable credit and security requirements in its origination. This provision is included to permit the Administrator to screen out those mortgages made without full adherence to the usual standards of good lending practices, so that the Government's risk of loss may be minimized, and high standards of lending practice encouraged.

Sixth. No loan may exceed $10,000 in original amount. The intention of this limitation is to induce lenders to give preference to the financing of low-cost homes.

Seventh. No monetary limitation has been placed upon the aggregate dollar amount which may be used by the Administrator for the purchase of eligible loans. This is intended to allay the fears that lenders might have that they might be excluded for lack of funds in the market when they should find a real need to sell more of their loans. A market with a limited amount of funds, on the other hand, would encourage lenders to rush their loans for immediate sale to the Government.

SECTION 517—DIRECT LOANS TO VETERANS

Section 517 authorizes the Veterans' Administration to make direct loans at 4-percent interest to otherwise eligible veterans who can show that they have been unable to obtain a guaranteed or insured loan for home purchase from a private lending institution. This section would supplement the mortgage-credit facilities otherwise available, but would not put the Government into competition with private sources willing to provide mortgage funds at 4 percent. This authority to make direct loans has several important advantages, as follows:

(a) Under the plan there would be no question of a lack of capital for GI loans and all veterans, in communities of every size, would be assured of obtaining a GI loan, provided of course that their credit position qualifies them as a sound risk. In short, the 4-percent GI loan would again become an actuality obtainable by an eligible and qualified veteran.

(b) The precedent of a system of Government direct lending as a supplement to private lending in the field of mortgage finance is already firmly established in the farm-mortgage field. Such a system is presently in operation in the farm lending program of the Farmers Home Administration of the Department of Agriculture. This agency stands ready to make direct farm-mortgage loans to qualified veterans and others at 4 percent whenever the farmer can show that he has been unable to obtain a conventional farm-mortgage loan at a moderate interest rate from a private lending institution in his community. The proposed solution, then, has precedent in other fields of Government finance.

(c) The costs of a system of supplemental direct lending would be negligible and there is every likelihood that these costs would be exceeded by the income which the Government would receive in the form of interest from veteran borrowers. Since the cost of money furnished by the Treasury to the Veterans' Administration would probably range from 2 to perhaps 2½ percent, the VA would be able to apply from 1½ to 2 percent of its interest income for administrative expenses and for the establishment of reserves. Assuming that the national levels of income and employment are maintained at or near present levels, there would be every expectation that the VA would show a sizable surplus from its direct lending operations. And moreover, even if a period of recession and of real estate decline should set in, it is important to remember that the possibility of loss to the Government on a direct loan is no more than the possible loss the Government may experience on the million and one-third loans which it has already guaranteed.

(d) Even though there has been a marked tightening up in the GI lending activity of lending institutions generally, many of these institutions are still making some GI loans available to veterans. Thus the plan does not provide for across-the-board direct lending but merely makes GI loans available where lending institutions do not want to make them.

SECTION 518. PROVISION OF FUNDS

Section 518 authorizes and directs the Secretary of the Treasury to make available to the respective agencies of the Government specified, the sums allotted to each of them to accomplish the objectives of the bill. These sums are as follows:

First. To the Administrator of Veterans' Affairs the following:

(a) For loans to veterans housing associations, up to $1,000,000,000.

(b) For direct loans to veterans unable to obtain loans from other sources, up to $350,000,000.

(c) Such sums as he may from time to time require for the operation of the secondary market.

Second. To the Home Loan Bank Board up to $750,000,000 for investment in eligible institutions.

Third. To the Secretary of Agriculture for loans to Federal land banks, and loans under the Farmers Home Administration Act, up to $100,000,000; and

Fourth. To the Federal Works Administrator for grants for public facilities, up to $50,000,000.

Advances on account of these sums are required to be deposited by the Secretary of the Treasury on request of the respective agency. Such advances, until repaid, with the exception of the Federal Works Agency grants, and moneys made available to Federal land banks, carry interest at rates fixed by the Secretary of the Treasury, taking into consideration the current average rate on outstanding marketable obligations of the United States. The interest rate on loans to Federal land banks is to be such rate, not in excess of 2¼ percent per annum, as is fixed by the Secretary of Agriculture and the Secretary of the Treasury. This maximum rate is specified in the light of rates currently payable on land bank bonds to assure their continued ability to make guaranteed loans at 4 percent per annum, which is their current rate on loans. Moneys for such advances are to be obtained by the Secretary of the Treasury by using the proceeds of the sale of any securities hereafter issued under the Second Liberty Bond Act, the purposes of which are extended for such financing.

Broad discretion with respect to the management of such funds, within the specific purposes and limitations defined in the bill, are given to the various agencies. It may be pointed out that in their respective exercise of this discretion and the related functions, these various agencies will not be engaged in financial activities novel to their present operations, but rather, will merely augment and extend somewhat the various services which are typical to their customary duties, and in which their officers and employees are well experienced.

SECTION 519. TERMINATION OF SECOND-MORTGAGE LOAN GUARANTY

Section 519 proposes the deletion from the GI bill of section 505a, which permits the guaranty of a second-mortgage loan in conjunction with a primary loan insured by the Federal Housing Administration. This form of combination loan, while much less advantageous from the standpoint of the veteran, is more advantageous from the standpoint of the lender. In many cases the combination loan costs the veteran up to 10 percent more than would a straight section 501 loan in a corresponding amount. Section 505a is not in fact achieving its purpose, since down payments are as frequently required to cover the balance above the combination loan as they are in section 501 loans. Moreover, the combination loan, affording as it does three layers of price support, is regarded as being more inflationary than the 501 loan. It is thought that if eliminated from the GI loan program at this time, when accompanied by the secondary market provisions of section 516 and the direct lending authority (sec. 517), the impact of the deletion upon the ability of the veteran to get home-loan financing will be negligible, and will net a benefit rather than a detriment to veteran borrowers as a whole.

SECTION 2. AMENDMENT OF NATIONAL HOUSING ACT

Section 2 of this bill amends the secondary market established under the title III National Housing Act, by providing that no GI loans shall be purchased under the old authority after 30 days from the enactment of this bill, except pursuant to prior commitments. This provision will eliminate any conflict of authority between the National Housing Act and section 516 of this bill, and will thereafter confine the authority of the Federal National Mortgage Company to the purchase of loans insured by the Federal Housing Administration.

ESTIMATE OF COST

It is not possible to estimate with precision the probable cost of this bill. However, it should be noted that all funds authorized to be expended under the program, with the exception of the $50,000,000 for grants for essential public facilities, are repayable to the Treasury with interest. The cash outlays over the 2-year period—5 years in the case of the secondary market—are estimated at $2,750,000,000, as follows:

Cash outlays

	Per year	Total
1. VA loans to veterans' housing associations	$500,000,000	$1,000,000,000
2. HLBB investment in home-financing institutions	375,000,000	750,000,000
3. Purchase of GI loans by VA secondary market (5 years)	100,000,000	500,000,000
4. Direct 4 percent loans to veterans	175,000,000	350,000,000
5. Department of Agriculture investments in Federal land banks and Farmers Home Administration	50,000,000	100,000,000
6. FWA grants for home-site development	25,000,000	50,000,000
7. Administrative expenses	2,500,000	5,000,000
Total	1,227,500,000	2,755,000,000

Final costs should be minor in terms of the benefits to be achieved. Because most of the cash outlays should be completely repaid, final costs are estimated to total only about $80,000,000, including a reasonable allowance for losses on loans made by VA pursuant to sections 512 and 517, as well as estimated administrative costs. The components of this estimate are summarized in the following table:

Final costs

1. VA loans to veterans' housing associations	$20,000,000
2. HLBB investment in home-financing institutions	None
3. Purchase of GI loans by VA secondary market	None
4. Direct 4-percent loans to veterans	7,000,000
5. Department of Agriculture investments in Federal land banks and Farmers Home Administration	None
6. FWA grants for home-site development	50,000,000
7. Administrative expenses	5,000,000
Total	82,000,000

Not only is this final cost to the Government trivial in comparison with other expenditures for far less worthy purposes than the providing of homes for our war veterans, but the total cash outlay is of manageable proportions. The total outlay for each of the 2 years—$1,200,000,000—involves an amount equal to about one-fifth of the current annual rate of new investment in residential building, and probably even less. Further, the important cost-saving devices available to the housing associations and the reasonable value protection provided as ceilings on loans to individual veterans, will have a salutary and profound influence in helping to bring stability to the entire home realty market at levels below those now prevailing.

SUMMARY OF PROVISIONS OF THE VETERANS' HOUSING BILL (H. R. 777)

First. It authorizes granting of charters to veterans' housing associations by the Veterans' Administration for the purpose of acquiring homes for sale or rental to World War II veterans.

Second. It provides housing at prices veterans can afford to pay—limits average per dwelling unit to $10,000.

Third. Rental and multi-unit housing as well as construction of individual homes is provided.

Fourth. It makes provision for community facilities where not otherwise furnished.

Fifth. Interest rates are at 4 percent or less with long amortization periods.

Sixth. It channels funds to lending institutions which need money to make GI housing loans.

Seventh. It gives special attention to needs of veterans on the farm.

Eighth. It provides long-range secondary market for GI housing loans.

Ninth. It authorizes Veterans' Administrator to make direct loans to individual veterans where lending institutions are unable to do so.

Tenth. Virtually all expenditures are on a reimbursable basis with final cost to the Government estimated at approximately $82,000,000.

What Is the Fate of America?

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. DONDERO. Mr. Speaker, the Washington Evening Star, one of the great newspapers of the country, has pointed out with rare clarity the danger manifest and expressed in the President's state of the Union message.

The editorial of January 6, 1949, should be read by every thoughtful American citizen.

Are the American people to share the same fate as the people of England, who are now engulfed in a Labor-Socialist government?

I include in the RECORD, as part of my remarks, the editorial above mentioned:

LEFT TURN AHEAD

Anticipating criticism of some of the proposals in his state of the Union message, the President seeks to discount it by predicting that there will be "strong opposition from selfish interests." Probably so. But there is no justification for the implication in this that only those who are serving some selfish interest will look askance at the philosophy embodied in the message, for there is reason to believe that adoption of Mr. Truman's proposals would mark a long step in the direction of state socialism. And there are many people, not identified with any selfish interest, who will be extremely reluctant to take this step without a more persuasive showing of necessity than the President sets out, and without a clearer understanding of the long-range consequences of adoption of Mr. Truman's program.

The essence of this message is an appeal for big government—for a government that will get bigger and bigger as it takes over more and more new functions. Repeatedly, the President uses such terms as the "increasing responsibilities on the Government," and "the Government has still other opportunities" to do one thing and another. Perhaps a continued expansion of government is inevitable, and it may be that this is not, in and of itself, a bad thing. But the President ignores the consequences, and they should be made clear. The people should understand that bigger government means more Federal employees and bigger Federal budgets. They should understand that the area of individual initiative and responsibility diminishes as that of government expands. And it should also be made clear that historically, the tendency of expanding government is to feed upon itself, and to grow constantly larger in the process.

Is it necessary that the Government take on ever-increasing responsibilities? Mr. Truman points out that since the boom year of 1929 there has been a population increase in this country of only 20 percent. In the same period agricultural production has increased by 45 percent and industrial production by 75 percent. So we have been making progress, although, in the President's judgment, not enough progress. He would go faster and further. Business, he says, should expand and produce more at lower prices. In event business and industry cannot or will not do this, the President submits an interesting though somewhat ambiguous proposal. In the case of materials in critically short supply, like steel, he suggests Government loans for expansion of production facilities. If this does not do the trick, he wants authority for construction of such facilities directly. Presumably this means

construction by the Government. If it also means Government operation or Government-directed operation, as it probably does, then the champions of free enterprise may well wonder whether they have not come to their Waterloo.

What is the prospect that private industry will meet the demands laid upon it by the President? He wants $4,000,000,000 in new tax revenue, to come "principally" from corporations. He demands enactment of all of the economic controls heretofore advocated. He attacks the Taft-Hartley Act on generalized grounds which are not supported by the facts, and demands its repeal. Finally, in the background, he brandishes the club of direct Government competition. Is this an atmosphere in which private investors will want to risk their money, or in which private industry will care to expand its plant facilities? The answer is no, and the inference can be drawn that the President, consciously or otherwise is calling for a state of affairs in which private industry cannot expand and in which the scope of government will have to be enlarged.

These things are by no means all that the President proposes. While calling for lower prices he wants higher minimum wages, maintenance of farm support prices and, one can infer, higher over-all wage levels which would not necessitate price-ceiling increases. Other items on his program are extended rural electrification, river development, better health facilities, Federal aid to education, and an expansion of public housing. Meanwhile, he urges that the Federal budget be balanced and that a substantial surplus be raised for public-debt retirement. No one can be blamed for wondering where the money for all this is coming from.

There are certain important facts on the other side of the picture. One is that private industry has not been able to give the people all they want in the way of better homes, better health, better schools, etc. Another is that the proposals in the message are, in the main, the proposals upon which the President made his bid for reelection, and he won. If it be pointed out that he won with slightly less than a majority of the total vote, the fact remains that the congressional results were somewhat of a sweep for the Democrats.

So when Mr. Truman says the election shows that the American people are in favor of the kind of society he advocates, he may well be right. Certainly, he and the new Congress cannot be blamed for thinking that it is good politics to try to create this utopian society. The people, by voting or by not taking the trouble to vote, can fairly be said to have given the signal for a turn to the left. Whether they will like what they find when the turn is made remains to be seen. But the chances are that the disillusionment, if there is to be one, will come too late.

Service Pensions for Veterans of World War I and World War II

EXTENSION OF REMARKS
OF
HON. RICHARD W. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. HOFFMAN of Illinois. Mr. Speaker, Congress has allocated huge sums of money for the Public Treasury for the purpose of rehabilitating the peoples of Europe and Asia. Millions of dollars, American dollars, have been expended and millions more are to be spent for the sole purpose of building the morale of conquered enemies as well as that of our former allies. This is being done to gain world confidence in our Republic and its political and economic system. I think that money spent abroad for this purpose, if properly controlled, is a farsighted approach toward stemming the tide of communism in those countries and establishing worldwide understanding and peace.

What our Government is doing at the present time is a repeat performance of its action in making loans to friend and foe alike at the close of World War I, except we now make no pretense of expecting the repayment of these tremendous outlays of American wealth. We are investing in national security as well as world peace.

In our eagerness to pour out our resources for building morale and confidence abroad, are we neglecting to maintain them in our own war veterans? How do the veterans of World War I and World War II feel when they read of these gigantic gifts of money and other wealth to people far across the seas?

A grateful Government granted pensions to the veterans of our other wars—modest annuities, to be enjoyed in their declining and less productive years. I believe the men and women who served honorably in both world wars are justly entitled to a monetary reward and an insurance of security which will last long after the fanfare of hero's welcomes and thanksgiving speeches fade away.

In humble appreciation of the service they rendered to our country, I introduced H. R. 847, which would grant service pensions to veterans of World War I and World War II. I am confident every Member of this Congress feels that some provision should be made to compensate these veterans for the loss of earnings, retardation of education, and risk of life and limb while in their country's service.

The provisions of H. R. 847 are, in brief:

First. That any person who served in the armed forces of the United States at any time between April 5, 1917, and July 3, 1921, or between December 7, 1941, and December 31, 1946, shall be eligible, provided: He was honorably discharged after 90 days or more service or for a disability incurred in line of duty;

Second. The pension shall be at the rate of $75 per month after attaining the age of 55, and $100 per month after attaining the age of 62;

Third. The amount of the pension is not modified by a person's other income. The payment of this pension is not reduced or discontinued because of other compensation under any law or veterans regulation, but a person may elect to receive this pension in lieu of such other compensation or pension;

Fourth. The Administrator of Veteran's Affairs is authorized to prescribe necessary rules and regulations to carry out the provisions of this act.

It is my judgment that these pension payments, high as the cost may seem, will be worth many times their intrinsic value when measured by the lift of morale given our veterans along with their increased confidence in our Government.

From an economic standpoint, we should not overlook the buying power that would be created by these pension payments, thus helping to maintain the increased production vital to our country's prosperity and progress.

I sincerely urge every Member to give H. R. 847 his earnest consideration.

Congress Reforms Rules Committee

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor, of Tuesday, January 4, 1949, which is in agreement with my proposal to amend the House rules to limit the power of the Committee on Rules:

CONGRESS REFORMS RULES COMMITTEE

(By Roscoe Drummond)

WASHINGTON.—The first act on the first day of the first session of the new Congress was to carry through a solid reform of the House Rules Committee.

By a vote of 275 to 142, the House placed a constructive curb on the deadly powers of the committee, which for a long time has been called—accurately and not fondly—the "graveyard of legislation."

The effect of this action is to prevent this heretofore all powerful committee from being a permanent blockade on legislation, which in the past it has been able to keep from the floor of the House whenever it didn't like it.

It now is provided that the chairman of any legislative committee whose regularly reported bill has been sidetracked for 21 days can appeal directly to the House to call it up. The new rule also provides that the Speaker of the House "shall recognize the Member seeking recognition for that purpose as a question of the highest privilege." If the committee chairman's motion receives a majority vote, then the bill is at once extracted from the clutches of the House Rules Committee and goes to the floor for action.

Two significant consequences flow from this reform:

It means that majority rule can find readier expression in the lower House of Congress; it can function more freely than it has been able to for many years.

It also means that the party in control of Congress tends to be made more visibly responsible for the legislative record which Congress writes—or fails to write.

At different times over the past 10 years individual members of the Rules Committee have acted autocratically to block proposed legislation either against the wishes of the party majority or against the overwhelmingly favorable vote of the legislative committee charged with particular bills. Democratic rules chairmen have done it, and last year the Republican rules chairman was up to the same tricks. Single-handedly, he prevented the House from voting on the universal military training bill, and his committee refused to let the Senate-approved Taft-Ellender-Wagner housing bill go to the floor until the committee had removed from it all the provisions it didn't care for.

Now there is less chance of the party majority being blocked by a recalcitrant minority in the House, regardless of whether the party majority is Democratic or Republican.

It is argued by some that the new rule vests near-dictatorial power in the hands of the Speaker by leaving him to "recognize" the committee chairman when he rises to move a 21-day-delayed bill out of the embrace of the Rules Committee.

But much of this interpretation probably was written prematurely when in its first phrasing the new rule provided that the Speaker may recognize the committee chairman for this purpose. As finally proposed and as finally passed, the new rule required that the Speaker shall recognize him.

It will be well to wait until the new rule proves itself in operation and until we see whether there is any tendency or any trick by which the Speaker could, at times, get around it. It seems to me the rule clearly is binding, and that failure of the Speaker to live up to it would be violating it in fact and in spirit. In any event, the responsibility of the Speaker is more visible, more get-at-able, by the public than that of the surreptitious "killings" of the Rules Committee. At the critical points he will have to operate in the open, and his actions, under most circumstances, will be the actions of the administration in power.

The net effect of the opening voting this week is to show:

That the Democrats begin the new session with even more effective control than they first anticipated.

That, as shown in the vote on the rules change, there appear to be at least as many House Republicans who are likely to side with the administration as there are southern Democrats likely to side against it. (All the Democratic votes—31 against the rules change came from the South; 40 Republicans voted for the change.)

That the bloc of 13 anti-Taft Republican Senators may prove a frequent ally of the administration, but will be capable of exerting a great balance-of-power influence over both Democratic and Republican actions in the Senate.

Hawaii Fights for Enlightened and Modern Point of View on Leprosy Under Leadership of Former Gov. Lawrence M. Judd

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of an address made by Lawrence M. Judd, former Governor of the Territory of Hawaii and now superintendent of the settlement for lepers maintained by the Territory at Kalaupap, county of Kalawao, on the north shore of the island of Molokai.

The address was made at a meeting at the settlement last October that was attended by the patients and a group of visitors including myself.

For close to 100 years Hawaii has been combating the disease of leprosy. The settlement at Kalaupapa was established in 1866, just after the American Civil War. The great sacrifice and work of Father Damien at this settlement in those early days has caused him to be canonized by the Roman Catholic Church.

Former Governor Judd appeals for an abandonment of the medieval attitudes toward this disease that have brought unusual hardship and suffering to its victims.

Under Mr. Judd's leadership an outstanding contribution is being made by Hawaii to the development of a more modern point of view toward this disease. His work is bringing to the settlement new hope and a new life to the patients. It is a great inspiration to all persons who visit this settlement today.

The text of former Governor Judd's statement follows:

Leprosy is perhaps the oldest disease known to man. It dates back in history to 2000 B. C. It was spread by mass migrations, military expeditions, and by the slave trade. It was brought to the Americas as early as 1543.

The best available evidence shows that leprosy is widespread throughout the world and that it is increasing. There are perhaps 5,000,000 to 10,000,000 persons afflicted in the world today.

Hawaii has been a participant in the age-old struggle with the baffling problem of leprosy for about 100 years.

Compulsory segregation was enacted on June 5, 1865, in the reign of Kamehameha V. The first contingent of patients, 25 in number, arrived at Kalawao on January 6, 1866. The original settlement was not located at Kalaupapa but at Kalawao, on the eastern side of the Kalaupapa Peninsula.

Patients lived in grass houses, caves, or under puhala trees, for the Government provided no facilities even for shelter.

It was not until 1878 that the legislature passed appropriations for some frame buildings and made meager provision for the care and comfort of the inmates. A physician was sent to the settlement at that time.

The records disclose that during the year 1866, 142 patients were admitted. Of these, 36 died the first year.

In 1890, for instance, there were 184 admissions, 154 deaths, and 1,174 active patients in the settlement at the end of the year.

What is the situation today?

On July 1, 1948, we had 280 active cases and 38 patients on temporary release within the settlement. During the year 18 new cases were admitted. Fourteen active patients died during the year. Of these deaths, the average period of commitment was 12 years and 8 months, the longest being 58 years and 11 months. During the year there was a period of 3 months and 8 days between patient deaths.

In 1931, the people of Hawaii spoke as one voice, through its legislature. An enlightened program for new administrative proceedure was adopted, leprosy affairs were reorganized and funds were provided for a well defined program of rehabilitation.

The steady decline in the incidence of the disease proves that the program and policies were sound.

We are trying conscientiously to improve the welfare of the people of the settlement and while we are in no way satisfied with the results so far attained, we are confident that substantial progress is being made. Needless to say, we have encountered many discouragements.

The general appearance and cleanliness of the settlement have been improved. Vocational, educational, and occupational therapy programs have been initiated. Additional opportunities for social intercourse have been instituted. The general moral tone of the settlement has been ameliorated. Worth-while forms of entertainment—cultural, edificatory, as well as amusing—have been brought in for the benefit of the people.

We are trying to recognize patients as individuals, with widely different aptitudes, who for a physical affliction producing much suffering and anguish have been banished to Kalaupapa, some of them for life. It is manifestly proper that the best humanitarian conscience and intelligence should be directed toward improving the lot of the patients.

But we must not rest content with that progress. Sufficient time has elapsed to justify a complete review of the present program with the hope and expectation that the people of Hawaii will again speak as one voice to make provisions for badly needed improvements, modernization of methods, treatment, procedures, and research.

No one disease has been so shamefully misunderstood or badly misrepresented as leprosy.

The unfortunate sufferer, throughout the ages, has been kicked from pillar to post, driven out of his home and community, and often locked up like a wild animal lest he contaminate some other member of society. Then to climax it all, the name "leper" has been applied to him, rendering him a social outcast and often bringing shame to his entire family as well as unjust disgrace and unfair treatment to himself. There is no reason why the ignorant superstitions of the dark ages should be continued today.

People still fear leprosy and think of it as the most contaminating of infectious diseases. Actually, except for other than children, it is much less communicable than tuberculosis and many more common infections. It has not been possible for scientists to induce infection in laboratory animals and even in human volunteers. All of us are exposed every day to more contagious diseases.

Not a single nurse or doctor at the National Leprosarium has contracted the disease in 52 years.

I do not speak with the authority of those who are charged with the responsibility of administering leprosy affairs in Hawaii but as an individual and a citizen who has devoted much thought to the problem and whose interest in the welfare of leprous people has been spread over a period of nearly 50 years, I do not advocate nor recommend that the present policy of segregation be completely abandoned. But I do advocate that the policy should be liberalized, modernized, and brought up to date in the light of the advancement of science and of the better knowledge of the problem.

We must treat the problem with greater wisdom, more charity, and better common sense. Our laws should be modernized and should embody only general principles. Authorizations and regulations should be made by experts and should be revised periodically in the progress of epidemiological knowledge.

Undoubtedly, some isolation is important, particularly in "open" cases, but the period of isolation should depend upon the progress of the disease and its response to treatment.

The control of leprosy involves precautions and measures which vary but need not be nearly as excessive as in the past or as at present. But these changes cannot be brought about at once because of the present error of public opinion that leprosy is a Biblical scourge and that the patient is cursed.

It is therefore of the utmost importance that public opinion should be enlightened. A new and more accurate understanding on the part of the public of this territory upon the subject of leprosy is one of the major essential requirements to effect control and

elimination of leprosy in Hawaii. There should be disseminated to the general public pertinent facts concerning leprosy, including information upon the latest improved medicine and methods for treating this disease. There should be fostered a spirit of tolerance and understanding upon the part of the public, in the interest of persons who have, or who may in the future contract leprosy, by showing the injustice of the leprosy stigma and for the purpose of allaying the unreasonable fear of this disease in the public mind.

I sincerely believe it will be desirable, both from sociological and economic viewpoints, to give serious consideration to a plan of compensation for disability incident to leprosy so that patients at the time they are placed upon temporary release or are finally discharged, will have determined the degree of physical disability sustained due to leprosy and/or treatment therefore. Appropriate disability compensation should be authorized and paid to all such patients who elect to live a normal life without the confines of the Kalaupapa settlement and Kalihi hospital. Such a plan will enable them to do so with some degree of financial security and with a minimum financial burden to their families and friends.

Furthermore, home isolation might be permitted under proper guaranties and prophylaxis.

I do hope that I have given you some food for thought and that you will lend your assistance toward improving the condition of our patients as well as changing the ridiculous, antiquated unjust attitude of the public.

I like to feel that a new day is coming for those who for centuries have been branded with the stigma, leper.

We must unite not only in improving their care and treatment, and in encouraging research, but in convincing the people of Hawaii that we are indeed living in a new era, the most important one since Biblical days, the era of hope for those who have, unfortunately, contracted or who may contract leprosy.

Reforming the Rules of Congress

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. EBERHARTER. Mr. Speaker, the RECORD, I include the following under leave to extend my remarks in article from the Christian Science Monitor of Monday, January 3, 1949, which is in agreement with my proposal to amend the House rules to limit the power of the Committee on Rules:

REFORMING THE RULES OF CONGRESS

(By Roscoe Drummond)

WASHINGTON.—In all the news and headlines you shortly will be reading about reforming the rules of Congress—from the lethal power of the filibuster to the "Stop, road closed" dictatorship of the House Rules Committee—one central fact should be borne in mind: The purpose of proposed changes is to permit representative government to function more effectively, to permit the majority, instead of the minority, to govern Congress.

The purposeful opponents of changing the rules under which Congress functions—or doesn't function—will try to make it appear that the public has little stake in these reforms—that only Congress is concerned, that it's all just a technical dispute which the innocent bystander had better sidestep. But that's sand in the eyes of the voters. The issue is whether a party clique shall run Congress and substitute its views at very critical points for the majority of Members of Congress.

When, 25 years ago, Vice President Charles G. Dawes led a good fight—but an unsuccessful one—to end the antidemocratic filibuster, he characterized the Senate rules as "putting into the hands of individuals and minorities at times a power greater than the veto power given by the Constitution to the President."

Dealing with the techniques of minority rule in both Houses of Congress in his valuable book "Congress at the Crossroads," Dr. George B. Galloway, one of the Library of Congress experts who helped to shape the recent Congressional Reorganization Act, speaks carefully when he writes: "There are many points on the legislative highways and byways where a few legislators lurk, like the pirates of Tripoli, and take the toll of passing traffic."

Obviously, the immediate incentive to reforming the rules of Congress comes from President Truman and the Democratic majority, who are concerned lest minority tactics prevent them from fulfilling their party's campaign commitments.

To this end, the Democratic caucus has just voted to curb the authority of the House Rules Committee through which it has been accustomed periodically to pigeonhole measures which the legislative committees of the House have approved. It now is proposed that after the Rules Committee has held up a bill 21 days, the chairman of the committee responsible for it may take the bill to the floor of the House and get the Rules Committee blockade removed by a majority vote.

But the validity of such a reform is not tied to the President's legislative program. It is a reform which Congress itself needs, which representative government needs, regardless of any particular election mandate. Time and again, a powerful minority clique blocked Republican measures in the House in the Eightieth Congress, just as it will do in the Eighty-first Congress unless something is done about it.

The House Rules Committee has become not a traffic regulator, as it was supposed to be, but a traffic dictator. And when it doesn't like a measure Congress' legislative committees send along to it, the committee either shunts it to a dead-end siding or substitutes a new measure of its own. Three recent examples will show how imperative it is to take the committee's stranglehold off the flow of legislation.

Two years ago this legislation "traffic" committee decided it didn't like the labor bill recommended by the House's own Labor Committee; it refused to give it clearance; it then substituted the Case bill, which had been introduced only 2 days before, which had not been approved by the Labor Committee, and on which there had been no public hearings. (The modern "pirates of Tripoli" at work.)

Frequently the Rules Committee assumes the authority to change, even radically rewrite, bills passed to it by the legislative committees. Last winter it removed all the provisions bearing upon public housing and slum clearance from the Taft-sponsored Senate bill. Its verdict was that it wouldn't let the House vote on the bill at all if it contained these Senate-approved provisions. It then forbade the offering of any amendments to the bill from the floor. (A smooth operation, but not democracy.)

On another occasion the Rules Committee refused flatly to pass to the House the administration-endorsed universal military training bill after it had been approved overwhelmingly by the Armed Services Committee. Thus, the Rules Committee simply refused to allow the Members of the House to vote on one of the most significant decisions before the country. It decided to reject the bill, regardless of what the majority of Congress wanted. (Quite a committee; quite a racket.)

These facts may be useful to bear in mind in appraising the motives and acts of those who try to stand in the way of reforming the congressional rules—of those who want to impose minority rule on Congress and turn it into unrepresentative government.

Berlin Air Lift

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, January 10, 1949

Mr. O'MAHONEY. Mr. President, one of the greatest achievements in the history of the American armed forces is, in my opinion, that by which the United States Air Force has been maintaining the supply of the beleagured inhabitants of the city of Berlin; indeed, all history tells no story to compare with it. A military arm of government has been carrying out the most effective peace mission ever undertaken. Operation Vittles, as it has been called by the gallant airmen who have been conducting it, was described last month by Assistant Secretary of the Air Force, Eugene M. Zuckert, before the Commonwealth Club of San Francisco. I ask unanimous consent that the substance of his address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AIR TRANSPORT DEVELOPED BY HAP ARNOLD

The last war proved the necessity of strategic air transport as an indispensable element of fighting a modern war. Or, as Hap Arnold put it in his final report to the Secretary of War: "Cargo and passenger air transport * * * operating with air-line precision and techniques is an essential part of military operations." General Arnold foresaw that development and organized during the war the largest air line in the world, the Air Transport Command. He gave it a separate organizational status so that it might not be hindered by subordination to the combat commands representing perhaps more glamorous aspects of war.

After the war, there was some opinion in respectable sources that in peacetime the service should substantially reduce transport operations, and instead create nucleus organizations for training and depend much more heavily upon commercial air lift for their requirements. Both the Air Force and Navy successfully opposed that doctrine and fortunately, otherwise Operation Vittles would not be a reality.

Today the air line General Arnold started and the Naval Air Transport Service which merged into the Military Air Transport Service (MATS) is operating the strategic air lift for all the services. It is MATS that is carrying out Vittles.

AIR ROUTE ONLY ACCESS TO BERLIN

How did Vittles start? It seems inconceivable that it was almost 5 months ago that the Russians barred the railroad and highway entrance to Berlin. June 21, 1948, was that date.

You merely have to glance at the map placed at your table to realize the predicament we were in. The only apparent access to Berlin from the British, American, and French zones required passage through the Soviet zone. Unless some means of getting through could be devised, the alternatives were clear. A city of 2,500,000 people (including 9,000 American citizens) was hopelessly doomed to starve or else we had to pull out of Berlin, and that was an action our diplomatic people feared might finally erase hope of maintaining peace in Europe.

Actually, the air provided the sole source of hope. Fortunately, by written agreement with the Russians there were provided three narrow air corridors from the Allied zones through the Soviet zone into Berlin, three 20-mile lanes of space upon which the effectiveness of our diplomatic policies might depend.

What did we have in Europe with which to support by air a city of 2,500,000 people? Physically, the answer was—not much. We had a couple of troop carrier groups on occupation duty in our German zone. These outfits were equipped with C–47's, the Douglas two-engine DC–3 that was a reliable workhorse of the war, but by no means a modern transport. Those C–47's could give us a potential lift of a few hundred tons a day, only a fraction of the 3,000 tons a day that General Clay originally estimated would be needed to do the job. Besides our planes, the British had at the start a few assorted transports, small assistance for the job at hand.

It wasn't just the aircraft picture that was bad. Even if we had had the aircraft in substantial quantity, we didn't have the people to maintain them. We had no adequate supply line back to the United States. The airport situation in Berlin was appalling. The British had one base at Gatow and a lake in which they could land amphibians—if they had them. We had Tempelhof Airdrome, but you would never have picked that for an air-freight terminal—an airport in the midst of a city—with only one short runway.

Fortunately, we had some intangibles, and among these were the personalities and leadership of two men. One is General Clay, the United States commander for all our forces in Europe. The other was Gen. Curt LeMay, head of our air forces there.

General Clay knew what had to be done and was ready to support whatever General LeMay needed to get the job done. General LeMay moved just as he did when he headed the B–29 operations for the strategic demolition of Japan. Curt LeMay set about doing the unbelievable, mostly with what he had, finding out what more he needed, and then joining with General Clay in hard-hitting cables back to the United States, clearly stating his requirements.

But he couldn't wait for his resources. On June 26, the "LeMay Coal and Feed Company," as the boys still call it, went into business. Our little fleet of two-engine C–47's made 25 trips carrying 80 tons, a far cry from the tonnage required. However, we were in business, carrying flour and coal so that Berlin could continue to eat and have available electricity so that trolleys and subways could run; power had already been cut 75 percent to conserve coal.

For the next few days the tonnage inched gradually upward. Already steps were being taken by headquarters USAF in Washington that affected almost every outfit in the Air Force all over the world.

CHALLENGE TO AMERICAN INGENUITY

C–47's—the Douglas DC–3—could not get the job done. C–54's—the big Douglas four-engined DC–4—could carry 9½ tons instead of 3 tons. We had to get C–54's to Germany. They came from Alaska, the Caribbean, Hawaii, and Japan. As one crew member put it to me, "Where was I on the night of June 26? I'll never forget. I was having a quiet small beer in a joint in Anchorage, Alaska. Somebody hollered that they wanted me back at the base. In a few hours, we're in the air. And by the Fourth of July I'm delivering 'vittles' for the LeMay Coal and Feed Company."

That crewman's experience was typical. Pilots, copilots, and crew chiefs climbed into their C–54's, loaded a supply of precious spare parts and flew them to Germany. Skilled maintenance personnel were requisitioned from each command and sent overseas in chartered commercial planes.

At the beginning we had to use airlift almost entirely. Naval air transport and crews came to our help also. We chartered planes to carry tires and engines across the ocean; terribly expensive, but vital if we were to keep going. The cables back to Washington kept demanding those engines and tires. At one point, we were so low on tires at Berlin and Wiesbaden that they were shipping them direct from the factory without ever going through our depot system.

There was another obvious problem from the beginning and that was the development of communications facilities necessary to keep the airlift going during the bad weather in which Berlin seems to specialize most of the year. We had to get ground control approach, the GCA, to make sure that we could fly in the instrument conditions that were prevalent so much of the time. The principle of GCA, for those of you not familiar with it, is simple. The man on the ground sees the incoming planes by radar. He can tell where they are and how high they are. By radio, he directs the pilot what to do in order to land. That sounds easy, but the equipment is highly technical, and operating and maintaining it is an art.

One of the worst shortages of skills in the Air Force has been in flight control communications people necessary to operate GCA equipment. We just didn't have the skill within the Air Force to do the intense flight control job required.

WARTIME TRAINING MAKES AIRLIFT POSSIBLE

Your military services developed outstanding communications men, but after the war many of them returned to civilian life. These were the type of men who had developed our air-to-ground systems for use throughout the world, developed radar, ground control approach, drone airplanes, and many other inventions in which the role of perfect communications played a dominant role. But we did know where to turn for help, because we keep a constant check on our reservoir of highly skilled technicians in the Organized Reserves, and they helped us solve our communications.

With replacement pilots for Vittles, we had to do somewhat the same kind of thing. Three months after Vittles, we had a specialized pilot training school going at Great Falls, Mont. Our replacement training program there became known as the Little Corridor because it consisted of a lane of 10 miles on either side of an imaginary line among the buttes and ravines. We duplicated the same hurdles in communications, weather, and instrument flying as the Berlin corridor with a lot of stress on the GCA techniques so essential to safety at Berlin. In 2 months, our alumni and current enrollment of that specialized school amount to almost 650 pilots and flight engineers.

BRILLIANT PERFORMANCE UNDER PRESSURE

I've outlined some of the steps we had to take to support Vittles. The examples chosen are a few of many. But I'm sure there's another aspect of the operation that you're interested in. How do they actually operate in Germany and what are some of the human factors involved?

We have four separate starting points where the Army delivers the freight to the Vittles operation. We fly from Fassberg and Celle in the British zone, and Wiesbaden and Rhein-Main in the United States zone. Although we have three separate landing fields in Berlin, you can appreciate that we are converging on a very limited air space.

Because that air space is so restricted we have to use a block system on the same principle as the railroad trains.

If you will look at the map I will try to explain a few things about it. I am sure that you will wonder with me how in the world so much traffic in the air can pass through clouds without tearing them to tatters.

On the map, you will notice the chart in the lower right-hand corner. This diagram shows a total of 26 airplanes in the air at four different altitude levels. Those planes are heading toward Tempelhof Airdrome at a time space of only, I repeat only, 3 minutes apart. In other words, the planes are flying 10 miles apart at about 200 miles per hour. In order to continue this high-pressure operation, our planes must land at Tempelhof every 3 minutes. Now once again look at the map. You will notice that the planes travel a course from Wiesbaden, for instance, that is not direct. This route must be followed in rain, fog, night, and sunshine. I am sure that you will all agree that the matter of successfully keeping about 26 airplanes in the air at once, and having them land as frequently as every 3 minutes for 16 hours a day, is a real job.

The essence of the operation is pressure. All you have to work with is time, whether your concern is the actual operation or the maintenance of the plane. In Berlin, each plane is timed from the moment its wheels are set down on the runway until it is clear of the runway. The taxiing to the stopping point is timed, opening the hatches and unloading are timed. Then the plane taxies to the take-off point, the crews are briefed and fed aboard the plane, flight clearances are handed them on the plane. They don't leave the plane during the maintenance check.

At Tempelhof planes frequently can land, taxi up, and be unloaded and airborne again within 30 minutes. Under favorable weather conditions this time of turn-around may be decreased and planes may get off at an even faster rate. Of course, the time that it takes to unload a plane is determined by the type of cargo the plane carries and ease or difficulty with which that cargo may be handled. In some cases, such as on the Fassberg-Gattow coal run, the displaced persons unloading planes have made a contest of the off loading. One such group set a record of 7½ minutes for unloading 10 tons of coal.

DOLLAR COST OF AIRLIFT

Well, I've talked about the background and how it works. What has it done? What does it cost the American taxpayer, and what does it mean? As of today, we have a fleet of 168 C–54's and a few C–82 packets

in Germany. From June 26 until the close of business of December 3—161 days—we flew 52,574 flights, 40,471 in C–54's, and we have carried 425,803 tons of coal and food into Berlin. On September 18, Air Force Day, we broke a record made during the war over the Hump in China by carrying in 5,583 tons to Berlin, and in weather so bad as to require flying on instruments 18 out of the 24 hours. This record was made without impairing our required average on subsequent days.

In addition to our own accomplishment, the British have flown in an additional 28.4 percent of the total lift, a magnificent feat considering that their fleet consists of a miscellany of planes, mostly the small C–47.

The result has been that Berlin's food stocks have been increased since last June. It is not going to be luxury eating, but Berlin will not starve. Likewise, with coal. Heating and electricity will be severely rationed; it won't be a cozy winter in Berlin. But Berlin will survive. And, as Gen. Bill Tunner, now in charge of the operation, says, "We can keep pouring it in for 20 years if we have to."

What does this cost? Let me again read from my daily report. As of the close of business on December 3, the latest cost figures read as follows:

Total operating costs	$18,365,000
Total support costs	25,323,000
Reserve for termination and undistributed costs	21,032,000
Aircraft wrecked (5 C–54's, 1 R5D, 5 C–47's)	2,410,000
Depreciation of aircraft	6,232,200
Total cost	73,362,000

Here's another cost. It cost 16 lives. That is a great price. As Charley Murphy, of Fortune, said, "The Berlin airlift is Rolls Royce delivery service to the greatest poorhouse in the world."

PERMANENT VALUE OF VITTLES OPERATION

But the cost of Vittles against the cost of war is not the only fact of significance.

In addition, Vittles is the most convincing proof possible of the American determination to support the cause of peace with much more than eloquent platitudes. Vittles is of the same pattern as our European economic cooperation program. Vittles is a heartening demonstration, not only to the Germans but to the whole world, that we know and are prepared to act upon our knowledge that the airplane has so reduced the size of the world that the last basis for any degree of isolation has been removed.

Vittles has been of great value in permitting us to make some valuable appraisals of our set-up for national security and the effectiveness of our military services. It has called for teamwork among the services and civilian agencies. The Army, with the purchasing help of the Department of Agriculture, has done a fine job in getting the food supplies to the airlift. The Navy has supplied many of the crews operating the airlift, and, in addition, the Navy has assisted in the sea-lane support of Vittles and has filled up the holes in our Pacific airlift caused by Vittles The project has proved beyond a doubt the effectiveness of the unified Air Force-Navy airlift organization—the Military Air Transport Service, which operates as an agency of the Chief of Staff of the Air Force. We know that unification of the services can function without destroying their respective identity and morale.

The actual operation of the lift itself has been a great test of the Air Force We have learned our lessons about our physical resources, strength, and weaknesses. For example, we know how critically dependent we are upon our supply of skilled enlisted maintenance personnel. We know, more forcefully than ever, that we are going to have to keep pressing to make the Air Force an attractive career for those men. Even an Air Force of volunteers cannot be effective unless those volunteers are willing to stay with us year after year.

We have been greatly encouraged by the evaluation of our organization, planning, and controls. You can understand the position we were in last summer—we did not know how long the Operation Vittles might continue. We had some tough questions to answer. For instance, how good were our procedures for planning such critical factors as the flow and training of personnel; or projecting the effect of Vittles upon our short supply of C–54 spare parts? What could be the effects on our combat potentials by our taking on this additional load? I can answer you that we have done a good job of the difficult forecasting problems involved, so that our operations people have been well advised of the areas in which they must take action, to keep the operations rolling with minimum dislocation to other missions.

You heard me give the bill of costs a little while ago. These cost figures are the proof that our business-management program, started 2 years ago by Secretary Symington of the Air Force, is paying off. Using our normal cost-accounting organization and procedures as a framework, we expanded quickly so that we could be able to assemble all costs of Vittles; the actual flying of the lift to Germany; maintenance operations in Europe and here; and the cost for our supplies.

We know now that we can do a good costing job even where our operation is so extensive and complex as this one we speak of today, but, even better than that, we have found we can interest all our commanders in cost control for the benefit of taxpayers, and instruct them in reducing costs as a part of their job—even under the stress of an abnormal operation.

As you businessmen know, a cost-control program is a success in business when the boys in the plant accept cost control as a logical and personal challenge. Our operations people are becoming cost-conscious, and the result will be greater insurance for the national security premium for which you pay.

Now once again, I would like to summarize the points we have covered:

In addition to giving a city of 2,500,000 people light, heat, and food—

1. We have established that, even under extraordinary and adverse conditions, the Air Force today is equipped to use air power in the furtherance of our security at home, or to strengthen our foreign policy as determined by the President and the State Department.

2. We have trained hundreds of flight crews who time and again have flown through fog, ice, and night to reach their objectives with only instruments and the teamwork of ground communications to guide them. These teams are all a vital element of our readiness.

3. As long as Operation Vittles lasts, the Air Force will grow stronger because we are learning under pressure. We have conclusively put the chaos of demobilization behind us, we are no longer a collection of plans, people, and units but a vital force that can do things.

4. We are seriously conscious of the economic burden of expenditures for national security and we are successfully implanting the business discipline of cost control in our military commanders.

5. And, finally, we have been teaching the world that we are not only the bankers for democracy but we are fighters for it as well.

Italian Colonies

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, January 13, 1949

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement issued by me on December 22, 1948, relating to the Italian colonies.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The people of Italy are among the best friends we have. I fear that we underestimate them, that we underestimate both the intensity of their friendship and the extent of their remarkably rapid recovery from the ravages of war.

In recognition of Italy's great friendship for us and the splendid strides she has made toward postwar reconstruction, I believe that the United States should work vigorously and emphatically to bring about Italian trusteeship over the prewar Italian colonies.

The situation as to these colonies is now as complicated as it is tragic. The peoples of Libya, Eritrea, and the Somaliland are handicapped in their progress toward eventual self-government because of the uncertainty which now surrounds their future.

One of the gravest problems which confront Italy herself is that of overpopulation. The crowded soil of Italy cannot support all the many mouths which must be fed. Until the pressure of excess population is relieved, the Italian economy can never be considered healthy and robust.

Although some emigration to the United States and to South America will be possible, the prewar Italian colonies are the logical and inevitable place for Italian emigres to found a new home. While the fate of the colonies remains in doubt, the population pressure in Italy builds higher and higher.

Moreover, many Italian families which lived permanently in the colonies before the recent war have not yet been able to return. Thus, hard-pressed Italy must provide for these temporary residents, as well as for the natural increase in her home populace.

It is a continuing and justifiable source of bitterness to the Italian people that they have not been accorded fully sympathetic treatment with regard to the colonies.

For all these reasons, it is pressingly necessary that a decision be reached, that the matter be settled, that this part of the debris left behind by the recent cataclysm be cleared away.

The Italian peace treaty provided that the Council of Big Four Foreign Ministers would reach an agreement as to the disposition of Italian colonies. The treaty also provided that if they failed to agree within a specified time limit, the problem would be placed before the General Assembly of the United Nations. The time limit did, in fact, expire without an agreement among the foreign ministers, and therefore the General Assembly takes over.

The General Assembly is to meet in special session next April largely for the purpose of considering the colonies. The Assembly must shoulder its responsibility and arrive at a just solution which will further encourage the Italian people in their efforts to help themselves and, by helping themselves, to help Europe and the world.

It is true that the Italiar colonies problem, like all important and vexatious issues, has many sides. Britain made a wartime promise to the Senusei tribes of Cyrenaica that they would not be returned to Italian administration. Likewise, justice demands that Ethiopia be given an outlet to the sea through Eritrea. The present Italian Government is itself wholly in favor of such an outlet for Ethiopia.

The United Nations statesmen will have to take these factors and many others into account, but the primary importance of restoring Italy to her historical role in the colonies cannot be gainsaid.

I want to emphasize and underscore the fact that all the colonies were in Italy's possession prior to the First World War. They are in no sense territories gained as a result of Fascist aggression.

I also want to stress that the Italian people, over a period of decades, spent a great percentage of their scant revenues in the development of these colonies, particularly the North African colonies. The results which could be achieved under a progressive and democratic government, like the present Italian regime, would be far more beneficial.

The Italians have definitely demonstrated their genius as colonial administrators. They have turned deserts into farm land; they have created schools where illiteracy once was rampant; they have introduced trade and stimulated industry. No nation is more fit than Italy to serve as a trustee, under the Trusteeship Council of the United Nations.

As Italy's friend, we must leave no stone unturned to help the brave Italian Government. Certainly, one indispensable way of helping is to throw our weight behind Italy's claims, so far as they are just, to trusteeship over the colonies.

The President's State of the Union Message

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. SMITH of New Jersey. Mr. President, on January 5 my distinguished colleague the gentleman from New Jersey [Mr. HENDRICKSON] made a brief radio broadcast commenting on the President's message. I ask unanimous consent to publish his observations in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For me, this has been an amazing day. As I listened to the stupendous task which the President has assigned to the Eighty-first Congress and heard his tax program, I could not help but wonder how his many very worthy objectives could be attained and still comply with his directive that we must balance the Federal budget.

I was thrilled with his appeal for legislative cooperation, and then I was deeply shocked when I returned to the Senate to hear the excuses which were offered by his own Democratic leaders to the threat of our all-American bipartisan foreign policy.

But I am here tonight primarily to discuss those portions of the President's message devoted to business, prices, and taxes.

As to business, it is essential that we maintain a high rate of production, and this can best be done by the free-enterprise method. Even the President conceded this in today's message to Congress. If, as the President claims, our economic system must rest on a democratic foundation based on free enterprise, then we must continue to let business initiative remain in the thousands of Main Streets throughout our Nation rather than to center such initiative in Washington.

In respect to the President's price proposals, they are much too general and indefinite for me to form a conclusion at this time. I realize the threat of inflationary pressures and will support legislation to guard against them, but I will not be catapulted into action upon any program for the control of prices until I am convinced that that program is based upon real need rather than purely political consideration.

As to new taxes, it is quite apparent from the President's message that they are as certain as that night follows day, and I am willing to support new taxes which are absolutely essential to meet the actual needs of our great economy, but, as I have suggested, if the Eighty-first Congress is to carry forward the President's all-embracing program in its entirety, I predict that we will exhaust all of our tax resources and leave our cupboard completely bare.

Lastly, I believe that economies should be the first order of business. When we know we have effected a maximum of these, then wherever a genuine need is shown, we are justified in enacting tax measures to meet that need.

The American Air Force — Tribute to Hon. Alben W. Barkley, of Kentucky

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address of special interest by Hon. W. Stuart Symington, Secretary of the Air Force, at the Town Hall dinner in New York on December 15, 1948, honoring Vice-President-elect ALBEN W. BARKLEY.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Entering 1949 the Air Force looks forward eagerly to the continuance of its development in the interest of our national security and world peace.

There have been milestones during the past 12 months which illustrate the constant great advancement in this new art of the air; milestones such as men still alive who have flown hundreds of miles an hour faster than the speed of sound (which is 760 miles an hour at sea level); and another young flyer who broke the official world's speed record with a tactical airplane when he flew, with his six guns and a full load of ammunition, over 670 miles an hour; and now we have the recent flight of 9,400 miles, with bomb load, by our latest, highest, and fastest long-range operational bomber.

And so we will move on this coming year, with breath-taking rapidity, into equally extraordinary accomplishments, in an air age that has brought all the world so close together, a matter of great interest as we enter the threshold of this strange atomic era.

The Air Force is proud also of such evidence of savings in the unification of the services as illustrated by the combination of the two great Air Force and naval airlines into one system—the Military Air Transport Service—MATS.

This consolidation has already resulted in the handling of 54 percent more ton-miles with but 4 percent additional personnel, to the great benefit of the American taxpayer.

Most of all, however, the Air Force looks with satisfaction on the Berlin airlift, the so-called Operation Vittles that started last June 26, and which is handled as a team with the Army and Navy.

Someone remarked this operation was a "Rolls Royce delivery service to the world's largest poorhouse." Well, that may be a clever wisecrack. It is expensive transportation, but here is the other side of the story.

The airlift prevents the starvation of millions of people. To prevent such an occurrence is in the American tradition. Because of the lift we are learning a great deal about handling planes at airports. As example, the Tempelhof landings are spaced 3 minutes apart in good weather, 5 minutes in bad; and the schedule is so tight that if a pilot fails to land on his first pass, he has to return with his load to the loading point.

This same 6-month operation has cost 17 American lives, as against 233 American lives lost daily in World War II.

Finally, the money cost of Vittles for an entire year will be less than the cost of World War II for a single day.

How could there be a more accurate and conclusive demonstration of the truth of the slogan that air power is peace power; and thus, too, we sustain the opportunity and hope for democratic solutions? Air power strengthens the hands of our diplomats, as under President Truman they work day and night for international accord.

When I was in Berlin last fall General Clay had a little ceremony which illustrates how much the German people appreciate the American planes of which they once were so terrified.

A Berlin businessman who asked that his name be kept anonymous, because some of his family were in East Prussia, said to Clay:

"My family have nothing left of value except this beautiful watch which chimes the hour, an old family heirloom. We know we are only alive today because of your flyers. Would you pick out one you think merits it most and give him this watch?"

And so there was a little ceremony in front of the Berliners and a young American flyer who had completed 42 round-trip missions in 46 days received this token, symbolic of the gratitude of a people.

In 1949 the Air Force looks forward to its continued development and continued support in the United States and at its stations all over the world. That support will be implemented by the President and the Congress; and with that in mind may I dwell a moment tonight with respect to the leading Member of the next Congress who has graced us with his presence this evening?

When one thinks of our Vice President-elect there comes immediately to mind all that is fine in our American traditions.

Just to meet and talk with ALBEN W. BARKLEY is in itself rewarding. It renews faith in the important and fundamental characteristics of America that have meaning and endure. When you think of Senator BARKLEY you think of America. Woodrow Wilson once said of Henry Clay:

"No man of his generation represented more of America than he did."

That tribute applies to Senator BARKLEY with even greater significance than to his illustrious predecessor from Kentucky.

During the recent campaign, voters of America felt and responded to his deep and abiding humanity. There is something of Senator BARKLEY's personality, as well as his deeds, that inspires confidence in his leadership. The people sensed to an unusual degree that here is a man they could trust.

He communicated to them his own qualities of integrity, of tolerance, and of faith. They sensed the essential bigness of the man who went among them espousing with great eloquence his own deep conviction that this Nation and its people can surmount and survive any crisis; and can deal effectively and democratically in the solution of common problems.

They sensed, too, that ALBEN BARKLEY is completely and utterly devoid of any meanness. Rare indeed has been the time when in a long career fraught with controversy Senator BARKLEY ever yielded to the mortal temptation to speak unkindly or harshly about an adversary.

Under great provocation, Senator BARKLEY has never lost his capacity for patience and understanding. Is it not indeed remarkable that no one, either his political opponents or others who may have disagreed on a particular course which Senator BARKLEY has advocated, has ever been able to accuse him of vindictiveness or bitterness—emotions all too common in political life.

Indeed there is something Lincolnesque about this great quality of Senator BARKLEY to love even his enemies. It is reminiscent of the famous passage in the Lincoln-Douglas debates, when, as history records, only once did President Lincoln descend to personalities—and then so whimsically that the sting was taken out of his recrimination. Lincoln in this historic campaign had his patience severely tested. On one occasion, he said of Douglas, as Senator BARKLEY might have been tempted to say of some of his political adversaries:

"I don't want to quarrel with him. I don't want to call him a liar, but when I come to square up to him, I don't know what else to call him."

As most of you will recall, Senator BARKLEY has repeatedly, during the campaign, told the story of the man with two sons. One went to sea. The other became Vice President. And nothing was ever heard of them since.

But I can predict with confidence that our next Vice President will not obtain the tranquillity which the Vice President normally provides.

The American people look to Senator BARKLEY for the counsel and guidance, and the wisdom of his mature and humanitarian leadership, to assist his chief, the President, in steering this country into the open seas of peace and abundance. His role will be significant because, among other things, the President has so often expressed complete confidence and trust in his former colleague in the Senate, and expects that his leadership will not be lost because he has become Vice President. In fact, our new Vice President is one of our great natural resources. To the challenge of our times, Senator BARKLEY will respond, as he has so often in the past.

I have read that the influence of Woodrow Wilson on ALBEN BARKLEY has been profound; and I have further seen attributed as Senator BARKLEY'S own political philosophy an excerpt of Wilson's great address at the dedication of Congress Hall in Philadelphia in 1913, wherein Wilson laid down this credo:

"Politics, ladies and gentlemen, is made up in just about equal parts of compensation and sympathy. No man ought to go into politics who does not comprehend the task that he is going to attack. He may comprehend it so completely that it daunts him, that he doubts whether his own spirit is stout enough and his own mind able enough to attempt its great undertakings, but unless he comprehend it he ought not to enter it. After he has comprehended it, there should come into his mind those profound impulses of sympathy which connect him with the rest of mankind, for politics is a business of interpretation, and no men are fit for it who do not see and seek more than their own advantage and interest."

Certainly our next Vice President is possessed in as great a degree as any man of our time of these impulses which connect him with the rest of mankind.

I am privileged to join with you tonight in paying tribute to one of the greatest men America has produced.

Policies of the Secretary of Defense

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, January 13, 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter of January 11, which was written to me by Mr. James Forrestal, the Secretary of Defense. The subject matter of Mr. Forrestal's letter will be of interest to all Senators.

In the recent past the junior Senator from Washington has received an avalanche of mail from his State which severely criticized Mr. Forrestal for demanding dictatorial and militaristic powers. The thought was expressed by most of the writers that Mr. Forrestal was conspiring with the administration to throw the country into war without even notifying the Congress. I requested Mr. Forrestal to submit his views in order that the letters from my constituents might be intelligently and fully answered. Mr. Forrestal's prompt and thorough response speaks for itself. As a Member of the Congress I would not resent the right of the administration to submit any proposal to the Congress. The Congress is charged by the Constitution with determining the character of that legislation which it thinks will serve the best interests of all the people. The Congress ought to welcome for study any proposal submitted by the executive branch of the Government. Any proposal which is either unreasonable or detrimental ought to be denied, and the reverse is likewise true. I am grateful to Mr. Forrestal for having made clear his position and some of his responsibilities as the Secretary of Defense.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF DEFENSE,
Washington, January 11, 1949.

Hon. HARRY P. CAIN,
United States Senate.

DEAR SENATOR CAIN: I have looked into the matters referred to in your telephone call to my office of last week, and the only conclusion which I can draw is that the broadcast mentioned by your constituent appears to be an attempt to discredit the foreign policy of this Government.

The broadcast contained a statement to the effect that the administration was seeking power to "throw the country into war without even notifying the Congress." From other statements contained in the broadcast, it seems clear that this language has reference to proposed legislation which would set out in clear and simple terms the authority of the President, under certain circumstances directly involving our national security, to furnish military supplies to other countries.

As you know, the field of foreign policy is the responsibility of the President, and the President generally formulates policy in this field after seeking the advice of the Secretary of State. The National Military Establishment does not make foreign policy. The National Military Establishment is, however, one of the organizations which the President may, if he so desires, utilize in carrying out certain aspects of foreign policy. The occupation duties of the Army are an illustration.

In order that our foreign policy may be kept in balance with our military strength, Congress established the National Security Council, and gave the Council the duty of advising "the President with respect to the integration of domestic, foreign, and military policies relating to the national security so as to enable the military services and the other departments and agencies of the Government to cooperate more effectively in matters involving the national security."

In accordance with the congressional language just quoted, the National Security Council—with a membership including, among others, the Secretary of State and the Secretary of Defense—recently advised the President of the desirability of seeking the legislation referred to above. The President has approved this recommendation of the National Security Council.

In his budget message of January 3, President Truman discussed this matter as one of the most important items of his legislative and budget program, and said: "In existing circumstances, economic strength is not enough to assure continued independence to free people. Under the Charter of the United Nations, therefore, we have been discussing with some of the western European countries measures designed to increase the security of the North Atlantic area. To further this objective, I expect later to request funds for providing military supplies to those countries and to certain other countries where the provision of such assistance is important to our national security."

This same subject was discussed at some length in a State Department press release of December 29, a copy of which I attach. It was also discussed at pages 13 and 21 of my annual report (copy attached), as released to the press for use in morning newspapers of December 30.

The broadcast referred to by your constituent described this proposed legislation as a request for "the power * * * to throw the country into war without even notifying the Congress." In the light of the information set out above, I trust you will agree with me that there is no basis whatever for such an allegation with respect to the proposed legislation—which, of course, as the President has clearly stated, is being submitted by him to Congress for congressional consideration.

In the broadcast referred to by your constituent, a second matter—and one which has no relation whatever to the subject I have discussed above—was mentioned. This second matter appears to be a reference to an investment which I made 20 years ago in a Canadian company organized by me. This 1929 investment was made 11 years before I severed all my connections with the banking firm with which I was associated in order to become an administrative assistant to President Roosevelt.

In 1933, when I was testifying before a committee of the United States Senate, I stated that the applicable tax laws of the United States and Canada had led me to make the investment. On this same occasion I also testified that the total income taxes paid by me to the United States and the State of New York for the year under discussion were in excess of $300,000.

This particular hearing was a public hearing conducted by the Committee on Banking and Currency of the United States Senate, and the full text of the testimony is readily available to the public in a volume which can be identified as follows: Stock Exchange Practices, hearings before the Committee on Banking and Currency, United States Senate, Seventy-third Congress, second session, on Senate Resolution 84 (72d Cong.) and Senate Resolution 56 and Senate Resolution 97 (73d Cong.).

If I can be of any further assistance to you in connection with any inquiries you may have concerning the broadcast in question, please let me know.

Sincerely yours,

JAMES FORRESTAL.

Taxpayers Dig Up Billions That Are Used Against Us

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks and include therein an editorial, I am presenting an editorial from the December 16, 1948, Detroit Free Press entitled "Uncle Sam, International Boob—Taxpayers Dig Up Billions That Are Used Against Us."

In view of the conditions outlined in this splendid editorial, it seems to me the administration should take heed and proceed upon a basis that will at least gain us the respect and confidence of those nations throughout the world which we are attempting to aid, and they in turn will extend to us the treatment which we in all conscience are entitled to.

UNCLE SAM, INTERNATIONAL BOOB—TAXPAYERS DIG UP BILLIONS THAT ARE USED AGAINST US

The discovery that Great Britain, Belgium, and Netherlands have been using Marshall-plan dollars to buy aluminum in Canada at 16 cents a pound and reselling it to us at 26 cents a pound is shocking but not surprising.

We asked for it.

We proclaimed our moral responsibility not only for financing World War II but also for rebuilding the world it wrecked.

We said to all nations in lend-lease, UNRRA, and ERP: "Ask, and it shall be given you."

We boasted of our wealth.

Why shouldn't others pad their requests for easy money from Uncle Santa?

"Help yourself!" we told the world. "And see what the boys in the back room will have."

The aluminum deal reveals a number of things of interest to American taxpayers. The Economic Cooperation Administration (ECA) should have known that Europe was not short of aluminum when it can resell to us what it has purchased out of the money we gave it.

We are short of aluminum, as shown by our willingness to buy it back at a premium of 10 cents a pound.

The aluminum industry estimates that American taxpayers will lose $26,000,000 this year through the Anglo-Belgian-Dutch transaction.

What it amounts to is that we have been buying aluminum and giving it to Europe and then buying it back.

American aluminum users will lose another $2,000,000 this year through premium payments to get back metal which, as taxpayers, they paid for in the first place.

A spokesman for the British Embassy in Washington says that "our conscience is clear." The amount of aluminum resold to the United States was nearer 1,000 than 12,000, as reported!

The theft of $1,000 may be less reprehensible than the theft of $12,000. The principle, though, is the same. You can't have just a "touch of honesty."

You shouldn't cheat even Uncle Santa, poor kindly sentimental old fellow giving away taxpayers' money.

Yet everybody seems to be doing it.

The Italian Government has just signed a series of trade and reparations agreements with Russia.

They call, first, for the early delivery to Moscow of 33 Italian warships. They also provide for Russia's taking over all Italian holdings in Rumania, Bulgaria, and Hungary as part payment of the $100,000,000 in reparations awarded to Russia in the Italian peace treaty. The balance will be paid out of Italy's current production.

The two countries agree to exchange annually $50,000,000 worth of goods for the next 3 years.

We now observe how well Russia fared under the peace treaty with Italy in the negotiation of which Secretary of State James F. Byrnes represented the United States.

The treaty virtually disarmed Italy, while Tito licked his chops for Trieste, and loaded down its ruined economy with burdensome reparations.

As we are now financing Italian recovery, any part of current production taken for reparations comes out of our pockets.

The story of World War I is repeated. Again we find ourselves paying the indemnities of a former enemy, turned friend, to a former ally, turned sour. The unpublished "pumpkin papers" can't contain anything less creditable to American statesmanship.

What is more, while we, for security reasons, are refusing to sell strategic commodities to Russia and its satellites, Great Britain, Canada, and Italy are reported to be selling aluminum to Russia for gold.

Great Britain is also charged with selling 240 American-made lend-lease military tanks to the Peron government of Argentina.

We expect corruption in China, where Confucius railied against it five centuries before Christ.

Columnist Marquis Childs, a liberal and an ardent one-world advocate, wrote on this page yesterday:

"This country during the past 2 years has sent upward of $2,000,000,000 to China in aid of one kind or another.

"A large proportion of this aid has eventually fallen to the Communists."

We thought in our ignorance and innocence that a higher standard of honor prevailed in Europe.

Yet, during the war, a furore was caused by the report that in the Middle East the British were reselling American goods supplied free to them.

After the war, UNRRA supplies from this country were used in eastern Europe for political purposes by the Communists. American flour from Minneapolis was distributed in Yugoslavia and the people were told that it came from Stalingrad.

We canceled a credit to Czechoslovakia when it was discovered that the Czech Government was making a profit by reselling to Yugoslavia.

After World War I we were called Uncle Shylock because we expected loans to Europe to be repaid.

As soon as World War II warmed up in Europe, we took the dollar sign out of transactions with our future allies.

We have since given them approximately $10,000,000,000 and are pledged inferentially, through ERP, to stake them to another $17,000,000,000.

The European simply cannot understand our motives. There is no parallel in history to our cosmic philanthropy—our universal WPA.

What other nation ever strained its own economy in peacetime to aid others and asked nothing in return?

The Europeans have concluded that either we are trying to buy them to fight on our side in the next war—in which case they ask why we don't pay them more as bribes—or else that we are just plumb daffy.

The British should know better.

Yet it was seriously claimed in Parliament and in a section of the British press that our $3,750,000,000 credit of 1946 was a plot to wreck the British economy.

We loaned them money, it was charged, to buy American goods and then immediately engineered an inflation to boost the prices of those goods so that the loan would go only half as far as expected.

Congress is about to be asked for more billions to pour into Europe through ECA.

A big build-up is now occupying the front pages of certain newspapers in this country.

The fact that Europe has done little or nothing to help itself, as contemplated by the Marshall plan, except on paper, appears, if at all, only under minor heads in the back pages.

What is more, as Barbara Ward, famous foreign affairs editor of the London Economist points out in The West at Bay, western Europe can get on its own feet and off the American bounty only by forming a customs and currency union and surrounding it with a tariff wall to keep out American goods.

Along the same line, another British economist recently proposed that all the world outside the United States form a trade alliance against it.

After having built Europe up, that is to say, we are to be kicked into outer space.

Congress should reexamine the Marshall plan from stem to stern and from A to Z before it votes ECA another dollar.

Americans don't mind, in their palsy-walsy sentimental, let's have another mood, being called Uncle Santa or even Uncle Shylock, but they should resent Uncle Sucker.

How much longer can we play the role of international boob before we, too, go bankrupt?

We Need An Air Force Second to None—View of an Idaho Constituent

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 3, 1949

Mr. WHITE of Idaho. Mr. Speaker, thoughtful people throughout the country are giving close attention to the protection of our country and the defense program of our Government.

Herewith is submitted the views of a prominent citizen of north Idaho for the consideration of Congress:

BONNERS FERRY, IDAHO, *January 10, 1949.*

Mr. COMPTON I. WHITE,

Member of Congress, Washington, D. C.

DEAR SIR: I would like to touch on a couple of subjects at this time.

First, the appointment of Dean Acheson as our Secretary of State. In my opinion, it would be the height of folly to put in that important position anyone who has the slightest hint of communistic tendencies. I

know not if Mr. Acheson is a Communist or not, but the fact remains that he has been closely associated with them in the past. If you cannot aid in blocking his ascension to this important position, then I believe it to be your duty to our country to use every effort to secure a very thorough investigation of all his activities, both past and present, and make public the findings, regardless of whose toes they might tread on. No effort should be spared to prevent the infiltration of Communists into the offices of our Government.

Secondly, all this stink the Army and Navy is raising about building up the Air Force.

It is well recognized that Russia is our only potential enemy. In the event of a war with Russia, of what use would an oversize Navy be, when Russia is not a great naval power? We need at least our present-sized Navy to combat submarines and other war craft Russia might put out, but certainly not an expanded Navy. Navy big wigs point to carrier-based bombers, but it has just been proven in combat that carrier-based planes, while excellent for reaching outlying posts, are greatly inferior to land-based planes, and there is no place in Russia beyond the reach of our present land-based bombers. Money spent enlarging our Navy only weakens our economy and robs the Air Force, which plays right into Russia's hands. I've no doubt but that the men in the Kremlin are keeping their fingers crossed, hoping that we will pour out billions on an expanded Navy.

And somewhat the same can be said for the Army. We would not be waging an offensive war, therefore we do not need a huge army for invasion and occupation, at least not at the present.

What we do need is the mightiest Air Force on the face of the earth, constantly on the alert, and kept up to date with the finest planes and latest equipment to come out of our experimental laboratories. No effort or expense should be spared in attaining that end.

We do need an expanded force of technicians to develop newer and better weapons, all the way from planes to bombs. We need more research into guided missles, and all other forms of modern warfare. Forget the old-fashioned idea of warships, and ground armies. They are as out-dated as the horse and buggy. You wouldn't think of sending a soldier equipped with a medieval sword and helmet out to combat another equipped with a machine gun. Of course not! That's out-dated; but no more so than the thinking of many of our top military men. All the top military men of France could think of before the last war was a super Maginot line. But what good did it do them? Let's not be caught like the French were.

Further, we are in bad need of equipment (and personnel to man it) for the detection of approaching planes or guided missiles. If Russia were to make a surprise attack today, when would we first be aware of it? When the first bombs fell? And supposing they should be atomic bombs, delivered en masse, and directed at all of our key cities? It's not a very pretty picture, is it? But, some may say, Russia hasn't got the atomic bomb. Perhaps not, but make no mistake, they will get it, and when they do we will receive it.

No, we have tarried too long already, for, after all, it will take considerable time to implement this program even after it is authorized, so let's get on the ball and make up for lost time, lest we be caught like we were at Pearl Harbor.

In the interest of our national security, yes of our very lives, you should use all your influence to secure passage of these measures, and quickly. If selfish and near-sighted Army and Navy men stand in the way, have them removed. Nothing should block so important a piece of legislation.

Yours respectfully,

WALTER D. STILES.

Great Britain Versus the Peace

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 3, 1949

Mr. KLEIN. Mr. Speaker, the people want peace. They want to live, to develop their future, to rear their families; but there is no peace.

Wherever there are natural or human resources to be exploited, the empire builders are pressing the yokes on the necks of the people. In Indonesia the Netherlands Government, with a cruel cynicism and swift terror that might make the ghost of Adolph Hitler envious, has forsworn all its fine promises and is in the process of destroying the Indonesian Republic while hypocritically trying to tell the world that the military might marshaled against the people's republic is mere police action.

GREAT BRITAIN PUTS ALL TO SHAME

But, Mr. Speaker, for the ultimate in cynicism, betrayal, double-dealing, double-talk, the whited sepulcher which is the Government of the British Empire, puts all others to shame.

Lie after lie, callous and cold and deliberate, flows from the treacherous depths of the British Foreign Office.

While Great Britain does in fact sabotage the United Nations and support, encourage, abet, incite, and arm the medieval and feudal Arab states toward Israel, her calculating and ruthless statesmen blandly tell the world that Great Britain does no wrong.

While in fact Great Britain imprisons thousands of hapless victims of the Hitler horror on Cyprus without shadow of legal right or process, holding them helpless, hapless, hungry, the venal press of Britain tells us that Great Britain loves everybody and is giving up her tottering and bankrupt Empire.

GREED AND AVARICE RULE

While Great Britain does in fact hold out both hands for American dollars and use those dollars to forestall our own traders and investors and cut American products out of the world markets, the British financiers and the Board of Trade give us soft words and broken promises; if the gentlemen will forgive a bad pun, they give us business, but not in a business sense.

Mr. Speaker, the peace-loving people of the world, and of America, demand that we crack the whip of economic superiority and bring the faithless British Government to heel.

In our hands, in the economic cooperation program and in our other loan agreements with Great Britain, we hold the power to force this Nation of heartless tradesmen to hold to its promises in the Middle East, in Germany, in South America, in the East—wherever British interests clash with our own, and that is almost everywhere.

These are strong words, Mr. Speaker, but I feel them deeply. We need a new American revolution against the crushing weight of British imperialism.

Under consent, I insert at this point a full-page advertisement inserted by the American Zionist Council in the Washington Post of Wednesday, January 12:

BRITAIN'S NEW WAR AGAINST ISRAEL

The British Government is launching a new war against Israel—even as direct armistice negotiations between Egypt and Israel are getting under way.

The evidence is clear and unmistakable:

Great Britain has admitted that British troops have been sent to the port of Aqaba in Transjordan. A long-standing truce has been in effect between Israel and Transjordan. It would seem that the British Government is concerned lest this truce eventuate into a permanent peace between the two countries. If the British-dominated Transjordan Arab Legion should reenter the war at any time in the future, it will be clear that Great Britain alone will be responsible.

There are reports that large numbers of British fighters and bombers are being landed at Mafrak, Transjordan, and that British armed strength is being concentrated on the Egyptian-Palestinian frontier. Large units of the British Navy are being moved into the area and are maneuvering, not far from Israel's shores. In addition, Israeli spokesmen have disclosed that Britain has been training troops in Tripolitania under conditions identical to those to be found in Israel.

British propagandists are trying to make it appear as if current British military moves were "provoked" by the shooting down of RAF planes by the Israelis. It should, therefore, be remembered that the afore-mentioned British troop movements of Aqaba were first disclosed by Israel almost 2 weeks ago.

Great Britain has persisted in sending planes into the battle-front areas of the Palestine war, but assumes an air of righteous indignation when the inevitable happens and British aircraft are shot down. It will be recalled that both Winston Churchill and Anthony Eden recently arose in the House of Commons to question the necessity and propriety of sending Royal Air Force planes over such a "dangerous and delicate" area. Nevertheless, Mr. Bevin continued to send British planes into this "dangerous and delicate" area. Why?

Furthermore, it has now been revealed that British arms deliveries to Egypt during the last few months have amounted to £50,000,000 ($200,000,000) and included shipment of the most modern jet fighter planes, naval vessels, heavy artillery tanks, heavy caliber shells, and aviation gasoline. All this took place at a time when Great Britain was publicly avowing strict neutrality and maintaining that it was not sending arms to the Arab countries.

THE POLITICAL OFFENSIVE

These military moves should be considered in relation to the panic propaganda which British officials had attempted to disseminate in this country on the basis of Israel's so-called invasion of Egyptian territory and the consequent obligation of Great Britain to come to Egypt's aid under the terms of the Anglo-Egyptian Treaty of 1936. Great Britain had obviously hoped to induce the United States to join a renewed British move to bring about the imposition of sanctions against Israel by the Security Council. In order to achieve this, Britain warned that if she failed to bring about the international action she desired, she would be "compelled" to act unilaterally in support of Egypt.

But—to the great embarrassment of the British—Egypt, while confirming that Britain had offered to provide her with military aid if she would invoke the 1930 treaty, decided to let the British do their own fighting for a change. Instead of invoking the treaty,

Egypt proceeded to reaffirm her earlier denunciation of it and, at the same time, asked for direct armistice negotiations with Israel.

Great Britain has thus been forced into the open and stands revealed before world opinion in her true role—the real enemy of Israel. She can no longer cloak her own selfish ambitions behind the actions of the Arab states whom she had encouraged to make war on Israel. The Arab aggressors have been defeated, and Britain must either become reconciled to a settlement which will keep Israel's political independence and territorial integrity intact, or commit British arms and troops to a new war against Israel.

Britain is seemingly choosing the latter course and is currently flooding the American press with distortions and misrepresentations of the situation in the Middle East. We believe, therefore, that the American people would profit from a review of the facts in the war Britain has waged with the primary objective of obtaining the Negev for her own use and exploitation.

THIS IS THE RECORD

1. Immediately after the adoption of the partition resolution by the United Nations General Assembly on November 29, 1947, the British authorities in Palestine systematically and deliberately opened the frontiers of that country to armed Arab bands who entered for the express purpose of engaging in a military struggle with the Jews in order to upset the decision of the United Nations by force of arms.

2. Britain also actively participated in this aggression by supplying the Arab states with financial aid, by creating a stock pile of war supplies and equipment for the Arabs, by providing officers and administrative help to the invaders. Simultaneously, Britain made every effort to prevent the Jews from arming for their own defense.

3. When—despite all of these British maneuvers—the Arab attacks did not succeed and the State of Israel was proclaimed on May 14, 1948, Great Britain encouraged the Arab governments to launch full-scale military invasions of Palestine, with the declared aim of overrunning and subjugating Israel. The attack was led by the Transjordan Arab Legion, a military force completely equipped, financed, and officered by Great Britain.

4. In the early days of the war, when the invaders were on the move, Great Britain did nothing to bring hostilities to a halt, but, on the contrary, maneuvered ceaselessly in the Security Council to keep the Arab states from being punished as aggressors. At that time Great Britain saw no violation of the United Nations Charter, although the action of the Arab states in invading Palestine was explicitly denounced as international aggression by United States Delegate Warren Austin (May 22, 1948). Then the British worked indefatigably to induce the Security Council to refrain from taking the action which was clearly indicated.

5. However, when the tide turned and the Israeli Army repelled the aggressors, there were immediate British moves for truces, Israeli troop withdrawals, and—finally, the bitterest irony—attempts to impose sanctions against Israel for successfully defending its own territory.

6. After Israel inflicted a series of decisive defeats on the Arab armies and, in the course of one military engagement, attacked legitimate military objectives on Egyptian soil, Great Britain threatened unilateral military action against the Jewish state.

It is against this background that Britain's current moves should be viewed.

AMERICA MUST TAKE A STAND

Whether or not Mr. Bevin continues his vendetta against Israel depends largely on the stand which our own Government will now take. The United States, which has accorded recognition to Israel, and which has pledged itself to support Israel's claims to territorial integrity, will surely not ignore the latest British efforts to renew the political and military offensive against Israel. Nor can our Government overlook the fact that Great Britain's current moves to frustrate the peace which now seems to be in the making between Israel and the Arab states, along with her threats of unilateral military action, flaunt the United Nations and its efforts to hasten a settlement between the Arab states and Israel.

American interest in peace in the Middle East can best be served by a firm warning to the British Government to desist from its present policy of war and intrigue against Israel.

AMERICAN ZIONIST EMERGENCY COUNCIL.
NEW YORK, N. Y.

Why Imitate a Failure?

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks and include therein an editorial from the New York Journal-American by E. F. Tompkins, I hereby present one appearing on January 6, 1949, entitled "Why Imitate a Failure?"

In this editorial Mr. Tompkins deals with the British experience in attempting to socialize the medical and dental professions of Great Britain. I would suggest that those who are inclined to believe that the socialization of these two great professions will bring ultimate utopia into the lives of all of us read this editorial carefully and give its views serious consideration.

Mr. Speaker, the pages of history for the past several thousands of years are replete with attempts on the part of many governments to socialize themselves. In each instance these attempts failed, bringing ruination and suffering to all the people. A most significant thing in connection with each of these attempts is the fact that in the last analysis the greatest sufferers were always the great mass of poor people. Why is it that we in this supposedly enlightened age cannot profit by the experiences of the past?

WHY IMITATE A FAILURE?

(By E. F. Tompkins)

If British experience has any meaning for the American people, the New Deal's scheme for national health insurance will not get very far in the Eighty-first Congress.

The Socialist Labor Government put its national health service into operation about 4 months ago.

Approximately 98 percent of the population has been covered into the plan, and all but a few of the doctors and dentists have been enrolled as "panel" practitioners.

The bureaucracy which is in arbitrary control—officially, the Ministry of Health—receives the pay roll and other taxes collected for the service and assigns patients and prospective patients to the licensees, with a maximum of 4,000 on any doctor's panel.

Each doctor or dentist receives a fixed annual fee of about $3.20 a patient, paid by the Government, and every person—even aliens and tourists—is entitled to free service, including glass eyes and false teeth.

Millions of Britons have taken advantage of the dispensation, to such an extent that there is a shortage of some 9,000,000 sets of dental plates and bridges.

The socialist administration are finding themselves unable to redeem their promises to their constituents.

Furthermore, the fixed incomes of the doctors and dentists have been set so low that the two professions are coming into rebellion and physicians' and dentists' strikes against socialism are being openly advocated.

The British Medical Journal, the most authoritative publication in its field, is carrying warnings that doctors may withdraw wholesale from the service and, if not permitted to practice privately without interference, will simply leave the country.

In other words, as between regimented poverty and exile, they prefer exile—they remember the song of their forefathers, "Britons never will be slaves!"

But the doctors and dentists intend to make a fight of it.

All branches of the British Medical Association have been asked to hold emergency meetings to vote on full resignation from the service unless the basic capitation fee is more than doubled by the Government to give them the income which they say a practitioner must have.

In one respect, dentists feel themselves to be worse off than the physicians.

Under existing regulations, dentists have been allowed twice as much as physicians.

With the physicians demanding that their fees be doubled to equal the dentists, the health officials have decided to cut the dentists' allowance in half.

Consequently, the executive council of the British Dental Association has asked its 8,000 members to expect an emergency meeting in London.

Some of the complaints made in the British Medical Journal are bitter.

Dr. R. E. Newman writes:

"Deterioration in the standards of practice is depressing and makes it impossible to tackle the problem of the sick without the carking care of financial insecurity.

"No man can give of his best with the wolf howling at the door."

Dr. J. A. H. Sykes says:

"The alternative to a Ministry refusal to give adequate living facilities seems to be a wholesale resignation and a return to private practice, or emigration."

From Dr. G. Neil Fleet comes this:

"To work a 7-day week, with numerous night calls and 24 hours on duty, and find at the end of the quarter that one's check is exactly half the monthly check of a dental colleague, is more than human flesh can bear.

"The situation, if not remedied, calls for a 90 percent resignation."

Plainly, in its very inception, socialized medicine is a failure in Great Britain for the public and the professions alike.

Despite denials at Washington, the New Deal's national health insurance plan is merely an American replica of the British scheme, both of them being derived from the fantastic Beveridge formula of security "from the womb to the tomb."

What socialism is doing to medical science in Great Britain is exactly what socialism did in prewar Germany and Austria.

It is exactly what socialism under any other name will do to American medical service, which under our free-enterprise system has made itself unquestionably the best medical service ever known.

The Nation's Second Greatest Basic Industry—Mining

EXTENSION OF REMARKS
OF

HON. COMPTON I. WHITE

OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 3, 1949

Mr. WHITE of Idaho. Mr. Speaker, today our Nation stands predominant among world governments. Our armed forces are triumphant in all parts of the world, due in a large measure to the utilization of our mineral deposits—in oil, iron, and nonferrous minerals found beneath the soil of our country. It is heartening at this late day to find that the representatives of the departments of Government are coming to recognize the vital importance of developing our vast mineral resources.

There is attached herewith an address entitled "A Program for Tackling the Minerals Shortage," by Hon. C. Girard Davidson, Assistant Secretary of the Interior:

A PROGRAM FOR TACKLING THE MINERALS SHORTAGE

(Address by Assistant Secretary of the Interior, Hon. C. Girard Davidson, before the Northwest Mining Association annual convention at Spokane, Wash., Saturday, December 4, 1948)

The miner with pick and shovel was for many years the recognized symbol of the West. This year, the one hundredth anniversary of the discovery of gold at Sutters Mill, Calif., we pay him special tribute for his role as the cutting edge in opening our western lands for development.

The gold rush which followed this first strike saw men spreading out through these unpopulated Western States, exploring every nook and cranny. The lives of the forty-niners were rough and tough. They lived in hastily constructed boom towns and they paid the inflated prices you would expect in a situation where almost everything they needed had to be brought over the long sea voyage from the East. They found it wasn't easy to go it alone before the creation of the diversified economy which was to support them. They needed the settlers who came shortly after to grow their food, and the traders and craftsmen to provide them with goods at reasonable prices.

The Government, too, played a part in those days in developing a balanced society and a balanced economy that backed up and supported the miners. In its traditional role of aiding private industry to do its job, the Government offered the services which made the boom towns livable and orderly. Important services then were law and order, post offices, land grants to bring the railroads through, and assay offices where the miner could be sure he got a fair evaluation of his strike.

Today the pick-and-shovel miner has practically disappeared in the wake of advancing mechanization. The emphasis is no longer on gold and silver but instead on the by-products found with them which, in terms of our present day society, are more precious than the precious metals.

Today the Government in its role of facilitating industrial operations is going forward with great programs of regional development that will again assure the miner a balanced economy. We are harnessing the waters of our rivers by the construction of multiple-purpose dams. We are irrigating new lands to feed a phenomenally expanding population. We are providing public power at low cost to energize new industries.

Today, on the hundredth anniversary of the opening of the West, we are discarding the pick-and-shovel techniques with which the early miner made his success. We might well emulate, however, the spirit and daring of the forty-niners which set them off into what were then uncharted lands to find something they could only hope would be there. With the same inspiration and determination, we must face up to the new facts in our minerals situation.

Today our requirements for zinc, lead, copper, and other minerals are fantastic. During 1947 alone we consumed 93,000,000 tons of iron ore, 7,500,000 tons of phosphate rock for fertilizer, one and one-third million tons of copper, and more than 1,000,000 tons of lead. These raw materials are the sinews of our industrial strength, the base of an industrial system which has given us full employment and a living standard unparalleled in world history.

The importance of these minerals has been brought home to us in recent years because now, for the first time in our history, we find we don't have enough of them. This country with its seemingly limitless distances, with its infinite variety of climate and terrain, has bred in us Americans a concept of abundance. As we spread across the continent from East to West always finding new lands, it was assumed we could always find beneath the lands the minerals we were seeking. Now at last we find that these resources are limited. To date we have been extracting our irreplaceable mineral assets with little regard for the future. Now as a result, we are already deficient in whole or in part in 30 different metals and minerals and the list will inevitably increase. We are driven to rely more and more on imports, on the use of lower-grade ores, and on substitutes for those materials which are close to exhaustion.

The dwindling of our mineral resources brings us face to face with new problems.

One of the most important of these is exemplified in our stock-piling program. Only 2 years ago when the Stock Piling Act was amended after the war, we were operating on the assumption that we could obtain sufficient quantities of strategic and critical materials to meet current industrial needs and to build a stock pile as well. Of these two possible end uses, current production was given the priority in the law which stated that the stock pile "shall be made, so far as practicable, from supply of materials in excess of the current industry demand." The present inadequate state of our stock pile proves that there has been practically no excess in many commodities. In fact, now we can't even meet the requirements of current industrial production. Recent events have intensified the need for the stock pile along with other forms of preparedness. Military authorities are now insisting that we complete the stock pile and that we do it quickly.

Another vital issue is the maintenance of full employment for our expanding population. It is being forecast that if we maintain full employment our gross national product should increase one-third or even one-half in the next decade or so. By 1960 then we could be turning out from our factories, our farms, and our service establishments 30 to 50 percent more goods than we are producing today. Incidentally, this forecast of a constant increase of over two and one-half per year is not at all fantastic; it coincides with the actual rate of increase over the 30-year period between 1917 and 1947. You all know that this increase in total production will require a proportionate increase in the output of many of our metals and other minerals.

Let us see, for example, what would be required to expand steel production one-third from 90,000,000 to 120,000,000 tons annually. First, we should need an equivalent increase in iron ore—but we are in sight of the end of the high-grade, readily mineable ores in the Mesabe Range vicinity. Second, each ton of steel requires 14 pounds of manganese, of which nearly 90 percent of our requirements is imported. Third, this level of steel production would require about 700,000 tons of metallurgical-grade chromite, although known domestic reserves are only 25,000 tons—a drop in the bucket relative to long-run needs—and we are dependent on Soviet Russia, which is currently furnishing half of our requirements.

Against these two national objectives of a stock pile for security and an expanding economy for full employment, we have the fact of shortages in many of our basic minerals. Does this mean then that we are not going to build the stock pile necessary to keep our country strong and secure? Does this mean then that we are not going to expand our production to the extent necessary to assure our people continued full employment and a rising standard of living?

If we answer these questions in the spirit of the forty-niners, our answer must be "No." Our question is not properly "can we" or even "will we"; it is "How are we going to do it?"

In order to do this gigantic double-barrel job, we shall need the fullest cooperation of industry, labor, and Government, and an awareness of its importance by every American. I believe it will entail allocation of scarce materials for a while. Of course, the fact is that we have allocations right now, allocations by producers who in a sellers' market decide to whom shall go commodities which are in short supply. Any program for stockpiling and maintaining full employment is going to require somewhat more effective allocations of materials which will direct them into the right channels to insure future adequacy of production. Who does the allocating is a very pertinent question. We in the West especially have need for impartial umpires. My experience would not lead me to choose as umpire the eastern steel men, who can use a voluntary allocation program to continue to impede western development.

In this great Nation I don't believe in making the doling out of scarce articles a permanent public policy. Ours is not a starved, constricted, eroded economy of a European state. American initiative and American ingenuity can do better than parcel out the scraps from a poverty-stricken table. If we are forced to allocate some items in short supply, we should do it only to make possible the eventual expansion of supply and insure abundance for everybody.

An excellent example of rationing scarcity is the operation of the voluntary allocations program in terms of the current steel shortage. We have seen many letters from the mining machinery industry, which serves you and which has already felt the pinch in steel. Let me quote these samples: "Our production has been reduced almost every month." "* * * unless our industry is approved for allocation of steel we will be unable to continue operations." "* * * the prospects for 1949, unless we obtain assistance, are much worse than 1948." "We do not like the old priority system, but it was a blessing to what we have been up against during the past few years." "* * * it is now obvious that we would be better under such an arrangement than we are now and better than, I believe, we can hope to be under any voluntary plan which does not include the allocation of all available materials."

Representing the western miner, the mining machinery industry, and the oil industry, the Department of the Interior went before the allocations committee of the steel industry with a request for 38,000 tons of steel monthly for mining machinery. At first we were given a brush-off but at the next meeting of the committee, after November 2, they gave us the steel we had asked for.

Getting this allocation was at best a small victory. Allocations of steel, even to essential uses, such as mining machinery, will neither satisfy our requirements nor end the steel shortage. Steel production this year is about 10,000,000 tons short of actual demand and there is little reason to hope that the situation will be any better next year or the year after. Today the eastern steel magnates are opposed, as they have always been, to any substantial enlargement of our capacity to make steel. These men of little faith are in constant dread of a depression which might leave them with too much steel. They have, it is true, at last recognized the public interest in the shortage and are now advertising that the steel industry is expanding. This expansion, however, totals only 3,000,000,000 tons over a 3-year period as against our 10,000,000-ton shortage each year. In addition, this expansion is largely in modernization and construction of finishing plants and not in basic steel ingot capacity. The new steel plants look bigger in the brochures than in reality when measured against the Nation's needs.

Steel is so vital to our full employment and our growing economy, as well as to our preparedness program, that the country cannot stand idly by while we suffer from a lack of steel. Public interest requires that we take every possible step to get the expanded steel capacity we need. If the steel men feel that they can't raise the capital to build new steel plants, then we should help them out by authorizing RFC to loan them the money. If the steel men then should reject these loans because of their basic opposition to expansion, then the Government itself must build the steel plants as it did during the war.

Not all, in fact, not many products are so vital in our national life that they require such drastic action. Steel, however, is at the very core of our industrial structure, and thousands upon thousands of producers depend upon it. We have pledged ourselves not only during campaigns, but also in law, to maintain full employment. As the population continues to grow each year, we shall need to make more products to make good this pledge. Without more steel, it can't be done.

Throughout the minerals field, industry and Government have the task of making available the minerals and their equivalents which are needed for an expanding economy and national security. Just as we needed the European recovery program to put a floor under Europe's sagging economy, so now we need a minerals recovery program at home to assure a secure base for our own economy.

The Department of the Interior, which would have the major responsibility for carrying out the Federal Government's share of such a marshaling plan for minerals, is hardly equipped for the job. Our present minerals activities are operating on a paltry $30,000,000 budget. This is two-tenths of 1 percent of the budget for national defense. Compare this with the value of the products of the mining industry, which comes to $12,500,000,000. Our Department needs between $50,000,000 and $60,000,000 to get started on a real MRP.

Here are some of the things we want to do.

We should like to maintain a continuous appraisal of where we stand in the minerals field so that we can always look ahead to where we are likely to be short and thus be ready to initiate action to relieve the shortage. Such a continuous appraisal will, of course, provide the mining industry with the up-to-date information which we are unable to give you in full now. We want to have more information on known deposits, usable reserves, mining production, refining and smelting capacity, consumption, and demand.

We would encourage greatly expanded exploration for new deposits, including submarginal, both here and abroad. We could do a much better job in research to improve exploratory methods, and we could go a great deal faster with the geologic mapping which makes search possible.

We would do more metallurgical research, experimentation, testing, and pilot-plant operation in order to make usable our current submarginal and unused raw materials.

We should be doing much more than we are doing today in finding substitutes to take the place of scarce minerals.

We should develop better conservation practices. We should promote more intensive and efficient use of minerals and eliminate the waste which is undesirable to industry and the consumer alike.

We want to study exhaustively the effect of the present tax structure on minerals development. If it is true that present practices do not give due allowance to the exhaustible nature of mineral deposits; if it is true that they inhibit exploration; if it is true that there is insufficient correlation between State and Federal tax procedures, then we want to propose recommendations to remedy the situation. Our Minerals Advisory Council, made up of industry representatives, is already examining this question, and we should like to be able to hire the experts necessary to carry their studies to a successful conclusion.

We would at long last move in on examination and revision of our archaic mining laws so that they would encourage the mining industry to develop minerals on the public lands. We are told that the present laws make discovery of hidden deposits almost impossible; that they do not take into account new scientific methods of exploration; and that they do not permit land tenure sufficient for satisfactory subsurface operation. We have a report from the Minerals Advisory Council on this problem also, and we are going forward with our analysis to the extent that our limited staff allows.

We want to consider seriously tariff problems as they affect mining. The dilemma created by the requirements of a healthy domestic minerals industry and healthy economic relations abroad to insure necessary minerals imports certainly calls for a comprehensive reexamination of the tariff structure.

We should inquire into the necessity for incentives, financial and otherwise, which will assist miners to find new deposits. Perhaps the answer to this problem will be found in our examination of the tax structure, if not, we want to pursue the study of other forms of incentives.

What I have recited here amounts to a large order. But it seems to me to be in keeping with the Government's traditional role of assisting industry and looking forward to meeting the needs of our ever-expanding economy. The mining industry itself will carry forward some of these projects in cooperation with government. The industry will, of course, continue to extract and process the minerals, exercising its great ingenuity, imagination, and skill in these activities which, as a segment of our private enterprise system, have contributed so much to giving America the highest standard of living in the world. Government can do its share only if it gets the funds and, where necessary, the additional legislative authority from the Congress.

To vitalize a minerals-recovery program we need the courage and initiative, the American genius for turning the impossible into reality, which is our heritage from the forty-niners. Jointly ours is a tremendous responsibility to the American people: To develop out of wasting resources the continuing minerals base for our security and prosperity.

Federal Aid to and Control of Education

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. GWINN. Mr. Speaker, I want to emphasize the truths of a radio broadcast by Dr. George S. Benson, of Harding, College, Arkansas, over ABC network, December 26, 1948.

Every citizen reading this convincing broadcast should bring it to the attention of community leaders, members of the board of education, educators, heads of service clubs, labor union leaders and others in position to give leadership on public thinking. Many of these who recognize the unanswerable logic of this experienced educator, Dr. George S. Benson, speaking from one of the poorest States in the Union measured in terms of material things, will wish to send copies of Dr. Benson's broadcast with their personal comments to their Representatives in Washington and to distribute copies in local service clubs.

Dr. Benson's complete address follows:

FEDERAL AID TO EDUCATION

(By Dr. George S. Benson, president of Harding College, Searcy, Ark.)

Federal aid to public schools of all 48 States of the Nation is now a very live subject. It involves much more, however, than merely an alternate method of financing public education. It involves principles that are vital to the future of our own American way of life.

In the beginning, let me say that American public school teachers are seriously underpaid. They should, can, must, and will be paid more, whether there be Federal aid or not.

There are two methods of financing our public schools. One is to continue financing them through local, city, county, and State taxation, as we have done throughout our history. The other is to supplement this local support by appropriations from the Federal Government. During the past 10 years there has continuously been one or more bills before Congress for such Federal aid, and one will shortly be presented to the new Congress, proposing Federal aid to every public school in every one of our 48 States.

Both the proponents and the opponents of Federal aid are agreed that the present bill, calling for $300,000,000 if adopted, would be only the beginning. Both sides are agreed that once the principle is adopted, aid would increase rapidly. In my opinion, it would increase until the Federal Government would be carrying the major part of the load within a decade after the start had been made. Of course, by that time, the matter of Federal control now considered so serious, would have been fully accepted and the consequences ignored.

Should the principle of Federal aid to public schools become the rule, we may be assured the principle would shortly be extended to the junior-college level. In fact, that is already being discussed. With the

principle in operation up to the junior-college level, we can expect that it would gradually be extended to the senior level. With that accomplished, private schools and colleges would tend to be squeezed out of existence through one of two procedures, or a combination of both. First, Government policies of cheap money and low interest rates have destroyed the effectiveness of their endowments. High income taxes and high inheritance taxes have also greatly shrunk the sources from which gifts for private schools may come. With a federalized public-school system this threat would become much more serious.

In the second place, there is already some agitation for legislation to require all children to attend public schools for national indoctrination. With a federalized system of education it isn't difficult to foresee the day when such legislation would be adopted, and even to the extent that private schools would be virtually eliminated.

Consequently, the real issue at stake today is not a mere $300,000,000 to be distributed among the public schools of the 48 States. The real issue is whether we shall maintain a locally supported and locally controlled public-school system that would virtually eliminate local control and tend to eliminate private and church related schools and colleges. The real issue is extremely significant. Upon our decision hinges the future of this Republic.

The consequences are not difficult to foresee. If we even modestly subsidize the administration of the public schools of the Nation, there will certainly be a tendency for instructors to teach the views of the government in power. As Federal aid and Federal influence should increase, this tendency would become stronger and stronger. In fact, it is my firm conviction that should we start Federal aid to our public schools now, we would see virtual Federal control within a decade, to be followed within one more decade by nationalization of industrial production, transportation, utilities, and agriculture.

The real issue before us today is not merely $300,000,000 in aid to our public schools. The real issue is whether or not we shall take this most crucial step toward the socialization of America.

It should be remembered by all American citizens that freedom is the priceless heritage for which our forefathers so bravely fought, bled, and died. It is the proud heritage they so nobly handed to us. It is the secret of our present greatness, and the one hope of our future prosperity. Every American citizen should also remember that freedom has been enjoyed by less than 5 percent of the people who have walked on this earth and that even in our own day less than 25 percent of the people of the world have any reasonable amount of freedom.

It should further be remembered that freedom and prosperity throughout the history of man have gone hand in hand; while ignorance, regimentation, and poverty have likewise gone hand in hand. Greece lost her freedom and lost her greatness. Rome lost her republic and ushered in the Dark Ages. England and France are losing their freedom as they move along the road of socialism and nationalism. France demonstrated the agonies of this road a few weeks ago when French soldiers, under government orders, were fighting government-employed coal miners to protect government-owned coal mines. England adopted a scheme of nationalization in 1945, which she was forced to follow in 1947 with a law giving the government power to tell any man or any woman (with certain limitations) where to work, what to do, and with penalties for failure to obey, or for absenteeism. The American public doesn't want to follow that dismal road. But Federal aid to the whole of our public schools, in all 48 States, as all these Federal-aid bills now require, would be a decisive step in that direction.

Federal aid to the public schools of America is not necessary and it is not desirable. It has been accurately said that the debt of the Federal Government is about $258,000,000,000. The debt of all the 48 States, added together, is about $2,500,000,000. The debt of the Federal Government is, therefore, 100 times as much as the total debt of all the States.

Since 1940, the debt of the Federal Government has gone up terrifically, while the debt of the 48 States has gone down. There is not a single State of the 48 which has not reduced its debt since 1940. There is not a single State in the Union that is not financially better off than the United States. There is not a single State that is not better able to pay the expense of the education of its youth than is the Federal Government. Why, therefore, should we saddle the cost of education on the Federal Government.

If Congress believes that all of the States or any of them is unable financially to provide an adequate system of public education, then there is a way that Congress can help much more than through a Federal-aid bill providing for $300,000,000 to be distributed among all the States. For instance, it is estimated that the present Taft bill would provide for my home State of Arkansas approximately $8,903,000 a year. Of this appropriation, Arkansas taxpayers would contribute $1,604,000. Thus Arkansas would gain about $7,300,000 at the expense of taxpayers of other States. There is a much better way to help Arkansas, while at the same time actually helping all other States too. It is a very simple method, except it might cost some votes. One-third of the Federal civilian employees could be removed from the pay roll without decreasing efficiency of the Government. This would save the entire Nation over $2,225,000,000 in pay roll alone. This saving to Arkansas taxpayers would be approximately $14,000,000. Arkansas could then increase her own State support to education by $14,000,000, which is approximately double the aid offered in the present bill, without having any heavier burden on herself, without any burden on taxpayers in other States, and without all the complications and implications of Federal aid.

I insist that this is the right way for Congress to help my State, and at the same time all the rest of the States. Arkansas is now actually paying to Washington in Federal taxes $114,500,000 a year. She would actually be aided by the present bill only $7,300,000, or 7 percent of what she pays to Washington.

It is like a doctor draining 4 pints of blood from a man and then exclaiming, "Why, you look anemic. I am sorry for you. You need aid. I am going to give you a transfusion of one-fourth pint of blood from my plasma bank."

Furthermore, it is my firm conviction that Federal aid would soon become a millstone about our necks. The Federal Government has no record for economic handling of expenditures. Were our present educational system, just as we now know it, operated by the Federal Government, it would likely be costing us 50 percent more to operate than is now the case.

When the Federal Government controlled and operated the railroads during World War I, it lost nearly $2,000,000 a day. During World War II they were operated much more efficiently under private management, paid over $3,000,000 a day in taxes, and still made a profit.

At the present time, the Federal Government is educating the American Indians. The cost per pupil is more than two times as high as the average per pupil in our public-school system in the average State in the Union, but the schools are not better.

It should, also, be made very clear that Federal aid is not necessary in order to put both grammar school and high school opportunity within the reach of all the youth of the Nation. Arkansas passed last November 2 an initiated act for the reorganization of the entire public-school system of the State. This reorganization will place grammar-school and high-school facilities within reach of every boy and girl in Arkansas. Although teachers' wages in Arkansas have been increased more than 150 percent in the past 7 years, this reorganization bill will further increase them materially. What Arkansas, one of the poorest States in the Union, can do for her pupils and her teachers, every State in the Union can do. There is no more reason for the Federal aid for increasing teachers' salaries in Arkansas than there is for aid to increase the salaries of ministers, policemen, and firemen, all of whom, like the teachers, work in the public interest.

The States, moreover, are bravely solving their own educational problems. During this past year alone they have increased salaries to teachers more than the total of $300,000,000 perennially sought in Federal aid. Still more important the increases have been greatest where the need was greatest. The average increase for the entire Nation was 86 percent from 1940–48, but for the 12 Southern States, including the poorest, the increase was 117 percent.

There is another still more important fact. The differential between the income of the wealthy States and the poorer States is rapidly narrowing. While the 16 wealthiest States averaged 46 percent more income per person in 1940 than the 16 poorest States, by 1947 that difference had been cut down to only 14 percent. With more oil being discovered and more industry moving to the South, that differential will continue to narrow until the North may be seeking aid from the South within a generation or two.

It should further be understood that Federal aid to education within itself would do absolutely nothing to bring into the schoolroom those children between the ages of 5 and 17 who are now out of school by choice. This would still remain a problem to be solved locally.

New York and California, the two wealthiest States in the Union, and the two with the highest average expenditure per student for education, still have their problems. They also have dreamers telling them they are not spending enough. So it is evident that neither the Nation as a whole, nor any part of it, can afford the expenditures the dreamers can recommend.

Moreover, the percentage of crimes and the number of Communists in those two States testify to the fact that it takes more than money to provide proper education.

No longer should the major emphasis be upon how much money we can spend. On the contrary, emphasis should be upon moral purpose—upon character and citizenship, without which no nation can long preserve a glorious republic like our own.

The State of Utah spends only about the national median, an amount per school pupil which all of our Southern States can reach. While this figure is only half the amount spent per pupil by California and New York, yet Utah gets the best results. Dr. E. L. Thorndyke, in a thorough study published in 1944, showed that Utah produces 100 percent more men of science and of distinctive achievement in proportion to population than does either California or New York.

Since every State in the Union can reach the present recommended minimum level, and since Utah's record proves that a State with that much money can produce the best results in the Nation, is it not imperative that we all put our shoulders to the wheel, adequately finance our own schools, and emphasize moral purpose, sterling character, and

genuine loyal citizenship—qualities that can be developed everywhere, but that money alone can buy nowhere? These greater values can be obtained only with keener local interest. But Federal aid will tend to decrease local interest and thereby push to a still lower level the development of character and citizenship.

Children are what they are taught. That is why most children in Egypt and Turkey are Mohammedan, while most in India are Hindu, and while most in America are Christian. They are what they are taught to be.

With a federalized school system we may expect, within a generation, that our children will have come to believe in the principle, and we may then expect its extension to industry, distribution, and agriculture.

England started down that road in 1945. Now she has announced a plan for nationalization, even down to the farms, by 1952.

The danger of Federal control is always present with Federal participation, and should never be overlooked. When farmers accepted subsidies, they also got controls. When some of them objected to the controls, a test case went to the Supreme Court. Justice Jackson ruled: "It is hardly lack of due process for the Government to regulate that which it subsidizes."

While the present Federal-aid bill does all that words can do to assure the public of no Federal control, it should be remembered that a Supreme Court decision already establishes a precedent for the Government to regulate that which it subsidizes. Moreover, as the amount of aid should increase there would be abundance of opportunity for revised legislation—in fact, it would be the miracle of the ages if it didn't come. These aren't days of miracles, so we had better protect our future by rejecting Federal aid to our public schools.

In all the excitement we should not lose sight of our present achievements under a decentralized government.

Our national income is equal to the combined national incomes of the next highest six nations (before the war or since). Our workers can buy with their wages two times as much food, clothing, housing, travel, entertainment, education for their children as workers at similar jobs in England, Sweden, or Switzerland, and five times as much as in Russia. America, with one-sixteenth of the world's population, sends more young people to high school and college than does all the rest of the world. Only one nation was able to arm itself adequately to meet the Axis Powers; only one nation was able to lend liberally to its allies in that war; only one nation is able now to extend help to its neighbors. I am not one of those who now think that that one nation must now surrender the fundamental principles that made her great in order to remain great.

On the contrary, I am thoroughly convinced that if we keep our freedoms and our liberties we can again double the purchasing power of the workman's wages in another generation, as we have in the past generation. Should we, on the contrary, turn to nationalization of education and production, we would likely go down by 50 percent in production, in wages, and in standard of living. There is much at stake.

Dr. Charles Seymour, president of Yale University, has recently declared that he wants no part of Federal grants for educational purposes. General Eisenhower is strongly opposed to Federal controls in the field of education. It is high time we all should wake up and stop this drift toward state socialism before we reach the point beyond which there is no turning back.

Remember, Federal aid is not necessary to the financing of an adequate public-school system. Every State in the Union can reach the necessary level. It is character and citizenship that should concern us and which money can't buy.

Remember that Federal aid will ultimately mean Federal control, and Federal control would reflect in the classroom the views of the Government in power, and would quicken our pace toward state socialism.

Remember that Greece achieved her best during the days of her democracy, that Rome achieved her best during her republic, and that England established her great Empire following the Magna Carta.

America, under still greater freedom, has achieved still greater power and prosperity. Federal aid to all the public schools in all the 48 States is not necessary and is not desirable. It would mean a definite about face in a system which has succeeded in providing the best for the public that any segment of mankind has yet experienced. As American citizens, it is our responsibility to pass on to our children unimpaired the priceless heritage of individual freedom which our fathers so proudly passed to us. Federal aid to our entire public-school system would constitute a decisive step in the wrong direction.

The Paradox of Force and Freedom

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am happy to include an article by the president of Harvard University, Dr. James Bryant Conant, which appeared in the Washington Post editorial page yesterday. It is a summary of an article appearing in the Atlantic Monthly and it contains much food for thought for all Americans who really love freedom.

The article follows:

THE PARADOX OF FORCE AND FREEDOM

(By James Bryant Conant)

(The following article by President Conant of Harvard is reprinted from the January issue of the Atlantic Monthly with the permission of the publishers. Copyright, 1918, by the Atlantic Monthly Co. All rights reserved.)

Can there be a moral basis for freedom in a world of force? This is one of the ugly questions which disturb many intelligent people at this moment. Can we reconcile the doctrine of military force—the idea of killing men in war—with a moral purpose? As a matter of history, freedom has often emerged from the successful use of force; yet we abominate war as intensely as we love freedom. How are we to resolve this paradox?

I should be ready to maintain that while liberty has repeatedly been gained by war, once won it can be protected only by adherence to those moral principles which were repudiated in its achievement. The distinction between the ethics of war and the ethics of peace, I believe, must be a fundamental postulate of our free society. If this be so, it is of the utmost importance to emphasize the distinction in these confused and gloomy days.

Either history is devoid of meaning or else we must believe that a study of the past will enrich one's understanding of the present. "To be ignorant of what occurred before you were born is to be always a child"—from which it follows that we must read the book of history diligently and scrutinize with the utmost care the events recorded. In that spirit one may venture to approach the difficult problems of reconciling force and freedom in our day by a glance at certain events which took place in England 300 years ago.

THE CAMBRIDGE PLATFORM

Everyone familiar with even the outlines of modern history will recall that the 1640's were a period of civil war in the British Isles. All who have traced the connection between the evolution of democratic institutions in the seventeenth century and the history of the United States will be well aware that the outcome of these wars left a lasting mark on the development of the Colonies of North America.

For example, a commission of the Congregational and Unitarian Churches of this country recently commemorated the tercentenary of the adoption of the Cambridge platform. This document was essentially a statement of the local independence of the churches of the Puritan colonies. It was a manifestation of a current running strongly both in old England and in New England as to the importance of local control and initiative in matters of religion.

Ambitious claims have been made that this platform was basic in the development of the cultural pattern of the United States. Certainly we are all aware of the significance of the twin doctrines of local responsibility and local initiative, and even the members of other Protestant denominations can give due credit to those early Congregationalists who proclaimed the independence of each one of the New England churches.

Any celebration, however, which rejoices in the influence of the New Englanders of three centuries ago must likewise recognize the role of force in the drama which was being enacted in the 1640's. The tramp of Cromwell's soldiers echoes through the years. For just when the learned ministers were writing the Cambridge Platform in New England the genius of Oliver Cromwell and the discipline of his red-coated new model army were settling the claim of rival church parties for the organization of the Protestant religion in the Anglo-Saxon world.

A second civil war had broken out in April 1648; the Royalists defeated in the earlier struggle were allies with the Scotch and the discontented Presbyterians. If this strange alliance should prove successful, there was a strong possibility that a combination of Scotch and English Presbyterians would control the form of church government in both Great Britain and the Colonies. But the victory by Cromwell and his followers at Preston in August 1648 eliminated this danger. The Congregationalists of New England and the Independent Party in old England were made secure.

OUT OF HARSH SOIL

The relationship between force and freedom in the seventeenth-century history of the English-speaking people is evident. Without the victories in the first civil war there would have been no possibility of a Cambridge Platform; a triumphant King would have seen to that. If the Presbyterians had won at Preston there would have been a prompt suppression of independent churches at home and in the Colonies.

But it was more than the victories on the battlefield which firmly established in a relatively few months the New England way of life. Between the time when the Cambridge Platform was adopted by the ministers and enacted by the general court, the influence of Cromwell and his soldiers had become literally overpowering. It is the irony of history that the arbitrary action of Cromwell's officers in Pride's Purge of Parliament in December 1648 and Cromwell's subsequent

dissolution of what remained, the so-called Rump Parliament, made secure a rule which was one of the sources of American freedom. For Cromwell's Independents saw eye to eye with the New England men.

The Cambridge Platform was certainly something more than a passing resolution of a handful of stout church rebels only because of the continuing victories of an extraordinary army, and perhaps only because of the arbitrary action of the same army against a representative assembly. Just as in England religious tolerance grew out of a period of military dictatorship of godly men, so our liberties in this country can claim to have drawn nourishment from the same harsh soil. Cromwell's soldiers fought for freedom of the Parliament from the King, freedom of all Christians from the Pope, and from Anglican Bishops. Cromwell's officers and men later manipulated the political scene and coerced the nation on behalf of independent church government and the consequent independence of a great variety of sects.

The problem of reconciling force and freedom by a historian reviewing the seventeenth century has a familiar modern ring. One can envy the men of 300 years ago on one point at least—they were spared some of the more disturbing doubts which three centuries have forced on the Western World. One can feel the sincerity of Cromwell's remarks when, describing one of his great battles, he said, "And the Lord made the enemy stubble unto our swords."

There is no evidence that aside from the Quakers the pious people of England or New England in those days had any scruples about the use of force, provided it was used by them. Whether the doubts which now assail so many honest men represent a slackening of our religious faith or a quickening of our sensitivity as human beings or a better appreciation of the Christian message is a question I leave to the theologians and preachers of this day.

RULE OF ARMED SAINTS

If one may venture to express a judgment on the actors of the great drama of the Puritan rebellion, I should say that Cromwell and his followers are to be praised for having fought well in both the civil wars. Indeed, I fail to see how anyone who rejoices in our liberties could well maintain the contrary. The behavior of the army leaders after the close of the second civil war is another story.

The verdict of history must be that they failed to execute a plan by which an orderly development of a broadly based government would be possible in England; they failed in spite of Cromwell's conservative instincts and his prayerful attempts to find a constitutional basis for his regime. The considered judgment of all who believe in the western definition of democracy and freedom must be that they were wrong to establish a military dictatorship even of godly men; in short the rule of armed saints is to be condemned on both pragmatic and moral grounds.

History is full of examples of earnest men so dedicated to a cause that they did not scruple to use violence as an adjunct to political action. To their minds the issues between themselves and their opponents were of such a nature as to justify the application of the rules of war even in times of peace. Fanatics who believe they are divinely led, or that history is on their side, usually maintain that the end justifies the means. Hence, an admixture of violence and treachery in affairs of state is for them the equivalent of the taking of life on a field of battle.

Any unwillingness to admit the validity of the moral distinction between war and peace is at once exploited by all apologists of dictatorships—past, present, or future. At the present moment those who believe that nothing can be worse than war are eagerly sought as allies by those who believe that nothing can be worse than our American practice of democracy.

The two join hands in pointing the finger of scorn at the apparent paradox that a nation founded on the principle of the sacredness of human life is ready to secure its liberties by war if need be. The one group bases its case on the consistent application of Christian teachings, the other on equally consistent denial of the Christian ethics. Yet the Pacifist and the Communist unite in exposing the logical inconsistency of the traditional American attitude toward force and freedom.

THE TOTALITARIAN PREMISE

Today, as in the past, the vast majority of the citizens of the United States, while abhorring war, nevertheless believe that it is not always wrong. They have a deep-seated conviction, however, that war is always totally different morally from peace. The consequences of abandoning this illogical position by proclaiming that fighting is never justified are all too clear.

If we were to lay down our arms as a matter of Christian principle, and as a Nation take an eternal vow of nonresistance, those who feel otherwise could hardly fail to accelerate the course of history as they see it. From their point of view they would be negligent in their duty if they failed to eliminate the Christian basis for our brand of democratic freedom.

I have not the slightest fear that we shall adopt the doctrine of nonresistance. I am not so certain, however, that we might not adopt the exactly opposite course of action. And if we did, we would very shortly destroy our freedom.

If we became sufficiently oppressed by the logical inconsistency of our emphasis on the distinction between war and peace, we might repudiate the paradox by accepting the premise of the totalitarians that at all times the end justifies the means. Once we had gone over to their position, the doctrine of a preventive war, so-called, against a potential enemy would be quite compatible with the philosophy of the Nation. But so, too, would be strong-armed methods at the polls, intimidation of a legislature, even a coup d'etat and political assassinations.

THE KREMLIN'S DREAM

The few who have been flirting with the idea of a preventive war have failed to see the implications of their position. Their argument says in effect, "In the next decade the Russians will have perfected their instruments of mass destruction; let's smash 'em now before they're ready." This reasoning of those who wish to force Russia to fight now might seem attractive at first sight to all who pride themselves on being hardheaded. I suggest that it is vulnerable, however, on realistic grounds.

Basically the argument for a preventive war fails to consider the fundamental nature of the struggle which underlies the present uneasy armed truce with the Soviet Union. We need to probe deeply into the question of what the Soviets' ambition would be if and when they have weapons of mass destruction in sufficient quantity and are ready with suitable methods of delivery.

I think it extremely probable that the men who rule Russia do not dream of a military victory over the United States followed by an occupation and control by Russian commissars, but rather a revolution in this country which would result in a totalitarian socialistic state with native American rulers. Once this is accomplished, the Russian dream appears to foretell, the world revolution is achieved and the utopian aspects of communism are possible.

I think the Russians now accept their Marx-Engels-Lenin doctrine with fanatic seriousness. If my assumption about the nature of the thinking in the Kremlin be admitted, it follows that the over-all strategy of the United States must be aimed primarily at preserving the type of free society we have inherited from the past and now enjoy. Our open society rests on a fundamental moral basis; once we destroy this basis, we have destroyed the essence of this Nation.

If I am right about my analysis of war and peace, any acceptance of the doctrine that the end justifies the means would be the moral equivalent of dropping atomic bombs on a dozen of our own cities. For us to develop a Machiavellian foreign policy which would culminate in our launching a surprise attack on the Soviet Union or declaring war for the purpose of a destruction of their armament would negate the very premises on which our culture rests. In short, it seems to me the moral argument against a preventive war is by no means softheaded, but rather a realistic appraisal of the fundamental issue which divides the world.

Let me make it plain, I am not advocating any policy of appeasement in regard to the present. The whole problem of our strategy for the months immediately ahead is another matter. If the Soviets force us into war by their own actions, that is another story. What I am opposing is the notion that we should precipitate a war a few years hence in order to beat the enemy to the punch in this matter of weapons of mass destruction.

PANIC AS A WEAPON

We have been told by more than one authority who has access to governmental secrets that sometime in the 1950's Russia will probably be able to produce atomic bombs. Assuming this prophecy to be true, one may well ask: How is the United States to survive as a free society in such a hideous era? But another question has priority: How will the rulers of Soviet Russia use the threat of their possession of atomic weapons (if and when they have them) to forward their own ends?

What would you do if you were living in the Kremlin and were a firm believer in the Marx-Engels-Lenin doctrine which includes the idea that the eventual triumph of communism is scientifically assured? I suggest that first of all you would prepare defensively against the possibility that a preventive war party in the United States might develop and gain control, and a superblitz from North America to Russia might some day come. Second, you would lead the United States to believe that Russia was well prepared offensively to attack that country by a superblitz, hoping thereby to cause panic among the people. One might feel certain that the citizens of a free society, sufficiently disturbed and frightened, in their frantic attempts to ward off military damage would wreck their economy, their social structure, and eventually their political framework.

If there be any merit in this analysis of mine, those in whose hands will rest the determination of the military policy of the United States a few years hence may have to solve a most baffling problem. On the one hand the United States must be well prepared for war in the age of atomic bombs, of a superblitz on the other, we must see that the methods used in such preparation do not lead to the very ends that the Russians may have in mind, namely, a breakdown of our economy, of our political system, with the consequent internal destruction of our Nation.

WALKING A KNIFE EDGE

To me it means we must deliberately refrain from taking out all the forms of military insurance that may come to mind. For example, to do everything that could be thought of to insure against destruction of our cities might involve such drastic shifts

in our whole life as to destroy our national being. Even in terms of dollars and cents I believe military preparedness could wreck us.

If I were sitting in the Kremlin, I should have great faith in the power of an inflation to ruin the United States. One way to cause a runaway inflation is surely to spend too freely and too fast on military equipment. Already, perhaps, one can smell danger in the air.

There has been a considerable amount of talk about the atomic age. It may be argued that we shall not be living in that age until two or more powers have atomic bombs in sufficient quantity to constitute a military menace to each other. If and when this time comes, those who are responsible for spending this Nation's resources on military matters will be confronted with the century-old problem of force and freedom in a new and terrible form.

They must walk a perilous knife edge—on the one side will be inadequate defensive and offensive military power, the possibility of outmoded strategic concepts and antiquated equipment; on the other will be the precipice which drops to domestic ruin—the destruction of the basis of a free society.

I see no escape from the fact that in planning for this possible future we must take some calculated risks. And the calculations will be difficult indeed. They involve the analysis of a complex situation, an appraisal of many technical and military factors. A vast amount of staff work by professionals must provide the necessary data. Fortunately we have high talent in the Military Establishment and men of wide vision and imagination.

But the rules of war must never be allowed to dominate the ethics of our people. Control must be in civilian hands. The basic judgments must be made by the voters and transmitted by them through Congress to the President and the civilian Cabinet members.

If all concerned keep in the forefront of their minds the vital issue, the survival of our free society, then we may believe the eventual decisions will be sound. We must never falter in our faith in the moral basis of this Republic. On these terms and these alone can we hope to resolve the paradox of force and freedom in an atomic age.

Success

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. SCRIVNER. Mr. Speaker, worthy of space in the CONGRESSIONAL RECORD is a definition of success, written 40 years ago by Mrs. A. J. Stanley, of Kansas City, Kans. Its literary value, its clear thought and concise expression won its author a prize in a Nation-wide contest, and widespread recognition.

Elbert Hubbard included it in his famous Scrap Book. It can be found in Bartlett's Quotations, and many other nationally known works.

The thought contained in this definition is as fresh and appropriate today as it was when it was first penned.

Reprinted, recently, in a magazine of national circulation, Mrs. Stanley's definition of success follows:

SUCCESS

He has achieved success who has lived well, laughed often, and loved much; who has gained the respect of intelligent men and the love of little children; who has filled his niche and accomplished his task; who has left the world better than he found it, whether by an improved poppy, a perfect poem, or a rescued soul; who has never lacked appreciation of earth's beauty or failed to express it; who has looked for the best in others and given the best he had; whose life was an inspiration; whose memory is a benediction.

United States Foreign Policy in Asia

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. JAVITS. Mr. Speaker, in the current maelstrom of conflicting views and revolutionary events in China and southeast Asia, a precipitate decision may well determine the fate of our Nation and the world for centuries.

Mr. Walter Lippmann, in the following column in today's New York Herald Tribune, offers a valuable and informed view of what our policy in Asia could be:

AMERICA IN ASIA

(By Walter Lippmann)

In trying to decide what we should do we must begin, I think, by recognizing that we cannot shape and direct the course of events in Asia. We may be able to exert a useful influence in maintaining friendly relations between the western democracies and the emerging peoples of Asia.

Even that will be difficult to do. But if we try to do more than that, or something quite different—as for example, to support puppet governments against the rising tide of nationalism and social revolution—we shall almost certainly fail and lose what influence we might otherwise have.

When we assess our position in Asia, as we must in order to form a policy, we may begin with the fact that we defeated Japan by dominating the Pacific Ocean and the islands of Japan—not by defeating the Jappanese Army and then liberating and occupying the vast territories in China, Indonesia and in southwest Asia which Japan had conquered. The American victory gave the United States undisputed supremacy north of the Equator and up to the coasts of the Asiatic Continent. But we did not attempt or presume to deal directly with the immense areas which Japan had conquered from the Chinese, the British, the French and the Dutch.

Having made the fundamental and unavoidable strategic decision to strike at the heart of Japan, and not to become involved in large land operations on the contineht or south of the Equator, it was left to our allies to take over the conquered territory evacuated by Japan.

Among our allies who were conceded the right to take over after the Japanese defeat, the Chinese under Chiang Kai-shek, the French and the Dutch had been too gravely weakened by the war to take over successfully. They have not been able to pacify the territory they lost to Japan.

Not only were they weak in material power. They were without real moral authority. Chiang Kai-shek's government, though it has received far greater help from the United States than the Chinese Communists have received from Russia, has collapsed. It has not collapsed because it was beaten in battle, but because it has lost the support of the Chinese people. In Indonesia and in Indo-China the Japanese destroyed, probably forever, the prestige of western Empire. Though the Japanese were in the end defeated by the Americans, they had proved that an Asiatic nation could defeat the European empires in the Orient. Their slogan of Asia for Asiatics continues to work, despite the surrender on the battleship *Missouri*.

Where, then, shall we look for allies, now that Nationalist China, the Netherlands, and France are so manifestly unable to play the role in Asia which we had supposed they would play? That, it seems to me, is the fundamental problem which has to be solved in order to form an American policy in Asia.

My own view is that the right direction was indicated by Mr. Attlee when he took the bold and far-reaching decision to treat India and Pakistan as leading members of what is now no longer the British Commonwealth but simply the Commonwealth. I am told that at the conference of the Commonwealth Prime Ministers in London last summer Nehru, who is certainly the greatest figure in Asia, suggested that in the future India might become the intermediary between Asia and the west. We would be well advised, I think, to enter into intimate consultation with Nehru about our whole course in China and in Indonesia. In doing that we should find ourselves in harmony with the Australians, who are surely among our dependable friends, as well as with Mr. Attlee and the wisest makers of modern British policy.

This is not only the most promising way of approaching the tremendous convulsion in Asia. It is also the most truly American way. For our position in Asia rests on a great tradition, unique in modern history. We have been, and still are, the only world power which has refused to become the imperial ruler of subject peoples. That reputation originated in the fact that we are ourselves a colonial people that won its independence. It has been confirmed by our long support of Chinese independence, by our history in the Philippines, and in Cuba. Our most precious asset in Asia is our abilily to persuade the people of Asia that there is a nation in the Western World, more powerful than the Soviet Union, which sympathizes with their struggle for independence, and has no wish to exploit it.

Our friends in western Europe should try to understand why we cannot and must not be maneuvered, why we dare not drift, into general opposition to the movements for independence in Asia. They should tell their propagandists to stop smearing these movements. They should try to realize how disastrous it would be to them, and to the cause of western civilization, if ever it could be said that the western union for the defense of freedom in Europe was in Asia a syndicate for the preservation of decadent empires.

A Brilliant Beginning

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the St. Louis Post-Dispatch, of Tuesday, January 4, 1949, which is in agreement with my proposal to amend the House rules to limit the power of the Committee on Rules:

A BRILLIANT BEGINNING

In curbing the excessive powers of its Rules Committee, the House of Representatives has got off to a brilliant start.

Its vote to democratize the rules procedure does more for the effective functioning of Congress than anything since the Legislative Reorganization Act of 1946. The objective had been sought long before the reorganization act, but was left out of that measure for political expediency.

It became a practical political possibility at the outset of the Eighty-first Congress because of a bold strategy of pressing for it before the House had adopted its rules. Later on, the proposal would have had to be referred to the Rules Committee itself, whose mercies could not have been expected to be tender.

For this considerable improvement in the way Congress works, there is little to thank the Republican Party as a party. If it had been left to the Republican Party alone, the reform would have been defeated two to one. Democrats could have managed it without Republican aid, for they mustered 225 votes, 7 more than a majority.

This is not to belittle in any way the fine record of the 49 Republicans who voted for the change. They showed that progressivism is a living force in the Republican Party though the withered hand of Old Guardism still dominates its councils in the House—and elsewhere.

Nor was the vote of the Republican progressives an empty gesture. It had concrete results in dampening hopes of an effective coalition between Old Guard Republicans and Dixiecrats, and in adding emphasis to Republican National Chairman SCOTT's call to the party to renew itself by means of forward-looking policies.

Reform of the Rules Committee is a direct carrying out of the mandate which the voters gave November 2. The blow falls hardest on two of the political relics who continue to occupy seats in the House though virtually everything they stand for has been repudiated at the ballot box. EUGENE COX, of Georgia, and HOWARD W. SMITH, of Virginia, used to run the committee pretty much as they pleased by teaming up with the four Republican members. They are now reduced to life-size.

More important still, an essentially unfair and stultifying method of operation has been corrected. As the Rules Committee's power had come to be used and abused, it was a sort of House counterpart of the Senate filibuster.

The old provision for involuntarily extracting a bill from the committee and bringing it to the House floor for debate and vote was a cumbersome one. A petition had to be circulated and signed by a majority of members. Now, if the committee does not send a bill along to the House within 21 days, the chairman of the committee that sent it to the rules group can move to consider the bill and a majority vote can place it on the calendar.

Since the House has seen how possible it is to strike off one incubus of obsolescence, it should be inspired to proceed against still another incubus, the seniority rule or custom. In the upper chamber, the Senators have a stimulating example to follow when MORSE, of Oregon, brings up his filibuster curb, as he plans to do immediately. All the Eighty-first Congress needs to do in order to write a distinguished record is to keep going in the direction in which it has started.

Labor Chiefs To Crack Whip of Dictatorship on Congress Soon

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. WOODRUFF. Mr. Speaker, under permission to extend my remarks and include therein an article by David Lawrence, I present the same herewith:

LABOR CHIEFS TO CRACK WHIP OF DICTATORSHIP ON CONGRESS SOON—DEMAND FOR CLOSED-SHOP MONOPOLY APPROVED BY TRUMAN FORCES

(By David Lawrence)

America has always prided itself on being different from the dictatorship countries in that no man here can act as dictator. But the test after next January on the dictatorship issue will come in an entirely different way. Congress will be called on to decide whether it is going to yield to the dictatorship of a minority group which claims to have received a mandate in the last election to do as it pleases with the labor-management relationship.

Already the issues are shaping up and the lines of cleavage are forming. Unless Congressmen are willing to submit to the dictatorship and become prounion, they are to be threatened at the polls. Already the same minority claims it is responsible for the election of President Truman.

The concrete question at issue is whether labor unions shall have no restrictions placed on them—whether, for example, they shall not be touched by Federal law when they engage in mass picketing and intimidation and interfere with the right to work or when they demand the right to say who shall be hired.

DEMAND FOR CLOSED SHOP

The demand for a monopoly privilege, legalizing what is known as the closed shop—where no American can work except with the permission of a labor union no matter how efficient or qualified he may be for a job—has been approved by members of the Truman administration.

The right to work—the most fundamental of all civil rights—is to be swept away and in its place the closed-shop monopoly is to be restored if, as planned, the Taft-Hartley Act is repealed in its entirety.

Labor unions, assisted by the Democratic Party's managers, now have announced that they want the entire Taft-Hartley Act repealed. The Democratic national chairman formally takes the position that this is what the public voted for in the last election.

While most Republicans and some Democrats say they want a fair law to substitute for the Taft-Hartley Act, this is apparently not the desire of the Truman administration, which acknowledges that the labor unions won the election for the President and that hence the administration is politically obligated to do as labor dictates.

Theoretically, for generations in America, the public interest has superseded that of any group or bloc. Thomas Jefferson inveighed against special privilege. Today special privilege is handed out to whatever faction or bloc produces enough votes to help win an election. There is no longer any shame about accepting such plain assertion of a claim to special privilege.

Today also the labor unions want those provisions of the existing law wiped out which place on them the same restrictions on the use of money in elections that have for decades been placed on corporations. The labor unions will insist—and doubtless President Truman will go along—that businesses must not use any of their funds for election purposes but labor unions may collect billions of dollars in dues and do as they please about using those funds for political purposes.

ONE-PARTY SYSTEM

Nobody has arisen from labor's ranks to say that a worker might possibly differ in his political views from another worker. His dues money can be appropriated against his will for a political purpose, no matter what he thinks—and he better not think out loud, because under a closed-shop monopoly he can cease to be in good standing in the union and be fired from the job by order of the union. This is a move toward a one-party system, which Moscow will, of course, not miss when it looks about for propaganda accusing America of hypocrisy.

Time was when labor unions were like any other groups—their petition for special legislation was considered only in the light of the public interest. Today there is no group in Congress representing the public interest as such. The labor unions have a list of those Members of Congress whom they consider prounion. All others are considered antiunion.

The labor leaders do not believe there is such a thing as objectivity or neutrality. Nobody who disagrees with a labor union is ever considered to be anything but antiunion.

This is totalitarianism with a vengeance, but the American people are going to learn all about it soon after January 1, when the new Congress meets and labor begins to crack the whip of dictatorship to the assembled Senate and House. No controversy in half a century presents as much drama as the coming battle to wipe out the Taft-Hartley Act in its entirety and substitute for it a law that hamstrings management and leaves labor unions free to do as they please. That same repeal action will wipe out the rights of workers to be free from coercion, economic and physical, exerted against them by labor-union organizers and officers.

The maximum power ever exerted by a single group in American politics will be manifest soon. It's going to happen largely because the spokesmen of management are apparently in a defeatist frame of mind while the defenders of the public interest are not organized at all.

Peace in the Middle East

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mr. JAVITS. Mr. Speaker, Members may well be concerned by the news from the Middle East and the complexities created by the British charges against the Israeli forces in connection with the shooting down of five RAF planes.

A conservative London newspaper is reported to have asked how it was that RAF planes happened to be at the scene of a battle between the Israeli and Egyptian forces. We in the United States could also rightfully ask whether Britain's policy in the Middle East is contributing to the world's peace and security.

Competent observers of the military scene, like Hanson W. Baldwin, of the New York Times, see in the action of the

Israeli forces against the Egyptians a drive for peace. This interesting analysis is contained in the article appearing below from the New York Times of January 6, 1948.

The New York Herald Tribune editorial sees the world's security and even the best British interests served by peace in Palestine, as shown by the editorial appearing below of January 10, 1949.

Let us hope that Great Britain will at long last use her real influence with the Arab countries to let peace descend on the Middle East, else the United States and the rest of the world may very well ask her why.

[From the New York Times of January 6, 1949]

ISRAELIS DRIVE FOR PEACE—RENEWED PALESTINE FIGHTING VIEWED AS EFFORT TO END CONFLICT BY CRUSHING FOES

(By Hanson W. Baldwin)

The resumption of fighting in Palestine obviously represents an Israeli attempt to achieve in the field what the Israelis have not been able to accomplish in the council chamber—peace.

Peace in Palestine is of great importance to the new state of Israel; it is also of importance to the world, for the longer the strategic middle east is plagued by war the greater the advantage to communism.

Israel has rather well demonstrated that she need not fear too greatly the strength of the Arab armies; her military victories made the new state a fait accompli. But the longer a state of war and armed-on-guard continues the more difficult Israel's economic situation will become.

The little land is in no sense a self-sufficient country; it has been, and still is, largely dependent for its well-being upon economic aid in the form of gifts and other assistance from Jewish and other groups outside its borders. It is hoping to absorb thousands of immigrants during the next year. Yet perhaps 75,000 of its people are under arms, and other thousands are engaged in supplying and supporting them, in manufacturing small arms ammunition, Piats (anti-tank weapons) and other war equipment.

Intermittent bombings and forays interfere, even though slightly, with normal life. Much of the country's money is going to purchase planes and other war equipment in Czechoslovakia and wherever they can be bought, in adding to the two converted corvettes that form the backbone of its tiny navy and in adding artillery and armor to its army, which is now organized on a divisional basis.

LONG CONFLICT WOULD BE DRAIN

There is no doubt that long continuation of conflict and the consequent economic drain upon the body politic would be a severe blow to the fledgling state. Israel would like to demobilize her men and establish a Swiss-type military system, which would minimize military expenditures.

But peace is essential to any such plan.

The Israeli operations in the Negeb Desert region have been largely an attempt to force Egypt to negotiate peace and, if possible, to secure all of the Negeb for Israel. Though veiled by a black-out, these operations have been fairly clear in their purpose. The beleaguered Egyptian garrisons along the coast from Gaza through Khan Ynis to Rafah on the Egyptian frontier have been partially encircled.

Faluja, where about 2,000 Egyptians have been virtually cut off for weeks, also has been under attack.

In addition to shelling and bombing the Egyptian strong points, the Israeli forces have swung south in attempts to cut the coastal road—the only supply route for the Egyptian forces in Palestine. In one outflanking movement south of Khanunis and Rafah Israeli units crossed the Egyptian frontier and drove as far as 30 miles into Egypt. The objective, however, was very plainly not Egyptian terrain—the Israeli forces have since withdrawn—but Egyptian supply dumps, airfields and rear installations supporting the Egyptian combat units in Palestine.

DRIVE MAY BE BROADENED

It is not yet possible to appraise the success of the Israeli military operations, for the struggle, which seems to be increasing in intensity and may well spread to other areas in Palestine, is continuing. The Egyptians still continue to hold their Palestine positions but those positions undoubtedly have deteriorated somewhat despite an initial check the Israeli forces seem to have encountered at Rafah. The operations may be broadened in the future to include Israeli amphibious landings near Gaza, for the Israeli Government seems determined to force Egypt to negotiate for permanent peace or to force the Egyptian forces out of Palestine entirely.

The anxiety that has been aroused in some quarters—reflected by British troop movements—by these Israeli operations stem in part from Irael's flouting of United Nation's authority—a practice in which the Arabs have also indulged—and in part from the extremist ambitions of some minorities in the Israeli state—notably the former members of the Irgun Zvai Leumi and the Stern Band. It is these former underground groups, definitely a small minority, but a fanatical one, which are one of the real threats to the peace that Israel is trying to achieve. For these men make no secret of their expansionist ambitions; all of the Negeb, all of Transjordan, they believe, should be part of Israel and some of them dream of greater achievements, of wider horizons.

If such ambitions should be pursued relentlessly it is obvious that the achievement of peace would be difficult and the maintenance of it still more difficult for the threat of Israeli expansionism would be a continuous unstabilizing factor in the Middle East.

The Israeli Government, therefore, which late this month must stand the test of its policies at the polls, must be able to control these minority factions and to moderate their extremism if it is to achieve and maintain what it is hoping for—peace. Its role is all the more difficult for a good many Jews who are not in sympathy with the extremism or terrorism of the former Irgun and Stern groups feel that now is the time to end the Arab menace for good and all, and—flushed with victory—to take advantage of victory.

These facts undoubtedly provide the background for the British concern about the Israeli invasion of Egypt. That concern is overstated, and Israeli spokesmen quite cogently point out that Britain has exhibited no similar concern about the invasion of Palestine. It is, nevertheless, clear that if peace is to come soon to the Middle East moderation must guide the aims and actions of all concerned, and if it is to be maintained extremism and fanaticism of either Arab or Jew, American or Englishman, can have no place in policy.

[From the New York Times of January 10, 1949]

TRAGEDY OF CONFUSION

The confusions underlying the recent accession of tension between Britain and Israel have had their tragically logical climax in the destruction of five British planes at Israeli hands and the death of at least one pilot. From whatever standpoint this muddled and dangerous situation is approached, perplexities arise.

There are a great many elements in the tangle, all of them posing difficult questions. What are the rights of Israel in the border areas of Egypt and Palestine under the General Assembly's partition plan? Under the truce orders of the Security Council? What are the rights of Britain in the Sinai Peninsula under the Anglo-Egyptian treaty? How does the war in Palestine and the intervention of the United Nations in that dispute affect the British position in relation to Transjordan and Aqaba? And, most puzzling of all, is there any essential conflict between the respective interests of Britain and Israel which would justify the present state of mutual hostility?

There will be efforts to resolve some of these questions by protests and counterprotests to the United Nations. The realinement of British forces in the Mediterranean will doubtless be met by measures on the Israeli side. Harsh words will be exchanged through diplomatic channels and harsher expressions through unofficial spokesmen and the press. But it is quite obvious that nothing will go to the roots of the matter except a speedy peace in the Near East, the peace which the forthcoming negotiations between Egypt and Israel seem to presage.

Such a peace is to the advantage of all parties. It is the only way in which the confusions which involve all nations whose interests meet in the Near East can be dissipated, the only way in which the rights of all parties can be clearly stated, the boundaries can be delimited, and the explosive incidents which a state of war or partial war provokes can be brought under firm control. For the Arabs it would mean the end of an exhausting and unprofitable struggle which has already endangered the governments of several states; for Great Britain it would mean an opportunity to pursue legitimate ends in the region in an atmosphere of stability; for Israel it would allow the work of creating a nation to go forward without distraction.

It is, therefore, of the first importance that the negotiations agreed upon between Israel and Egypt proceed without interruption or deviation. Any provocative acts, from whatever quarter, could only hamper the peacemakers and delay the possibility of drawing other Arab states into the discussions. The role of the United States should, and probably will, be directed to discouraging such acts, and bringing international efforts in relation to Palestine down to fundamentals, which is to say, to the promotion of a lasting peace.

England's Excursion Into Genocide at Cyprus

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 3, 1949

Mr. KLEIN. Mr. Speaker, there is a growing revulsion in this country and abroad against the wide gulf between the public assurances of the British Government in the forums of the world, and the actual brutality of the British in their far-flung empire of oppression, war, exploitation, and monopolistic hogging of world trade, while they allow American taxpayers to finance their frenetic efforts at recapturing mercantile supremacy by fraud, force, and deception.

I am not minimizing the gallantry of the British people in war and in arduous peace; I am attacking the callous heads of the British Government who are betraying the peace and the United Nations for the sake of imperialist exploitation.

In this connection, under consent, I am inserting a paid advertisement of the American Jewish Congress which appeared in a number of daily newspapers, together with my own comment thereon.

Rabbi Wise, in his open letter to the British Embassy, bitingly comments on the difference between the magnificent humanitarianism and ring of freedom in Magna Carta, and the brutal reality of England's excursion into genocide at Cyprus.

[From the Washington Star of January 7, 1949]

CYPRUS 1948 VERSUS MAGNA CARTA 1225—A LETTER TO THE BRITISH AMBASSADOR FROM DR. STEPHEN S. WISE

DECEMBER 27, 1948.

His Excellency Sir OLIVER FRANKS,
Ambassador from Great Britain,
British Embassy, Washington, D. C.

YOUR EXCELLENCY: I write this letter as a lifelong friend of the British people. I write it as one who during two world wars did all he could to mobilize American support, both Jewish and non-Jewish, for Britain because of the principles of freedom and justice your country inspired and defended.

Last week there was returned to you, as representative of the British Government in this country, the manuscript of the Magna Carta of 1225 which your Government generously loaned to our own Library of Congress 2 years ago. Freemen throughout the world, and millions still struggling to be free, are the eternal debtors of your forefathers who centuries ago won the guaranties of individual freedom inscribed in that charter. We Americans are grateful to your Government for having enabled us to view this document. It has served to remind us of the priceless nature of the heritage it gave to the world and to render us more zealous in the defense and furtherance of the principles it set forth.

I hope, however, that when the Magna Carta reaches the shores of your country, it will not immediately be consigned to its vault in the British Museum. For, I deeply regret to say, there are members of your Government who need to be reminded anew of the principles which the Magna Carta established. They need to be reminded that by order of your Government thousands of Jews are forcibly detained on the island of Cyprus, where they are languishing in concentration camps. These long-suffering heroes and heroines of the modern odyssey of the displaced persons seek only admission to the land of their fathers, the land of Israel. Their only crime is their passionate belief in and dedication to the principles of the Magna Carta. Yet they continue to be imprisoned by your Government in violation of every principle of law, justice, and humanitarianism, and in defiance of the guaranties of individual freedom your forefathers won.

When the Magna Carta arrives in England every member of the British Government should read it carefully and rededicate himself to its principles. Let them particularly read the "Golden Passage," which asserts that—

"No free man shall be taken, or imprisoned, or disseised, or outlaw'd, or banished or by any ways destroyed; nor will we pass upon him or commit him to prison, unless by the legal judgment of his peers, or by the law of the land. We will sell to no man, we will deny to no man, or defer right or justice."

Let them search their hearts and souls and answer to God, their consciences, and mankind, whether they can permit the interned Jews on Cyprus to continue under imprisonment for a single day. Unless your Government immediately provides for their release and their journey to Israel it will have to suffer the inevitable judgment of mankind; though the parchment on which the Magna Carta is inscribed rests once again in Britain, its contents and spirit will have abandoned, and have been abandoned by, your land.

Sincerely yours,

STEPHEN S. WISE,
President, American Jewish Congress.

[From the Washington Post of January 12, 1949]

CYPRUS DETENTION

I fully support the sentiment expressed by Dr. Stephen S. Wise, president of the American Jewish Congress, in his open letter to the British Ambassador to the United States, as published in the Washington Post. I share his admiration and gratitude to the British people for the magnificent principles contained in the Magna Carta, but I also share his outrage over the continued detention in Cyprus of Palestine-bound Jewish refugees.

The British are detaining these Jews under a unilateral interpretation of the Security Council resolution of May 29, 1948, which barred the entry of fighting personnel into the territories of the states involved in the Palestine war. In its reference to men of military age, the resolution stated that these, when they enter the territories involved, should not be drafted into the armed forces. There is nothing in that resolution that lends credence, even inferentially, to the British contention that the resolution obliges them not to permit the departure from Cyprus of Jewish men of military age, all of them European survivors who were forcibly transshipped to Cyprus from Palestine when that country was still under a British mandate.

When the May 29 resolution was passed, the French delegate moving the amendment on men of military age, made it very clear that it was not the intention of the amendment to bar the entry of such men into Israel. When the resolution was voted on, the members of the Security Council were well aware of this explanation.

The July 15 resolution, setting the second truce, was based on the general intents and purposes of the May 29 resolution. It reaffirmed some specific provisions of that resolution, as for example in its references to Jerusalem, but, significantly, it made no mention of men of military age.

It is true that the mediator had subsequently made statements in which he expressed anxiety lest the entry of men of military age increase fighting personnel. It was within his purview to consult the governments concerned and request assurances on this point. These statements cannot serve as a legal basis for Britain's unilateral action in preventing the Cyprus detainees from departing for Israel.

There is some concern over the fact that some countries appear not to have kept their pledge on the return of German war prisoners by a certain date. The Jews detained in Cyprus are not prisoners of war. Their detention in Cyprus is an unprecedented example of the flagrant flouting of international law. It is a stigma on Britain's reputation which attaches itself, by inference, to all governments that do not denounce this conduct by the British authorities. Such flouting of international law and violation of morality lends comfort to those who labor to discredit the Western democratic powers.

ARTHUR G. KLEIN,
Representative from New York.

WASHINGTON.

Address by Gov. Horace Hildreth at National Grange Convention, Portland, Maine, November 9, 1948

EXTENSION OF REMARKS
OF
HON. FRANK FELLOWS
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. FELLOWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by former Gov. Horace Hildreth, of Maine, at the National Grange Convention, held at Portland, Maine, on November 9, 1948:

Worthy National Master Goss and Mrs. Goss, Worthy State Master and Mrs. Bean, honored guests, brother and sister patrons, I wish to speak to you of the freedom of individual opportunity which is the heritage of New England. I desire to place before you a decision which we must make. Whether we desire it or not, we must determine whether individual enterprise and the capitalistic system as we have known it are to continue or whether we shall experiment with some other form of society, following the development of government in Europe, in which centralized government will have complete dominance over industry and the individual.

We can no longer assume that the way of life we developed will continue simply because it has been proven a good way. Unless we act to protect it, it will be replaced. We are challenged to abandon the passive acceptance of our system of living and doing business and take positive action to protect it. If we underestimate the power of the challenge, we shall lose a priceless heritage.

It is time for us to ask ourselves some very important questions.

Have we forgotten that since the dawn of civilization a very small percentage of the men who have walked this earth have known any appreciable degree of freedom? Have we lost sight of the fact that probably less than 5 percent of all the men and women who have lived their span on this planet actually could call their souls their own? Have we overlooked the terribly significant truth that even in this enlightened day, less than one-fourth of the world's population knows or has experienced freedom even remotely comparable to that which we consider the inalienable right of every American?

These are very important questions, because the answers remind us that less than one-fourth of the earth's population does enjoy a great measure of freedom and—coincidentally—produces the vast majority of the world's manufactured goods.

This Nation has undergone the most phenomenal growth of any that the world has known. In a century and a half it has become the most influential in the world, meanwhile developing the highest standard of living for the great majority that history has yet recorded. As long as 10 years ago, the United States had brought its national income to a point where it equaled the total national income of the next six highest countries in the world.

Although we count only one-sixteenth of the population of this planet, we send more young people to high school and college than all the rest of the nations combined. Our workers, with their wages, are able to buy two times the quantity of necessities and luxuries that workers in France, England, Sweden, or Germany can; five times as much as the Russians; and more than ten times as much as in a good part of the Orient. All this before the war and since.

The paramount fact to remember is that freedom of individual opportunity is the keystone of American achievement, of America's wealth, and of America's high standard of living.

We have only to read the history of other and older nations to know how much that boon of individual opportunity has meant to our growth. The people of Russia have a very low standard of living despite that nation's vast resources, labor abundance, and fertile lands. It is because the Government of Russia does all the planning, operates all the plants, distributive systems, and farms. The Russian fears his government. He knows that if he so much as speaks of individual freedom he has committed a crime against the state.

The history of little Switzerland is a shining example of the other extreme. There, with few natural resources and only enough land with which to raise half of the food needed, the greatest per capita wealth in the world has been developed. From the viewpoint of resources, Switzerland should be the poorest of countries. Yet, it is quite the opposite because the Swiss enjoy the freedom of independent opportunity. The Swiss can own personal property, can create a business or an industry, is free to fulfill his individual dreams, to belong or not to belong to a labor union, to work or not to work.

It is a significant truth that throughout the world freedom of individual opportunity and prosperity go hand in hand. They are invariably found together. It is equally significant that governments have no freedom to give. They can only restrict and limit freedom. A government of a prosperous and happy people can only be the servant of the people, never its master.

Any system of government that is dynamic and which is quickly responsive to need for change or adjustment is certain to face temporary dislocations. We are meeting these dislocations, however, and we know that our economy makes possible a higher living standard, even at its worst, than other countries have ever known, even at their best. One very important thing to remember is this: When you have governmental regimentation with guaranteed full employment and security for all, you also have perpetual poverty.

Where lies the danger to our system? It is difficult to understand, yet it is true—and you all recognize it—that despite the incontrovertible proof history gives that individual freedom and enterprise provide the only avenue to general prosperity and a high standard of living, the tendency of the whole world today is toward regimentation.

What brought on World War II? The activities of highly regimented Germany, Italy, and Japan. What nation today blocks the road to peace and economic recovery? Highly regimented Russia.

For some strange reason we do not seem to absorb history's lessons, nor do we fully profit from examples which are plain before us. England and the British experiment in government management ought to be the most potent argument possible for individual freedom.

There we have a vivid picture of the consequences of even a limited regimentation. It is the British who cherished and—above all other European nations—stood for individual freedom. If any nation in the world could succeed in both nationalizing its industries and maintaining individual freedom, Britain is that nation.

Yet, after 2 years of the experiment, the so-called crisis bill was passed, giving the Government the power to direct any man between 18 and 50, or any woman 18 to 40, where to work. To make that law even more effective, penalties are provided for failure to accept that direction or for absence from work. Thus the Government was given the power to uproot a man from his community, force him to take any work assignment anywhere, and make sure that he obeyed in every respect. It would hardly be possible to find a surer admission that Government-managed economy had failed. Perhaps equally important was the new British tax of 50 percent on all income from investments in addition to an already high income tax.

It is astonishing to think, in the face of this evidence, that there are a great many Americans who urge more and more Government controls, with less and less individual freedom. What they say, in effect, is: If you want to remain great, you must depart from the fundamental principles that made you great. And so skillful is the propaganda supporting this view that our present younger generation is growing up almost entirely in ignorance concerning the outstanding achievement of our American economy and the basic factors which make it a successful economy.

And this is our challenge. We must recognize and neutralize these skilled propagandists who have invaded our country and who are anxious to destroy private capitalism.

It is quite clear, I think, that these enemies of a free economy have one aim—to destroy the one great capitalistic nation. They plan every move shrewdly. Theirs is the old technique of division and destruction. They would divide employers and workers by attempting to make us believe that industrial leaders are profiteers, oppressing workers and bleeding the American public. They are attempting to convince young people and workers that competition and the profit motive are evil forces destined to oppress the weak. These, they say, should be abolished in favor of Government ownership and Government operation of industry.

Let us look into the picture of profits and see what the situation actually is, for it is imperative to our safety that profits be understood. You may be told that American industry made $28,000,000,000 in profits last year, a sum which, it is argued, should have gone to workers. The fact is that industrial profits last year amounted to $28,700,000,000. However, $11,300,000,000 of that money went into taxes, leaving $17,400,000,000. Of this amount, $10,600,000,000 was invested in plant and machine facilities to improve the productive system. The direct beneficiaries of that investment are workers and the public. The investment reduced actual payment to stockholders to $6,800,000,000, in the form of dividends as their share of income for the use of machines and tools. Of this amount, a large part was taken in taxes from individuals by the Government. Remember, too, that about 90 percent of the work was done by those machines and tools, with a direct increase in wages paid to employees.

Now, as to those workers. Wages totaled $100,000,000,000, about 16 times the amount paid investors. The investors are the owners of the tools of production, and it is well to bear in mind that if their return is too little, ultimately, investments will decrease, fewer machines and tools will be in operation, production will decrease, wages will follow, and thus the economy of the whole Nation will be impaired.

Look into the income records of all corporations. In the years 1946 and 1947 they averaged less than 6 percent, more than half of which was turned back immediately into the industries. To stockholders, less than 3 percent was paid as dividends. Not only has industry not been profiteering, but on the contrary has been providing the highest wages ever known, the greatest volume of manufactured goods, and the highest standard of living ever enjoyed by any people.

It ought to be plain enough for anyone who will make the effort to read and to think that capital is far from being the enemy of the workingman. There is a good deal of criticism, on the part of the propagandists, of the high salaries which are paid officers of some of our corporations.

I submit that our able industrial leaders are not taking bread from the mouths of workingmen, but are, as a matter of fact, their benefactors. The presidents of large corporations, with salaries of $100,000 a year or more, are the geniuses of production and distribution. Their services cost the average worker only 1 cent or 2 cents a day, while that same genius increases the wage of the average worker by a dollar or two a day.

For an example of the way that works, consider the automotive industry. When automobiles were first being built, it took one workman an entire day to shape the top half of a gasoline tank, for which he was paid $1. Careful and competent management constantly reinvested profit in better and better plant facilities and better and better tools. Today a workingman, with the aid of a giant machine, shapes the top half of a gasoline tank in 1 minute. He receives $10 a day for his work. In this fashion profits improved the plant, raised production, and increased wages. This same application of profits to plant improvement and facilities has made it possible for the average American to own and enjoy an automobile, electric refrigerator, telephone, radio, better clothing, education, improved housing, and a great many other things which, not so long ago, were luxuries beyond the reach of his family.

All these things were recognized if we think about them. And yet, there is the threat to this kind of economy, the only kind of economy which has proved itself capable of producing an abundance for the vast majority of the people. We can only meet that threat by convincing the public—and particularly our young people—that free competition and the profit system are not evil forces. Their condemnation should be recognized for what it is—a part of a planned attempt to destroy our capitalistic system, which has achieved more for the average American than any segment of the human race has ever enjoyed.

We have examples from the past to warn us what the future will bring, unless we take heed and protect ourselves. The glory of ancient Rome was surrendered to a dictatorship which spawned the Dark Ages. The destruction of American private enterprise would bring dictatorship to us—would introduce a period of degeneration, of poverty, of spiritual as well as material stagnation which would rival the Dark Ages.

It has been well said that the price of liberty is eternal vigilance. Let us resolve that the great Nation we have built in the free exercise of individual initiative—the Nation that has provided so much of good living to so many—shall not be undermined by those who, in ignorance or cupidity, would plunge into a world of economic darkness. Let us each shout the praises of the best system of government the world has yet known. In that, let us be both vigilant—and vocal.

Gov. John W. Bonner's Address to the Montana Legislature

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. MANSFIELD. Mr. Speaker, on Wednesday, January 5, 1949, the Honorable John W. Bonner, Governor of the State of Montana, delivered his address to a joint session of the Montana Legislature. The speech is well thought out, well put together, and shows the real interest of our Governor in our State.

Governor Bonner has stated in no uncertain terms that the promises he made during his campaign he intends to keep. He recognizes that his job will be a difficult one, but Montana is assured that he will give to the State an honest and a capable administration. He deserves the assistance of every Montanan at home and I can assure him that I will do my very best to give him every aid from Washington and to cooperate with him fully in the difficult task ahead.

Montana is proud of John Bonner and he has our State's full confidence and support.

Good luck, John.

The address follows:

I can find no language within my vocabulary to adequately express my gratitude to the people of Montana who have so signally honored me. Upon assuming office as your Governor, I am not unmindful of the great responsibility of my position, and right here and now I desire to thank you from the very bottom of my heart for the confidence reposed in me.

On Monday, the chief justice of this great State did, in the presence of a convocation of friends, administer to me my oath of office. I desire to give you the positive assurance that I shall not regard indifferently the sacredness of that oath.

With the present deplorable world conditions threatening to stamp out every essence of democracy and with our own perplexing governmental problems which call for straightforward action and thinking—now more than ever, each public official and employee must realize his position as one of trust—the violation of which may well be a contributing cause to the weakening of our cherished democratic form of government.

PLEDGES UNSELFISH SERVICE

I pledge anew my love and loyalty to my native State and pledge to her unselfish service. Born and reared on Montana soil, educated and trained in her educational institutions, honored beyond measure by her people, I am ready to give my very best to her upbuilding.

For nearly two centuries, the territory comprising Montana has been a vital factor in the political affairs of men. During this era at least three countries have endeavored to manifest their sovereignty over her.

Woven in her thrilling history of war and peace has been exploration, the hardy endeavors of our pioneers, romance and heroism.

Today we are here assembled for the thirty-first time in the history of our State, as a new legislative administration is being mobilized for service. As members of this legislature, I know the spirit with which you enter upon your duties. You are all imbued with the great desire to perform a useful service for the people of Montana and upon this foundation democracy rests. Government must be responsive to the wishes of its citizens. In order to attain a real democratic government, we all must have a keen understanding of the lessons of experience, a broad vision of the future, a thorough appreciation of the factors which determine Montana's economic welfare, and last, but not least, an attitude of unselfishness.

I know the people of Montana. Recently I have met them face to face all over this great State of ours. No one can travel this great State and meet its people without experiencing the thrill and throb of the growing pulse of the people for a fine type of civilization which permits no dishonesty in private thinking, no camouflage in social life, and no double dealing in public service.

We, as Montana elected servants, have the duty to direct the destinies, to make and administer the laws, to lift high the ideals, to protect the weak and curb the greed of the strong, to perpetuate the liberty, to guarantee the industrial freedom of over half a million people.

It is a challenge that comes but once in a lifetime and I know that we all are more than willing to accept that challenge by doing our very best for the interests of all our people.

ABOVE PARTISANSHIP

Only a part of the men and women of Montana elected me Governor—yet as I took the oath of office Monday, I stepped beyond the narrow and selfish confines of partisan politics, and became the Governor of every man, woman, and child who lives within the boundaries of Montana. And so it is with you, as representatives of the people. The future is before us. No prejudices should thwart our purpose—no bias should encumber our judgment and no personalities should becloud our vision or hamper our endeavors. Petty political bickerings should not exhaust our energies which are now so sorely needed for the welfare of our people.

We are not here to build political fences or to construct political machines. Personally, I shall call around me to fill positions those in whom I have confidence and I shall remove from office, without fear or one single thought of the future, any or all of them if I find that they do not live up to my expectations.

Conforming to our constitution, I will now proceed to give you information concerning the condition of our State, recommendations for the enactment by you of such measures as I deem expedient, and my estimates of the amount of money required to be raised by taxation for all purposes in the State.

FINANCES

Our State auditor has informed me that on December 1, 1948, we had a balance of $8,993,592.89 in the general fund and our State accountant has informed me that our actual income for the fiscal year 1947–48, as compared to the estimated income for the same period, is as follows:

Income source	Amount of income	Amount of estimate	Increase
Beer Act	$782,769.06	$550,000	$232,769.06
Trade stimulator	691,820.02	500,000	191,820.02
Cigarette license	1,292,228.87	850,000	442,228.87
Photographers' license	306.00	70	236.00
Slot machines	250,815.96	70,000	180,815.96
Other income	12,430,899.20	8,001,249	4,429,650.20

The State accountant has also informed me that our present income far exceeds our unexpended appropriations.

It is common knowledge that present salaries paid to city, county, and State officials and employees are generally inadequate when we take the cost of living into consideration and salaries paid by others for the same type of work and responsibility. I therefore recommend that you do everything possible to rectify this situation.

If our income is carefully expended, I am convinced that, save for highways, our present revenues will adequately provide for the proper function of State affairs without additional new taxes except in cases where commodities are not now taxed and which are akin to those commodities now subject to taxation.

We have duplications of duties in our State government. I recommend that a committee be appointed to study the duplications which exist in our State government and that you pass appropriate legislation during this session, eliminating such duplications, which will result in a saving to the taxpayers of this State.

Unless we call a halt to duplication of duties and practice economy wherever possible, it is obvious that we cannot live within our income, no matter what new taxes are imposed upon our citizens. If you see fit to increase the expense of State government, you should also consider the source of revenue or taxation to take care of these expenses.

Montana's tax laws have not been revised since 1921. It is my belief that the State's whole tax structure should be carefully reappraised, and I therefore further recommend that you set up a commission, with the necessary finances, to study Montana's tax structure and report its finding to the next legislature.

PUBLIC SCHOOLS

Everyone is conversant with the fact that we are faced with a serious problem concerning our public-school system. It is needless to say that all the children of this State, whether they reside in rural areas or in towns or cities, are entitled to equal educational opportunities, but such a condition does not exist.

Many of our districts do not have the same financial means as other districts and because of such inequalities, our public-school system is not what it should be. It is my opinion that we should have superior public schools from kindergarten through college. This we do not have and it is therefore obvious that we must inaugurate a new system of organization if we are to have the type of school system we desire in this State and to which our children are entitled.

It would appear that the inequalities of taxation concerning our schools may be removed by an adequate contribution from a State level which would insure equalities of educational opportunities for any child regardless of where he lives in Montana.

Contributions from a State level could well be in the nature of non-real property taxes, which would, in effect, constitute replacement taxes in that they would tend to reduce and eliminate further taxes on real property for school purposes.

Numerous revenue proposals have been advocated in order to solve our present educational problem and such proposals, in my opinion, must be considered in light of the entire financial condition and obligations of the State. Additional sources of revenue will, of course, depend on all financial measures considered and passed by you in this session for the State as a whole. For this reason I am not at this time making specific recommendations as to sources of revenue for the solution of our school problem because at the present time it appears that this is a matter wholly within your good judgment and discretion.

Our school problem should be solved during this legislature and I therefore recommend that you give the closest scrutiny to the recommendations of the Montana citizens committee on education and the recommendations of any other committee whose objective is to better the public school system of this State.

TEACHERS' RETIREMENT ACT

The Montana Teachers' Retirement Act has been of great value to our retired teachers and our educational system. The provisions of this act are far from perfect and may be improved. I therefore recommend that you carefully consider this act with the view of liberalizing it in light of the changing employment conditions since its enactment. I know we all agree that we must continue to do everything possible in order to attract worthy persons to the teaching profession in order to maintain a high standard of education. I therefore recommend that you seriously consider any legislative program presented to you for the betterment of our teachers' retirement act.

HOUSING

It is common knowledge that we have a serious housing condition existing in Montana and I recommend that you memorialize Congress to pass legislation which will provide means with which our citizens may procure reasonable and adequate housing facilities at the earliest possible moment.

PUBLIC WELFARE

We all recognize that it is our duty to adequately care for the needy aged, the blind, and neglected and dependent children so that they may live in decency. It is obvious to every one of us that the increasing living costs have far offset payments, and I therefore recommend that you carefully examine the situation affecting these worthy beneficiaries of State assistance and enact appropriate legislation which will substantially increase their monthly allowances. At the present time their allowances are far from adequate and therefore should be given special attention.

HOME FOR THE AGED

One of the most serious problems confronting Montana today is that of caring for the needy aged persons who are not insane, by providing a home for them in order that they be adequately cared for. This is a matter that should not be delayed and I earnestly urge that you provide a home for the needy aged separate and distinct from our State hospital so that these unfortunate persons will not be committed to Warm Springs, as is now the case in many instances.

STATE HOSPITAL

Another serious problem confronting the people of Montana is that of making our State hospital a fit place for the unfortunates who are committed there. I know we all feel a deep responsibility for our mentally ill fellow citizens. We must see to it that these patients receive the best of medical care, that they are well housed, receive just treatment, and have a high standard of living. I therefore ask that you give special consideration to this problem and make adequate appropriations to meet the objectives which I have just enumerated. From my information, with the completion of the present building program, the patients will be adequately housed and special attention should now be given to appropriations for the food and other requirements necessary to meet a high standard of living—medical care and adequate and efficient personnel.

WORKMEN'S COMPENSATION

In light of the high cost of living, I recommend most earnestly that the weekly payments made under our workmen's compensation law be increased substantially because payments now made are inadequate. In order to bring about more justice in the administration of the workmen's compensation law, I also recommend that the waiting period for a single person be reduced to 1 week, as is the case with a married person.

Furthermore, I recommend that in case of an injury causing death, that the beneficiary be paid for 500 weeks, as is the case with those who sustain permanent disability and I also recommend a 25-percent increase in the number of weeks for specific injury.

LABOR DEPARTMENT

Labor in this State is entitled to not only official recognition but to a separate department in our State government in order that there be an efficient administration of our labor laws. In order to establish this vital and worthy department it is necessary that you pass appropriate legislation so that a constitutional amendment providing for a labor department be submitted to the voters at the 1950 election. I recommend that such legislation be passed by you at this session.

UNEMPLOYMENT COMPENSATION

Because of the present high cost of living and in order to further aid those who are unfortunate enough to be unemployed, I recommend that our unemployment compensation laws be amended to provide for a substantial increase in the maximum weekly benefits, dependents' allowances, a longer uniform potential duration, and a reduction of the waiting period to 1 week.

From my information, these beneficial changes may be accomplished without a change in the contribution rate.

In legislation affecting the provisions of our unemployment compensation laws, it is my opinion that we should at all times be certain to protect and maintain an adequate reserve in our unemployment fund in the event of a period of economic stress which might arise in the future.

INDIAN HOSPITAL FOR TUBERCULAR

By virtue of Public Law 332, Eightieth Congress, there was appropriated by the United States the sum of $750,000 for the purpose of cooperating with the State of Montana for the construction, extension, and improvement of a tubercular sanitarium at Galen for tubercular Indians. The original appropriation was for $1,500,000 and Hon. JAMES E. MURRAY, United States Senator from Montana, as well as Hon. MIKE MANSFIELD, Congressman from the western district of the State of Montana, have both expressed their opinions that the Eighty-first Congress will appropriate the additional $750,000 for this purpose. In order to avail ourselves of this appropriation, the State of Montana must provide additional funds to complete the construction, extension, and improvement, including regulation equipment of the said hospital. From my investigation, I am convinced that it is necessary we do everything possible in order to construct the hospital for the benefit of our tubercular Indians and I therefore seriously recommend that a contingent appropriation be made at the earliest possible moment which will be effective upon Congress appropriating the remaining $750,000 as I have heretofore related.

Personally, from my investigation, I believe that in order to comply with the congressional appropriation that our contingent appropriation need not exceed $700,000.

VETERANS

As we all know, the veteran and his dependents do not want something for nothing, but simply a chance to make a decent living and establish themselves in their respective communities. In order to accomplish this, worthy legislation concerning them should always be carefully considered. In order to help the veterans and their dependents to accomplish the objectives I have heretofore enumerated, I recommend that legislation be enacted giving nondisabled veterans a credit of at least 5 percent and a disabled veteran a credit of at least 10 percent on all examinations required before employment by the State. And I further recommend that such legislation also give such credits to their dependents in such examinations. Again, in order to help insure the education of children of veterans killed in action or who died of disease during World War II, I recommend that legislation be passed giving those children free tuition at any of our Montana public educational institutions.

I also recommend that you memorialize Congress to pass the veterans' economic development bill as embodied in H. R. 521 and S. 1652 in the Eightieth Congress. This bill proposes to set up a $5,000,000 backlog from which loans may be made to develop and create new industries. The act would operate in the same manner as does the Home Owners Loan Corporation and other like Federal agencies which have been entirely self-supporting. This legislation would help both veteran and nonveteran and bring new business to Montana.

I also recommend that you give serious consideration to appropriations asked for by the Veterans' Welfare Commission.

The foregoing constitute matters which I deem essential at this time in order to help the veterans and their dependents and undoubtedly many other worthy measures will be presented to you by the veterans and their dependents for your consideration and I know you will give these proposed measures your utmost attention.

MEMORIAL BUILDING

Though $400,000 has heretofore been appropriated, from my investigation it is my opinion that $350,000 more must be appropriated in order to construct the pioneer-veterans' memorial building. This is due to increased building costs since the last appropriation and because an additional room is needed for the reason that I will now give. At the present time, a committee is working with the view of procuring a great number of paintings by Charles E. Russell for the State of Montana. These paintings, in order to be adequately kept, must be placed in a room with favorable atmospheric conditions. In my opinion, the plans for the pioneer-veterans' memorial building should be altered in order to provide for such a room. The appropriation I have just mentioned includes the cost of this room. The appropriation will not entail new taxes because ample money for the construction of this building, so I am advised, is already in the capitol building fund and the veterans' memorial fund.

I recommend that these appropriations be made so that the pioneer and veterans' memorial building may be constructed without further delay.

HIGHWAYS

We have reached a crisis, as far as our highway situation is concerned, in Montana. In my opinion something must be done by this legislature if we are to save what highways we have and to have an adequate program of highway construction in this State. I think it is obvious to all that the people of Montana want action now on our highway program.

Since the last general election, I have obtained from our State highway commission the statement of our financial situation and what is going to be necessary in order that we can take advantage of Federal funds already available. Our present highway

financial situation, as given me by the highway commission, is as follows:

	State	Federal	Total
Work remaining to contract the 1944 Federal act	$5,720,000	$8,580,000	$14,300,000
Wor remaining to contract the 1948 Federal act	9,000,000	14,000,000	23,000,000
Total	14,720,000	22,580,000	37,300,000
Deduct State funds available including debentures	5,720,000		
Additional State money required in order to match available Federal funds under 1944 and 1948 Federal acts	9,000,000		

The additional $9,000,000 of State money which is required to match the present available Federal funds, as heretofore shown, over and above that of all State funds available including the debentures which will be sold, would undoubtedly provide a real aggressive program of highway construction for approximately 3 years. This means, of course, that we must provide revenue during this session of the legislature which will provide $3,000,000 a year because it is reasonable to assume that Federal funds in the same proportion will continue in future years. From my investigation it is my conclusion that we need this type of program in the amounts just stated if we are to have the type of highway construction and maintenance to which this State is entitled.

There are, in my opinion, at least six equitable methods by which additional revenue may be obtained. These are:

1. Increased gasoline tax.
2. Increased tax on Diesel fuel.
3. Imposition of a tax in proportion to the gasoline tax on propane, butane, and all other fuels excepting gasoline by rating of pounds per horsepower hour, used for propelling vehicles of any kind upon the highway.
4. An annual tax on trucks determined by tonnage.
5. An annual tonnage tax on trailers and semi-trailers.
6. A caravan law providing that a fee be paid on each vehicle transported for hire on our highways which fees would go to the building and maintenance of our highways.

I do not believe that any further tax or license should be placed on private passenger vehicles for the obvious reason that a further tax or license on such vehicles would be inequitable.

The people of Montana know that the revenue must be raised for the maintenance and construction of our highways and I again seriously recommend that you find ways and means during this session to obtain revenue which will insure a real program of highway maintenance and construction for Montana.

Delay in solving this problem will avail us nothing, but on the contrary will lead, in my opinion, to a substantial loss of the millions of dollars which we have already invested in our roads. Not only this, but the lack of a real highway program will inconvenience our own residents and will substantially diminish the revenues which Montana each year receives from its tourists. In considering our highway situation, I also earnestly call to your attention the feasibility of working out a program for farm-to-market roads which is essential to the farmers and ranchers of this State.

STATE HIGHWAY PATROL

Our State highway patrol is a very efficient organization. It is composed of a high caliber of men and is a credit to this State. However, the salaries paid these patrolmen are grossly inadequate and I recommend that you seriously consider appropriations which will insure them salaries commensurate with the fine service they render to this State.

MUNICIPALITIES AND COUNTIES

Streets and roads in many of our municipalities and counties are fast deteriorating because of inadequate funds, and I therefore recommend that you seriously consider any legislation which will aid such towns, cities, and counties in providing better streets and roads.

RURAL ELECTRIFICATION

We are progressing well with rural electrification in Montana and I am sure you will agree with me that we should continue to do everything possible with the view of extending rural electrification wherever we can to every farm and ranch in Montana.

APPRENTICESHIP COUNCIL

I heartily endorse the work of the Montana State Apprenticeship Council in conjunction with the Federal Bureau of Apprenticeship. The work of these agencies is of primary interest and importance to industry, including management and labor. At the present, more than 1,200 apprentices in Montana are registered under apprenticeship programs developed jointly by the State apprenticeship council and the Federal agency with management and labor in over 50 apprenticeable trades. Approximately 85 percent of these apprentices are veterans of World War II, learning the skills of their chosen trades, thus equipping them with the knowledge for future journeymanship resulting in security for themselves, providing skilled workers to employers, and the public benefiting by having skilled craftsmen performing their work. Because of the most worth-while work being performed by these agencies, I request the legislature to again provide adequate funds for the continued successful operation of the Montana State Apprenticeship Council, under the State apprenticeship law.

RADIO PRIZE CONTESTS

Participation in radio prize contests has been held illegal in Montana. In order that our residents have the same rights as others who reside in the United States to take part in radio prize contests, I recommend appropriate legislation in order to rectify our outmoded laws in this respect.

AVIATION

The increasing importance of aeronautics and its functions is becoming more and more apparent in its relationship to the economy of our State. The use of the airplane by the rancher and businessman is no longer a novelty. Crop spraying by air for weed and insect control is a proven additional utility of the airplane. We must continue to plan ahead in the development of landing strips and airports for all communities. Airport development is necessary before we can establish feeder air lines to link all of our communities with the present excellent air lines now operating through Montana.

I would like to bring to your attention the good work of our State aeronautics commission. This agency, financed only by the industry it represents, has accomplished a great deal in the promotion of aeronautics, airport development, and air education. The commission has been aided in this work by the Montana Pilots' Association, the Flying Farmers, and other aviation groups. Your support of any recommendations the commission may make will be justified. Montana can benefit materially in fostering aviation.

LIQUOR CONTROL BOARD

I recommend that you thoroughly investigate our liquor control system with the view of squeezing politics and corruption out of its operation so that it will be operated efficiently for the benefit of the people of this State.

As long as I am governor there will be no brokerage system and I recommend that legislation be passed prohibiting brokerage, in connection with our liquor monopoly system.

In order to more efficiently administer the liquor control act and to procure more revenue for the people of this State, I recommend the enactment of legislation which will authorize and direct the Montana liquor control board to purchase, safely keep, and sell identification stamps serially numbered to be affixed to each and every bottle of distilled spirits, wines, cordials or liquors sold by or under the authority of the liquor control board.

During the last session a law was passed limiting the number of retail liquor and beer licenses. As a result newly established posts of national veterans organizations and lodges of national fraternal organizations are without liquor and beer licenses because such licenses have been oversubscribed in the area in which these posts and lodges are situated. In order to remedy this situation, I recommend legislation which will give a legitimate national fraternal or legitimate national veteran organization, which has been in existence for at least 5 years, the right to procure liquor and beer licenses. In order to avoid speculation in beer and liquor licenses, I recommend legislation which will provide that all liquor licenses and beer licenses which are not actually used by the owners thereof within 60 days after issuance by the liquor control board be automatically canceled.

In order to permit the retail liquor dealers to legitimately carry on their business with the prospect of a reasonable return on their investment, as is the case with other merchants, I recommend that this legislature enact legislation giving the retail liquor dealers a 10 percent discount on liquor purchased in quantities by them from the State. This procedure would conform to standard merchandise practices, as where the retail merchant purchases in quantity from a wholesaler.

Under the present law, one selling liquor to a minor can be tried only in justice court. The selling of liquor to a minor, in my opinion, is a grievous offense and is one for the district court, where a greater penalty can be meted out in the event the defendant is found guilty. I, therefore, recommend appropriate legislation which will make the selling of liquor to a minor a major offense, with a severe penalty in the event of conviction.

SOCIAL CLUBS

Since you last assembled here, social clubs have grown over this State like mushrooms. There has not been a case, as far as I know of, which has determined whether or not any of these social clubs have conformed to existing laws. These clubs, in many instances, have received licenses from the State to operate slot machines. Many of these clubs carry on open gambling. At the same time, as most everyone knows, without the guise of social clubs, slot machines are being illegally operated openly and notoriously in violation of law in many counties of this State. In many instances, I am informed, individuals or syndicates control the operation of these slot machines. This practice is, of course, a racket, constitutes corruption, and should not be tolerated. Only the illegal operators and corrupt public officials profit under this system.

I am informed that the United States (Bureau of Internal Revenue) licensed 6,019 slot machines in Montana last year, while only 3,162 of such machines were licensed by this State during the same period of time. Some of our retail liquor dealers benefit from the operation of social clubs because of their right to have licensed slot machines. This

causes unfair discrimination among the liquor retail dealers, for the reason that those who are not benefiting from slot machines obviously cannot compete successfully with those retail dealers who are benefiting from the operation of social clubs, or illegal gambling, whether it be by slot machines or otherwise. The result is, therefore, unfair competition. I believe we should face the issues as they stand. Either all slot machines operating in the State should pay a high State license tax for the benefit of our citizens or be completely banned by honest, decent, and courageous enforcement of the law, save those which are operated under license by truly recognized fraternal and veteran organizations or by truly charitable institutions. These are matters for you, and for you alone, to rectify during this session, and I so recommend.

WATER-CONSERVATION BOARD

One of the essential programs for Montana is, of course, reclamation. We must go ahead with this fine program, and any adequate financial provisions which will permit the water-conservation board to proceed with its projects merits, in my opinion, your serious consideration.

BOARD OF EQUALIZATION

Chapter 218, Revised Codes of Montana, 1935, was declared unconstitutional with respect to interstate commerce, in *State* v. *Montana-Dakota Utilities Co.* (114 Montana 161). Thus natural gas exported through a pipe line originating in Montana for use without the State escapes taxation. In order to correct this situation, I suggest that a law taxing the production of natural gas be enacted, incorporating a provision that the production tax be offset by any distribution tax paid on the same gas.

At the present time Montana has no law providing for a tax on aircraft engaged in interstate commerce. I recommend that the legislature give careful consideration to the enactment of legislation which will correct this deficiency in our present taxation law.

Our freight line company tax law as amended in 1935 was declared unconstitutional by the Supreme Court in December 1945. Since the decision, no taxes have been collected on freight line property. The law formerly brought in about $35,000 annually, which was credited to the State public school general fund. A new law should be enacted to again place this property on the tax rolls and I so recommend.

Throughout this State most hotels and other public lodging places have portable coin-operated radios, supplied by foreign concerns, for the use of their patrons. Being portable, they can easily avoid taxation on the first Monday of March, but if they are required to be licensed, the State will derive substantial revenue from that source. For that reason, I recommend that a law be enacted to license each such coin-operated radio.

The State board of equalization has found evidence that tax stamps issued by this State to evidence payment of a tax upon required articles have been removed for use upon other taxable items or forged, thereby depriving the State of revenue. I recommend that a law be enacted prescribing the manner of affixing of such stamps and prescribing a penalty for defrauding the State of Montana.

Of major importance is the matter of reclassification and revaluation of real property and improvements in rural and urban areas in each county and I recommend appropriate legislation to bring this about. Unequal tax burdens exist among the taxpayers and among different classes of property. Section 2028, Revised Codes, 1935, enacted in 1921, authorizes a levy to defray the cost of classification in each county, but does not authorize or provide for reclassification. There is no other statute pertaining thereto.

A resolution was passed by the county assessors of Montana at their last annual meeting that the reclassification should be done under the supervision, or by the State board of equalization, in order to obtain uniformity throughout the State.

While much preliminary work has been done under the limitation of the said statute, in cooperation with the soil-analysis department of Montana State College, the extension service, the county assessors, and the boards of county commissioners, a new act is necessary before authority exists for such reclassification and revaluation. If the work is to be done by the State board of equalization, an appropriation sufficient for the purpose will be needed.

FISH AND GAME DEPARTMENT

We must inaugurate a program of immediate restoration and development of fish and game resources to the fullest extent in this State, and I especially invite your attention to any legislation which will aid in bringing this about.

PURCHASING AGENT

The present laws relating to State purchases by the State purchasing agent are impractical. The statute requiring notice by publication before purchase would, in many instances, cost the State of Montana over the period of a year, many thousands of dollars. Because of this fact, purchasing agents for many years, in order to avoid the heavy costs of publication, have sent out invitations by mail to persons and corporations interested in submitting bids. This practice has at times caused confusion, delay, and needless litigation.

I therefore recommend that you pass appropriate legislation which will make workable our laws relating to State purchases by the purchasing agent which will be economical to the people of this State and yet at the same time safeguard all purchases made by the State.

INCOME TAX

Many of our citizens are contributing more than 50 percent of the support of persons over 18 years of age. Under our present law (sec. 2295.10, RCM, 1935) these persons are not entitled to an exemption. In my opinion, this is unfair, and I believe that the law should be amended to change the rate of $300 to $500, with the elimination of any age, provided the taxpayer contributes more than 50 percent to the support of such dependent.

I recommend the foregoing changes in our income tax law because many of our people are supporting children going to college as well as persons who are incapable of support because of mental or physical defects.

POSTWAR PLANNING PROGRAM

Inasmuch as our postwar planning program has not been completed and in order to insure its completion, I recommend that the balances in the postwar planning program for the various institutions be reappropriated in order to carry them beyond the June 30 fiscal period.

INDUSTRIAL SURVEY

With our great resources, undoubtedly we can encourage new business to come to this State. However, this will take initiative and planning and cooperation on the part of all of us. With this in mind, I recommend that a Montana resources development board be created in order to make a study and survey of the State's resources and industrial and business possibilities with appropriate policy recommendations for the next legislature.

CONCLUSION

At no time do I intend to encroach upon the prerogative of your functions. I sincerely believe that the two departments of government should function independently. Heretofore, I have pointed out to you several matters which I believe should be treated by law. It is your province alone to prepare and pass measures embodying suggestions on which the people of Montana have so clearly spoken in this last election. At all times, I am ready to help you either individually or collectively, and to you I offer the fullest measure of cooperation.

The people of Montana are expecting much of this legislature and, without question, many of these expectations will end in disappointment unless the executive and legislative branches carry out their respective duties in utmost harmony. I am confident that all of you know full well how intensely the people are thinking. It is your duty and my duty to see to it that our actions during this session of the legislature meet the approval of the people of Montana.

President Truman's Message to Congress

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Just As We Expected," published in a recent issue of the Palladium-Item, of Richmond, Ind.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUST AS WE EXPECTED

President Truman offers us nothing ahead which we had not already foreseen.

His message to the Congress is a repetition of his demand for more taxes, more spending, more controls over American life and business.

He wants Government to provide prepaid medical assistance, have a larger part in education, and force our youth into universal military training.

At a time when inflation seems to have reached its peak he proposes inflationary Government spending on a larger scale.

This policy alone will serve to add new life to higher prices.

He wants to control goods in short supply even as the supply of goods is rapidly reaching the point where needed articles are available.

The President proposes to put the Government in business in competition with private industry if free enterprise fails to measure up to his ideas of what it should produce.

And so none may escape, he favors a study of a move toward increasing income taxes on wage earners in the middle as well as upper brackets.

His program means more taxing, more spending, more regulation by Government. It means a more powerful state, more Federal employees, more chances to elect and elect.

Water Problems of Los Angeles Area

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. McDONOUGH. Mr. Speaker, to understand the water problems of the

Los Angeles area of southern California, it is necessary to have some knowledge of the climate and topography of this region, and the history of the development of water sources to meet the growing needs of this area.

The following summary sets forth these vital facts concerning our Los Angeles water problems, and I recommend it to the attention of the Members of the House:

CONSERVATION REPORT SUMMARIZES FACTORS IN WATER PROBLEMS OF LOS ANGELES AREA

TOPOGRAPHY

Los Angeles County embraces slightly more than 4,000 square miles, which can be divided into three general sections of approximately equal area. The northern third is an inland valley completely surrounded by mountains which separate it from the coastal or Los Angeles area. These mountains, which occupy the middle third of the county, are characterized by peaks ranging from 5,000 to 10,000 feet above sea level.

The southerly third is the Coastal Plain ranging from sea level to approximately 1,000 feet. On this plain lies the city of Los Angeles and forty-odd other municipalities.

The latest population figure for Los Angeles County is 3,818,713, of which 1,930,561 represents the city of Los Angeles. This area, including the southern base of the mountains, is drained by the Los Angeles and San Gabriel Rivers, which, in turn, are fed by numerous small mountain streams.

PRECIPITATION

Practically the entire precipitation, including the snow which falls on the highest mountains, occurs between November 1 and April 30. The total varies according to elevation from approximately 11 inches at sea level, 20 inches at 1,000 feet, and 33 inches at 5,000 feet in the higher mountain area. The average rainfall for the four summer months amounts to thirty-four hundredths of an inch.

WATER HISTORY

For more than 150 years, the Los Angeles River, the original source of the local water supply, has continuously served the community. Since 1781, when El Pueblo was founded, residents have used this water. Even today, the river with its average flow of 80 second-feet (52,000,000 gallons a day) supplies a 40-square-mile area within the city, including a part of the original business district.

The Los Angeles River is unique in that, except during the winter rains, it seldom has more than a trickle of surface water, none of which is directly diverted for domestic needs. Instead, the city has constructed a system of underground galleries and some 75 wells.

The deepest gallery is 150 feet below the river bed. In the winter months the water flows from the galleries into conduits leading to storage reservoirs, and the river replenishes the galleries and gravels with water.

Early in 1900, the city was faced by the necessity of getting additional water to supply its growing population. In 1908, construction was commenced on the Los Angeles-Owens River aqueduct, a 238-mile water carrier which tapped the snow-fed creeks on the east slope of the High Sierras. The project was completed in 1913 at a cost of $24,500,000.

As the population of Los Angeles steadily forged ahead from its 1930 mark of 1,500,000 people, the city continued to anticipate its water needs. To insure an ample supply for 2,000,000 people, the Mono Basin, located 350 miles north of Los Angeles and adjoining the Owens River watershed, was developed to augment the aqueduct supply.

Therefore, at the present time, the city has available 80 second-feet from local sources, plus 430 second-feet from the Owens River and Mono Basin, or a total of 330,000,000 gallons per day. On the basis of our present consumption, this is adequate for a population of 2,000,000 people.

Water is stored in seven reservoirs along the aqueduct and, in addition, there are 37 reservoirs within the boundaries of the city.

In the early twenties, the city began preliminary studies of the Colorado River as a source of additional water supply. In this project, the city of Los Angeles was joined by other municipalities, and in 1928 the Metropolitan Water District of Southern California was organized with 11 member cities.

In 1930, the district contracted with the United States for storage of 1,500 second-feet behind Hoover Dam and the actual construction of the project was begun in the last week of 1932. The construction of the project took 9 years, and its net construction cost to date approximates $198,000,000.

At the present time, the district embraces 26 cities, the coastal municipal water district, and the San Diego Water Authority, the latter embracing a large part of the most populous section of San Diego County. When this latter district joined the Metropolitan, it brought with it a contract for 112 second-feet of Colorado River water.

The original agreement between the cities provided for the sharing of the cost on the basis of their assessed valuation, and allocated the water to them on the same basis. This would entitle the city of Los Angeles to considerably more than 50 percent of the available supply, or at least 800 second-feet (520,000,000 gallons a day), which is more than sufficient to supply water for an additional population of 3,000,000 people. Thus, Los Angeles, by its foresight, has put itself in a position to care for a population of some 5,000,000 people.

IRRIGATION

Agriculture has through the years been one of the principal sources of income in Los Angeles County. Its products in 1947 amounted to $222,882,990, of which $33,991,700 came from fruits and nuts, $27,835,600 from vegetables, $45,018,600 from field crops, and $116,037,090 from livestock and dairying.

The total irrigated area in the county, according to the census in 1940, amounted to 185,000 acres. Of this amount, approximately one-half is located on the coastal plain and the balance within the San Fernando Valley, in the city of Los Angeles, and the Antelope Valley north of the main range. While this area may be divided roughly 50–50, more than one-half of the values produced come from the area lying on the coastal plain.

This area is underlaid by water-bearing gravels which are fed partly from the rains that fall upon the surface, but principally from the Los Angeles and San Gabriel Rivers and lesser streams that debouch directly onto the coastal plain.

The winter run-off from the mountain and foothill area is controlled and conserved by 16 dams. Plans call for the construction of several more such structures in order to fully control and conserve the run-off for beneficial use.

The irrigated area is served by numerous small water companies largely by pumping from the underlying gravels. In addition to water needed for irrigation, these companies furnish the domestic supply for some 30 cities and a dense rural population.

Water from the excess supply brought from the Colorado River is available in the case of necessity for both irrigation and serving the communities not at the present time members of the district itself.

American Business and Education

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered before the Association of American Colleges at their thirty-fifth annual meeting on January 11, 1949, by the chairman of the board of the Standard Oil Co. (New Jersey), Mr. Frank W. Abrams. Mr. President, I make this request because of the widespread interest in this address, interest not only for what the address says but because of the theme presented. In Chairman Abrams' speech he presents a legal question which I cannot answer, but in his remarks he has this sentence which to me represents an ideal definition of what a corporation should be when he says:

A corporation is not an isolated selfish phenomenon in society, but a part of the world in which it operates. Like any other person—legal or human—its best interest cannot be served by narrow selfishness.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOW CAN AMERICAN BUSINESS HELP AMERICAN EDUCATION?

A year ago last September I took part in a meeting which inaugurated the crisis in education campaign of the advertising council.

I presented my views and the views of my associates on the board of the Standard Oil Co. (New Jersey) regarding the stake of business in American education.

I have never made a speech which produced a wider response. I am still getting letters about it.

This fact is evidence to me that education today is looking to American business for help, and welcomes a growing recognition on the part of many enlightened business and industrial managements that an independent and progressive American educational system has been, and will continue to be, vital to American business and industry.

What I would like to do this morning is to discuss the question: How can American business help American education?

I have in mind especially higher education.

Let's first look at some of the reasons for finding ways to help.

It is my personal opinion that the peace, prosperity, and security of this Nation may depend as much on the way we treat our teachers and our religious leaders as it does on any other single influence. The ideas, the faiths, the beliefs which will affect our government and our institutions 10, 20, and 30 years from now (and I am thinking very specifically of our corporate institutions) are being strongly influenced by the teachers of today. It seems to me vital that we attract a substantial percentage of the best minds of every generation into the teaching profession. To do this, we must offer them more than bread and water and a chance to do good. Education must be competitive. It must be able to attract its fair share of the ablest young people.

I have included religious leaders because I believe the case is similar and equally strong. Our American belief in freedom for the individual is essentially a religious belief. Our political structure has a moral and spiritual foundation. We believe that the individual is important and should always come first.

The problem of higher education is familiar to this audience. Before the war American colleges and universities had to accommodate about a million and a half young men and women. Today they are required to take care of nearly one million more undergraduates. During a period when population has increased about 9 percent, the number of young men and women in our colleges and universities has increased about 60 percent; and even though the number of GI's has begun to fall off, the total attendance may be expected to increase. Higher education is expanding. Like all expansions this one develops large capital requirements and creates other problems.

It is generally acknowledged, I think, that the increase in higher educational demand is almost certain to result in a tremendous expansion of our publicly supported institutions of higher education—our State colleges and universities.

No one will dispute that some of the greatest educational institutions in this country are State colleges and universities. But in the opinion of many wise observers, this is true in part because of the existence of outstanding private, or so-called independent, colleges and universities. If these independent institutions are absorbed into a State educational system, or become wards of the State (I use a capital "S" in both cases) American higher education would be seriously weakened, in the opinion of many Americans.

If independent colleges and universities are to remain strong and vigorous in order to supply not merely an alternative for the undergraduates and for the teachers of the Nation but a vigorous and effective quality competition for State colleges and universities, they must receive continued financial support from outside sources. Tuition and other direct charges cannot cover the costs of an education. They never have. Every young man or woman who graduated from an independent college or university got a free ride part of the way because money given to these colleges and universities by private individuals has always covered a substantial part of the costs of higher education.

If tuition charges were increased high enough to cover full costs, we would automatically close the doors to a great many of our most competent young people. Furthermore, the independent colleges and universities in our free society must compete with public institutions which can charge less over the counter for an education because the tax-supported institution will get the difference between its costs and its price from the Public Treasury.

The independent college or university finds itself in a dilemma. Its costs have grown enormously. Some fortunate institutions have been able to raise their endowments very substantially and I understand that 1948 has been a banner fund-raising year. But when the total dollars are discounted by their purchasing power (and a dollar is only worth what it will buy) we find that our independent institutions of higher education are having to run very, very fast to stay in the same place. The value of their new endowments, even if they reach record-breaking levels, will be worth little if any more than the amounts raised during the depression years of the early thirties.

Colleges and universities find themselves in the same spot that many industrial corporations do. Record-breaking dollar income is inadequate to meet their postwar obligations to reconstruct and expand.

Colleges and universities are today more and more looking to business and industry for help—and I think they are quite right in doing so. More and more the corporate individual is being asked to assume some part of the responsibility that the private individual is not so well situated to carry with present taxes and surtaxes—and I think it is interesting and significant that corporation giving to various forms of philanthropy has increased tenfold in the past decade.

I believe that the will to contribute exists very widely today in the field of business and industry, but I find that very few people (among them very few educators) are aware of the substantial obstacles to giving which the law puts in the path of the public-spirited corporation management. It is textbook law that corporate managers may not make "gifts" of corporate funds. An English judge remarked some 60 years ago: "Charity has no business to sit at boards of directors." However, the right of a corporation to assume that it owes an obligation to society or the community has been established slowly by our courts and by a process of identifying more and more progressive programs with the self-interest of the enterprise and its shareholders.

For many years the basic legal doctrine was so rigidly applied that corporations were not permitted to include in pension plans any payment in recognition of past services.

I think you should be aware also that the law may impose upon corporate managers financial responsibility as a group and as individuals for any "wrong guessing" they may do regarding judicial attitudes in matters of this kind. Perhaps particularly today, when a good many business directors are men of limited means, they must take a very serious view of the legal fences which surround them and must stay well within the not-always-clear boundaries marked out by the law and the courts.

The courts have relaxed somewhat the rigid application of the "no gift" rule. If it can reasonably be held that some legitimate business interest of the corporation is benefited by a contribution, the courts have upheld the contribution as proper and warranted. It is recognized and acknowledged today, for example, that pensions are good, not only for retired employees but for the corporations which provide them. That a corporation's best interests may be served by many forms of fair and far-sighted dealing, which could not be approved on a strictly "Scrooge" type of reasoning, is a view which has been reflected in court decisions and in legislation over the years.

In this our courts and legislatures have been not only socially enlightened but intelligent. A corporation is not an isolated selfish phenomenon in society, but a part of the world in which it operates. Like any other person—legal or human—its best interests cannot be served by narrow selfishness. Unadulterated selfishness destroys men, and it also destroys institutions.

At the present time reasonable pensions to retired employees—including amounts in recognition of past services—are generally not considered gifts because of the benefit to the corporation which stems from improved morale of the organization and the increased efficiency and loyalty of employees who have not yet been retired. The business benefits accruing to companies from contributions to local hospitals and other community welfare services have been recognized by the courts.

Coming now to education—scholarships and fellowship grants in a specific field of study which is related to the corporation's principal business activity are considered justified and in the interests of the enterprise. The same thing is true of grants to be devoted to the creation or maintenance of physical equipment and facilities useful in study and research in some specific field of science or business which is closely related to the corporation's principal business activity. General grants to educational institutions which devote their major endeavors to work in fields closely related to the corporation's principal business activity also seem warranted by the same logic. But other types of contributions in support of education, such as grants to the general endowment funds of an undegraduate college, have still to be supported by court decisions or otherwise before corporate managers can face the legal dangers and risks without considerable uncertainty.

From our point of view, the present legal situation is unsatisfactory. We think it is unsatisfactory also from the viewpoint of the American people and of the Nation. Our reasoning is this:

1. Whatever the law may say, and however much the courts may have altered the "no gift" rule by their decisions, the American people do not, in fact, consider that corporations should be cold, selfish, impersonal institutions with no responsibility except to their shareholders. The American people—with that great good sense which marks so many of their decisions—insist that the legal persons which we call corporations have responsibilities to society.

In our view, the American people are entirely right. Furthermore, we believe that the long-term interests of shareholders cannot run counter to the long-term interests of the American people.

2. We live in a world in which public opinion has become increasingly important and effective. Business and industry must constantly be aware of the fundamental faiths of the people of this Nation and must live and grow in accordance with those faiths. That is merely good sense. If you want, you may call it business statesmanship.

I do not mean that business and industry must blow hot and cold or fly hither and yon in response to every gust of wind from some new quarter. The fundamental beliefs of the American people change slowly and after a long association with some satisfactory or unsatisfactory experience.

I simply mean to say that no corporation and no group of people in this country can be intelligent and, at the same time, hope to be the only one in step when everybody else is marching to a different beat.

3. The increased importance which we today attach to public opinion is not derived from some copybook but from experience. We are all aware of its force. We are all increasingly conscious that we must not only do right but be known by our fellow citizens as decent, honorable and fair-dealing men and institutions. Good relations with the American people are important to the shareholders of Standard Oil Co. (New Jersey) and to shareholders of every other major corporation.

It is important to our shareholders that we deserve and get public confidence and respect—that we do right and are known to do right—that we identify and accept responsibilities for the general welfare.

And in this regard I think that no field is fundamentally more important to modern American business and industry than the field of education.

Business and industry have long been beneficiaries of the vast American educational system which has given us not only trained and more productive manpower, but prosperous and more valuable markets. It seems to me that one of the major problems of the world is to increase the educational level of people everywhere so that they can deal more effectively with the conditions that surround them and build better societies and higher standards of living.

It seems to me that it is no more strange today to propose that business and industry recognize and acknowledge a direct and important interest in higher education than it

was 25 years ago to urge the practical virtues of pensions for employees.

If we can agree that existing legal restrictions may run counter to the public need in this area, the question is what can be done about it?

Enabling legislation in various States might be of some help. About a dozen States already have such legislation. But it is not clear in all cases whether the statute has educational contributions in mind when speaking of charitable grants. Furthermore, judicial precedents in some States cast doubt on whether charitable or educational contributions which might otherwise be considered unjustified by the courts can be validated by legislation enacted after the date of the company's incorporation. The theory is that the State is only one of the parties to the charter and cannot change it.

There are States where this whole problem may not arise; other States where legislation has already been enacted; and still other States where legislation may be needed for the future.

The most effective course, however, seems to be to go to the courts for an interpretation of the existing law and to find out how far judicial opinion coincides with public opinion as we see it. It is important to realize that for more than a quarter of a century, so far as we know, there has been no court decision directly dealing with the right of corporate managers to give to education.

I feel sure that some of you have already begun to say to yourselves: "Your heart seems to be in the right place—but what are you going to do about this problem?"

Let me say first that we have already made some moves. A little less than a year ago I asked myself the same question I think that you are asking. Then I invited a group to dinner. My guests included several businessmen and industrialists, two college heads, two men from the field of educational foundations, a banker, a lawyer, and one or two personal friends. I put the question to them. Among other things, we began to explore such questions as: What is the need; what might be the machinery of giving; should we think in terms of a foundation to which many might contribute; how much good are we likely to do?

The discussion continually ran head-on into the hard fact that it had not yet been legally demonstrated that managers of corporations can give corporate funds for general educational purposes. Discussions which we in our company have had since that time led us continually back to the central question: "Have we the right to give?"

I want to report to you today where we stand on that question.

Our board of directors has agreed that, if we can feel legally privileged to do so, our company as a corporate person, living in a great free nation and as a long-term beneficiary of our national educational system, will be one American corporation (we hope one of many) which will give to independent colleges and universities for general educational purposes. We have asked our legal department to propose to us what steps we may take to find out whether we have that privilege.

I know you will begin to ask yourselves what higher education might expect to get from business and industry for general educational purposes if it appears that corporations have the right to make such contributions.

I can't answer that question for you. We ourselves are not thinking in terms of any large sums at this time. We are already making substantial contributions to education for specific purposes. The same thing is true of a good many other companies. Furthermore, it would not be in the best interests of education to look to business and industry for the solution of its financial problems. All segments of the national life, including business, are the beneficiaries of education and should participate in its support.

I would guess that in time, however, the independent colleges and universities of this country might expect to receive substantial annual support from the business and industrial community.

The problem today, however, is to establish clearly that the interests of shareholders are, in fact, served by reasonable and thoughtful corporate giving to general education and general educational purposes.

Today, certainly, it is the establishment of this principle which is important rather than the amount which might be given. It is our hope that we may be able to carry out our own conviction that such a course is in the interests of our shareholders, and that in doing so, we may establish a useful precedent.

Investigation of Un-American Activities

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 13, 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed by Hamilton Fish to President Truman, dated December 23, 1948.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NEW YORK, N. Y., *December 23, 1948.*

Hon. HARRY TRUMAN,
President, White House,
Washington, D. C.

DEAR MR. PRESIDENT: You have persisted in attacking the Un-American Activities Committee, duly appointed by the House of Representatives, and denouncing its recent startling exposures of spies and traitors in our midst as "red herrings." I sincerely respect you, Mr. President, because you were a tough combat officer in World War I, and on account of your Missouri mulishness, but there is such a thing as carrying stubbornness too far. You must know by this time that you were wrong in raising the "red herring" issue.

Who appointed Alger Hiss to the State Department?

Who appointed him as adviser to F. D. R. at the Yalta Conference?

Who appointed him as executive secretary of the Dumbarton Oaks Conference in 1944?

Who appointed him as secretary general of the San Francisco Conference for the organization of the United Nations in 1945?

In order that I may not be considered raising a partisan issue I agree that the public is entitled to know from John Foster Dulles, a Republican, if he had anything to do with various key appointments of Mr. Alger Hiss in the State Department and as president of the Carnegie Endowment for International Peace.

We have already had too much secret diplomacy at Yalta, Teheran, and Potsdam which we are now paying for in Berlin and China, and not enough faith in the American people.

Why should any public official or loyal American want to protect Communist spies and traitors? Every individual implicated in this stealing of secret documents from the State, War, or Navy Departments should be publicly exposed and punished.

Mr. President, who is the State Department trying to cover up?

Mr. President, who were and who are the agents of the Communist Party in the State Department and other departments of the Government?

Mr. President, the American people are entitled to know how Alger Hiss and other Communist sympathizers and Red stooges infiltrated into important Government positions.

Mr. President, how long will Communist spies and traitors be permitted to infest the Federal service and abuse the patience of the American people? It is time that the various departments of the Government realized that they are the servants and not the masters of the people.

The diabolical espionage plot with its stolen documents and microfilms must be openly exposed, and everyone connected with it punished. Let no guilty man or woman escape, no matter how important or powerful, dead or alive.

The Un-American Activities Committee has rendered an important public service. It should be commended, not condemned, and its activities continued by the incoming Congress.

There can be no appeasement of Communist spies and traitors, or those aiding and abetting them. There can be no compromise with treason under any guise.

I am writing this as an American and not as a partisan Republican.

Respectfully yours,

HAMILTON FISH,
Chairman of the House Committee To Investigate Communist Propaganda and Activities in 1930–31.

British Aid to Egypt

EXTENSION OF REMARKS
OF
HON. GUY M. GILLETTE
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, January 13, 1949

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Gene Currivan, which appeared in the New York Times on January 10, purporting to be a report on the activities of the British in regard to arms deliveries to Egypt.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARMS AID TO EGYPT PUT AT $200,000,000—ISRAELI SOURCE SAYS BRITISH SHIPMENTS INCLUDED MOST MODERN JET FIGHTERS

(By Gene Currivan)

TEL AVIV, ISRAEL, January 9.—British arms deliveries to Egypt during the last few months have amounted to £50,000,000 ($200,000,000) and included shipment of the most modern design jet fighters, according to a reliable source close to the Israeli Government. In addition to aircraft the supplies also are said to have comprised naval vessels, heavy artillery tanks, heavy caliber shells, and aviation gasoline.

Most of the deliveries were made between August and the latter part of December, it was said. It was in August that Brig. John Bagot Glubb (Glubb Pasha), commander of the Arab Legion in Transjordan, visited London and was reported here to have suggested immediate aid to the Egyptians in the Negeb if the Jewish settlements were to be reduced according to plan. The latest known

arrival of the large consignments of aircraft from the United Kingdom was in mid-December when 30 Mosquito bombers were flown to Egypt, according to these confidential sources.

Other British aircraft said to have been supplied to the Egyptian Air Force include two types of British jets for which contracts were signed by Col. E. P. J. Ryan, regional representative of the Society of British Aircraft Constructors in Cairo. Six Vampires are known to have been delivered while a second consignment of Meteors is expected, according to this informant.

There was also an undetermined number of Stirling bombers, one of which crashed at Almaza Airport when it was coming in, and some Mark 9 Spitfires, all of which arrived toward the latter part of November. These deliveries were made, according to the same source, 3 weeks after the Egyptian Government had placed an order with Britain on November 9 for nine fighter-bombers. The amount of aviation gasoline said to have been placed at the disposal of the Egyptian Army and Air Force during the period January to September was estimated at 500,000 gallons.

Early in November, this informant alleged, three modern British mine sweepers of the Algerine type were turned over to the Egyptian Navy in Alexandria Harbor. Craft of this type recently shelled the Tel Aviv shore after intercepting and boarding an Israeli-bound merchant ship 60 miles off the coast. They carry a single 4-inch gun and four 20-millimeter antiaircraft guns. It is further alleged that three British Navy ships with a nearly 90 percent Egyptian complement have been cruising the Mediterranean for training purposes and that one of these ships was seen in the port of Venice last September.

These reports indicate also that British troops no longer are confined to the Canal Zone area as required by the terms of the 1936 Anglo-Egyptian treaty, but have now spread out through the Sinai Desert and Nile Delta, where abandoned airfields have been reused and are receiving RAF reinforcements. Sinai Desert detachments are said to include the North Staffordshire Regiment, a body of Lancers, and the Essex Regiment.

The informant alleged that when Glubb Pasha was in London he outlined the precarious position of the Egyptians in the Negeb and legion forces in the central front and suggested that Britain transfer as inconspicuously as possible the equipment of their medium artillery regiment that had left Palestine on its way to Misurata, Tripolitania. Glubb Pasha is said to have pointed out that the regiment at Misurata could easily be reinforced with equipment from the United Kingdom. On October 17 an American military intelligence query requested clarification of the unusual situation at the British medium artillery regiment at Misurata. It appears that the regiment had double equipment. Whether the surplus ever reached the Egyptians or was intended for them has not been disclosed.

Cash Value of the Displaced Persons

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the question of displaced persons, appearing in the Philadelphia Bulletin for January 8, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CASH VALUE OF THE DISPLACED PERSONS

In answer to those who think that refugees from Europe may take away jobs from American workmen, Government officials offer some surprising figures. They estimate that the 205,000 displaced persons who will enter this country in the next 2 years will increase the Nation's income by a minimum of $200,000,000 a year.

This does not represent their own earnings. Only about 70,000 of them will be workers, the rest are wives and children. But most of them are highly skilled workers, selected as such, for certain trades and industries which badly need them. The tailoring industry is given as an example. New York State alone needs 20,000 more master tailors. And 1 clothing company states that for every additional tailor on its staff it will hire 10 to 15 other workers who have lesser skills and abilities.

It is said in so many words that in no cases will DP's be taking jobs away from American labor. They will be making more jobs for American labor. The basic principle involved is often overlooked by those who want to protect their jobs and wages by limiting the numbers employed in any industry. More people at work, producing more goods and merchandise, increase the national wealth and income for the benefit of all.

Reasons for the Recent Election Results

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that an editorial entitled "Why It Happened" relating to the result of the recent national election, published in the El Paso Herald Post of the issue of November 4, 1948, be printed in the Appendix of the RECORD.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

WHY IT HAPPENED

Second guesses being the order of the day, we venture a few of our theories about why the election came out as it did.

Most of the credit belongs to President Truman and the fight he made. And don't overlook ALBEN BARKLEY'S part. The next Vice President didn't get many big headlines during the campaign, but he was in there plugging hard every step of the way.

We think Mr. Truman reaped the benefit of a lot of public sympathy because, right up to Tuesday, he was so generally pictured as the underdog—the game little fellow doing his best in a hopeless cause.

Editorials that criticized him harshly, cartoons that poked fun at him, columnists and commentators who pontificated about his errors, all probably helped him.

For mighty few people ever have found it possible really to dislike Harry S. Truman, while an amazing number seem to find it extremely easy not to love Governor Dewey, much as they may admire his competence.

Prosperity—high employment, high wages, record-breaking national income—worked for the President. It's tradition that the American people don't turn an administration out of power when times are good. It was not, in our opinion, consistent of Mr. Truman to claim Democratic credit for prosperity and put all the blame for the high cost of living on the Republicans. But millions of voters must have believed him.

His victories in such agricultural States as Iowa, Illinois, Wisconsin, and Ohio were thumping surprises. Evidently many farmers, too, like to be prosperous, want to keep prices for their crops high, and were persuaded that the Democrats would be most likely to keep them propped up.

Organized labor's efforts were more effective than most campaign observers thought. The union leaders, we believe, grossly misrepresented the Taft-Hartley Act, but they succeeded in making it a rallying point. And they got out the votes in industrial areas for Mr. Truman and for Democratic congressional candidates.

Incidentally, we suspect that more union members than ever before refused to tell pollsters how they intended to vote. That may have accounted for the big "undecided" figures in the polls—the figures which, as the surprised Dr. Gallup has pointed out, now appear so largely in the Truman-Barkley column.

Finally, we think Mr. Dewey was a victim of overconfidence. Like many others, including us, he put too much faith in the polls and the predictions of professional experts. Whether the outcome would have been much different if Mr. Dewey had made another type of campaign—if he had come down from the heights, scrapped his platitudes and generalities, and talked more specifically about the issues—could be debated endlessly. And fruitlessly.

The important fact is that Mr. Truman is back in the White House for a new term. And this time he got there on his own power, not as a coattail rider, not by accident. He owes nothing to the Democratic bosses who tried to ditch him at Philadelphia, to the Dixiecrats, or to the Wallaceites, or, for that matter, to the newspapers and the commentators.

For the next 4 years he will be President of the United States in his own right, and for at least the next 2 with a Congress controlled by his own party. We hope he will be one of the best and most successful Presidents this country has ever had.

No UMT Action?

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "No UMT Action?" published in the South Bend Tribune, of December 7, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO UMT ACTION?

Apparently the universal military training project will not be vigorously pushed, at least in the impending first regular session of the new Congress. A UMT advocate who will be in a strategic legislative position when the new Congress is organized expresses pessimism. Representative CARL VINSON, Georgia Democrat, announces formally that he will not ask the Armed Services Committee to consider the project in the next session. As Representative VINSON will become chairman of that committee in January his stand has much practical import.

Representative VINSON emphasizes the prospect that Congress will not appropriate sufficient money to raise the Army to the strength set forth in the Selective Service Act for the Regular Establishment. Approval of a universal military training program would make necessary a large increase in the Federal military budget. Actually President Truman has indicated determination to limit the military budget. Mr. VINSON finds it best not to mention the President's attitude which, after all, may be the determining factor in congressional planning and actions where military matters are concerned.

Universal military training remains decidedly controversial. This distinguishes it from the peacetime selective-service system already in operation with congressional sanction. Even if sentiment in favor of UMT were more extensive in the next Congress it would appear rather incongruous to sanction spending of money for that at a time when the Regular Army expansion program authorized basically by Congress is not being fully carried out. Impliedly President Truman is not enthusiastic about universal military training at this time.

The President's Budget

EXTENSION OF REMARKS
OF
HON. ZALES N. ECTON
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, January 13, 1949

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Beyond Safe Limits," from the Washington News of January 11, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BEYOND SAFE LIMITS

President Truman's budget for fiscal 1950—the 12 months beginning next July—calls for record Government peacetime spending of $41,858,000,000.

That's 40 times as much as the Government ever spent in a fiscal year before World War I; more than twice what it spent in that war's most expensive year; nearly 5 times what it spent in the New Deal's peak year of war against depression; two-fifths as much as it spent in the costliest year of World War II.

To balance the budget, and provide a surplus for use in cutting down the public debt, Mr. Truman wants $4,000,000,000 in new taxes on corporations and individuals. He also wants nearly $2,000,000,000 in new pay-roll taxes, to start health insurance and expend social security.

These taxes—if the national income stays high—would boost the Government's revenue to about $46,000,000,000. That's almost as much as it collected in fiscal 1945, at the height of World War II, and more than six times what it collected in any year before that war.

We agree with Mr. Truman that a prosperous country cannot afford an unbalanced budget—that the Government must take in more than it spends and apply the difference toward retiring the debt.

But peacetime taxes of the magnitude proposed could so burden the national economy that the national income would fall and higher tax rates would produce less revenue. That, in our opinion, is a grave danger.

So we think it is the urgent duty of Congress to apply the acid test to Mr. Truman's statement that his spending proposals present a minimum level below which our responsibilities will not permit us to go.

It is true, as the President points out, that past wars and efforts to prevent another war—or to be prepared to win it if it cannot be prevented—are responsible for more than three-fourths of the expenditures he advocates.

Of each dollar in his proposed budget national defense costs would take 34 cents; international spending, chiefly to help other countries recover and withstand Russian aggression, 16 cents; services and benefits to veterans, 13 cents; interest on the debt, 13 cents. Only 6 cents would go for social welfare, health, and security programs, and 18 cents for all other Federal activities.

And it is true that what Mr. Truman asks for national defense is less than what many military authorities say is essential.

But it is also true that the 6 cents of each Truman budget dollar proposed for social welfare, health, and security programs would account for the spending of about $2,400,000,000 in fiscal 1950, and for more than that in future years. The 18 cents of each Truman budget dollar proposed for "all other" Federal activities would account for the spending of $7,500,000,000.

Those two items total $9,900,000,000—which is more than the entire cost of the Government only 10 years ago, in fiscal 1940. We are sure there is no compelling reason that they should be that large.

Now is the time for Congress to adopt, and observe, a legislative budget of its own, as required by the La Follette-Monroney congressional reorganization law.

First step should be to determine how much the American people can afford to pay for present and new or expanded governmental activities.

Next step should be to fix what the people can afford as a ceiling on appropriations, and to stay within that ceiling.

We believe Mr. Truman's budget would push spending beyond safe limits, and that is no way to insure social welfare, or security, or prosperity, or peace.

The Truman-Democratic Victory

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, January 13, 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Stupendous Surprise," published in the Birmingham Age-Herald for November 4, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STUPENDOUS SURPRISE

The surprise and the significance of the Truman-Democratic victory in the presidential election are so stupendous as to overwhelm any human power of immediate, precise, and assured analysis. But certain things are clear and profoundly impressive. The Democratic Party, in the face of intense internal dissension and an apparently strong sentiment for a change in executive control of the Government, has won an astounding and sweeping victory. President Truman, subject to a terrific barrage of criticism, much of which came from within usually Democratic ranks, and widely proclaimed a sure loser, has won a tremendous personal triumph.

The party and its leader have been given a clear and strong mandate by the people. After 2 years of divided control in Washington, the Democrats are once more in full command.

How did that come about? Discussion of that question will proceed for many a year. It is difficult, indeed impossible, to generalize a complete answer. Many factors were influential. But conspicuous considerations immediately present themselves.

This paper, having expressed its continuing faith in the merits and potentialities of the National Democratic Party, nevertheless had come to feel that the sentiment for change and the division in party ranks and the widespread criticism of the President, some of it extreme, were too much for Mr. Truman and the Democrats to overcome.

But Mr. Truman himself never lost hope. One must grant now that there was reason for his proclamations of confidence, that such expressions did not issue merely from political expediency.

Generally, close observers, trying to appraise the outlook objectively, seem to have grossly underestimated the factors favorable to Mr. Truman and the Democrats and to have overestimated those which appeared to assure a Republican victory.

What counted decisively for the Democrats apparently was a continuing lack of faith that the Republican Party and Mr. Dewey gave assurance of a satisfactory dealing with domestic and international problems. Mr. Truman bore down heavily on this contention. He pointed to the Republican attitude on aid to foreign nations, on housing, on inflationary dangers. He upheld vigorously the Democratic record on labor and farm legislation. The upswell of response is the most outstanding of the factors contributing to his victory.

The record of the Eightieth Congress, vulnerable in important respects and subjected to an unrelenting, hammering attack by Mr. Truman, had much to do with producing the result. The President was resolved that the people should not overlook these shortcomings. He drove hard in his attack and he made great headway with it. The 1946 election resulted from a healthful reaction against certain extremes of the New Deal administrations, but the Republicans, tending toward power-drunkenness after long exclusion from control, went too far. Tuesday's election was in part a counterreaction to such extremism.

Against the sharp denunciation of the President's own record, there was evidently a growing sympathy for him as an underdog candidate, an accelerating response to his aggressive campaigning.

On the other hand, Governor Dewey did not call forth a great popular enthusiasm. His emphasis—and that of Governor Warren—on unity was admirable in spirit but many voters must have felt that his campaign and his party failed to provide adequate specific assurances for the future respecting matters of deep concern to them.

One of the remarkable aspects of the result is presented by the number of Americans who made independent decisions for themselves despite the strongly dominant expressions of sentiment that a Dewey victory was virtually certain. Whether or not one agrees with those who in this spirit decided for Mr. Truman and the Democratic Party, such independence commands high respect and is refreshing and heartening as a manifestation of the free American spirit.

With the Democrats taking over control of both executive and legislative branches of the Government, after a campaign of much bitterness and grave concern; with the Nation and the world still confronting urgent and complex problems of tremendous import and danger, our country faces a new

summons to basic unity and wholehearted patriotic devotion.

The messages of congratulation and good wishes to the President from Governor Dewey and Governor Warren sets a lofty example of the spirit which should govern all Americans.

President Truman has won one of the most extraordinary personal triumphs in American history. The Democratic Party has again been given a very remarkable vote of confidence.

The President, we hope and believe, will be sincerely humbled by the outcome. We believe he will continue trying to give his best service to the Nation. He has limitations. He has made serious mistakes. But we have never doubted his intent, his devotion, his courage. The spirit he showed when he suddenly found the immeasurable responsibilities of the Presidency imposed on him commanded the confidence and admiration of the country. We believe that his true spirit.

Learning much from gruelling experience, growing under the demands of his exalted and powerful office, he faces an opportunity of staggering magnitude.

Of course he should have the good wishes and the support of all our people as he strives to serve us all.

As for the party, instead of the break-up which many felt was threatening it, it has achieved vigorous renewal and is challenged to prove that it merits the confidence which has been expressed in it. That, we are confident, will be its high aim. Good will, magnanimity, moderation, and courageous fidelity to what is in the highest interest of the Nation should be the resolute purpose of us all.

ECA Double-Cross

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "ECA Double-Cross," published in the South Bend Tribune of December 16, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ECA DOUBLE-CROSS

The Governments of the Netherlands, Belgium, and the United Kingdom are indicating irritation because the United States Government has decided that they have not been entirely fair in the ECA or Marshall plan period. As beneficiaries of the Marshall plan, they have been and still are asking for and receiving supplies of aluminum and lead from the United States. At the same time they have been buying aluminum in Canada at relatively low prices and reselling it in the United States with the "scrap" label at prices guaranteeing them substantial profits. Lead is classified as an "associated" metal.

From the viewpoint of Americans who are straining if not actually overstraining their own national economy to assist western European nations, this is fantastic and practically intolerable. Spokesmen for the American aluminum industry estimate that the cross hauling of the metal to and fro across the Atlantic is costing American taxpayers about $26,000,000 a year. They estimate also that aluminum users in this country are paying a large annual premium because of the effect on the domestic market and supply of the diversion of metal to the purportedly needy European countries. Ironically the Europeans are said to be evading the American tariff levies on their exports of aluminum and associated metal to the United States by classifying the shipped metal as scrap.

No matter what fine diplomatic explanations are contrived, nobody can convince intelligent Americans that this is not fundamentally a form of double-crossing. It has been going on for many months. The United States Government could and should have taken corrective steps earlier this year. Only now, apparently because the ECA set-up will have to run the congressional gantlet before next July 1, first because an ECA deficiency appropriation is to be requested and, second, because Congress must vote an appropriation for the full 1948–49 fiscal year, the executive department in Washington is making an issue of the foreign double-crossing.

The public in this country, for the most part, has reconciled itself to the Economic Cooperation Administration system on the assumption that it is a vital necessity. The public, however, is made resentful by evidence that the good will, honesty, and high spirit of the system are confined to the United States. No doubt this aluminum-lead revelation, whether or not complete correction is forced in the meantime, will cause much discussion in Congress. The legislators would be derelict if they ignored it.

The Christian in Action

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement issued November 21, 1948, by the bishops of the United States:

THE CHRISTIAN IN ACTION

Human life centers in God. The failure to center life in God is secularism—which, as we pointed out last year, is the most deadly menace to our Christian and American way of living. We shall not successfully combat this evil merely by defining and condemning it. Constructive effort is called for to counteract this corrosive influence in every phase of life where individual attitudes are a determining factor—in the home, in the school, at work, and in civil polity. For as man is, so ultimately are all the institutions of human society.

To combat secularism, the individual Christian must get the full vision of Christian truth. It is not divisible. One cannot pick and choose from it. Either it is accepted as a whole or it counts for little in real life. When the Christian does get this full vision, he becomes enthusiastic in trying to share it with the world about him. It is a wonderful vision which gives new meaning to human life and an impelling urge to selfless action. The sorry fact is that many, very many Christians, see this vision only dimly and vaguely and miss its impact on reality. They hold themselves to be Christians and are accepted as Christians, but they have never been thrilled by the glory of the truth of Christ in action. By their apathy they actually abet those who work for destruction and chaos. They criticize and even deplore the decay of morality and the spread of corruption in public life, but they feel no obligation to do anything about it. They simply do not realize that the great wonder of divine love is that it brings the divine into human life and that godliness in living is giving self to God. The great Christian paradox is that to find you must lose, to get you must give. Much of the confusion and chaos about us is attributable more directly to the inaction of Christians than to the effectiveness of the feverish efforts of the destroyers. The destroyers are definitely a minority, and yet the work of destruction goes on. The crisis is at hand. Today every Christian must face the full Christian vision and with no thought of compromise must seek vigorously to live it. Every day he must ask himself: What am I doing to build a Christian world? No matter what his condition or state, there is much that he can do. The reconstruction must start with the individual. He must be vigorously Christian in thought and in action—in the home, in the training of his children, in his office or workshop, and in his community.

RELIGION IN THE HOME

In the full Christian vision, there is the divine ideal of the home—the basic social institution. It is not enough to profess the Christian truths of the stability and sanctity of the marriage bond and to keep in mind the purposes of marriage. The Christian must make his home holy. It remained for modern history to record the first experiment in secularizing the home, an experiment which is at the root of so many of our greatest social evils. The Christian home must realize the Christian ideal. The whole atmosphere of the home must be impregnated with genuine Christian living. The domestic virtues must be practiced, and family prayer made a daily exercise. It is in the home that the children learn their responsibility to God and in this responsibility their duty to others. The home is the child's first school, in which he is taught to make the vision of Christian truth the inspiration of all living. We strongly commend organized effort to make the home more truly Christian. Our Catholic Family Life Bureau plans and offers programs which make for a veritable apostolate of the Catholic home. It is gratifying to see the use that is being made of these programs by our Catholic lay organizations and the spread of this work in our dioceses. These activities serve as a powerful antidote to the venom of secularism and withstand its withering effect on piety and virtue in the American home. All of us are familiar with the problems which the family faces in our complex and maladjusted society. In trying to solve these problems we must not compromise our Christian principles. The solution of these problems is only a part of the solution of the wider social problems of our day. To do their part, our homes must be thoroughly Christian and must let the glory of the full vision of Christian truth illumine them.

RELIGION IN EDUCATION

We know the sacrifices made by our people to educate their children in schools in which the "superabundant wisdom" is the gospel of Christ. Catholic parents closely associate their schools with their Christian homes, because they know that human living must center in God. Year after year we are making wider provisions for the education of our Catholic youth. At a time when secularism has captured the minds of very many leaders in education, it is heartening that Catholic parents are becoming more insistent in their demand for schools in which the best standards of instruction and training are integrated in the teaching of religion. It behooves us to see that we enable our schools to work out fully the Christian educational ideal. The field of higher education in particular demands a

wider and more active interest. Our institutions of higher learning are the natural training grounds for Christian leadership. The ranks of Christian leadership will draw recruits largely from the undergraduate schools, but these ranks will not be filled without the Christian scholars who are formed in graduate schools. Perhaps much of the success of the secularist is due to the fact that the number of excellent Christian scholars is inadequate for the needs of our times. We ask a deeper appreciation of the contribution our institutions of higher learning are making to a Christian reconstruction of society, and we urge a more generous support of their work. For if we as Christians are to do our part in restoring order to a chaotic world, Christ must be the Master in our classrooms and lecture halls and the Director of our research projects.

RELIGION AND ECONOMIC LIFE

Christian principles should be put into action in economic life. It is not enough to find fault with the way our economic system is working. Positive, constructive thought and action are needed.

The secularist solutions proposed by eighteenth century individualism or twentieth century statism issue either in perpetual conflict or deadening repression. Christian social principles, rooted in the moral law, call insistently for cooperation not conflict, for freedom not repression in the development of economic activity. Cooperation must be organized—organized for the common good; freedom must be ordered—ordered for the common good. Today we have labor partly organized, but chiefly for its own interests. We have capital or management organized, possibly on a larger scale, but again chiefly for its own interests. What we urgently need, in the Christian view of social order, is the free organization of capital and labor in permanent agencies of cooperation for the common good. To insure that this organization does not lose sight of the common good, government as the responsible custodian of the public interest should have a part in it. But its part should be to stimulate, to guide, to restrain, not to dominate. This is perfectly in line with our Federal Constitution which empowers Government not only "to establish justice" but also to promote the general welfare.

Catholic social philosophy has a constructive program for this organic development of economic life. Pope Pius XI, rounding out the social principles formulated by Leo XIII, laid down the broad outlines of this program 17 years ago. In line with that constructive program we advocate freely organized cooperation between the accredited representatives of capital and labor in each industry and in the economy as a whole under the supervision but not the control of government. The agencies of this freely organized cooperation have been called by various names: occupational groups, vocational groups, or more recently industry councils. American Catholic students of the social encyclicals have expressed their preference for the name "industry councils" to designate the basic organs of a Christian and American type of economic democracy into which they would like to see our economic system progressively evolve. This evolution can come only as the fruit of painstaking study and effort to safeguard, in justice and charity, the rightful interests of property and the rightful interests of labor in the pursuit of the dominant interest of all, which is the common good.

Such a constructive program of social order seems to us to be the answer to the questionings of high-minded leaders of industry and to the explicit proposals of sound and responsible leaders of organized labor. We bespeak for it in these critical times dispassionate consideration and calm, open discussion in an atmosphere of good will, and in a disposition to seek solutions by agreement rather than by force, whether political or economic. We call upon men of religious faith and principle, both in management and labor, to take the lead in working out and applying, gradually if need be, a constructive social program of this type. For the moral and social ideals which it would realize are the heritage.

RELIGION AND CITIZENSHIP

The inroads of secularism in civil life are a challenge to the Christian citizen—and indeed to every citizen with definite religious convictions. The essential connection between religion and good citizenship is deep in our American tradition. Those who took the lead in establishing our independence and framing our Constitution were firm and explicit in the conviction that religion and morality are the strong supports of national well-being, that national morality cannot long prevail in the absence of religious principle, and that impartial encouragement of religious influence on its citizens is a proper and practical function of good government. This American tradition clearly envisioned the school as the meeting place of these helpful interacting influences. The third article of the Northwest Ordinance passed by Congress in 1787, reenacted in 1790, and included in the constitutions of many States enjoins: Religion, morality and knowledge being necessary to good citizenship and the happiness of mankind, schools and the means of education shall forever be encouraged. This is our authentic American tradition on the philosophy of education for citizenship.

In the field of law our history reveals the same fundamental connection between religion and citizenship. It is through law that Government exercises control over its citizens for the common good and establishes a balance between their rights and duties. The American concept of Government and law started with the recognition that man's inalienable rights—which it is the function of Government to protect—derive from God, his Creator. It thus bases human law, which deals with man's rights and his correlative duties in society, on foundations that are definitely religious, on principles that emerge from the definite view of man as a creature of God. This view of man anchors human law to the natural law, which is the moral law of God made clear to us through the judgments of human reason and the dictates of conscience. The natural law, as an outstanding modern legal commentator has written, "is binding over all the globe, in all countries and at all times; no human laws are of any validity if contrary to this." Thus human law is essentially an ordinance of reason, not merely a dictate of will on the part of the state. In our authentic American tradition this is the accepted philosophy of law.

On this basically religious tradition concerning the preparation of the citizen through education and the direction of the citizen through law, secularism has in the past century exercised a corrosive influence. It has banned religion from tax-supported education and is now bent on destroying all cooperation between government and organized religion in the training of our future citizens. It has undermined the religious foundations of law in the minds of many men in the legal profession and has predisposed them to accept the legalistic tyranny of the omnipotent state. It has cleverly exploited, to the detriment of religion and good citizenship, the delicate problem of cooperation between church and state in a country of divided religious allegiance. That concrete problem, delicate as it is, can, without sacrific of principle, be solved in a practical way when good will and a spirit of fairness prevail. Authoritative Catholic teaching on the relations between church and state, as set forth in papal encyclicals and in the treatises of recognized writers on ecclesiastical law, not only states clearly what these relations should normally be under ideal conditions, but also indicates to what extent the Catholic Church can adapt herself to the particular conditions that may obtain in different countries. Examining, in the full perspective of that teaching, the position which those who founded our Nation and framed its basic law took on the problem of church-state relations in our own country, we find that the first amendment to our Constitution solved that problem in a way that was typically American in its practical recognition of existing conditions and its evident desire to be fair to all citizens of whatever religious faith. To one who knows something of history and law, the meaning of the first amendment is clear enough from its own words: "Congress shall make no laws respecting an establishment of religion or forbidding the free exercise thereof." The meaning is even clearer in the records of the Congress that enacted it. Then, and throughout English and Colonial history, an "establishment of religion" meant the setting up by law of an official church which would receive from the government favors not equally accorded to others in the cooperation between government and religion—which was simply taken for granted in our country at that time and has, in many ways, continued to this day. Under the first amendment, the Federal Government could not extend this type of preferential treatment to one religion as against another, nor could it compel or forbid any State to do so. If this practical policy be described by the loose metaphor "a wall of separation between church and state," that term must be understood in a definite and typically American sense. It would be an utter distortion of American history and law to make that practical policy involve the indifference to religion and the exclusion of cooperation between religion and government implied in the term "separation of church and state" as it has become the shibboleth of doctrinaire secularism.

Within the past 2 years secularism has scored unprecedented victories in its opposition to governmental encouragement of religious and moral training, even where no preferential treatment of one religion over another is involved. In two recent cases, the Supreme Court of the United States has adopted an entirely novel and ominously extensive interpretation of the "establishment of religion" clause of the first amendment. This interpretation would bar any cooperation between government and organized religion which would aid religion, even where no discrimination between religious bodies is in question. This reading of the first amendment, as a group of non-Catholic religious leaders recently noted, will endanger "forms of cooperation between church and state which have been taken for granted by the American people," and "greatly accelerate the trend toward the secularization of our culture."

Reluctant as we are to criticize our supreme judicial tribunal, we cannot but observe that when the members of that tribunal write long and varying opinions in handing down a decision, they must expect that intelligent citizens of a democracy will study and appraise these opinions. The Journal of the American Bar Association, in a critical analysis of one of the cases in question, pertinently remarks: "The traditionally religious sanctions of our laws and government are challenged by a judicial propensity which deserves the careful thought and study of lawyers and people."

Lawyers trained in the American tradition of law will be amazed to find that in the McCollum case the majority opinions pay scant attention to logic, history, or accepted norms of legal interpretation. Logic would

demand that what is less clear be defined by what is more clear. In the present instance we find just the reverse. The carefully chiselled phrases of the first amendment are defined by the misleading metaphor "the wall of separation between church and state." This metaphor of Jefferson specifies nothing except that there shall be no "established church," no state religion. All the rest of its content depends on the letter of the law that sets it up and can in the concrete imply anything from the impartial cooperation between government and free religious bodies (as in Holland and traditionally in our own country) all the way down to bitter persecution of religion (as in France at the turn of the century). As was pointedly remarked in a dissenting opinion: "A rule of law cannot be drawn from a metaphor."

A glance at the history of Jefferson's own life and work would have served as a warning against the broad and devastating application of his "wall of separation" metaphor that we find in this case. The expression first appears in a letter written by Jefferson in 1802 and, significantly enough, in a context that makes it refer to the "free exercise of religion" clause rather than to the "establishment of religion" clause of the first amendment. Twenty years later Jefferson clearly showed in action that his concept of "separation of church and state" was far different from the concept of those who now appeal to his metaphor as a norm of interpretation. As the rector of the State University of Virginia, Jefferson proposed a system of cooperation between the various religious groups and the university which goes far beyond anything under consideration in the case at hand. And Mr. Madison, who had proposed the first amendment and who led in carrying it through to enactment by Congress, was one of the visitors of the University of Virginia who approved Jefferson's plan.

Even one who is not a lawyer would expect to find in the opinion of the Court some discussion of what was in the minds of the Members of Congress when they framed and adopted the first amendment. For it would seem that the intent of the legislator should be of capital importance in interpreting any law when a doubt is raised as to the objective meaning of the words in which it is framed. In regard to the establishment of religion clause, there is no doubt of the intent of the legislator. It is clear in the record of the Congress that framed it and of the State legislatures that ratified it. To them it meant no official church for the country as a whole, no preferment of one religion over another by the Federal Government—and at the same time no interference by the Federal Government in the church-state relations of the individual States.

The opinion of the court advances no reason for disregarding the mind of the legislator. But that reason is discernible in a concurring opinion adhered to by four of the nine Judges. There we see clearly the determining influence of secularist theories of public education—and possibly of law. One cannot but remark that if this secularist influence is to prevail in our Government and its institutions, such a result should in candor and logic and law be achieved by legislation adopted after full popular discussion, and not by the judicial procedure of an ideological interpretation of our Constitution.

We, therefore, hope and pray that the novel interpretation of the first amendment recently adopted by the Supreme Court will in due process be revised. To that end we shall peacefully, patiently, and perseveringly work. We feel with deep conviction that for the sake of both good citizenship and religion there should be a reaffirmation of our original American tradition of free cooperation between government and religious bodies—cooperation involving no special privilege to any group and no restriction on the religious liberty of any citizen. We solemnly disclaim any intent or desire to alter this prudent and fair American policy of government in dealing with the delicate problems that have their source in the divided religious allegiance of our citizens. We call upon our Catholic people to seek in their faith an inspiration and a guide in making an informed contribution to good citizenship. We urge members of the legal profession in particular to develop and apply their special competence in this field. We stand ready to cooperate in fairness and charity with all who believe in God and are devoted to freedom under God to avert the impending danger to a judicial establishment of secularism that would ban God from public life. For secularism is threatening the religious foundations of our national life and preparing the way for the advent of the omnipotent state.

(Statement issued November 21, 1948, by the bishops of the United States and signed in their names by the members of the administrative board, National Catholic Welfare Conference: Dennis Cardinal Dougherty, Archbishop of Philadelphia; Edward Cardinal Mooney, Archbishop of Detroit; Samuel Cardinal Stritch, Archbishop of Chicago; Francis Cardinal Spellman, Archbishop of New York; Francis P. Keough, Archbishop of Baltimore; John T. McNicholas, O. P., Archbishop of Cincinnati; Robert E. Lucey, Archbishop of San Antonio; Richard J. Cushing, Archbishop of Boston; Joseph E. Ritter, Archbishop of St. Louis; John Mark Gannon, Bishop of Erie; John F. Noll, Bishop of Fort Wayne; Emmet M. Walsh, Bishop of Charleston; Karl J. Alter, Bishop of Toledo; Michael J. Ready, Bishop of Columbus.)

The Man Who Fights

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Man Who Fights", appearing in the Arkansas Gazette, of Little Rock, Ark., for November 6, 1948.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MAN WHO FIGHTS

Just as the "Message to Garcia" furnished an inspiring example of asking no questions, raising no difficulties, but going on with the mission, so the fight that Harry S. Truman made for his election as president was an inspiring example of unfaltering courage and unflinching resolution.

The prospects and the predictions were enough to discourage any man, enough to take the starch out of any candidate, to shake his will and make his words belie his true belief as to his chances. But Mr. Truman was adamant against the dismal and the despairing. He was unmoved by desertions in high places and impervious to the insidious needles of doubt and pessimism. He bounced and bounded with joyful enthusiasm in the face of the most widespread assumption that his defeat was certain. It was not alone the partisan spokesmen who gave him no chance. The political poll takers' figures showed him defeated, and sincerely impartial observers and commentators were convinced that nothing short of a miracle could save him.

But instead of letting himself be sunk by succumbing to the idea that he had been nominated by the Philadelphia convention as the leader of a lost cause, he came out fighting and lifted up the Democratic delegates into sorely needed enthusiasm. Then he swung through the country with unbeatable optimism and with confidence and defiance. There must have been millions of people who were not going to vote for him, or people who felt that their faithful votes were going to be thrown away, who still admired his indomitable fighting spirit. If he had for a moment faltered, he would have left limp and downcast many members of his own party who stood by him through the campaign with little or no hope that he could be elected.

The way this Presidential election was won is the way many a battle has been won in war. Some military leader has refused to count odds, has stood firm against conventional judgment of the situation, has struck fire from cold ashes, and laid on the attack with all his army had in it.

The lesson has been taught again that has been taught so many times in human experience, from mighty conflicts on the field of battle to football fields, from beds of serious illness to lesser things—the battle is not lost until it is over. And the man who has won at last against forces that seemed remorselessly to doom him to failure has new confidence in his own star of fortune and new respect and admiration from others—as Harry S. Truman is now fairly entitled to have.

Statement of the University Bank of Kansas City, Mo.

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement issued by the University Bank, of Kansas City, Mo.:

GUARD US AGAINST THOSE THAT WOULD DESTROY OUR LIBERTY AND FREEDOM

(Statement of the University Bank, Kansas City, Mo.)

"GIMME" CHECKS

That was the answer! Santa Claus could not be shot so close to Christmas. The labor racketeers, now so gleefully frothing in anticipation of the rescinding of the Taft-Hartley law, are grasping with alacrity all credit for Truman's election, even in the face of failing miserably in carrying such highly industrialized States as Pennsylvania, Michigan, and others, though up in Republican Iowa, where the tall corn grows, and in similar agricultural States, where the "gimme" checks have been flowing for years, the story was different. But, or, how sad will this fantastic vote-buying scheme prove to be as our cycle of bankruptcy unfolds!

In proof of the potency of these "gimme" checks, allow me to give you an example. I said to an old friend who owns hundreds of acres of choice farm land: "Jim, you are well to do and should not accept these gratuitous checks from your Government that is so deeply in debt. Instead you should be setting an example of integrity. No man with a good farm should be paid money that is leaving a debt on unborn children."

His reply: "Rolla you are just a d—— —— fool. The New Deal is putting out

this money, and if any of it is ever paid back I will have to help do it, so I am taking it."

Further, the farmers like those "gimme" checks, and you are never going to be able to take them away. It is like a fellow getting a pension that he does not deserve; after receiving it for awhile he is not going to give it up.

There is nothing more vital or necessary than the education and encouragement by the Government of sound soil conservation, but to pay a farmer to improve his own soil is political demagoguery.

It is the billions upon billions that we are shipping abroad, representing both the fruits of labor and our natural resources, which has made everything scarce and high at home, thus creating a synthetic prosperity. This continuation of our inflation has given our unthinking masses more money to spend than they have ever known before, producing an unnatural economic condition. They do not realize where this money is coming from and that we all will be punished for this waste in the future as they are not concerned about the solvency of their Government; it simply means prosperity to them now.

So it was this artificial prosperity of the present time that elected Truman. It is a serious reflection upon the economic intelligence of our people and is only the continuation of Roosevelt's vote-buying schemes, with additional promises of new and fantastic spending, more Marxist philosophies, subterfuges, paternalism, and bureaucacy.

The theory of socialism always subtracts, and never adds, to the wealth of a nation. Socialism and communism spring from the same seed. The difference is that socialism represents the transition period between private ownership and communism, and its followers increase only during the confiscation of private accumulations. When poverty seeks its level for all, communism follows. This has been the history in the Old World. A perfect example is Russia, where human freedom has been lost and the people are slaves of the state, without even the right of emigration.

If socialism is such a utopia why are England, France, and other countries pleading with this Nation of private enterprise for help? And if our demagogues continue in power how long will it be before we will be in the same condition as they?

The New Dealers have been using the poison of socialism for 16 years in their frenzy to gain the votes of that class demanding something for nothing, though, like oil and water, it cannot mix with the principles of a government founded, as was ours, upon individual responsibility and, in the end, will destroy man's most precious heritage—human liberty and the private ownership of property.

The more involved nations become financially the more hysterical their people and politicians become in their desires to climb on the back of the government. The deeper the morass the greater the demands for increased salaries, pensions, price control, guaranteed jobs and wages, and socialized medicine and dental care. Like a child looks to its parent, they demand Federal aid for all the necessities of life, including guaranteed security.

And the tragedy is that they will vote for the demagogues that promise them the most. Differing from the Pilgrims who landed at Plymouth Rock and our pioneers who blazed the trails that made possible this great Nation, they are now treading the pride of their ancestors in the mire of iniquity. Our New Dealers have so poisoned the minds of our people that they can't realize that liberty and freedom specifically have but one price tag, and that is individual responsibility.

If one doubts this statement, look at England; once the proudest nation in the world, its integrity unquestionable, now but a mendicant nation, constantly begging without a thought of repaying her obligations, yet she is continuously increasing her socializations. Another perfect example of this transition period.

Lord Macaulay, that great economist of his day, speaking of our form of government, said we were "all sail and no anchor," implying the Government of England was on a sounder basis. Little did he realize that bankruptcy would come to his beloved England first, though, alas, I fear she will not be for long alone in these days of economic snares and delusions.

Everyone who thinks at all knows that these vote-buying schemes will eventually bankrupt this Nation for the reason there simply is not enough of our people with that old pioneer pride, who pay their own way and stand upon their own feet, to continue carrying the financial burdens of all the world together with the demands of our increasing class of "gimme's" in our own country. The results are inevitable.

"The power to tax is the power to destroy." Never were truer words uttered by mortal man nor a time when they need to be so harkened to and indelibly impressed upon the minds of the American people. The hundreds of billions we have squandered in the past few years now remain a mortgage upon the lives of unborn generations. This waste and its inflation should have produced some of the prosperity the demagogues brag about. But these debts and interest are a fixed liability upon the backs of our taxpayers, and if the New Dealers keep the demagogic promises they made in their desperation to win, it is impossible to imagine what the necessary increases in our taxes will be on top of our present confiscatory rates.

Granting that this country has been wonderfully blessed in natural resources, which we have been wasting, we have been piling up a bonded debt, a currency-inflated debt, and unknown contingent debts, totaling, no doubt, over $500,000,000,000. This means that our spending in the past 15 years has been astronomical. This economic camouflage cannot last, for somewhere along the line there is bound to be a breaking point. There will be no money in Europe to buy our surplus products, and our people, now geared to this artificial spending, prices, and wages, and stuffed full as they are about the "abundant life," and so forth, will have a rude awakening. What then? Just history repeating itself. The unsound promises of oily tongued demagogues have bankrupted another country.

Harry Truman's entire success in life is due to machine politics. His affiliation with the corrupt, ruthless Pendergast machine made him a Senator, and as a rubber-stamp follower of Roosevelt he is now President. His political code is of machine quality and more precious to his way of thinking than the preservation of this Nation. Like others unsuccessful in business but highly successful in politics, he has little respect for the successful businessman because everything that comes first with him is wrapped up in politics. This background and record of Truman should be a solemn warning to all businessmen and patriotic Americans.

Practically every law passed under the New Deal was a vote-buying scheme and is proving to be gradually bankrupting this Nation; no doubt with the approval of Moscow, which is bleeding us white with the expense of its cold war.

If it were not for the fact that our country needed, as never before, a thorough housecleaning and that far more conservative men would have been elected on the Republican ticket, Dewey personally got what was coming to him for the millions of "gimme's," now receiving billions in gratuitous checks, were in no mood to vote for an imitation promiser after enjoying a sure thing for so many years, coming from the billions squandered and the taxing of literally everything but the air we breathe.

What Dewey grossly underestimated was the millions of patriotic citizens who read lightly and know little about economics but whose votes he could have received if he had crusaded earnestly, simply by explaining the true facts of the New Deal's economics, how great is the danger of our national debt and our present inflated currency, and how necessary it is to restore our Government to solvency.

I still have enough faith that if our people realized the truth of what has really happened to our country they would refuse to travel further on the road to socialism and slavery for it is the serious responsibility of every parent to protect the future freedom of his children.

Truman laid himself wide open with rank, reckless, and bankrupting promises, and Dewey failed to explain the inevitable results if those promises are kept. Honor and sound principles were all on his side, but he failed to take a militant stand and fight for the right with convincing proofs, which he could so easily have done.

The terms "Democrat" and "Republican" are today misnomers. The Democratic Party is now under the control of the Socialists, "gimme's," and racketeers. And all the Republican label does is to separate the good people of the North from those of the South, yet both believing, as did our founding fathers, in human liberty, States' rights, and a solvent, constitutional form of government. So why not the Constitutional Party, uniting our virile citizens instead of allowing only a name to separate us?

With hope that springs eternal, though the hour be late, with your prayer and mine, encourage our people to restore the pride and integrity of our pioneer ancestors. Scorn the demagogue and his promises of handouts unearned. Be proud to choose the hard right road instead of the easier wrong road. Encourage individual responsibility and make sacred charity for all those in need. Guard us against those that would destroy our liberty and freedom, and help us sweep back this tide of poisoned thinking, for we want no nursemaid state that would enslave us and spoon us out our food.

J. R. BREED.

Any man whose allegiance to Moscow is more sacred than to his native land is not a citizen. If he refuses to answer with pride that he is not a Communist, he has convicted himself. He should be given 30 days to leave this country, never to return, or shot like a spy, which he is.

J. R. BREED.

SOMETHING IS WRONG

When we increase salaries instead of cutting debts; when consumers are promised cheaper food and farmers higher prices; when the canons of government show no desire to economize; when citizens are promised low-priced houses and unions higher wages; when the masses say, "What do we care about the debt?"; when midgets, mental and economic, are in the seats of the mighty; when people are encouraged to desire something for nothing; when politicians assume the power to fix wages and hours of work; when unions are given a monopoly and politicians surrender to their power; when any method other than economy and sacrifice is used to restore financial soundness; when an American boy is forced to join a union to have the right to work; when mob psychology is for it; when the farmer votes the same political ticket as the labor racketeer; when Senators and Representatives vote themselves pensions; when the taxpayer is considered a sucker and the forgotten man; when governments encourage 100-percent loans on inflated prices, with grief to follow for all; when magic replaces solvent government and the science of simple arithmetic; when people are paid for not working; when politicians are made

custodians of insurance funds (social security); when a country, billions upon billions in debt, can only work 40 hours a week; when any excuse other than squandering is given as a cause of inflation; when the financial judgments of human parasites control a nation; when "gimme" checks soothe the conscience and integrity of men; when the intelligent class lose the financial control of a nation; when Communists are allowed to remain citizens; when parlor pinks call themselves Democrats; when the indolent are promised the abundant life and given pensions; when industry and frugality cease to be the foundation of good government; when taxes of one State are used to build Moscow apartments in another; when people are encouraged to look for Government doles in their old age; when the bankrupting abilities of New Dealers are rewarded with higher salaries; when men willingly trade freedom for socialism; when a government, hundreds of billions in debt, promises social security; when the votes of the indolent are more sought after than those of the diligent; when there is no fear of billions of debts; when your own Government competes with private business yet exists on its taxes; when a government encourages cooperative associations yet lives from the taxes of private business; when farm products are sky high yet must be subsidized; when so-called social security funds are used for current expenses; when men that have been failures in private life are elected Presidents; when the earning power of the dollar is artificially made nearly worthless; when our Post Office Department, a monopoly, loses 300 million dollars in 1947 and 500 million in 1948, while paying no interest or taxes, thus proving socialism in action; when a man owning a good farm is subsidized but little children are encouraged to buy Government bonds; when citizens, cities, and States consider Federal aid manna from heaven instead of their taxes returned at a discount; when Communists call themselves Democrats; when so-called Democrats lead us step by step in the direction of a totalitarian state; when we send billions to the four winds of the world and increase our "gimme's" at home; when politicians become auctioneers of something for nothing instead of statesmen; when the budget jumps from 5 billion to 40 billion in a few years; when raw gold brings $40 an ounce in America and $100 an ounce in Europe; when a political party that has passed laws or violated these truisms is again reelected; when the whole world has gone crazy; something must be wrong. J. R. B.

Country Almanac

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Country Almanac of December 1948 by A. B. Genung, Freeville, N. Y.:

HINDSIGHT

We certainly don't know much about politics. Neither does anyone else.

Our Democratic friends fancy that the people voted for Mr. Truman. What they voted for was perpetual Christmas. We know now that the Democrats could have elected Charlie McCarthy this time had he been put up. Those Corn Belt rugged individualists showed how ruggedly they were for high incomes and fat subsidies, the factory workers for fantastically high wages, and the innumerable hand-outs that they have come to expect from the New Deal. After all, we're all human.

This is not to disparage Mr. Truman's fighting spirit. He showed himself a dead-game fighter and we all admire that, notwithstanding that his campaign was the lowest exhibition of demagoguery since Andrew Johnson. As a human sort of person, he shows up well in victory, too. But we think that the Truman political saga is subject to about 98-percent discount.

Incidentally Mr. Dewey shows up equally well in defeat, which is much harder. Whatever his errors, he is a game loser and maintains the priceless American tradition of sportsmanship in elections.

Actually the narrow Truman victory was not the significant thing about this election at all. He was incidental, a chip riding the wave. The really impressive thing was the landslide in Congress and in State governorships. It was in these local sweeps that the full strength of New Dealism showed itself.

Labor and farmers have had a long draught out of the inflationary jug, the socialistic jug that fills itself from capital and pours out its libations to labor. They want more. They voted for a continuation of the inflationary pattern, with all that it implies, and against deflation, which means paying the bills. They voted to postpone the day of reckoning—they hope. Incidentally a lot of housewives voted for artificial lids on the high cost of living.

The total vote was surprisingly small. Only three times in a hundred years has a candidate been elected by as small a percentage of the electoral vote as was Mr. Truman. The New Dealers won, in a sense, by default. Labor got out its vote. Then there's always the South, which votes solely by prejudice, most of it safely in pocket even this time. A lot of fatuous Republicans, listening to that slumber song of the pollsters, didn't bother to vote. And that was that.

The fundamental issue in this country was never presented to the people by Mr. Dewey. That is statism, the issue of individual liberty and free enterprise versus the authoritarian, socialistics of the New Deal. Mr. Dewey chose again, as he did once before, to soft-pedal that basic issue, and again it availed him nothing. The thinking people the people who might have arisen to a real crusade on that ground, were lulled and many of them did not bother to vote. Well, they have no kick coming.

That Mr. Truman and his new Congress will push us further along the socialistic road is certain. Tax policies, Federal spending, controls, repressive tactics against the corporations, and many other fields will reflect it. As for economy in Washington—what a joke!

But there are a couple of other certainties in the picture, too. One is that Mr. Truman will make mistakes. He can be depended upon to do that. The other is that he and his New Dealers will have the Big Depression to handle. Wait and see.

A ME-TOO PARTY?

A group of "Young Turks" are said to be trying to grab Republican leadership with a view to "liberalizing" that party, making it "more responsive to the will of the people." This is to be expected—and discounted. Apparently they are more interested in personal and partisan maneuvering than in principles.

It would be well to recall that the term Liberal, which has been brazenly misused in this country for 16 years, derives from the word Liberty. If it stands for anything, it means freedom, free enterprise, free markets, free men. What it does not mean is this collection of controls, political coercions, and bureaucratic management which has been slowly imposed upon us behind the benign whiskers of a Santa Claus system. It has given the people a wonderful spree and the bills have not yet been presented. This was a rich country and could put a lot on the cuff.

If these Young Turks want a liberal Republican Party, let them start fighting for the economic freedoms that are so rapidly passing out of our hands.

But is that what they want? Rather, what they seem to want is to run with the hare and hunt with the hounds. They apparently want to get in on the system of being liberal with other people's money; what they are seeking, by implication, is more sponsorship of this social servility system, more hand-outs for labor, farmers, pensioners, and so on, more forced redistribution of the national income to the largest pressure groups. What their talk boils down to is, in the last analysis, virtual abandonment of the two-party system.

What reason is there to suppose that Republicans will vote for a watered-down imitation of the New Deal? Why should they when, if so minded, it's just exactly as easy for them to vote for the real thing—as a lot of them did last month. In 1944 Dewey actually outbid Roosevelt at every hand of the game, and how many votes did it impress?

What would be stimulating right now would be to see the Republican leaders taking their licking like men, stiffening their backbones, and planting more firmly the banner of real liberalism, liberty, for a better fight next time. It is our opinion that the New Deal has a well established corner on socialistic offerings to this country; that no leftists are going to be weaned away from that camp by any amount of Republican pandering; that the country needs and will support a forthright, free enterprise party; and that over the long pull it will win as many elections as the radicals who thrive by taking money away from the thrifty and giving it to importuning pressure groups.

It is our quaint notion that more than half the people of this country are sufficiently thoughtful and intelligent to demand a sound economic and social system, once they become concerned enough to assert themselves. A feather would have tipped the scales even in this time of inflationary fever. This Santa Claus phase in America is already pretty well along on its road to trouble. When the tide turns, a more solvent party will inherit power and keep it for a full generation. We personally want no stock whatever in a Republican leadership that thinks it can put on a dab of pink rouge and entice the boilermakers' union.

HAVE WE MANAGED PRICE LEVEL?

Inflation is a man-made thing. The Government can inflate credit and the total money supply of the country just as easily as a child can blow up a toy balloon; can and has. It has tripled the money supply in the last 10 years, from $36,000,000,000 to $110,000,000,000. It borrowed some $275,000,000,000, mostly from the banks, to finance the New Deal and then the war, giving the banks a trainload of bonds to play with. What we then had was the most gigantic balloon of expanded currency and credit ever seen in any solvent nation.

The retail price level went up 74 percent.

After the war the Government tried, very cautiously, the experiment of letting a little gas out of the bag. Over a period of about a year and a half, beginning in latter 1946, it reduced the public debt some $25,000,000,000.

That experiment nearly drove the experimenters into a nervous break-down. Last February they saw prices of farm products along with the stock market, always the most sensitive barometers, start down the toboggan. Sensing how the wind blew, buyers began to lay off textiles, clothing, shoes, rubber

goods, furniture, radios, and what not, and as summer wore on a string of these consumer goods began to slide off, too.

Here was a fine kettle of fish for an administration facing an uphill election fight: deflation and falling prices. Unemployment just around the corner. Union leaders and farm leaders hot-footing it to Washington, quoting the prophets and proverbs. Hell to pay.

To make a long story short, the Treasury and a divided but acquiescent Reserve Board turned off the valve and stopped the balloon from losing any more gas. The Marshall plan and defense plans and cold war and European relief and a dozen other big spending projects just happened to enlarge the Federal outlay amazingly in early 1948. Retrenchment in Washington just happened to reverse itself and the Government pay roll began taking on people by the hundreds per day. Money poured out to industry and the farmers.

The price level stopped going down.

The balloon began to expand again. New nonfarm mortgages by individuals in the first half of this year $1,800,000,000; new loans insured by FHA first 8 months $2,200,000,000; new borrowings by corporations and public units $6,300,000,000 in first 9 months; all large increases over last year.

Yes, the fire was stoked up and the pot was put back where she'd boil again, with good results for the cook, too.

If the country were operating under a free economy there isn't a doubt that farm products and most soft goods lines and the stock market would be declining. As it is, these commodities are resting on artificial props, while durable goods and wages are being elevated by equally artificial jacks.

Maybe this situation, new in our history, is the long-sought formula for raising ourselves by our bootstraps. At least union labor and the Corn Belt certainly like it, so far. Why shouldn't they? Yea, Lord, give us this day our daily gas, laughing gas.

CAN WASHINGTON CALL THE TUNE?

Summing things up, as we view the prospect from our barn door, we get the impression of the managers of the managed economy running a close race now with the ordinary forces of supply and demand.

If you look at the field of consumers' goods—clothing, textiles, shoes, housefurnishings and so on—you see the market already turned into substantially a buyers' market. The same is true of foods, fibers, and nearly all products of the soil.

If you look at durable and capital goods, steel products, housing, new plant and equipment, it is true that you still see a strong and unsatisfied domestic market; yet even in some of these major lines, activity is slowly tapering off.

It is to Government spending and Government supports that you have to look for the real bullish elements in the picture ahead. Of course the administration is set to spend and spend, subsidies, price supports, internal projects, defense program, new lend-lease, cold war, Marshall plan, operation "Chiang Kai-Rathole."

In short, on one side of the picture ahead stand out the forces of natural restoration and lower prices that should be, and are, appearing at this interval after a great war. The other side shows a labor government committed to holding the whole structure of prices, wages, and costs up at the wartime levels, and taking steps to do just that with its artificial props and stimulants.

Can Atlas hold up the globe, and, if so, for how long? We wonder what would happen if his bonds started to weaken. For we are reminded that the stuff that fills his globe is largely borrowed from the banks, and at low interest rates. What would one little frosty shiver passing over the Government bond market do to that distended balloon?

MENACING SHADOW OF ASIA

Back there east of the Black Sea are one and a half billion people. For a thousand years they have lain in the vast reaches of Asia like a great human sea, dammed back by deserts and mountain ranges, but spilling forth from time to time to overrun Europe in a barbaric tide.

In the year 451 the Huns under Attila, the "Scourge of God" swept westward out of central Asia like a devastating plague, on across the Rhine to the very Atlantic and down into Italy. The bloody battle of Chalons finally turned them back, but all Europe groaned under their savage depredations.

Eight hundred years later another Asiatic tribesman, Genghis Khan, brought all China under his heel and resolved to conquer all the peoples of the then known world. Three quarters of a million Mongols and Tartars marched under his banner as they pressed slowly westward. In their first battle with the Persians they killed 150,000 in 1 day. Those who would oppose them were overwhelmed as by a convulsion of nature. Gibbon relates the sieges and destruction of scorces of cities, dozens of countries, "five centuries have not been sufficient to repair the ravages of 4 years."

From Gengis' harem of 500 women emerged 4 sons who completed their father's destructive work. One of them, Octai, sent his chieftain, Batou, with three-quarters of a million men to invade the west. In 6 years they had completed that mission. They overran modern Russia, Poland, and all central Europe clear to Germany, obliterated the cities, ravaged the lands, harried the people with a fury beyond imagination. After the Battle of Lignitz, for instance, they filled nine sacks with the ears of the slain.

Gibbon tells how they disposed of the inhabitants of each conquered city always in three batches: the able-bodied men butchered, the young women and skilled artisans sold into slavery, the old and useless returned to the ruins of their town and taxed for the privilege of living. Such was the ordinary routine.

"But the most casual provocation, the slightest motive of caprice or convenience, often provoked them to involve a whole people in an indiscriminate massacre; and the ruin of some flourishing cities was executed with such unrelenting perseverance that, according to their own expression, horses might run without stumbling over the ground where a city had once stood. The three great capitals of Khorasan—Maru, Neisabour, and Herat—were destroyed by the armies of Gengis; and the exact account which was taken of the slain amounted to 4,347,000 persons."

A hundred years later Tamerlane was overrunning the west again, another Mongol conqueror of unimaginable ruthlessness. Human life was the cheapest of commodities to him and his horde of barbarians. He might choose to bury alive all the men in a conquered city, as with 4,000 Armenians at Suvas.

"In his camp before Delhi, Tamerlane massacred 100,000 Indian prisoners who had smiled when the army of their countrymen appeared in sight."

Or, as from the people of Ispahan who displeased him, he built "a structure of several lofty towers out of 70,000 human skulls. A similar tax was levied on the revolt of Baghdad, the exact account is stated at 90,000 heads." And so on, to fill volumes.

It is against a present-day reservoir of a quarter of a billion men east of Suez, with a 3,000-year background of that kind, that we must consider the steady Russian consolidation of power in Asia.

Is the potential merely Russia against western Europe? Or could it be the towering shadow of Asia surging up to threaten the entire west once more? We would do well to recall that this is not a fanciful hypothesis merely; it is a thing that has happened repeatedly in past history. In Asia still resides the most ruthless and barbaric power in this world. It is a thing that could obliterate, and several times has all but obliterated, western civilization. It is a thing that force alone can meet.

Veterans' Compensation and Pension Benefits

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. Sam Stavisky, in the current issue of the American Legion Magazine has analyzed all legislation affecting veterans' compensation and pensions, which is very informative and I am sure will be of great interest to every Member of the House. Veterans' benefits are an important part of our congressional work and this article explains in detail just how the veterans are affected:

For the past 3 weeks I've been hacking my way through a vast, dark jungle and have just come out of it alive and kicking. I've been through jungles before, from Guadalcanal up through the Solomons into New Britain and up to Dutch Guinea, and it was jungle every inch of the way.

But, brother, I now must confess that those Pacific blotches were Gardens of Eden compared to this last trek of mine. This was a jungle right here in civilized United States of America, an immense area of mystery, choked with legal jabberwocky, medical abracadabra, and governmental gobbledygook, surrounded by nigh-unscalable mountains of red tape and infested with terrifying swamps of ignorance.

I've been banging my head through that jungle referred to as veterans' compensation and pensions.

I started out eagerly, with a running jump and tripped over a law that had its roots in the Continental Congress. In a little while I became thoroughly lost in the tangled underbrush of laws and regulations that sprang up in the wake of the Civil War. And by the time I caught up with the veterans' benefits of the most recent Eightieth Congress, brother, I was dragging tail.

Think of it. Virtually every one of the 80 Congresses that have met to date have done something or other about the laws dealing with veterans' benefits. Major alterations were made after each war beginning with the Revolution. Government agencies, in carrying out some 300 Federal laws on the subject, have issued thousands of regulations, some contradictory, all subject to various interpretations. Special boards of appeals on veterans' claims have handed down tens of thousands of decisions covering all kinds of cases, circumstances, and conditions.

So, it's not astounding to learn then that few people really know what veterans' compensation and pensions are all about. No person knows it all. He couldn't, and still be human.

And since I'm human, it can be safely assumed that I don't know it all either. But I have been around a bit, talked with the big shots in Washington and the captains in the field, with experts in the Veterans' Administration, in the American Legion, and the other veterans' organizations, and with Joe Veterans and dozens of his comrades of one war or another. I've read laws, statutes,

regulations, codes, manuals, decisions, instructions, guides, circular letters, information bulletins, etc., etc., and found myself talking out of both sides of my mouth like some governmental directives.

Still, I've come out of all this with a few solid facts about compensation and pensions which every veteran ought to know.

I'm not talking about the kind of facts which ought to be filed in the back of your head with the interesting-if-true department. Nor is it the kind of information that will make you a whiz at parlor-party question games.

I'm talking about the kind of facts which put money into the pocket, brother.

(At this point we pause momentarily so that readers interested in money-in-the-pocket can call over the other members of the family to gather round and bend an ear.)

First of all, it would be wise for us to be sure we are all speaking the same language, because the language of compensation and pensions is a thing unto itself.

What do I mean by compensation and pension? Most folks take it for granted that the two words mean the same thing, that is, a monthly check from Uncle Sam. There's just enough half-truth to that opinion to cause a lot of trouble and stir up needless gripes.

So let's get the record straight:

Compensation is the monthly cash benefit paid by Uncle Sam to veterans disabled while serving in the armed forces. It also refers to the monthly cash benefit paid to the dependents of a veteran killed in uniform or who died as a result of a disability incurred in the armed forces. This group of veterans and dependents is known as service-connected.

Pension is a monthly cash benefit paid disabled veterans and the dependents of deceased veterans whose disability or death had nothing to do with the veterans' service in uniform. This group of beneficiaries is known as non-service-connected. The word also refers to a monthly cash payment to veterans of certain wars who reach the age of 62.

So, remember, compensation means service-connection. Pension means non-service-connection.

For example: George Reed was so severely wounded in World War II that under the law he is considered totally disabled and draws $138 a month compensation. His buddy, Jim Blake, came out of the war unscathed, but a year later was so severely burned in an auto accident, that he'll never be able to work again. Jim draws $60 a month pension because he is considered to be permanently and totally disabled.

Reed, the service-connected disabled veteran, gets compensation from a grateful Government to repay him—in part—for the injury or disease he suffered while in uniform and the resulting loss in earning power when he returned to civilian life. In like manner, the widow, or orphans, and dependent parents of a service-connected deceased veteran receive monthly compensation to compensate them—partially—for the loss of their breadwinner.

Note that the monthly compensation is regarded as partial repayment for the loss suffered. Not even the most heartless type of bureaucrat thinks that money can pay for the loss of a limb, for the death of a husband, father, son, or daughter.

Jim Blake's pension is based on another concept of the Government's relationship to its citizen-soldiers. Our Government feels that every war veteran has done something for his country which entitles him to a special consideration when that veteran becomes incapacitated by disease or injury after he leaves the service. So that when Jim lost his ability to earn a living, Uncle Sam granted him a pension to prevent Jim from becoming a charity case. Jim earned his pension for past services rendered in uniform. In the same way, the Government gives a small pension to dependent widows and children of deceased veterans.

If you have been confused and bewildered by definitions of compensation and pension, you are in the majority, brother. It was not until 1946 that Congress wrote a clear-cut definition of the two words. Hitherto, the two terms had been used interchangeably.

The American Legion and other groups had urged Congress to establish the two distinct definitions because the term "pension" has at times been in disrepute due to certain abuses in the system. During the roaring eighties, for example, some politicians freely bartered pensions for votes. Also there was a time when the term "pension attorney" had the same connotation and stigma as "ambulance chaser." The "pension attorney" sought out veterans, and offered to get them Federal pensions. There was a legal $10 fee permitted, but kick-backs were part of the shameful racket.

It is a sad fact that in the past unscrupulous veterans tried to make a gravy train out of the pension system. But they were in a minority.

On the other hand, it has been estimated by experts of the veterans' organizations that many thousands of eligible veterans have never applied for compensation or been granted the proper compensation due them under the law as a right.

These experts say there are probably an additional 1,000,000 veterans of World War II who may be entitled to compensation—yet for one reason or another they have failed to file for compensation, or are drawing less compensation than they rightfully should be getting.

In other words, there may be as many as 1,000,000 missing veterans—missing the opportunity to help make up for loss of earning power sustained in the war.

And you may be one of the missing million.

How could this be?

Well, you don't get your compensation—or pension—automatically. You must file a claim with Veterans' Administration.

There are no exceptions to this statement, because it's the law. Even if you lost an eye in the Battle of the Bulge and all the buddies in your platoon can vouch for it having happened, you still must file a claim. That goes for the dependents of deceased veterans, too. They must file a claim.

Out of the 15,000,000 veterans who participated in World War II, less than one-third have filed claims.

Among the remaining 10,000,000 are thousands of veterans who have just and valid claims, but who have failed to file because of apathy, ignorance, laziness, in some few cases a false sense of pride, or failure to recognize the urgency of filing the claim now.

Approximately 1,670,000 veterans of World War II are drawing compensation. Their average monthly payment is $39.93 (according to latest available figures). This sum is over and above the monthly earnings of these veterans. Even a totally disabled veteran drawing the maximum compensation of $138 a month can hold down a full-time job. Uncle Sam makes it a policy not to penalize disabled veterans who have the courage and enterprise to overcome their service-incurred handicaps.

(For those who like statistics, here are a few worth reading: There are 2,277,000 veterans of all wars and the peacetime armed forces who are today drawing compensation or pensions. There are also 940,000 dependent widows, children, and parents drawing compensation or pensions.

(Average monthly compensation payment for World War I is $54.80, compared to $39.93 for World War II. The average monthly compensation payment to dependents of World War I deceased veterans is $59.24, compared to $70.68 for dependents of World War II.)

For the most part, it is true, you may file your claim for compensation or pension at any time—tomorrow as well as today. But every day you delay you also lose money, and possibly the ability to prove you are entitled to compensation. With one exception, benefit payments begin with the date of application for pension or compensation. World War II veterans may file for compensation any time within a year after discharge and get the full benefits for the whole year. But that is the lone exception, and, of course, most World War II veterans have been out of service more than 1 year. Dependents will be paid compensation or pension from date of veteran's death only if claim is filed within 1 year.

But there's an even more important reason for filing your claim right away.

"The longer a veteran puts off making a claim, the longer it takes us to develop his claim, gather together all the necessary evidence supporting the claim, and reach a just decision in the case."

So states Willis Howard, VA director of claims and the Federal Government's No. 1 expert on the subject. Experts of the Legion and other veterans' groups agree.

After all, as nice a guy as he is, Uncle Sam just doesn't take your word for it that a Jap sniper nicked you while on patrol on August 23, 1943. Now your elbow is giving you trouble, and you're losing a couple of days' work each month visiting doctors. Then you remember you never did turn into sick bay, and there probably is no medical record on your case. But there were witnesses. Sure, two of your buddies were there, and they'd be glad to sign affidavits—if you could only find out where they are living these days.

"When in doubt, file a claim," says T. O. Kraabel, American Legion National Rehabilitation Director. "Develop it fully and the Government will decide whether or not you deserve compensation or a pension." Kraabel, who has personally assisted thousands of veterans with their claims, speaks from long, deep experience.

Thus far, 4,400,000 veterans and dependents of World War II have taken the trouble to file a claim. Of these, 2,000,000 applicants have been granted compensation or pension, but more than half have been turned down.

There's no question, pension experts say, that many of the rejected claims would be valid if they were properly prepared and developed. Besides, VA was overwhelmed with a flood of claims right after VJ-day and was in no condition to give full consideration to each case. By February 1946, a backlog of 661,000 cases piled up in VA, and in the effort to catch up with the pending cases, it was only natural that a few short cuts were taken. In the ensuing rush of work, many of the pension rating boards had their sights set on quantity production, rather than quality of consideration.

Anyhow, the fact is that a good number of veterans probably failed to get thorough consideration of their cases and have since failed to do anything about it.

Here's where these veterans, and all veterans with a claim or pension gripe can and should turn to their veterans' organization for advice and counsel. Here's where the 17,000 American Legion service officers of posts throughout the country can and will give you a genuine helping hand.

If there is one thing I learned in the exploratory trip through the jungle of compensation and pension, it is this:

You can save yourself a lot of time, trouble, and expense by having a veterans' service representative handle your claim for you.

Fed up by the abuses of the "pension attorneys," Congress in 1924 authorized reputable veterans' and welfare organizations to

be recognized by VA as representatives of veterans with claims against the Government. In return for this privilege, these organizations provide the service to veterans for free.

There are today 24 such recognized organizations and 43 State agencies. According to the Legion's claims staff, of all the veterans who have turned to the recognized organizations for a lift with their claim, two out of five veterans turned to American Legion service officers.

These service representatives are, more or less, experts in the complex and multifarious laws and regulations dealing with veterans' benefits. They know the ins and the outs. They know how to talk the language—a highly technical language. And they're willing and ready to go to bat for you in developing your claim with the proper evidence, in presenting it to a VA rating board, and, if necessary, in pushing the fight to the Board of Veterans' Appeals.

The law says that VA must help you develop your case, help you put your best foot forward, so to speak. The entire VA claims' set-up—adjudication officer, rating board, authorization service, and so forth—must help you in every reasonable way to obtain the evidence necessary to support your claim for compensation or a pension.

But these officials are only mortals, and may miss a few angles you know nothing about. An alert service officer will worm this data out of you if you give him half a chance. VA officials have a duty to perform to each veteran, but a service representative has a service to perform.

It is no reflection on Veterans' Administration and its thousands of conscientious, hard-working employees to state that a veterans' representative has just a little more curiosity about a veteran's case. Nor is it a reflection to say that the service officer will help you prepare a better case than you can yourself with the help of the VA staffers. The service representative will also help you prepare a stronger appeal, should you be dissatisfied with the decision of the local rating board. And that's important to remember.

A check-up with R. L. Jarnagin, Chairman of the Board of Veterans' Appeals in Washington, discloses that out of every hundred veterans whose claims are rejected on the local level only one ever bothers to appeal his case.

Yet, of those who do take the time and effort to make the appeal, as many as 1 in 5 may win the appeal.

It is significant that well over three-fourths of the appeals claim cases are handled by veterans organization service representatives. In Washington, as in the local town, it is not a question of influence, but of evidence. The service representative is like an attorney, conversant with the procedure and the laws. Armed with your power of attorney, he serves as your champion or advocate, at no cost to you whatsoever.

The American Legion has the largest network of service representatives. Besides the 17,000 service officers in the posts, who are unpaid volunteers, there are some 1,500 full-time (and part-time) career service officers, in the county, State, regional, and national headquarters. It is a glowing testimony to their good work that more than half of the veterans seeking the aid of legion service representatives were not legionnaires at the time their case was taken up.

"Veterans seeking our help do not necessarily have to be members of the legion," says Rehab Director Kraabel. "Nor do we coax them to join as a condition for our helping them. We do encourage them, however, and we know that as a matter of course many of these assisted veterans will join the legion, and will become steadfast members, because service makes membership."

Now let's see how VA handles a claim for compensation or pension.

VA has around 9,000 employees whose chief job is to process the claims. You can get your claim started in one of three ways: write or visit one of the 600 VA offices scattered around the country, or get in touch with a veterans organization service representative.

You fill out the proper form, and attach any medical evidence you might have to support your claim, such as a statement from you local doctor about your ailment, or a statement from your employer about the days you missed on account of illness. You add any statements or papers you think will help your claim.

Your claim is then channeled to the nearest VA regional office, where it is given a C-number (claim number). Then a request is sent out from the VA regional office for your military records, which may be at any one or more of several record-collection stations operated by the Federal Government. This business of getting your records takes a little time—perhaps a month or two, so don't get impatient. Because, in dealing with compensation claims, it is a fact that delay in reaching a decision in your case may mean that more consideration is being given to your case.

In due course, a VA adjudicator figures there's enough evidence on hand to send your case along to a rating board for a decision.

The rating board is made up of three experts; a lawyer, a doctor, and an occupational specialist. There are 400 such rating boards within VA, distributed among the regional offices. Each veteran applicant rates having a full three-man board consider his case, but sometimes in the rush of business or for the lack of personnel, this rule may be short-circuited by various VA offices.

The board can decide that the veteran ought to take a physical examination, and if so, order it. The veteran has the right to appear in person before the board, and the board is supposed to lean backwards in every way to help the veteran with his case. The board will make two decisions:

1. Is the disability service-connected or non-service-connected?

2. How severe is the disability, and therefore how much compensation or pension shall the veteran get?

Compensation for disability for veterons of World Wars I and II ranges from $13.80 a month for 10 percent disability to $138 a month for 100 percent disability. Additional cash awards are made to veterans who lost an eye, leg, or arm. The last Congress also passed a new benefit for disabled veterans, providing extra compensation to the more severely disabled veterans (suffering 60 percent or more disability) on the basis of dependents. This new law was passed not to encourage disabled veterans to have large families, but to help disabled veterans with large families meet the spiraling costs of food, clothing, and shelter.

It is possible for a veteran to have a service-connected disability of less than 10 percent—in fact, as little as 0 percent—and still be, under the law, a disabled veteran. For example, an ex-GI who had been given a medical discharge was originally found to be suffering from 30 percent disability caused by neuro-circulatory asthenia—which are mighty big words for nervous fatigue. Recently, he was reexamined and found to have no current symptoms of the ailment, and as a result the VA rating board reduced his disability to 0 percent. This action cuts off the veteran's cash compensation, but leaves the case open for a reappraisal later, if and when the disability should flare up again.

For disabled veterans with less than 10 percent disability, there is no cash compensation, but they are still entitled to three valuable advantages.

First, although every veteran is pretty much entitled to free hospitalization, service-connected cases get precedence in obtaining a VA hospital bed. This privilege is important in those areas in which VA hospitals are short of beds in face of the demand for hospitalization.

Secondly, only service-connected cases are entitled to out-patient treatment, either at a VA clinic or with the home-town doctor. A non-service-connected case can get free VA medical attention only by becoming a hospital patient.

Thirdly, and for many veterans most important of the advantages, a veteran with a service-connected disability—even 0 percent—gets a 5-point preference over other veterans, and a 10-point preference over non-veterans, for civil-service jobs. This extra 5 points might mean the difference between getting a Federal position or not.

Between holding onto a Federal post, or losing it, during one of the frequent economy waves which sweep through the Government, a minimum rating of 10 percent is required.

Early in 1947, VA ordered a 15 percent cut in personnel rolls. In round numbers, the order meant that 31,000 VA employees would be let go. Veterans had a preference, to be sure, but since most VA employees were veterans anyhow, it was a case of veteran versus veteran. Hundreds rushed to the Legion to seek help in obtaining the extra five points for compensable service-connected disability. That could be obtained only by filing a successful claim for compensation.

Since all claims against the Government by VA employes must be handled in the central Washington office, the small Legion staff in the Washington headquarters office found itself swamped with pleas for help by buddies all over the country. During the next 18 months the Legion's Capital staff literally knocked itself out pushing and appealing cases.

"We knew we were fighting for jobs not only compensation," recalls Charles Stevens, assistant director of rehabilitation.

"Everybody waited for the last minute to file a claim or prosecute one already filed, and then we caught hell from all over," recalls T. O. Kraabel.

Now, back to the rating board and your claim.

The rating board comes up with a decision, and informs you of it in writing. Theoretically, at least, the board's decision must be written in nontechnical language, so that even you can understand it. If you believe the verdict to be just, everything's fine and dandy.

But if you feel dissatisfied—as is your privilege—there are two things you can do: Either file a new claim with new evidence, or appeal your original claim to the Board of Veterans' Appeals in Washington.

The Board of Veterans' Appeals is an independent division of VA. It has no tie-up with the claims division. Chairman of the Board Jarnagin and Claims Director Howard are of equal rank, assistant administrators. Thus your appeal is handled by a fresh slate of judges.

There are 35 members of the Board of Veterans' Appeals: a chairman, a vice chairman, and eleven 3-man teams of judges. Each team includes two lawyers and one doctor, and each team can turn to six or seven full-time legal and medical consultants for advice and assistance.

Any one of the teams may get any one of the cases. If the decision of a team is unanimous, it is also the final decision of the Board.

If there's a split decision, the chairman or vice chairman may call upon two teams to deal with a controversial case and settle it on a majority vote of six team-judges. The chairman or vice chairman would cast his

vote in case of a tie, and that would be the final decision of the Board.

Not even the courts can overrule the decision of the Board of Veterans' Appeals in matters of compensation and pensions.

However, any claim may be reopened at any time on the basis of new evidence.

Last year the Board of Veterans' Appeals turned out 40,000 decisions. This year it expects to come up with 60,000 decisions.

A veteran can, if he wishes, make a personal appearance before the Board in Washington, or arrange for a hearing before a traveling Board team. In most cases, though, he will authorize a veterans service representative to handle the case for him. And that's good judgment.

There are lots of veterans who have false and fuzzy ideas about rating boards and the appeals board. I'll clear up a few of the most popular fallacies.

Some folks feel that Uncle Sam is a penny-pincher when it comes to compensation and pensions, and throws all kinds of obstacles in the way of a claimant.

That feeling probably stems back to the days right after the First World War when certain Government officials took a callous attitude toward the legitimate requests for assistance by veterans.

In 1919, on assignment by the American Legion Weekly, noted biographer Marquis James investigated the situation and exposed a confidential order issued by the Federal Board for Vocational Education, an agency no longer in existence. The order read:

"The organs used in approving cases are the eyes and the brain. The ears and heart do not function.

"Be hard-boiled. Put cotton in your ears and lock the door. If you are naturally sympathetic, work nights when nobody is there."

Nowadays, by direction of Congress, VA officials must resolve every reasonable doubt in favor of the veteran who files a claim. Uncle Sam says point blank that when it comes to a border-line case, the breaks must go to the veteran.

There's another feeling that if a rating board calls up a veteran for examination, he's doomed to have his compensation or pension cut off. That's just not so.

It is true that certain types of disability improve with the passage of time, and when the veteran gets better it is only just and proper for his monthly payment to be cut down accordingly. Thus, most of the 200,000 malaria disability cases out of World War II may by now have lost their malarial symptoms, and their compensation as well.

But there are diseases and disabilities which grow worse with time, and for these cases, VA will increase the compensation or pension. In one 6-month period, for example, the Board of Appeals allowed 60 percent of the appeals for higher payments on gunshot cases..

The example of the gunshot cases, by the way, should kill once and for all the phony belief that any veteran who dares appeal his case will suffer a loss in compensation or pension. That's plain hogwash.

The Board of Veterans Appeals is restricted to dealing with the question at hand. Its decision deals only with your request, and nothing else. The Board does not cut benefits.

Then there's the veteran who knows another veteran who has "the very same kind of a disability" but who is drawing a bigger monthly check from the Government. Anybody who stops to think will realize that the two veterans, while they may feel they have the same disability, probably don't have the same disease or injury to the same degree, medically speaking.

Veterans of different wars, different peacetime service, different periods of service, etc., etc., come under different laws of benefits. From the medical aspect alone, the latest schedule of disabilities of veterans (1945) contains a list of 750 disabilities, with 10 rating steps for each disability. Since the First World War there have been five similar schedules, and one such schedule contained nine "variants" for each disability.

I could go on, but it only gets more confusing. I mention these details in order to impress you with the wisdom of getting your Legion representative to handle your case—especially your appeal—on a claim. In Washington, a special Legion medical staff headed by Dr. H. D. Shapiro, senior concultant, is in constant contact with the VA authorities on newly arising medical questions.

"Through curiosity, through give and take, we often get VA to see the veteran's case from an entirely new angle," says Dr. Shapiro.

"After all, VA and the Legion representatives are aiming at the same goal: the best possible development of a veteran's claim."

Veterans' leaders are pretty much agreed that, on the whole, our pension and compensation laws are today fairly generous. True, the benefits lag behind the rising cost of living, but so do most kinds of earned income. There have been two high-cost-of-living increases on most compensation and pension benefits, and the Legion is heading up a drive to get another equitable adjustment upward from the next Congress.

There are many individual gripes, and these, with time and patience, can be adjusted. There are some people, of course, who are never satisfied—including veterans. Well, there's only one honest answer to chronic gripers: The line has to be drawn somewhere.

Every veteran can't be declared 100-percent disabled and given a maximum pension, else the basis for the system—partial compensation for the loss of earning power—loses its meaning.

Up through the Spanish-American War veterans the Federal Government has recognized that as a veteran reaches the age of 62, his earning power dwindles. Therefore, the Government has voted these veterans a pension based on age. Thus 106,000 Spanish-American War veterans are drawing up to $90 a month pension.

In the past several years, as the World War I veterans have moved along in their fifties, there has been growing agitation for a pension based on age. This first emerged as Legion policy by action of the 1948 convention in Miami. There has also been some demand in Congress for establishing all veterans' compensation and pensions on a uniform basis, but that demand has thus far failed to crystallize into action.

Veterans who lost an arm in the last war feel that they, as well as the leg amputees, ought to get a free auto. There's no satisfactory answer when that question is raised, except that a line has to be drawn somewhere.

"But why draw it with us?" cry the arm amputees. O. K., then what about the veterans suffering from tuberculosis, heart conditions, arthritis, and other disabilities which make it difficult for them to get around? Should they be given a free auto, too? Congress batted the issue around for months before limiting that benefit to those who lost a leg or the use of a leg. Congress can, if it wishes, pass out the benefit to any other veterans.

Of course, no line can be drawn anywhere without leaving some disabled veterans on the wrong side of that line; and none of the benefits—cash, equipment, autos, or houses—are meant to make up completely for what the disabled veteran lost in the service to his country. Compensation is meant to assist in that veteran's rehabilitation, but Uncle Sam recognizes that a lot depends on the disabled veteran's character, courage, and initative, and no VA rating board can give those things to a veteran.

There's one more point to be driven home. There's a curious impression among many veterans that a service-connected disability has something to do with combat wounds, injuries sustained on the front lines, and perhaps heroism in hand-to-hand fighting. "Service-connected disability" covers a much wider swath. Simply put, "service-connected disability" means disability from disease or injury held incurred in or aggravated by active military or naval service.

After all, malaria often was worse than a bullet wound; mental and nervous maladies took a heavier toll among servicemen than submarine torpedoes; schistosomiasis—a parasite infection—might lay you up longer than shrapnel.

Furthermore, a veteran having a service-connected disability does not have to be feverish with malaria, racked with pain, or shaking with spasms to prove that he suffered the disability in war service. In fact, a veteran does not have to be actively disabled—crippled, sick, ailing, etc.—to establish his service-connected disability. To draw compensation his disability must be measured as 10 percent or more. But he may establish service-connection any time he can prove it—then half the job will be done should the disability increase to 10 percent or more in the future.

All the veteran has to do is show through his military medical record or through other evidence that during his wartime service he broke out with symptoms of one kind or another. These symptoms, meaningless at the time, may later prove to be indications of brucellosis, encephalitis, or some other chronic disease which will not break out in full force until perhaps years after you left the armed forces and returned to civilian life.

Hundreds of World War I veterans are today trying to establish evidence of disability incurred 30 years ago. You have only to refer to the Comrades in Distress column of The National Legionnaire to see how desperate some of these veterans are.

Every one of these late appeals underlines the compelling necessity of your filing your claim for service-connected disability and compensation now, while World War II is still fresh in memory.

Remember, there are at least one million veterans of World War II who have missed their opportunity so far.

These veterans have more than just lost an opportunity—they've lost money, like dropping it out of their pockets.

And they're missing the chance of providing a little extra insurance that their families will be provided for when they—the veteran and breadwinner—are gone.

Heed the words of Legion Rehabilitation Director Kraabel:

"The disabled veteran who files his claim today makes it easier for his widow and orphans tomorrow. The veteran who puts it off makes it tougher."

Compensation of Higher Federal Officials

EXTENSION OF REMARKS

OF

HON. RALPH E. FLANDERS

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. FLANDERS. Mr. President, I ask permission to have printed in the Appendix of the RECORD an article entitled "We've Got To Pay More for Leadership," written by the junior Senator from Maryland [Mr. O'CONOR] and published in the American Magazine for January 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE'VE GOT TO PAY MORE FOR LEADERSHIP

(By HERBERT R. O'CONOR, United States Senator from Maryland)

Our Federal Government risks losing its brain power through its failure to pay adequate salaries to top-flight men. Salaries of higher executives in industry in many cases are 2 to 10 times as much as our Government is willing to pay men in comparable positions. As a consequence, a wholesale exodus of executives from Washington has threatened since the end of the war.

The United States has been forced by circumstances into the leadership of the world. Aside from the tremendous pressure of international problems, including a cold war with Russia, the business of Government has become a colossal one—a $40,000,000,000-a-year affair employing more than 2,000,000 civilian workers. To conduct this business properly we must have the best brains in the country.

Russia can conscript her brains; we must obtain ours as we obtain everything else, through open competition. Yet we pay the nine members of the President's Cabinet, men charged with huge responsibilities, only $15,000 a year each, much less when income taxes are taken out. Then there are something like 3,000 high administrators appointed by the President, as well as upper-bracket civil service appointees, who receive in the neighborhood of $10,000 a year. This is paltry compensation compared to the huge salaries paid in private industry.

When industry calls, therefore, our top administrators, executives, planners, and economists, out of justice to their families, are quick to answer. If they continue to leave their Government posts, as many have been doing in the last 4 years, we shall be confronted with a crisis of the gravest type. Our parsimonious policy in the matter of rewarding our leaders has proved itself to be a most shortsighted one. We have failed in our obligations to this group of valued public servants, whose capabilities are vital to the proper conduct of Federal business.

The President of the United States, head of the biggest business in the world, receives only $75,000 a year as against salaries of twice and three times that much and more paid to many by private industry. The President receives the highest salary paid by the Federal Government, but many men under him, whose jobs in the Government far exceed in responsibility and importance most jobs in industry, get far less.

According to a survey we recently conducted, four American oil companies in 1946, our last record, and four metal-processing and manufacturing industries, paid their presidents more than $100,000 each. The president of one large rubber company received $306,282.72 in the same year.

The Vice President of the United States is rewarded for his high office with a salary of only $20,000. When Governor Warren, of California, ran for the Vice Presidency, the second highest office in the land, he knew that victory would have meant a pay-cut for him of $5,000 a year. His salary as Governor of California is $25,000 a year.

My experience over a quarter of a century in public positions has enabled me to see at close range the plight of many public-spirited citizens who were desirous of rendering public service but could ill afford to make the required financial sacrifice. For instance, if one of the $25,000- to $50,000-a-year members of a legal staff goes to Washington as a Government man, he must take a cut of about $15,000 to $40,000 in salary and establish a new home in Washington, today the most expensive city in the United States.

Such men rightly aspire to careers with futures. In Washington, a Presidential appointive job lasts for the duration of the President's administration. No future, in terms of incumbency or advancement, is assured. He who takes the job, knowing this, usually must keep his old home while establishing a new one. He figures that sooner or later he must go back to his old home. Very often he loses his old job when he gives it up to go with the Government.

As a consequence, many able men refuse Government jobs. That is why the President, Cabinet members, and bureau heads sometimes find it difficult these days to get the best men to take the important jobs that our Federal Government has to offer. And when the underpaid executives in Washington see a chance to take their wives and children to a pleasant, not-too-expensive industrial town at a tripled or a quadrupled income, they do so. They want their children to have the best.

At present salary levels we just can't keep top men in Government and can't fill their places when they leave. We can't compete with industry with a pay roll that isn't too attractive for intelligent college graduates 5 years out of school.

Illustrative of the way our Government suffers by its own penurious policy, I cite an experience I had with President Franklin D. Roosevelt. When the war clouds were at the darkest in the last World War, I happened to be lunching alone with him at the White House. He asked who were the two outstanding Maryland men who were qualified to give the greatest help in production for the armed services. I immediately suggested Howard Bruce and another executive.

Mr. Bruce unhesitatingly accepted the invitation to join the war effort in Washington, and demonstrated his great ability in the War Department's matériel branch, winding up as one of the few civilians to be awarded the Distinguished Service Medal.

The other Marylander, equally public-spirited, was confronted with a tragically difficult problem when he was invited to Washington. Dependent on his income for the support of a growing family, he would have been compelled to dispose at a loss of securities he held, and then take a sizable reduction in salary. If the assignment lasted for very long he would have been back where he started years ago, as far as finances were concerned. In justice to his family he reluctantly declined the War Department's offer.

While he continued wholeheartedly in the private output of one product essential to the war effort, Uncle Sam lost the services of a highly capable man in the bigger production job just when the threat of the Axis Powers was at its height. And all because statutory limitations prevented increasing an official's salary a relatively small amount. And this, too, when the man to be appointed was to have the responsibility of handling war supplies worth billions.

Since I have been in government, I have seen many capable and earnest men go to the brink of financial disaster before they finally gave up and took the lucrative jobs that industry is constantly offering to brainy men. There is no excuse for this pitiable state of affairs in a nation as wealthy as ours.

I think one of the first big tasks of the new Congress is to correct the injustice we have done our leaders and raise the salaries of top executives in the Government.

President Truman, having received such an overwhelming vote of confidence in the November election, should be given bipartisan support by the Senate and the House of Representatives in a concerted effort to get and to keep the best brains in America for the efficient administration of governmental affairs. No better investment could be made than by assuring the greatest efficiency in the functioning of the democratic process. This can be achieved by realistic provisions for adequate salaries which will pry loose from private enterprise some of its great men.

We cannot ever hope, perhaps, to match dollar for dollar in government the tremendous salaries paid to industrial executives, nor do we want to. A public servant must have motives other than financial to serve the country's best interests. He must have a sincere desire to serve his fellow man and feel that in government he finds the most satisfying outlet for his talents. If a top-flight man is out for money alone, he should go into private business. But if he is qualified and eager to serve the Nation, he should be enabled to go into government without being penalized too sharply for his desire to be a public servant.

A conscientious public official has a right to live in the dignity to which a high administrative position entitles him. Such a position in Washington is very costly, indeed. When a Government executive receives a foreign official of corresponding rank from abroad, as he frequently does, he must, by all the rules of international usage, entertain his guest appropriately, a propriety which runs into considerable money if it happens often. And it happens often. Government bureau heads who make $10,000 a year simply cannot foot the bill. They have no expense accounts.

When Federal employees are required to make official trips, they are granted transportation and $6 a day for living expenses, which, as any traveler knows, is insufficient for dignified and comfortable maintenance.

An executive in private industry, entertaining a buyer or some other useful visitor, usually has an unlimited expense account. It pays business to be lavish. It would pay our Government, too, in terms of international good will, to play the gracious host for important personages from abroad. Men in our diplomatic service, on their niggardly salaries, find it very difficult to keep their heads above water in the social whirl of foreign capitals.

The present salary crisis in government was high-lighted first in 1946 by the resignation of the late Harold D. Smith as Director of the Budget, one of the most important administrative jobs in Government, which Mr. Smith filled for 7 years in a most able fashion. During his administration he received a salary of $10,000 a year. He resigned to take the vice presidency of the International Bank at a taxable salary of from $35,000 to $40,000. While he was a zealous and inspired public servant, he felt he would be disloyal to his family to continue in a $10,000-a-year job in a high-priced city. His resignation was a signal loss to the economy of the Nation.

Another $10,000-a-year man, Daniel W. Bell, resigned his Under Secretaryship of the Treasury for the presidency of a moderate-sized commercial bank paying more than twice his Government salary. As a Government executive, Mr. Bell supervised Treasury operations running into billions of dollars, many, many times as much as he handles in his new job.

Milo Perkins, who directed the Board of Economic Warfare during the recent war at a salary of $10,000 a year, resigned from Government service just after the war, although his ability was much needed in reconstruction, and opened an office as a foreign-trade consultant. He is reported to be making from $30,000 to $40,000 a year.

One man, who had served for 25 years in the United States Forestry Service at a salary of $7,000 a year, recently went to the American Pulp and Paper Association at a salary of $20,000. An industrial chemist in the Department of Agriculture, with 24 years of service at $6,400 a year, recently accepted a job in private industry at an increase of from 100 to 200 percent in salary. An attorney who had spent 19 years, the best part of his life, in the service of his Government for

$6,500 a year, gave up his job not long ago for a $50,000-a-year law practice.

Since 1944, the Federal Communications System has lost three chairmen, James Lawrence Fly, Paul Porter, and Charles R. Denny. The Chairman of the FCC gets $10,000, the same as the members. Mr. Fly and Mr. Porter returned to the successful practice of law. It has been reported that Mr. Denny, now employed by NBC, draws a salary of $37,000 a year.

Such inconsistent policies in Federal Government, which force men from the public service to undertake more lucrative tasks in private practice, are also found in State governments. I recall a case in Maryland when we were projecting a road program to cost more than $100,000,000. The chairman of our State roads commission, a brilliant engineer, could not afford to continue on a salary of $10,000, when engagements in a consulting capacity were being pressed on him. One of these engagements would pay him several times his annual salary. Who could blame him for leaving the public service? Numerous other cases could be cited to show that Government is the loser in such instances.

The Department of Justice has suffered heavily in the last 5 years by the resignation of attorneys. It is not to be wondered at. In many corporation cases Uncle Sam's young lawyers, at salaries of $10,000 or less, find themselves pitted at the bar against highly paid corporation counsel, whose very prestige and prosperity are intimidating factors. Indeed, these "big lawyers" may well act as talent scouts for their own money-making firms while vying with Uncle Sam's underpaid legal talent.

Thurman Arnold and Wendell Berge, both former Assistant Attorneys General, resigned their posts in the last few years for the private practice of law, where they could make more money. In his resignation Berge stated that he made his new move "in justice to my family." J. Edgar Hoover, director of the FBI of the Department of Justice, is reputed to have repeatedly turned down offers of from $50,000 to $70,000 a year from private industry, preferring, as an earnest and diligent public servant, to serve his Government for $14,000 a year.

Blocked by low salaries from getting able businessmen into Government, the Federal administration naturally would turn to the training ground of city and State governments for able administrators. But even the States and cities of the Nation, in many instances, outbid the Federal Government in salaries paid.

Occasionally the States even outbid one another, as I learned not many years ago when I was Governor of Maryland. I was called on the telephone one afternoon in the friendliest manner by Gov. Thomas E. Dewey, of New York. He stated that we had an outstanding specialist at the University of Maryland who, they had decided after a country-wide search, was the best man for an important assignment in New York State. Governor Dewey was most considerate in asking if I could meet the salary offer which he was prepared to make. I couldn't, under the rigid legal requirements, and in consequence the specialist moved up. The unfortunate result in such cases is that the difference of a few thousand dollars means the displacement of a seasoned expert around whom an important governmental activity had been organized.

Of the governors of the five territories of the United States, all Presidential appointees, none is paid more than $10,330 a year, while 15 of our State governors receive $10,500 or more a year and, in addition, in some cases rent-free houses and sizable expense accounts. The head of the Federal Security Agency, under whose authority the United States Office of Education operates, gets $12,000 a year. Five State officials of education in the United States receive as much or more. The superintendent of schools of the city of New York gets $25,000 a year. In Los Angeles the general manager and chief engineer of the department of water and power is paid $27,000 a year, more than is paid any Federal official, with the exception of the President of the United States.

If the Federal Government can't compete with private industry or even with the States and cities of the land for trained leadership, I see nothing ahead of us but disastrous loss to the most important governmental system in the world. Others see that it pays in the long run to reward leadership. Our Congress, apparently, has had a blind spot on this subject.

Quite as dangerous to the morale of the Federal service as the disparity between Government salaries and those of private industry are the inequalities of the Government compensation system itself. It must be disheartening, for example, for the Under Secretary of the Treasury to know that, within his own Department, there are men below him in authority who are paid more than he. The Under Secretary himself gets only $10,000 a year, while a number of men under him receive $11,000 or even more.

One Cabinet member, the head of a large and consequential department, said some time ago that he had invited a very able man, who made more money than the President of the United States, to go to Washington as head of an important bureau.

"How much would I be getting?" asked the businessman.

"Ten thousand dollars a year," the Secretary replied.

The businessman said, "What would the next two or three people under me be getting?"

The Secretary replied, "Ten thousand dollars a year."

"Then I don't know what you need me for," said the businessman.

The point was that there was nothing in the position offered to the businessman that distinguished him from his subordinates. The businessman said he wasn't concerned particularly with the salary he would receive, but if the salary had been $15,000 and the people under him were to receive $10,000 he would have thought that he had some recognition and responsibility.

In the Bureau of the Budget, from which Mr. Smith resigned, the Director, the Assistant Director, 5 chiefs of division, and 20 top technicians all receive $10,000 a year each, the subordinates getting exactly the same salary as their boss.

Top leadership in our democracy should have a top reward, if for no other reason than to win the respect and challenge the competitive zeal of subordinates in lower brackets of income. This is in keeping with the philosophy of our system. There seems to be no rhyme or reason in the salary structure of the Federal Government.

If you can make any sense out of the Federal Government's compensation system you are better than a number of us who have spent months studying the problem. We tried to get results in the last Congress, when a bill asking for higher salaries for top men was under consideration, but once more was sidetracked. We shall try again, as a patriotic duty in the next session of Congress, because the rate at which we are losing leadership to private enterprise is becoming alarming.

The bill, which is now in the final drafting stage, does not provide, by any means, the salaries which our top leaders should have if we are to stay in business as a growing concern. But it appears to be the best bill that can be successfully supported.

Generally, the proposed provision for upper-bracket increases are these:

Cabinet members from $15,000 to $20,000.

Under Secretaries from $10,000 to $18,000.

Assistant Secretaries from $10,000 to $15,000.

Heads of the seven largest agencies of Government, whose present salaries range from $10,000, as in the case of the Bureau of the Budget, up to $17,500 in the exceptional case of the Chairman of the Atomic Energy Commission—all to $18,000.

The bill will include other raises for heads of boards and commissions and such, all in keeping with the general increase.

Zealous and self-sacrificing public servants should not be asked to devote a lifetime to the common weal, and resist the siren call of higher salaries from private enterprise, unless Government is prepared to reward them in a manner that is at least comparable to financial rewards for leadership in industry.

Some Enduring Achievements of the Lincoln Administration

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an essay by J. Duane Squires, professor of the department of social studies at Colby Junior College, New London, N. H., entitled "Some Enduring Achievements of the Lincoln Administration, 1861-65." This essay appeared in the Abraham Lincoln Quarterly for December 1948, and I recommend its reading to my colleagues.

I have been informed by the Public Printer that the manuscript is estimated to make four pages in the RECORD, at a cost of $284.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

SOME ENDURING ACHIEVEMENTS OF THE LINCOLN ADMINISTRATION, 1861-65

(By J. Duane Squires)

Viewing the Lincoln administration in retrospect, many able scholars have emphasized its accomplishment as chiefly that of waging a tremendous civil conflict to a victorious conclusion. That the total defeat of the Confederacy was a vital aspect of Lincoln's leadership between 1861-65 there is no doubt whatsoever. That the preservation of the Union was an achievement without which nothing else would have much mattered is not to be gainsaid, and yet there is another aspect of the Lincoln administration which has not always been adequately stressed by students of the Civil War period. President Lincoln and his colleagues instituted an extraordinary number of innovations, many of them only tangential to belligerent activities, which have effected enduring changes in American life.

In seeking to make an estimate of these innovations, it is not necessary to undertake the delicate and perhaps impossible task of assessing the exact degree of credit which should go only to President Lincoln on the one hand and only to members of his administration on the other. It is true that some of the innovations which are to be discussed were not conceived by Abraham Lincoln himself. In several instances they were the projects of members of his Cabinet or of persons entirely outside the inner circle. Yet, to the extent that they were endorsed by the Chief Executive, or supported by him in divers ways, or bound

up in congressional statutes signed by him, or facilitated by him in the exercise of his constitutional powers, they properly belong to the administration of Abraham Lincoln.

In order that there may be a unifying scheme for our approach to this aspect of the Lincoln administration, we shall examine it from the respective viewpoints of the executive departments as they were at the time of the Civil War. In the order of their establishment by Congress, these were State, War, Treasury, Postmaster General, Attorney General, Navy, Interior, and Agriculture. The first seven of these were in existence in 1861. Although the Department of Agriculture did not attain full Cabinet status until 1889, it was founded in 1862, and, as we shall see, was of special concern to Abraham Lincoln. Each of these principal divisions which constituted our National Government during the administration of President Lincoln was responsible for enduring achievements.

I

In foreign affairs, the realm of the State Department, the Lincoln administration may be given credit for six lasting accomplishments. Those relating directly to the governments of foreign states were four in number: (1) President Lincoln's realization of the necessity of Anglo-American harmony as a permanent requisite for American security; (2) President Lincoln's emphasis on our national desire for the good will of Russia, an emphasis made with singular clarity in his communications to the Czar of February and October, 1862, which beyond doubt helped to pave the way for the acquisition of Alaska 5 years later; (3) the acceptance by the Lincoln administration of doctrines of blockade, contraband, and continuous voyage, which became the basis for Allied policy toward neutrals in both world wars of our century; and (4) recognition of the Negro Republic of Haiti, a development long desired by the Haitians, but in the United States politically impossible heretofore.

In addition to these four achievements directly relating to foreign states, two other phases of the Lincoln administration within the purview of the State Department may be noted. One was the issuance by the Secretary of State on behalf of the President of a proclamation dated October 3, 1863, which set aside the last Thursday in November as a national day of thanksgiving. Thus began the practice of Presidential designation of that particular day as the time for the annual observance of this traditional New England holiday. With the exception of the 2 years in which President Franklin D. Roosevelt sought to change the date from the last to the fourth Thursday in the month, every American Chief Executive has followed the precedent set by President Lincoln.

The final achievement of the Lincoln administration in the area of the State Department was not so much a tangible policy as it was a spiritual attitude. It was the President's unvarying sympathy and friendliness toward individuals from other lands. There was not a trace of xenophobia in the mind or heart of Abraham Lincoln, and his administration faithfully reflected his personal generosity and friendliness. In his party's 1864 platform plank on immigration, in his own gracious communications to such persons as Garibaldi, the King of Siam, and the governing council of San Marino, one notes this attitude. Above all, one finds it in Lincoln's willingness as Commander in Chief of the Army of the United States to grant posts of high command to notable foreign-born and foreign-trained officers. Among these one thinks of Ferrero from Italy, Stolbrand from Sweden, Turchin from Russia, Karge from Prussia, de Trobriand from France, Krzyanowski from Poland, and many others. It was this attitude of Abraham Lincoln's toward the foreigner which two decades later found embodiment in the Statue of Liberty, and which should be more vividly remembered today as we face the problems of displaced persons and concentration camps.

II

Turning now to the enduring achievements of the Lincoln administration in the range of activities encompassed by the War Department, we find a whole series of remarkable innovations. Writing on The Place of War in History, Herbert Rosinski in the Infantry Journal for November 1947 reminds us that the impact of the industrial revolution upon preindustrial warfare was first apparent on a large scale in the American Civil War. Trite as this may seem to students, it is a fact which ought never to be forgotten. The war which Abraham Lincoln had to wage was the first modern war. His administration made contributions to military art and science which were noteworthy even by the standards of the 1860's. To us of the present generation they loom even more important as foreshadowings of the future. Eight of them are worth noting.

1. In June 1861, with the direct approval of the President, the Army Signal Corps was established under the direction of Col. Albert J. Myer, and the original experiments in military aeronautics were begun under the guidance of that remarkable son of New Hampshire, T. S. C. Lowe. Lowe became the chief aeronaut for the Army of the Potomac. His balloons were in constant use as observation craft during every campaign from the first battle of Bull Run to Chancellorsville.[1]

2. On July 12, 1862, President Lincoln signed a bill originally introduced by Senator Henry Wilson, of Massachusetts, creating a national award for valor to be known as the Congressional Medal of Honor. From that day to the present, this has been accepted as the highest distinction of its kind in the gift of the United States. Maj. Rankin Roberts, of the Public Information Division, has informed the present writer that the Congressional Medal of Honor was granted to 327 individuals in the armed forces of the United States during the Civil War period. Among the first to receive it were certain members of the famous volunteer group that "stole" a Confederate train in Georgia in the spring of 1862.

3. Toward the end of the second year of the war a provost marshal general for the Army was authorized. On March 17, 1863, James B. Fry, the first provost marshal general in our history began his duties. From that beginning have come all the manifold aspects of the military police and related activities with which we are so familiar today.

4. Dr. Richard Shryock in his recent volume, The History of Modern Medicine, has reminded us that contemporary military medicine, surgery, nursing, and hospitalization owe much to the innovations begun during the anguished years of the Civil War. Early in the struggle President Lincoln appointed Dorothea Dix as the first superintendent of United States Army women nurses. Her stated duties were "to select and assign women nurses to general or permanent military hospitals, they not to be employed in such hospitals without her sanction and approval."[2] Before the end of the war 2,000 women had participated in this work of mercy. It was the services of Miss Dix, Miss Clara Barton, and many others—finely summarized by Marjorie Barstow Greenbie in her book, Lincoln's Daughters of Mercy—which led three decades later to the formal establishment by law of the Army Nurse Corps.

Another important development of the Lincoln administration in this field was the so-called Letterman plan for the evacuation of sick and wounded men from the battlefield. Devised in 1862 by Dr. Jonathan Letterman—for whom the present hospital of that name in the Presidio of San Francisco is a lasting monument—the Letterman technique was extended to the entire United States Army in 1864. It became standard practice in our armed forces after 1865, and was copied in other armies all over the world.

Supplementing the nursing and evacuation programs was the development of large general hospitals all over the North. Typical of these was the Lincoln General Hospital in Washington, D. C., and the Harvey General Hospital in Madison, Wis. The latter was so named at Lincoln's own request in honor of a war Governor from that State.[3]

5. On March 3, 1863, President Lincoln approved the first draft law in our history. Despite the many and well-known defects in this original venture into conscription, it became the precedent for later and more efficient draft legislation in 1917 and 1940. An amplification of the principle is now being advocated as a permanent American peacetime policy.

6. The first experiments in absentee voting ever attempted in the United States were carried out in the autumn of 1864. This little-known development is ably summarized by Joseph H. Benton in his book, Voting in the Field: A Forgotten Chapter of the Civil War (1915). Eleven of the 25 Union States, at the suggestion of the Lincoln administration, that year enacted soldier-vote laws. Approximately three-fourths of the military personnel who took advantage of this opportunity for absentee voting cast their ballots for the administration. This innovation of 1864 became the precedent not only for analogous legislation in 1918 and in 1944, but also for all subsequent civilian voting by absentee ballot.

7. The Union armies fought the Civil War largely with muzzle-loading muskets. But between 1861 and 1865 the Lincoln administration experimented in the field with at least twenty different kinds of breechloaders, among which were the noted Spencer and Henry carbines. By 1873 both these models had been taken off the market and developed into the Winchester rifle by the famous gunsmith of New Haven, Conn., Oliver Fisher Winchester.

8. The ponderous collection entitled "Official Records of the Union and Confederate Armies in the War of the Rebellion," comprising upward of one hundred and sixty volumes, was authorized by the Lincoln administration and begun in the autumn of 1864. This project, although smaller in quantity than similar endeavors planned for World War I and World War II, was the first large-scale effort of its kind in American history. It is still basic to a proper understanding of the belligerent aspects of the Civil War.

Even this abbreviated summary of these eight developments of the Lincoln administration in the area served by the War Department will suggest its resourcefulness and intellectual flexibility. One is impressed by the fact that much which is basic to modern warfare had its origin in the years between 1861–1865.

III

A third category of enduring achievements of the Lincoln administration comprises a number of remarkable developments in the

[1] Fragments of these balloons and papers relating thereto have been examined by the present writer, whose monograph upon Lowe and his work was published in the American Historical Review for July 1937.

[2] The Army Nurse (War Department, 1944), p. 8.

[3] There is a notable account of these wartime general hospitals in the recent book by Dr. Victor Robinson entitled "White Caps" (Lippincott, 1946).

related fields of wartime taxation and finance, which came within the province of the Treasury Department. Here the Lincoln administration made five lasting contributions to our national life.

Chronologically speaking, the first of these innovations was Federal paper currency. The original issue of such money in the United States consisted of non-interest-bearing Treasury notes authorized under the acts of July 17 and August 5, 1861. This issue was soon supplemented by the United States notes, commonly called greenbacks, circulated under authority of the act of February 25, 1862. Since these issues of paper money, the Government has always had some kind of paper currency in circulation.

The second fiscal innovation of the Lincoln administration was the placement of the famous words, "In God we trust," upon certain of our common coins. Authorized by Secretary Salmon P. Chase on the last day of November 1861, the phrase actually appeared for the first time upon the 2-cent piece of 1864. Since that date the phrase has been in continuous use on various coins. For example—and very appropriately—it first appeared upon a penny in the Lincoln-head issue of 1909, and upon the dime in 1916. It has been in continuous use on these two coins since those dates.

The third fiscal innovation was the income tax. This now-familiar type of taxation received its first national application in the decade beginning in 1862. Although declared invalid by the Supreme Court decisions in the 1890's, the tax was revived after the passage of the sixteenth amendment to the Constitution. Abraham Lincoln's advisers patterned their income taxation after current practice in Great Britain. The basic rates established in the act of July 1, 1862, were 3 percent on personal income between $600 and $10,000, and 5 percent on income above that. Modest enough, by contemporary standards. So far as national officeholders were concerned, the principle now described as the withholding tax was applied. Despite legal doubts, based on section 1 of article II of the Constitution, President Lincoln faithfully paid his income tax. It is interesting to note, however, that in 1872 his entire payments were refunded in a special warrant payable to his estate.

The fourth, and doubtless most familiar of all the financial achievements of the Lincoln administration, was the banking system introduced into our economic structure by the National Bank Acts of February 25, 1863, and June 3, 1864. The principal results of the establishment of national banks were the introduction of an additional kind of currency, the elimination from the monetary system of State bank notes, and the consolidation of powerful financial interests behind the United States Government. Thanks to the new national banks, the flotation of war bonds was most successful, and ample funds for the winning of the war were made available. (Incidentally, the national debt climbed from $75,000,000 on March 4, 1861, to $2,800,000,000 on September 1, 1865, or an increase of almost 4,000 percent.) But to the present hour, whenever one observes the word, national, in a bank's name, one should think of the financial ingenuity of the Lincoln administration.

The fifth accomplishment falling within the scope of Lincoln's Treasury Department was the formation of the United States Secret Service. The actual installation of the first chief of the Secret Service took place a few weeks after Lincoln's assassination, on July 5, 1865, William P. Wood, whose name is not even mentioned in the Dictionary of American Biography. But the plans for the Secret Service had been previously laid by Treasury Secretary Hugh McCulloch, and President Lincoln was cognizant of them. As the Treasury Department has written the present author, it is worth noting that the original chief of the United States Secret Service was Wood and not Allen Pinkerton or Lafayette C. Baker, as so often stated. Both these men had indeed been active during the war years, but they were on the pay roll of the War Department for activities akin to those of modern G-2 or of the OSS in the last war. The Secret Service was organized to protect the national banking system and the Federal paper money against the menace of counterfeiters. Confusion arises from use of the name as the equivalent of espionage.

IV

Perhaps less spectacular than the developments in the Treasury Department, but nonetheless worthy of note, were certain achievements of the Lincoln administration in the post office. Four developments under Lincoln should be remembered today. First among these in interest and importance was the inauguration on July 1, 1863, of urban free delivery by mail carrier in the 49 principal cities of the North. Thus, at the very hour when most American eyes were strained toward the fields around Gettysburg or toward the bluffs above Vicksburg, there began the indispensable plodding of the postman on his daily route.

In the law of March 3, 1863, which authorized city carrier service, a second innovation appeared. This was the establishment for the first time in our history of a uniform rate of letter postage, regardless of distance transmitted. Always heretofore, mail rates had varied directly in proportion to the distance the letters were to travel. Breaking through the rate complex which this system involved, the Lincoln administration inaugurated the present basic principle of uniform postage for first-class mail anywhere in the United States.

The remaining two developments may be briefly stated. In 1861 the Postmaster General issued the third series of United States postage stamps. This series, in use from August 17, 1861, to February 27, 1869, as every philatelist knows, was the first to include a 2-cent stamp. It was the well-known "Black Jack," bearing the stern face of Andrew Jackson. Since Lincoln's Presidency the Nation has never been without such a stamp, and scores of designs have been issued. In 1864, 3 years after the appearance of this stamp, came the introduction of the domestic money-order system into American life. Once again an experiment was destined for a permanent place in our national scheme of things.

V

In the field of jurisprudence and constitutional interpretation three enduring achievements of the Lincoln administration may be mentioned. They all are concerned with clarification of the Constitution or of custom.

The first of these was an elucidation of the meaning of article I, section 9 of the United States Constitution. This clause, of course, is the one relating to the suspension of the privilege of the writ of habeas corpus. By the actions of President Lincoln, by statutes of Congress, and by subsequent decisions of the Supreme Court, it was established that the President cannot suspend the writ by virtue of his own authority, but must wait for congressional authorization to do so. As a further result of the Lincoln administration's actions in the habeas corpus matter, it has been agreed that the writ shall be suspended only in the zones of military operations and then only when the civil courts fail to function properly.

The second constitutional clarification which occurred during Lincoln's administration was set forth in the so-called Prize Cases of 1863. These established the principle that Congress cannot declare war on a member State of the Union. Such a declaration may be made only against a foreign state. If on a small scale, conflict with a member State is to be treated as insurrection only; if on a large scale, it will be treated as rebellion.

The third clarification involved an American custom which in our own generation has been shown to be deeply rooted in the public mind. It is related to the size of the Supreme Court. As originally constituted in 1789, this august body had numbered six justices. Its membership was reduced to five in 1801, increased to seven in 1807, and further increased to nine in 1837. At that size it remained until the Lincoln administration. In 1863 Congress increased its membership to 10 justices. This was done because of a desire to provide a new circuit court of appeals for California and Oregon. Despite this plausible justification, however, the innovation was disapproved by the country. Four years after Lincoln's death the size of the Court was restored to nine. At that number it has remained since. Thus, by what logicians would call the method of the obverse, American feeling on this matter was permanently clarified.

VI

The Lincoln administration's enduring achievements in naval affairs were two in number: (1) a convincing demonstration of naval blockade as a means to victory; and (2) the introduction of ironclad warships in naval warfare. Familiar as these two developments may be, each deserves a brief mention. Gen. Colin R. Ballard, a distinguished British military critic, in his volume published in 1926 entitled "The Military Genius of Abraham Lincoln," pays high tribute to Lincoln's perspicacity and inexorable purpose concerning the blockade. General Ballard declares that the Lincoln administration in general, and the President in particular, thoroughly understood the principle of command of the sea and gave a never-to-be-forgotten demonstration of that principle during the years 1861–65. In the enforcement of the blockade the United States Navy increased from 90 to 670 ships, the officer corps rose from 1,300 to 6,700, and the enlisted personnel expanded from 7,500 to 51,500. The coast line blockaded by "Uncle Sam's web-feet," as Lincoln humorously termed the Navy, was 3,500 miles in length. But the results of that blockade were so effective that no responsible person since then has questioned the decisive nature of this technique of war. American naval policy in the twentieth century is based squarely on this precedent of the Lincoln administration.

Since this subject has been so thoroughly explored, it is unnecessary to go into the details of the adoption of ironclad warships by this country. Inquiry at the Office of Naval Records and Library in the Navy Department, however, brought the present writer a helpful letter from Capt. John B. Heffernan, its director. Captain Heffernan's communication furnishes some interesting data on the members of the Lincoln administration who were involved in the fateful decisions of 1861. The principals were President Lincoln himself; Gideon Welles, Secretary of the Navy; and Gustavus V. Fox, the First Assistant Secretary. They proceeded by authority of an act of Congress dated August 3, 1861.

A crucial meeting between these officials and naval experts occurred on October 4, 1861. That gathering was to decide which, if any, of the various designs for ironclad warships submitted by ambitious inventors was worthy of adoption. At this meeting Lincoln saw the plans for John Ericsson's *Monitor*. The President was pleased with the design, and made a typically alert remark concerning its practicality: "All I have to say is what the girl said when she stuck

her foot into the stocking. It strikes me there's something in it."[4] The meeting resolved to undertake the construction of three ironclad warships, one of them the *Monitor*, and the outcome of that decision is history familiar to all.

VII

Among the truly remarkable achievements of the Lincoln administration were three that for convenience may be listed under the general heading of the Department of the Interior. It is true that this Department was not responsible for their origin, nor was it charged with their development. But each of them pertained to an important aspect of internal or domestic affairs in the United States, and in that sense they may be considered as a related group.

The first was the Homestead Act, approved by President Lincoln on May 20, 1862. A final step in liberality to the westward-moving pioneer, this famous piece of legislation—still in effect in 1948—allowed a poor man to acquire a farm and home, carved from the public domain. The homestead question had been a political issue since 1848. It had been earnestly advocated by men like Galusha Grow, of Pennsylvania, and had actually progressed to the stage where only a veto by President Buchanan in 1860 prevented its enactment into law. In 1862, however, the Lincoln administration made real the homestead principle. Henceforth it was to be the cornerstone for agricultural development in the trans-Mississippi West.

Parenthetically, it may be noted that the Lincoln administration in July 1864, enacted the alien contract immigration law. Many students believe that this was the compensation offered to the industrial leaders of the Nation for the favors extended to the farmers under the provisions of the homestead law of two years before. It was under the provisions of the alien contract immigration law that the unique labor situation in North Adams, Mass., developed, a situation so deftly summarized by Frederick Rudolph in The American Historical Review for October 1947. Under this law, during the last 2 years of the Lincoln administration more than 300,000 immigrants were brought to the United States.

Allied to the Homestead Act in philosophy and results was the Morrill Agricultural College Land Grant Act, which became law on July 2, 1862. A delightful account of this congressional statute appears in the late Carl Becker's volume entitled "Cornell University: Founders and the Founding." Energetic as were men like Jonathan B. Turner, of Illinois, and Justin S. Morrill, of Vermont, in urging the passage of the act, it is clear today—as Becker so convincingly demonstrates—that no one in the Lincoln administration fully sensed the possibilities inherent in this provision of 1862 for agricultural and mechanical education in the United States. Knowing today, however, that every one of our 48 States has taken advantage of this statute of the Lincoln administration, we may venture the opinion that it is to date the most important single piece of educational legislation in American history.

Last in the related trilogy of achievements in our domestic economy was the chartering of two Pacific railroads. The Union Pacific was authorized by Congress in a law of 1862, and an amended act of 2 years later. The Northern Pacific was chartered by the same body in 1864. Most informed persons today are aware that these two so-called transcontinental railroads were established by the Lincoln administration during the Civil War years. With the name of the Union Pacific-Central Pacific project from Nebraska to California we associate the personalities of Grenville M. Dodge, Leland Stanford, and many others prominent in the history of engineering and finance. With the Northern Pacific line from Lake Superior to Puget Sound we link the names of Josiah Perham and J. Gregory Smith, two Yankees, respectively, from Maine and Vermont, and of Jay Cooke and Henry Villard. We know that both railroads were built with the aid of Federal land grants—a practice begun in behalf of the Illinois Central Railroad in 1850 and continued thereafter for 21 years. We know that certain railroad rate problems connected with these land grants of the Civil War period persisted until final settlement thereof by the Eightieth Congress in 1947.

But some aspects of this important railroad legislation of the Lincoln administration have sometimes been overlooked. Especially is this true with regard to President Lincoln's own connections with these projects. Because the Union Pacific was the first one chartered, and because, as John W. Starr has reminded us, Lincoln was profoundly interested in it, we may consider the Chief Executive's relationship to that enterprise.[5]

Under the statute as passed by Congress the President was charged with important responsibilities. He was directed to locate the point for the beginning of the line at that place in Nebraska which seemed best to him. Lincoln selected Omaha, and the Union Pacific still has its operating headquarters there. Likewise, the President was directed to locate the 300 most difficult miles of construction for which the Government had pledged the maximum subsidies. This Lincoln and his successor did, basing their decision on the rule that the dominating grade could not exceed that of the Baltimore & Ohio Railroad where that line crossed the Alleghenies. Finally, under the statute, President Lincoln was to fix the gage for the Pacific railroad.

The importance of this provision in the law was great. Prior to 1861 American railroading had employed as many as 23 different track gages in the construction of various lines. Most popular in the North and East was the Stephenson gage of 4 feet 8½ inches, brought over from Great Britain. In the South and in California, however, the prevailing gage was 5 feet. So confusing was the resultant situation that not until after 1865 was there continuous railroad passage across either the Potomac or the Ohio Rivers. All observers in 1863 agreed that the gage decided upon for the Union Pacific would probably be decisive in guiding the future operations of American railroads. President Lincoln at first was inclined to favor the wider gage. On March 3, 1863, however, he acquiesced in the desire of Congress and specified that the new line was to be built with the 4-foot 8½-inch gage. How vital this decision was may be inferred from the fact that within barely two decades all main lines in the United States had followed suit, and standard gage rolling stock was operating everywhere in the Nation. Aside from winning the war itself, the action of the Lincoln administration in thus insuring a standard gage for our railroads was its major accomplishment in attaining a true national unity.

Before leaving this fascinating topic of Lincoln's relation to railroads, it may be remarked that during his years in the White House the first steel rails ever used in the United States were imported; that, as Robert S. Henry has so ably pointed out,[6] the Civil War developed into the first truly railroad conflict of history, whose lessons were heeded in the great emergencies of 1917–18 and 1941–45; that during the war years the first post-office cars were added to American trains; that the oldest existent railway labor union, the Brotherhood of Locomotive Engineers, was organized; and that to Lincoln's funeral train in 1865 there were coupled the original Pullman sleeping car and the first Presidential private car ever built for an American Chief Executive. While the administration was not responsible for all these developments, it is worth remembering that they occurred.

VIII

So far as the Department of Agriculture is concerned, the Lincoln administration's contribution was to establish it as a truly important branch of our National Government. Building on a tiny foundation of previous work in the United States Patent Office, the Congress established the autonomous Department of Agriculture by an Organic Act approved by the President on May 15, 1862. Lincoln promptly appointed his good friend, Isaac Newton, a prominent farmer from Pennsylvania, as the first Commissioner for the new department. In his first annual report, issued the next year, Commissioner Newton aptly summed up the objectives of his department by saying that it was to help the agriculturist "make two blades of grass grow where one grew before."[7] From this telling phrase came the title for Thomas S. Harding's notable recent history of the Department of Agriculture (Two Blades of Grass, 1947).

Back of the Lincoln administration's decision to establish such a department were the rapid urbanization of the North, the war-induced need for increased production of foodstuffs, and the insistent pressure of agricultural societies all over the country. Confident of the President's support, Commissioner Newton rapidly expanded his new department. Within the first 2 years he had organized the divisions of plant industry, entomology, agricultural economics, and chemistry. In addition, Newton named the noted American botanist, William Saunders, as head of the department's experimental gardens. It was to Saunders that Abraham Lincoln turned for advice in designing the national cemetery at Gettysburg, and it was Saunders who was a pioneer in introducing into the United States selected plants of foreign origin, among these the eucalyptus tree and the valencia orange.

IX

These, then, were the enduring achievements of the Lincoln administration in the great areas of national life approximately within the scope of the eight principal departments of government as they were between 1861 to 1865. The story, however, is not yet complete. There were several other accomplishments which do not fit easily into the above pattern of reference.

Perhaps the most significant of these was the foundation of the National Academy of Sciences. The congressional statute establishing this institution was heartily approved by the President on March 3, 1863. The original incorporators included such well-known men as Joseph Henry, of the Smithsonian Institution; Asa Gray, from Harvard; and Alexander Dallas Bache. From the beginning the National Academy of Sciences has been quasi-governmental in nature, its nearest equivalent being the British Royal Society and the French Academy. Since 1863 it has limited its membership to 350 citizens of the United States, and 50 foreign associates.

[5] John W. Starr, Jr., Lincoln and the Railroads (1927), p. 194.

[6] The Story of Reconstruction (1933), pp. 419 ff.

[7] That Lincoln had something to do with the phraseology of Newton's report is suggested by the fact that Lincoln used the phrase in his address before the Wisconsin State Agricultural Society, September 30, 1859.

In 1916 the National Academy of Sciences offered its services to President Wilson; from that offer grew the National Research Council of the First World War. In June 1940, as the Hitler armies were overrunning Western Europe, the leaders of the National Academy of Sciences and certain others were requested by President Roosevelt to form the Defense Research Committee. In 1941 this was rechristened the Office of Scientific Research and Development. Now in the postwar period, with many doubts and heartsearchings in various places, efforts are going forward to estalish a National Science Foundation to encourage research in civilian and military endeavors. To us today, however, it is noteworthy that this entire trend of institutionalizing and subsidizing scientific research stems from an innovation of the Lincoln administration.

Three other miscellaneous but enduring accomplishments of Lincoln's Presidency may be named. One was the establishment of Washington Territory with the same boundaries as the present State in March 1863, the recognition of the State of West Virginia in June 1863, of Nevada in 1864, and the formation of Montana Territory in May 1864. Another was President Lincoln's invitation to all the governors of the North to met with him at the White House on September 26, 1862, an innovation from which the modern annual governors' conferences have evolved. The third was the use by the President of the press conference in a way that foreshadowed its development in our time. James E. Pollard in his volume entitled "The Presidents and the Press" (1947) has written as follows: "In his sense of public relations and in his dealings with the press, Abraham Lincoln showed more skill and acumen than any previous President and, allowing for the differences in time, more than all but one or two since." [5]

William H. Herndon once remarked of his celebrated law partner: "Mr. Lincoln thought too much and did too much for America and the world to be crammed into one epigram or shot off with a single rocket." Benjamin P. Thomas in his recent book, Portrait for Posterity, declares: "As our portrait of Lincoln becomes true, it also becomes more superb."

Both these aphorisms take on new proof from a review of the enduring achievements of the Lincoln administration. The mind that was as keenly interested in balloons as in the best gage for a Pacific railroad, that was as alert to the possibilities of a breech-loading rifle as to the need for improved agriculture, that was as sensitive to the feelings of the Negro republic of Haiti as to the demands of the financial magnates for a new banking system, that was as aware of the possibilities in Ericsson's designs for a naval ironclad as of Joseph Henry's dream of a National Academy of Sciences—such a mind is in very truth superb.

If we should include only the accomplishments sketched in this essay, there are more than 30. If we disregard all those directly connected with the actual prosecution of the war, i. e., those related to the War and Navy Departments, there are yet left a score of noteworthy achievements. If we strike from this list all those that seem inconsequential or of little import, there still remain a dozen achievements of first-rate importance in the shaping of American life and national character. Surely it is not too much to say that in creative imagination, in intellectual vigor, and in moral recognition the Lincoln administration left a heritage unsurpassed in our history.

The statue of Freedom surmounting the dome of our Capitol in Washington was placed there during the Presidency of Abraham Lincoln. On December 2, 1863, it was erected on what was then the highest man-made elevation in our Capital City. There it stands today, symbolic of the spirit and aspirations of our people. The Lincoln administration stands equally high in American memories. Its enduring and constructive achievements will always be cherished as proofs of democracy's vitality when enobled by leadership like that of Abraham Lincoln.

Socialized Medicine

EXTENSION OF REMARKS
OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the December 12, 1948, radio broadcast by a leading San Francisco attorney, Mr. Aaron M. Sargent, entitled "Socialized Medicine."

I recommend every person reading this convincing statement bring it to the attention of community leaders, members of health departments, educators, heads of service and women's clubs, labor unions and farm leaders, and others in position to give leadership on public thinking.

I am going to start this broadcast by reading some propaganda:

"The Soviet Union is a bulwark against war and aggression. It works unceasingly for peaceful international order. It has eliminated racial prejudice. It has established higher living standards. Its constitution guarantees free medical care, security in sickness and old age."

Screwy, isn't it? Particularly that stuff about international peace. I have just been reading part of an open letter for closer cooperation with the Soviet Union published in the September 1939 issue of a Communist magazine, Soviet Russia Today. You can get the original from appendix IX of the Dies committee report on the National Citizens Political Action Committee.

Some of the signers of that statement were university presidents, college deans, professors, clergymen, writers, poets, and other intellectuals. It contained the signatures of 170 gullible American liberals—theoretical and inexperienced people who are supporting a lot of the experiments being tried out by your Federal Government today.

HERE IS THE EVIDENCE

My subject is socialized medicine. I am not a professor. I am here to give you the evidence arranged as an attorney would present a case. This is not a dry subject which concerns only the business of your doctor.

Actually, it is your business. It is no longer safe for you to let theoretical and impractical people tinker with that business.

Suppose we get down to brass tacks. What is socialized medicine? What is the history of that movement? Perhaps we should start with Karl Marx, who worked out the theory of communism in 1848. That was 100 years ago. Socialized medicine is nearly as old as that. Bismarck introduced it in Germany in 1883. They called him the Iron Chancelor. He had no interest in the common man, nor in social reform. But he was interested in socialized medicine because it would strengthen the monarchy by making the people dependent on the state.

AS GERMANY TRIED IT

The German system spread to Austria in 1888 and was introduced in France in a modified form in 1918. Now, what was the German system?

Medical care was free—at least it was free in the sense that the patient made no direct payment for the service. The entire cost was paid by the state. It came out of a fund raised by general taxation.

When the French took over that system with the Province of Alsace, after World War I, they found it involved in huge deficits and wide-spread corruption. They substituted a medical reimbursement plan under which the patient paid the bill and then applied for a refund from the state. The service did not improve. Deficits continued. Medical care was free. The people abused their privilege and took advantage of the system.

Socialized medicine started in Great Britain in 1911. The present Labor Government passed a drastic law, this year, as a part of its nationalization program. New Zealand has been experimenting with a medical plan for the last 10 years.

The New Zealand statute provides that "every person is entitled, without cost to himself, to such medical care as is ordinarily given by medical practitioners in the course of general practice." Under that law the patient is free to visit as many doctors as he wishes, per day, per week, or per year—all without cost to himself. He has that right and he takes advantage of it. His prescriptions are free—so are his X-rays and so is everything else. It is all free—something for nothing.

The New Zealand system has a pension angle. With a doctor's certificate, a man can get on the pension list, at least temporarily, and sometimes for life. He can see one doctor after another until someone will certify him for the pension fund.

In New Zealand the annual cost is $60 per person. That means $240 per family. It would be a large item to come out of your budget. The direct tax takes five and a half cents out of every dollar paid as wages. That covers only a part of the cost. The balance comes out of the general fund.

NO TIME FOR RESEARCH

Even then, medical standards are low. A very small amount is voted for research. Physicians have little time for study. They must see too many patients in the course of a day. Ethical doctors are at a disadvantage. Those who will certify pension claims get most of the business. Medical practice is a question of endurance and survival.

The failures of social medicine in Germany, France, Great Britain, and New Zealand have certain elements in common:

The deficits put a squeeze on both doctor and patient. To avoid excessive cost the state had to limit the amount of service. Pressure was applied to force the doctor to use cheap remedies, even where more expensive treatment was necessary.

Some doctors had to see as many as 50 and even 100 people in a single day. Adequate care was impossible. Since the service was free, the patient had no interest in keeping down the cost. He did have a very definite interest in building up a pension claim.

THE APPROACH IN AMERICA

Our Federal Security Agency is backing a plan for compulsory health insurance. Its program is based on the following argument:

1. That the Nation's health is in a deplorable state;

2. That adequate care can be provided only under a compulsory system.

Draft rejection statistics are cited to prove an emergency.

Rejections during World War II amounted to 36 percent of the men called for duty. If that figure were an index of our public health, we would really be in a dangerous fix. But that is not the truth of the matter.

Many rejections were for nonmedical causes. Others involved conditions which could not have been prevented by any form of medical treatment. Men were eliminated for illiteracy, mental deficiency, and insanity—for minor difficulties such as eye trouble, defective hearing, and even for flat feet. There was quite a bit of venereal disease. It is a social rather than a medical problem. These items covered 60 percent of the rejections in some places.

The examinations were for combat duty, not to determine whether the men were in good general health, nor even whether they were fit for civilian employment.

So much for the medical angle. How about the economic consequences of this compulsory scheme? Group plans and private insurance companies will be eliminated. They are unable to pay the claims that will pile up under a free—get something for nothing—type of law. Health insurance will be a Government monopoly. There will be more waste, the result of bureaucracy. In France the cost of social security increased until it consumed 25 percent of the nation's pay roll.

LIFE INSURANCE NEXT

The next move will be to socialize life insurance, to make it part of the national pension system. Step by step the process will go on. Government invasion of insurance, or of any other business, is like creeping paralysis. It takes over one operation after another until the people have lost control of everything.

Very well, let's be practical and look at this as you do—the way you have to look at it. You want to do something about your own security. You are not a capitalist, or an executive, or a businessman. You work for wages. Maybe you are a white-collar worker.

Does this thing really affect you and your future?

You will find that there is nothing free about free medical care. It is a direct tax on wages. You pay the bill. You carry the burden of every man who takes advantage of the system. It will reduce your scale of living.

You will discover that you have gambled and lost your opportunity to get real security under voluntary plans. Fifty-two million persons now have some form of hospitalization insurance. Instead of turning over your future to a Government bureau, don't you think you should arrange for more security by an extension of that system?

DANGER OF SOCIALISM

Have you considered the danger of socialism? Freedom of employment can only exist in America where there is private operation of business. You may not always agree with your boss. It may be necessary to pass more laws to regulate his business. But think twice before you put him out of business.

Government ownership of business will bring political control over jobs and wages. Some public official will decide whether you or someone else is hired. You will have to play politics to make a living. No labor union in this country is strong enough to protect you against such a monopoly.

Under our system of private operation of business with an independent medical profession, we have the best health record of any large nation in the world.

Do you realize that in our generation 20 years of life have been added to the average expectancy of individuals at birth? Disastrous epidemics have been virtually eliminated; we have stronger, better-fed children; there has been a sharp reduction in the death toll from many diseases that were formerly high on the mortality list; and we have a vast storehouse of knowledge about the prevention and treatment of disease. This is the record of what has been achieved by freemen in the medical field in our time.

Do you know that the United States is the only country which spends an adequate amount on medical research? We have funds supporting the study of heart disease, cancer, and infantile paralysis. An amazing amount of progress has been made in the last 37 years—nearly all of it in this country. During the same period nothing of importance has come from Soviet Russia, or from any country in the grip of either socialism or communism.

You had better think about the effect of all this on the morale of our people. Every time we lead men to believe they can get something for nothing, we bring them closer to dictatorship. Lenin said, "Socialized medicine is the keystone to the arch of the Socialist state."

There are at least 10 Communist fronts working for social insurance. Do you think they are trying to improve conditions in the United States? Do you have the idea they are trying to build a strong nation, able to stand up against Soviet Russia?

COULD BANKRUPT UNITED STATES

No, the key people in these Communist fronts realize that compulsory health insurance will bankrupt the United States, as it has exhausted the finances of every nation which has tried that experiment. They know disorder will follow—that we will become disunited. And they know something else—they realize that controls established under that system will be available to set up a dictatorship.

Social security is the greatest delusion of our time. We have come to believe we can get security without working for it—that it is only necessary to vote for it. The people of another great nation went to destruction because of their belief in that delusion. They voted for a promise of their leader. He said: "We shall banish want. We shall banish fear. The essence of national socialism is human welfare. National socialism is the revolution of the common man. National socialism means a new day of abundance at home, and a better world abroad." Those are the words of Adolf Hitler, and that is the delusion.

What does America intend to do about its own delusion? What do you propose to do about it?

State Medicine in Practice

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. STEFAN. Mr. Speaker, on December 11, 1948, an article entitled "State Medicine in Practice" appeared in the Christian Science Monitor. This article was written by Elizabeth W. Wilson, who is one of the outstanding women actuaries in the United States and the only woman sent from America to the Congress of Actuaries in London this past summer. She made a study of the British socialized medicine program and her findings are being circularized by the American Medical Society. Because there is so much interest in this problem at this time, I feel that the membership of the House would be interested in reading this article. By leave granted to me, I include her article herewith in my remarks:

STATE MEDICINE IN PRACTICE—WAITING FOR THE DOCTOR PUTS DIFFERENT EMPHASIS ON BRITISH HEALTH SERVICE

(By Elizabeth W. Wilson)

One rainy mid-August afternoon I sat in Dr. Brown's surgery in an English provincial town. On hard benches around the walls were elderly women, young women, and a few children, new panel patients in the 6-week-old national health service. One matriarch grumbled, "In the old days, the doctor would have come to my house on a day like this; now he says, 'The government expects you to come to me.'"

Another woman spoke up, "Dr. Brown is better about that than Dr. Anderson. He won't go to you unless you have a fever of 102."

A toddler whimpered. Her mother apologized. "She gets so restless when we have to wait. It seems that is all we do nowadays. My brother had to wait 2 weeks until his dentist could get permission from a government dentist to put two gold teeth in his mouth, and the London man never even saw my brother."

The old woman assented. She continued, "Waiting, waiting, always waiting. We queue for the bakery, we queue for the busses—now we have to queue for the doctor. I could do half a day's work in the time I waste in line."

Her daughter soothed her with "You ought to be thankful that you can sit down here. Tonight, when the men come in, the line will be out in the street."

The woman who knew the doctor's wife reported: "Last Friday the doctor had 120 patients in his surgery and made 25 calls."

I made a quick calculation—120 patients in 2 hours; that was 2 minutes each. Other doctors were having similar experiences. A doctor in a northern industrial town had showed me his books for the first week of the new system. Together we had worked out the average time given an office patient. It was 6 minutes. In an eastern university town, a doctor said he averaged 3½ minutes.

I asked, "Doesn't the line move quickly?"

A woman, previously silent, replied, "Sometimes it does. When there are lots of certificates they take only a couple of minutes each. We have to get a new prescription every time our medicine is renewed, and certificates for glasses, stays (specially made corsets), and lots of other things." No wonder one of my general practitioner friends had written me that he was getting writer's cramp signing certificates.

The baby's mother said, "When the doctor is in a hurry, he pushes you right along; other times he lets you tell him everything."

The old woman sniffed. "Who wants to tell the doctor everything? The local executive committee can see his records and that gossipy little Minnie Smith is the committee secretary. Once she got hold of anything it would be all over town in a hurry."

Later I asked the doctor about this. He said that it was true. Despite the fact that before the service went into operation, the people of Britain were assured that their relationship with the doctor would remain personal and confidential. Regulation 507 provides that the doctor must allow his records to be inspected, and even turn over the records to the committee.

I asked him, too, about the report that family doctors were becoming mere distributing centers, pushing patients along to hospitals and/or specialists. He shook his head sadly. "There are only about 5,000 accredited specialists in Britain. Not quite all of them are in the service, but about 40,000,000 people have joined. Such a small group cannot do much to lighten the general practitioner's load. Of course, the outpatient departments of the hospitals help some, but it is next to impossible to get

patients into hospitals except in case of emergency. The Royal Devon in Exeter has a waiting list of over 1,400."

That checked with stories I had heard elsewhere. A 300-bed hospital in Cambridge has a waiting list of 1,800, and one of the big London hospitals has more than 4,000 applicants. The problem is not just building more wings but finding nurses to service the beds in them. A survey is being made of the possibility of more efficient use of existing facilities, but no one in authority seems to think that it can solve the problem. No other solution seems imminent.

As I walked back to my hotel from the doctor's office I saw another long line, this time in front of a chemist's shop (drug store). The next morning I interviewed the proprietor. He told me that since the new service had come into operation the number of prescriptions he had to fill had almost doubled. "Everyone seems eager to get something for nothing," he said. Moreover, the average cost per prescription has also increased. Doctors are using more proprietary drugs.

Under the old national health insurance doctors were forced to prescribe the less expensive drugs, but the Government has promised that under the present scheme such prohibition will not be used

What do the people think of the new service? Some like it. Some do not. Businessmen and farmers fear the cost. Factory worker and bus driver think it is a wonderful experiment. They brag that it is their service. One riveter actually told an eminent surgeon, "You must do as I say—you doctors are working for me now."

John Burroughs boasted, "Serene I fold my hands and wait." The Britisher has to fold his hands and wait for doctor, for hospital accommodation, for his prescription, and for governmental permission to have dental work done. The question is, How long will the laborer who owns the system remain "serene"?

The Liberalism Hoax

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. KEATING. Mr. Speaker, the distinguished majority leader attempted to point out in remarks on January 7, 1949, the manner in which the Democratic majority, through the device they saw fit to adopt the opening day of the session, have liberalized procedures in the House. One of the best answers to this chimerical claim is contained in the enclosed article by Mr. William S. White, of the New York Times staff. It shows the practical manner in which the new system will work.

The absolutism inherent in the changed rule is well known to the membership, which is familiar with the practical operations of such matters, and to the politicians who tailored the rule to suit their purpose.

The retrogressive step may not be equally apparent to the public. For that reason, Mr. White's illuminating explanation is extremely helpful.

HOUSE GIVES TO SPEAKER LARGE GRANT OF POWER—UNDER NEW RULES HE WILL BE ABLE TO HOLD UP OR EXPEDITE LEGISLATION

(By William S. White)

WASHINGTON, January 8.—The Democratic House, with the help of 49 Republicans who perhaps had in mind the events of last November 2, has now laid it down in the rubrics that its Rules Committee shall be forever curbed.

The committee, through the current Roosevelt-Truman decade, has been a bottleneck—and its members perhaps would not be the last to concede it—for many programs for innovation in many fields.

Its power has been, by inheritance, by tradition, by precedent, and by age, the power to decide, generally speaking, which bills should get to the floor, and which should die undebated.

Its personnel, for years, has been usually of the right-wing because about half—giving or taking a bit for the run and ebb of party control of the House—have been Republican. Most of the other half have been southern Democratic, since the southerners as a group run to high seniority, which is the key qualification.

ACTION INDICATED

When Mr. Truman was elected in his own right it was obvious, of course, that he and his associates had to do something about the situation. For it was the Rules Committee that had successfully put out orders, in the President's "worst" Eightieth Congress, that there should be no public housing, no universal military training, and nothing done about certain other items to which the President was committed.

However, when it came to putting down on paper ways and means to re-form the committee (the outright abolition of which was unthinkable because of the necessity of controlling the enormous flood of bills annually), many difficulties at once rushed to hand.

There was an early thought of packing it—until it was realized that the congressional system must take care of the minority, too. Therefore, if the leaders added new members, roughly in the proportion of one Republican to one Democrat (beyond a certain initial weighting in favor of the Democrats), the character of the committee would remain the same as it had been.

EVIDENT DISADVANTAGE

There was a notion to permit, say, 100 House Members to circumvent and dislodge the Rules Committee by direct appeal to the floor. However, administration Democrats soon recognized that under this scheme 50 Republicans and 50 southern Democrats, all with hostile purpose, could bring off embarrassing revolts.

So, at length, the administration forces settled on the ultimate design: any chairman (meaning any Democrat) of a legislative committee (meaning one directly responsible for making up bills) may now appeal to Speaker SAM RAYBURN if the Rules Committee insists on sitting unduly on his projects.

The Speaker, in this arrangement, is under direction to recognize the dissident—that is, to let him bring his proposal directly to the floor.

COMPLICATING FACTORS

There are, however, certain complications. There is nothing really substantial in House rule or law or custom—and custom is in every case the most powerful factor of all—to compel any Speaker to recognize anyone. He may, by design or simple omission, see someone else first, so to speak; and the first man on his feet may be the last man standing there.

Moreover, it is customary in the House for those seeking the Speaker's official ear on the floor to go to him in advance, perhaps the day before, and privately advise him as to what is afoot. Persons not taking these preliminary dispositions, which are, of course, in the nature of provisional requests, rarely get very far when the hour for recognition arrives.

But then, assuming one had sought out the Speaker in advance, there are other possible difficulties. If the applicant contemplated bringing up over the head of the Rules Committee a bill which the leadership did not want, various things might then ensue.

SPEAKER'S POWERS

The Speaker, who apart from his high constitutional office is almost always the unchallengeable boss of his party in the House, could indicate a certain displeasure. He could suggest that for ponderous reasons, including the disfavor of the administration, the bill should not immediately come in. He could, in the next to last resort, if the chairman-applicant remained adamant, arrange things so that not even all of the chairman's own members would stay with him in a show-down.

He could, in the last resort, cast all the party hierarchy's influence against the applicant.

Thus it is that Mr. Rayburn, as he is well aware, has received a power and a responsibility not given in generations to a Speaker of the House. He will be in command; and he will be responsible, in almost the complete sense of that term, for what the House does, insofar as the administration Democrats are not outweighed, from time to time, by the orthodox Republicans and whatever bloc of rebellious southern Democrats may be marshaled.

The House, in short, has recognized what has been recognized there since the middle nineteenth century: that in a body so large and inchoate some aspect of bossism is indicated, until some not yet devised scheme may be brought forward that makes a better and more democratic scheme possible.

The wheel, in all reality, has turned very nearly full circle toward the old days of czarism—in the hands of the Speaker.

The Rochester Institute of International Affairs

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. KEATING. Mr. Speaker, informed public opinion is perhaps the most important factor in enhancing the prospects for world peace. On December 11 last, the Rochester Institute of International Affairs was held in Rochester, N. Y. The institute was established a year ago as a joint venture of the Rochester Association for the United Nations—the largest dues-paid association in the country, the Rochester branch of the Foreign Policy Association, and the City Club of Rochester, Inc. The program this year was enlarged into both afternoon and evening meetings, follow-

ing the extremely favorable response accorded the inaugural program.

At the afternoon meetings Mrs. Vera M. Dean, director of research for the Foreign Policy Association, spoke on Our Responsibilities in World Affairs and Mr. Francis H. Russell, Director of the Office of Public Affairs of the State Department, on the subject Problems of Peace. In the evening the speakers were Maj. Gen. Gordon P. Saville, commanding general of the Air Defense Command, on The Role of the Military; Dr. J. Robert Oppenheimer, chairman of the General Advisory Committee for the Atomic Energy Commission, on the Open Mind, and the Honorable Sumner Welles, former Under Secretary of State, on A Decisive Moment in American Foreign Policy. The addresses by these leaders in their respective fields were uniformly informative and thought provoking.

Dr. Oppenheimer's address, it is understood, will appear in the February issue of the Atlantic Monthly and Mr. Welles' address in the magazine the Changing World, published by the American Association for the United Nations. The latter was also carried coast-to-coast by the Columbia Broadcasting System.

It was a moving experience to watch thousands of people from all walks of life crowd into these meetings, all searching hungrily for peace.

A letter was read from Mr. Trygve Lie, Secretary-General of the United Nations, to Mr. Sol M. Linowitz, general chairman of the institute. Mr. Lie said:

Please accept my best wishes for the success of the Rochester Institute of International Affairs.

Real international understanding can only be founded on an alert and enlightened public opinion and this in turn can only be developed if individual citizens will take it upon themselves, and are given the opportunity, to study and to discuss international affairs.

In affording such an opportunity to your fellow citizens I feel that you are performing a fine public service.

Mr. Linowitz, who did an outstanding job in making the arrangements for these meetings, described their purposes in these words:

The sole aim of the institute is to make an effective contribution toward the development of an alert public opinion, enlightened with respect to world issues and mobilized in support of intelligent leadership in international affairs. In conformance with this objective, the institute presents distinguished authorities, eminently qualified to discuss world problems.

It is significant that this year, even while the dread of another major war hangs heavy over the peoples of the world, the various segments of our community have made common cause in sponsoring this institute. Rochester's churches, civic organizations, professional associations, labor and management groups, youth agencies, and institutions of learning have here united to explore together the prospects for world peace.

We hope that the institute will continue as an annual community-wide event in Rochester. We trust that it will become an important force in the development of a fuller understanding of world issues and a clearer perception of the fundamental bases for an enduring peace.

The Rochester institute has now clearly attained Nation-wide significance. It represents a tangible and effective expression of community-wide devotion to the problems of world peace.

The Years Ahead

EXTENSION OF REMARKS
OF

HON. ALBERT M. COLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Alf M. Landon to Washburn Bar Association, January 11, 1949:

There are three subjects of intense interest and general discussion that will only be answered in the years ahead by the kind of government we have.

Government being used here to mean the administration of our public affairs.

These three subjects are one and the same. They are:

1. Our relations with Russia.
2. National defense.
3. Future business conditions.

In attempting to evaluate the years ahead, we must get a sound foundation in our thinking.

No longer can the fact be concealed from the American people that we have again lost the peace. This time by no stretch of the imagination can it be blamed on either the Republicans or the isolationists.

The hallelujah internationalists hysterically refused to permit any examination or consideration of what we were doing from the first trip of Secretary Hull to Moscow to the United Nations Conference at San Francisco.

Every attempt to point out that things were not as they seemed to be represented to the American people—that we ought to and had a partner's right to examine the colonial policies of our allies—that we had no foreign policy except revenge—that we were getting the cart before the horse at Bretton Woods or at the United Nations Conference at San Francisco—was met with hysterical cries of perfectionism or isolationism by the hallelujah internationalists.

The hallelujah internationalists had their way. The peace is lost again. America today faces its greatest menace in a great totalitarian government on three fronts. Every strategic position which Russia occupies today in the world was handed her on a silver platter by the U. S. A., and now superficial liberals would belittle the discoveries of a Communist conspiracy in America.

I have said heretofore that whether the contest between communism and capitalism would result in a war in the near future or not was more or less a guess. Personally, for some time I have not thought that it would result in a war in the near future—unless some explosive incident occurred. There are many opportunities for that to happen scattered over the world. I think the Russian strategy is based on the Marxian concept that the capitalistic system will fall under its own weight—undermined by subversive activity from within. That, however, does not mean that war with Russia is remote.

It is high time we believe Lenin and Stalin. They have repeatedly announced that the conflict between communism and capitalistic democracy is irreconcilable.

Their strategy of sabotage boring from within is well known. Confident of our strength, we have ignored it too long. Many a political campaign as well as key fortresses or battles in war has been lost by overconfidence.

Whatever their methods the end never changes—the destruction of the U. S. A.

The greatest menace to America today is to believe that if we are reasonable with Russia she will be reasonable with us—when there is not a spot on the globe where Russia has not precipitated a conflict with us.

The center of the conflict is not in western Europe or Asia or the Mediterranean. The crucial field of conflict is here in America—not Berlin—nor even China.

If our grand and glorious republic—the citadel of world democracy—can be conquered and crushed by the Trojan horse tactics prescribed by Marx and Lenin—the world battle against Russian imperialism will be lost.

More vital than rearmament is the task of tearing off the masks of so-called Americans—who by conviction, whims, or perversity, not gold—are destroying our country. Itching palms do not cause their treachery.

Spying—the cloak and dagger stuff—the delivery of secret state documents into the hands of the Communists—has dramatized but must not divert us from the vital job of penetrating the heart of Communist conspiracy to conquer America from within.

"In this cold-war period which has many world leaders far more frightened than they were during hostilities," to continue to ignore the gravity of the revelations of the House Un-American Activities Committee—not so much as spying as of infiltration—is to invite tyranny of communism and the ruination of our beloved Republic.

Regardless of smearing attacks on congressional committees—or of the personal habits of the men whose names have been involved—the fact that documentary evidence of a Communist conspiracy has been uncovered with plain indications that it is continuing today.

In the light of startling and shocking events—until at least some other Government agency proves as diligent in defense against Communist activities in America—and the surface of the Communist conspiracy has only been scratched—America is weakening by the systematic campaign attacking the House Un-American Activities Committee.

Hysterical cries of a witch hunt by superficial liberals and by the dupes of artful Communists—who are serving in false front organizations—must not divert our finishing of the job of removing the Communist gangrene eating into the heart of the Nation.

An administration that neglects to deal vigorously and immediately with the Communist conspiracy honeycombing America—in government—in labor unions where anti-Communist labor leaders are battling Communist labor leaders—in educational circles where Russian-first writers, lecturers, and teachers are busy as beavers—has as heavy a responsibility as if it failed to prepare for armed defense.

From the questions asked me daily, it is evident that people are increasingly mystified and concerned by the administration's attempt to sit on the lid of the Communist conspiracy in America and its failure to follow up vigorously the exposure and the prosecution of traitorous Americans uncovered as a result of the Canadian spy investigations.

The right of investigation by the legislative branch is a precious one. It extends from the National Capitol to statehouses and even municipal government under a council. Repeatedly it has proved its value. But as I have said heretofore, these investigating committees need to set up some standards and principles of procedure. The worst usurpations of the rights of citizens in modern times were the New Deal investigation

committees in the early thirties. But there were no protests then from the "totalitarian liberals"—even though private files were rifled and telegrams seized—something the Un-American Activities Committee has never stooped to.

I am convinced that the Russian dictator of half the world is waiting for us to knock ourselves out through our own financial excesses. By creating turmoil at home and abroad, the burden is increased on us. Capital investment is being diverted from reconstruction to rearmament in all the democracies.

The Eighty-first Congress should take stock of our resources and our potential expenditures and cut the cloth of its appropriations to fit the measure the same as any simple family—after first complying with the President's request for a sizable debt reduction.

No document in recent years measures the importance of the Hoover report. It shows how billions of dollars can be saved in the reorganization of the maze of Government bureaus. It deserves the intense attention of the entire country.

Both the Finletter report and the Hoover Commission estimate that billions of dollars could be saved if we have a real unification and an efficient administration of the armed services. Unification of our armed services is a joke—but a costly one. The bill passed by the Congress was a weak act, and it has been weakly administered.

The squabble between the top brass—their wasteful expenditures and unsatisfactory results—is a scandal. They ought to be fired and Congress should pass a real unification act not only for the sake of the already overburdened taxpayer—who cannot last forever the way we are going—but also for the sake of a more modern efficient planning and administration of our national defense.

I have repeatedly said for a year or more that the real crises we faced were in our defense program. Our national security is threatened by the dispute between the armed services. Under the supposed Unification Act, we have four secretaries where we had two before, and we have a flock of under secretaries and assistant secretaries.

The Secretaries for the Army, Air, and Navy and their Under Secretaries and assistant secretaries should be immediately abolished, and we should have but one Secretary for Defense with one Under Secretary and assistant secretaries. We should have one Chief of Staff for all the armed services.

Neither the Congress nor the President should tolerate the continuing disputes between the civilian and military heads of the three services—each lobbying for their own separate claims on the already heavily burdened Treasury and taxpayer.

The business conditions in the years ahead will depend on Government policies more than they have heretofore. I do not mean that government can plan successfully their arrangement or that government can guarantee economic security for any private individual. I mean that a wasteful and prodigal government can exhaust the resources of even so great a people as Americans.

Instead of seeking economies wherever possible in order to sustain our defense program, ERP, the draft, the rearmament, further expansion of Government spending is projected. Contrary to the plain intent of the Congress the ERP is being administered to too great an extent as a relief measure. A high-ranking ECA official says that only 26 percent of its funds are being used in what he calls multipliers.

Whether European economic recovery can ever be attained on a long-run basis under present policies is a big question.

Obviously domestic business will continue a mirage of prosperity as long as we are dishing out the money.

But we are duplicating our experience after World War I when we lost our shirts through the Dawes plan and kindred financing of European countries that led to the smash in 1929.

I made a good many speeches in 1933 and 1934 in which I said that a man that owned the little piece of Kansas land—free of debt—as near self-sustaining as possible—was in the best position to ride out the social, economic, and political storms ahead of us. I think that is becoming more prophetic every day.

As America goes so goes the world. And America can only be destroyed by Americans.

It can be destroyed by biting off more than we can chew through a wasteful and extravagant expenditure of the fruits of American labor, in local, State, and Federal Governments.

The American taxpayer is the first line of defense for democracy—the world over—today.

America can be destroyed in the factories—on construction jobs where men are not doing an honest day's work.

The battle is being fought when dishonorable executives of large corporations have participated on the side in the gray market of their product.

The battle is being fought when men do not realize the value of cooperative collective bargaining as well as cooperative organizations in business and agriculture.

The battle is being fought not by spies obtaining secret official documents but by traitorous Americans systematically striving to shape American policy—thinking—and labor activities to orders from the Kremlin.

These indefatigable followers of Russian imperialism masquerading under the false front of Communism would betray their America wherever they can.

Not itching palms but perverted thinking motivates their treachery to their country.

They would substitute:

1. Arbitrary imprisonment for the right to trial.
2. Slave labor for free labor.
3. Dictatorship for free elections.
4. Atheism for religion.
5. Tyranny for freedom.
6. Control of teaching—literature—arts—and sciences by the central committee in Moscow. Servile thinking for academic freedom.
7. Murder for debate.

The tyrants of Russia are proving their determination to kill by the sword or by slave camps every human being whose political beliefs differ from theirs.

We are in a situation where failure to resolutely and immediately uncover the deceptions and the trail of treasonable Americans who follow Moscow will be fatal.

The strength of the democratic world is the strength of America.

The strength of America is the strength of her farms and factories.

We have been thinking a lot about our external strength and not enough about external strength being dependent on internal strength.

It Might as Well Be Hiss

EXTENSION OF REMARKS

OF

HON. JOHN SANBORN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. SANBORN. Mr. Speaker, just to keep the record straight, I want to call to the attention of my colleagues the fact that the President has appointed Dean Acheson Secretary of State without consulting Republican members of the so-called nonpartisan Foreign Affairs Committee, which means, of course, that the nonpartisan foreign policy has been tossed out the window. The Republicans have been forced into the position where they must either appear very pitiful or they must accept the minority responsibility to investigate and criticize.

Mr. Acheson was the acknowledged head of that triumvirate that spearheaded the pro-Soviet bloc, namely, Mr. Acheson, Alger Hiss, and Harry D. White, former Assistant Secretary of the Treasury. These three claimed most of the credit—and probably deserved it—for drafting the Charter of the United Nations, the Morgenthau plan, the Yalta agreement, and for the adoption of the Bretton Woods monetary agreements, all of which have proved to be inimical to the best interest of the United States.

Soviet Russia is not a military threat to the United States; their war talk is intended only to frighten and cause huge expenditures in the hope we will suffer an economic collapse. The Marshall plan and the administration's spending program are furthering Russian objectives. This triumvirate is also responsible for spreading the poisonous propaganda that the Chinese Communists are merely agrarian reformers and for betraying Chiang Kai-shek, our wartime ally, who has been consistently fighting communism for 20 years. By abandoning the Chinese Nationalist Government we are making it possible for Russian communism to overrun all of Asia, including the Philippines, and seize control of raw rubber, tin, bauxite, and manganese, all of which are so vitally essential to our economy; and once Russia controls these raw materials she can force us to pay through the nose or cripple us economically.

I am appending the lead editorial from the Chicago Daily Tribune of January 10, 1948, just to keep the record straight:

IT MIGHT AS WELL BE HISS

President Truman has appointed Dean Acheson to be Secretary of State. He might as well have named Alger Hiss.

Dean Acheson was Assistant Secretary of State through the war, and Under Secretary from 1945 until July 1, 1947. Alger Hiss was his man. It might be said also that he was Hiss' man. Hiss was his principal follower in the State Department. They were widely recognized as leaders of the pro-Soviet bloc there.

Adolf Berle, another New Deal Assistant Secretary of State, testified before the House Committee on Un-American Activities that in 1944 he fell out with the Acheson-Hiss clique because he "felt that the Russians were not going to be sympathetic and cooperative." He lost that fight and was exiled to Brazil as American Ambassador, ending his diplomatic career, he said.

Berle was a little less than frank. He told the committee that he was "worried" about Hiss. Actually, Whittaker Chambers had been taken to him 5 years before this incident, and Chambers had named Acheson's man, Hiss, to Berle as one of the persons in the State Department who was serviceable to Russian spies.

Acheson was the real father of the Marshall plan, insofar as it had a father on this side

of the Atlantic. He suggested its essential details in a speech in Mississippi before Secretary Marshall made his speech at Harvard. The give-away scheme originally included gifts to Russia. After the plan got rolling, Acheson quit the State Department and went back to the practice of law in Washington. He took Alger Hiss with him, as well as Alger's brother, Donald, another pro-Russian character.

A MILLION DOLLAR FEE

Acheson and the Hisses started lining up foreign governments as clients, for whom they solicited American gifts from the European-aid funds that Acheson had suggested and helped obtain. At one time they were reported to be trying to get half a billion dollars for Soviet-dominated Poland, for which service the fee was to be a million dollars.

Acheson was scheduled to be a witness before the Un-American Activities Committee, but never appeared. That would be an appropriate body to question him on his qualifications for the office to which he has been named.

Jay Franklin, the columnist who wrote campaign speeches for President Truman last year and has utilized that connection to write what is represented as inside information on the President's plans, comes out with a new one in the current issue of Life magazine. He alleges that what he calls the Marshall-Forrestal-Byrnes-Vandenberg foreign policy is to be replaced by a Truman foreign policy, of which the keystone will be an attempt to reach an agreement with Russia.

The Acheson appointment would fall in with such a theory. Although Acheson aroused Russian fulminations 2 years ago when he was beating the drums for the Marshall plan, he has a long record of pro-Russian conduct before then—conduct so pro-Russian that there is evidence on which to consider it anti-American.

Whatever the merits of efforts to end the cold war, and they may be considerable, Dean Acheson is not the person to handle them.

The New Crisis in the Republican Party

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The New Crisis in the Republican Party," which I made to the Young Republicans Convention at Salem, Oreg., on Saturday, December 4, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NEW CRISIS IN THE REPUBLICAN PARTY

It is a great honor to be invited by the young Republicans of Oregon to address this convention. It is also a great responsibility to address you because these are days in the life of the Republican Party when we must engage not only in critical analysis of Republican mistakes but also in constructive building of a great party which will represent and protect the common good.

I do not ask you to agree with my analysis of some of our party's problems. I never ask audiences to agree with me, but I do ask them to think with me about the various issues of government which I endeavor to raise for consideration in my speeches. It is easy for a politician to win audience approval or at least avoid audience disapproval if he says nothing in a speech but uses a lot of words accompanied by sound and fury in saying it. Unfortunately, too many Republican speeches have been like that and I suggest that Republican platitudes are part of the explanation for our party's not being in control of the affairs of our Government today.

Our defeat on November 2 has in no way changed my determination to continue to do whatever I can to help build public confidence in the Republican Party so that our party will be entrusted with the executive and legislative responsibilities of our Government. I am as convinced today as I was before the election that a Republican victory on November 2, 1948, was needed if we are to protect constitutional government in America and bring to our national administration the efficient farsighted statesmanship which I think it so sorely needs and which the election of a Republican President would have given it.

There is room in the Republican Party for broad differences of opinion on specific issues. In fact, one of the great strengths of our party is to be found in the fact that we have made great progress in our party over the years by hammering out on the anvil of conscionable compromise the differences of opinion which have existed from time to time between conservatives and constitutional liberals within our party. We Republicans have always recognized the importance to sound Republican government of making steady middle-of-the-road progress within the checks and balance system of constitutional procedures. Conservatives and liberals alike in the Republican Party have rejected the technique of the Democratic Party of circumventing constitutional procedures whenever the Constitution stood in the way of some end sought by the Democrats. One need mention only a few incidents to illustrate the point. Yalta and Potsdam stand out as clear examples of circumventing the treaty making procedures of the Constitution. The price we are paying for those mistakes is a dangerous threat to the peace of the world.

It was at Yalta that Korea was sacrificed on the altar of Russian Communism. It was at Yalta that concessions were made to Russia in Asia which never would have been approved by the Senate of the United States had those concessions been submitted as a part of the settlement of the peace through a treaty as they should have been. It was at Potsdam that the Berlin crisis was born. It needs no argument to prove that the Senate of the United States would have at least asked for a corridor into Berlin and would most certainly have insisted upon a clarification of our rights, prerogatives, and jurisdiction in Berlin.

It has been difficult to get the American people to fully appreciate that the Democratic administration has been willing to circumvent the Constitution and it has been more difficult at times to get people to understand the danger of that policy of the Democratic Party to their rights as individual citizens and to their daily living. It sometimes seems that to many people the Constitution is but a mere document of empty words—something to be praised in the abstract but not to be practiced in fact. Too many fail to see that it is a dynamic, living set of principles which grants them their political rights and economic freedoms. Thus they were not too alarmed or at least not as alarmed as they should have been over a court-packing plan or a proposal to draft men into private industry at the whim of the President and in the name of government direct them to be transferred from point to point in this country and required to work under the instructions and orders of private industry for the profit dollars of private employers. Too frequently the people have not seen the basic conflict between the highly discretionary, arbitrary, and capricious procedures of the Democratic administration and the provisions in this country of principles of government for which we Republicans have fought—namely, government by law in accordance with the liberalism of the Constitution.

Many people call me a liberal, but my liberalism consists of putting into practice the liberalism of the Constitution. It is that type of constitutional liberalism which I am convinced the overwhelming majority of the young Republicans of America, and I believe the rank and file of Republicans of all ages, really desire to put into practice.

Thus tonight I propose to address you briefly on the subject The New Crisis in the Republican Party. At the outset I would stress that irrespective of what differences may exist in the Republican Party, the leaders of that party, conservative and liberal alike, have a responsibility now of trying to weld together a sound program of constructive legislation—a program which will convince all groups within our society that we are the party which seeks to protect the legitimate interests of all segments of our economy without becoming the political tool of any economic pressure group. We must convince the American people that we are striving against the development of political alinements in this country based upon economic class consciousness. Nothing will wreck more quickly or more completely political and economic democracy in America than the development of political alinements based upon class conflict. If I were a member of the Democratic Party, I certainly would be greatly concerned with and deeply disturbed over the rapidity with which the Democratic Party is fast becoming a class-conscious party in America.

One of the troubles with the Democratic Party is that it has made so many inconsistent and conflicting promises to so many economic pressure groups in America that I am sure it will find it necessary to revive as its theme song during the next administration the old ditty, Yes, We Have No Bananas.

However, the Democratic Party is bound to slip on the peelings of its own promises. Therefore, we must prepare our party now to stand for a program which will restore the confidence of the American people in a forward-looking statesmanship. My campaign experiences in the 1946 and 1948 congressional campaigns have left me with a deep-seated conviction that the overwhelming majority of the rank and file of registered Republican voters of this country are much more forward looking in their point of view as to what the Republican Party should stand for than are many of our Republican leaders who in the Eightieth Congress followed a legislative course of action which cost us the election on November 2, 1948.

In the campaigns of 1946 and 1948 I gave a great many speeches for the party. In the 1948 campaign I traveled across this country speaking in behalf of the Republican National Committee before many audiences which were greatly concerned over the issues of labor, agriculture, cost of living, taxes, education, and war or peace. I believe that every man who holds high office in the Republican Party has an ethical duty to do whatever he can to help win elections for the Republican Party. Until we can place our party in control of both the White House and the Congress, we cannot demonstrate to the American people that we can be counted upon to meet in the people's interest the many issues which are causing the worries that are troubling all citizens these days. I am particularly critical of those so-called liberals in the Republican Party who in times past have accepted high office from the Republican Party, have enjoyed the benefits that the party gives them through their offices, have accepted committee assignments in the Congress of the United States from

the Republican Party and then have sulked in their tents during a campaign. In fact sometimes some of them have even gone so far as to bolt their party because their party has not accepted in toto their views on every subject.

Many of you have heard me say before, but it is worth repeating now, that Republican conservatives and liberals alike have an ethical duty to work together in campaigns in an endeavor to elect a Republican administration in this country. I recognize that one's intellectual honesty makes it necessary for him on occasions to remain silent rather than support an individual or an issue which in his honest opinion cannot be reconciled with either the best interests of the party or of the country. However, that's quite a different thing from doing what some Republicans, both conservatives and liberals, have sometimes done in recent campaigns—namely, injure their party's chances at election by either bolting their party or failing to cooperate in a campaign.

Of course, some of you may ask how consistent are you in living up to the principle of political ethics which I have just enunciated? Haven't you at times in the Senate of the United States refused to support the recommendations of the Republican policy committee of the United States Senate? I plead guilty to that charge if charge it is. I most certainly have at times voted contrary to the recommendations of the Republican policy committee of the Senate. I shall continue to refuse to support the recommendations of the Republican policy committee of the United States Senate whenever in my judgment the facts do not support those recommendations. It should be self-evident to every Republican in Oregon that the voters in Oregon did not send me to the United States Senate to let the chairman of the Republican policy committee, be he BOB TAFT or any other Republican, cast my vote for me. They sent me to the Senate to vote for issues on their merits in accordance with the facts as they are presented.

I shall always vote with the chairman of the Republican policy committee whenever he and his committee can demonstrate that their recommendations on an issue are sound on the merits and are not based primarily on partisan strategy. It needs to be emphasized that the Republican policy committee of the United States Senate is not the Republican Party. The Republican Party is composed of millions of rank and file registered Republican voters of this country. I shall always be willing to take my chances any time with those voters when it comes to my honest differences of opinion with recommendations of the Republican policy committee of the Senate as to what are sound Republican policies and principles.

When I first went to the Senate it was a common practice when one was sitting in committee and was called to the floor of the Senate by the vote bell to have some Republican leader tell you when you arrived on the floor of the Senate that such and such a bill had been called up for a vote and that it was an administration bill and that the vote should be "no." Sometimes after I went to my desk and pulled out the bill I would discover that it was a much-needed bill which should be passed in the public interest, and so I would vote "yes." Sometimes after the roll call on such occasions the Republican adviser who had met me at the door would say, "WAYNE, did you miss the instructions on that one? Didn't you realize that it was an administration bill and the vote was 'no'?" To which I would reply, "I understood the instructions all right, but you failed to tell me what was wrong with the bill."

We will never build a strong Republican Party in the Congress of the United States unless and until the Republicans in Congress demonstrate to the American people that we are willing to subordinate partisan and political strategy to the merits of needed legislation. In fact, in the Eighty-first Congress, I think we should proceed without delay to offer constructive legislation needed in the fields of labor, agriculture, taxation, education, veterans' affairs, conservation, reclamation, civil rights, and improved policies in foreign affairs plus legislation on many other issues which are causing such great concern to the American people. It is my hope that Republican strategy in the Eighty-first Congress will not be a defensive one trying to block the advance of the party of the opposition. Rather we should grab the ball at the beginning of the session and start our own march down the field of political statesmanship in support of sane, reasonable, workable legislation aimed at bringing about the needed stability in American policies, both domestic and foreign. If we do not take the offensive, I am fearful that a majority of the American people will cheer the opposition party on to further victories in 1950 and 1952.

Right now is the time for us to analyze the new crisis in the Republican Party. What do I mean by the new crisis in our party? Obviously, I refer to the significance of the walloping which the voters handed the Republican Party at the polls on November 2, 1948. It is clearly the worst election licking the Republicans have taken since 1932, especially when viewed in the light of the long head start which our party was given.

These are days when all Republicans, conservatives as well as liberals, should conduct a searching post mortem in an endeavor to detect any heretofore undisclosed political diseases which killed our party's expectant victory at the very critical time when most of us thought it was aborning. There is no point in trying to rationalize or alibi the political realities which caused our defeat.

So many campaign advantages were handed to the Republican Party during the weeks preceding election day that we cannot, with intellectual honesty, deny the fact that President Truman gave us an unmerciful whipping.

Republican advantages in the campaign were many. The Democratic Party suffered from the bitterness of the Wallace and the leftist commie-line attacks against Truman. The Dixiecrat split in the Democratic Party was also a serious handicap to Truman and those responsible for it wrote a disgraceful page in American history. It is shocking to think that in the year 1948 any group of Americans would attempt to form a political party based upon bigotry, intolerance, racial discrimination, and desecration of the Bill of Rights.

Truman's next handicap was his lack of campaign finances. His expected defeat was so completely taken for granted by former financial supporters of the Democratic Party that most of them refused to buy any hay for the Democratic donkey. One frequently heard the jesting remark that Truman was looking for a railroad siding on which to park his special train because his empty pockets were sure to reduce him to a campaign of political hitchhiking.

The epidemic of political laryngitis, which seemed to confine most of the top Democratic speakers to their tents for the duration of the campaign, was another liability to Truman. Only a few of the Democratic platform battlers such as Barkley, Brannan, Tobin, O'Mahoney, Ickes, Clark, McMahon, McGrath, and some others were willing to stand up for Truman and fight it out until the final bell sounded.

We now know that the hardest and toughest puncher of all was Truman, who threw such terrific right and left hooks into the body of the Republican policy that the American people counted us out, though we were still on our feet, on election day.

In an article in the February 1948 issue of the Progressive I warned that the Republican leaders in Congress who were responsible for the political-gesture anti-inflation bill passed during the 1947 special session of Congress deserve the rebuke recently handed them in President Truman's sound criticisms of the bill.

I also said it was fortunate that the great majority of registered Republican voters and people generally, did not share the reactionary economic views of those responsible for the bill, and suggested that it was not too late for the Republican Party to recover the anti-inflation bill which it so clumsily fumbled in the 1947 special session of Congress.

Finally, I said: "Let my Republican Party never forget that there are not enough Republicans to elect a Republican President, nor enough Democrats to elect a Democrat as President. Fortunately there are not enough fellow-travelers to elect Wallace.

"In 1948, as always, the political balance of power will be held by the millions of independent voters in our country. Their eyes are watching the Republican majority now sitting in the Eightieth Congress.

"The record of that Republican Congress in the months immediately ahead will determine in a large measure whether the voters' verdict in November 1948 will be victory or defeat for my party." Subsequent events speak for themselves as to whether that warning was sound.

Thomas E. Dewey was handicapped throughout the campaign by the failure of the Republican Party to make a record in Congress which would convince the American people that my party could be counted upon to protect the economic weak from the exploitation of the economic strong. Mindful of that record, it is understandable that powerful political groups, such as farmers, teachers, organized labor, many small-business men and large numbers of other consumers, were so politically frightened by economic-fear arguments in the campaign that they voted for Truman.

I would emphasize as strongly as I can that Thomas E. Dewey, the candidate, did not lose the election but rather the Republican Party and its strategy lost it for him. Further, I would stress that Dewey is the outstanding public administrator in the country today. He would have given to our National Government an administrative efficiency and a sound program of constitutional liberalism which are needed if we are to have government by law rather than by arbitrary men. Dewey's great record as Governor of New York, his devotion to efficiency in the handling of governmental affairs, and his support of progressive legislative policies make his future leadership a continued source of strength within the Republican Party.

However, there is no sense in Republicans trying to hide the fact that Dewey's defeat was a great blow to the party. Now is the time for the Republican Party to reorganize along the lines of constitutional liberalism so that the next Republican candidate for the Presidency, whoever he may be, will not have to plunge into the political swim of a campaign with the heavy stone of a reactionary congressional legislative record around his neck.

There is no doubt about the fact that Truman succeeded in convincing millions of American people that the Republican Eightieth Congress had let them down. It did let the people down on some issues. Nevertheless, it made a much better record than the people were led to believe. For the most part, Truman's attacks on the Eightieth Congress were unanswered. That was a mistake in Republican strategy. Dewey was entitled to reinforcements from Republican leaders of the Eightieth Con-

gress all across this Nation in answer to Truman's charges.

It needed to be pointed out, in clear terms, as some of us endeavored to do, that the record of the Eightieth Congress, in carrying out a sound bipartisan foreign policy under the able statesmanship of ARTHUR VANDENBERG, was historically a great one. It needed to be pointed out that this record in foreign relations had been marred on occasion by the blunders of the Democratic administration, including the Presidential mistakes growing out of the Potsdam Agreement and the White House proposals to sidestep the United Nations.

The public should have been reminded that the Taft-Hartley Act was no more the product of Republicans than of Democrats. While it unfortunately wears a Republican label, it was passed by Democrats as well as Republicans. The veto would have been sustained if the President had made a vigorous fight and if those of us who were battling to sustain the veto had received any substantial support from the Democrats in the Senate.

The point should have been stressed during the campaign to a much greater extent than it was that the Republican Party stood for needed revisions in the Taft-Hartley law. Some drastic revisions are needed in order to correct the injustices which have developed under the law since its passage. It should have been pointed out as some of us did during the campaign, particularly those of us who were sent by the Republican National Committee before large labor audiences throughout the country that both our Philadelphia platform and Dewey's Pittsburgh speech on labor pledged our party to a revision of the Taft-Hartley Act in light of facts which can be established showing that injustices exist in the law. It should have been pointed out that increasing numbers of employers for months past have been urging amendments to the Taft-Hartley law along the lines of the procedures of the Morse-Ives bill. There simply can be no doubt about the fact that too many Republican leaders, partlcularly in the Eightieth Congress disenfranchised in their thinking the overalls of America. They forgot that those overalls were on legs which would walk to the voting booths on November 2 carrying heads that entertained resentful determinations against the labor legislation of the Eightieth Congress.

Too many of our Republican leaders fell for the line that only the labor leaders disliked the Taft-Hartley law. The unsoundness of that observation was demonstrated on November 2. Too many of our Republican leaders victimized their own thinking by falling into the non sequitur that because there was a decline in strikes after the passage of the Taft-Hartley bill there was some cause to effect relationship between the law and the decline in strikes.

Now we are confronted with a concerted drive on the part of labor aimed at swinging the pendulum so far to the other extreme that they propose to have the Taft-Hartley law repealed and the Wagner Act repassed without change. In my speech before the CIO convention the other day in Portland I made crystal clear that I will be just as opposed to that extreme pendulum swing as I was opposed to the extreme swing which changed the Morse-Ives bill into the Taft-Hartley bill.

So far as I am concerned sound legislative principles must be applied equally and without discrimination to both labor and industry. In this instance one sound principle is that labor legislation must be designed to protect the legitimate rights of both labor and industry and thereby protect the public welfare. One of the issues of my 1944 campaign for the United States Senate was my stand for the equalization of the Wagner Act. Contrary to the opinion of some in Oregon who have yet to read the constructive proposals I made in the Senate for an equalization of rights under the Wagner Act, I delivered on my pledge to fight for fair labor legislation in the Congress of the United States. Come January 1949 I shall continue to carry on that fight by advocating a substitution for the Taft-Hartley Act in the form of legislation which revises the old Wagner Act in those ways necessary to make it a fair and workable piece of labor legislation.

No extended comment needs to be made about the loss of the labor vote. Everyone knows now that the Taft-Hartley Act was a terrific political liability to the Republican Party. In vain some of us in the Republican Party argued in the Senate that if the Congress passed the Taft-Hartley bill without removing its unfair, unworkable, and unconstitutional sections, the party would hear about it at the ballot boxes of America.

Here again, Thomas Dewey is not to blame for the loss of the labor vote. He pointed out in his speeches that as the facts were presented showing existing injustices, he would support amendments. Some of us who were campaigning for Dewey assured many labor audiences that we would propose specific amendments to correct what is now generally recognized by employers and the general public as well as labor to be necessary in order to have a fair and just labor law. However, too many workers were afraid they could not count upon a Republican Congress to correct a wrong which it never should have committed in the first place.

As to the issue of inflation, it needed to be pointed out that the so-called anti-inflation bill, offered in the closing days of the special session of 1948, was a monstrosity. It is common knowledge that a majority of the Democrats in the Senate would not have voted for it if they had thought there was any danger of its passing. Furthermore, Republican campaigners should have made clear that the so-called Barkley antiinflation bill of the special session was nothing more or less than a clever piece of political strategy which the Democrats knew had no chance of passing but which they hoped would pin on the Republican Party the onus for the failure to take effective steps against inflation.

I say it was up to the Republican leaders of Congress rather than Dewey to point out to the American people the good features of the record of the Eightieth Congress. It also was their obligation to confess its serious failures.

We Republicans cannot afford to ignore the valiant fight made by Harry Truman. His chief strategy consisted of discussing his differences with the Eightieth Congress. Republican speakers, for the most part, ignored those differences but the voters didn't. Thus, the Republican organization as a whole failed to take unequivocal yes-and-no stands on a series of specific issues which were disturbing large groups of voters. For example, one of the primary causes of our defeat is to be found in the fact that millions of housewives voted against us because Truman convinced them that the Eightieth Congress was directly responsible for high kitchen costs in America.

We lost several million farm votes also, because many Republican leaders and candidates in farm States talked in broad generalities about farm problems. It is not true that Tom Dewey failed to take a definite stand on protecting the purchasing power of American farmers; but it is true that many individual Republican candidates on State tickets tried to soft-pedal the farm issue during the campaign, with resulting dissatisfaction and defection in the farm vote. The political reality is that at this moment too many farmers do not look upon the Republican organization as being sufficiently friendly to farm interests. I think the farmers are mistaken on this point, but it is up to the Republicans in the next session of Congress to demonstrate it.

It was most unfortunate that many farmers developed the notion that the Republican Party will not take those steps necessary to maintain the purchasing power of the farmer. As I said many times during the campaign and repeat now, the Republican Party recognizes that the standard of living of American workers, of American businessmen, of men and women in the professions, and of our consumers generally depends upon the purchasing power of the American farmer. The reason for that is an obvious economic fact. We are basically an agricultural economy in the sense that when the purchasing power of the American farmer falls below the standard which permits him to maintain himself in health and decency, the inventories of American business backlog. Unemployment then walks the streets of America and a depression is the inevitable result.

In the 1920's the American farmer experienced his depression 6 or 7 years before the rest of us. Those in charge of our Government at that time did not act fast enough to check the economic toboggan ride toward the depression which the farmer took in the early 1920's. I am afraid it is true that the Republican Party failed to make clear in the election just ended that we have no intention of withdrawing a support program necessary to maintain the purchasing power of American agriculture at that level essential to maintain national prosperity.

No one can deny that there are inequities in the support price program and that some changes are needed in that program in the interest of the farmers as well as the interest of the public at large. One cannot talk to a farm leader of any of the national farm organizations who will not tell you that there is a need for a revision in the program. However, the need for revision is in the interest of making the program more economically sound so as to lift from American farmers the criticism and resentment that is developing among some consumer groups of the country as a result of some of the inequities and abuses which have developed in the program.

Before the election, plans were already under way on the part of agricultural leaders in this country to sit down, for example, with the Agriculture Committee of the Senate under the direction of that great Republican agriculture leader in the Senate, GEORGE AIKEN, of Vermont. It was planned that agricultural leaders should work out with the committee the needed reforms and modifications which the farm leaders themselves recognize in the interest of American agriculture need to be adopted in an improved Agricultural Adjustment Act. The result of such a cooperative effort between our party leaders and the farm leaders would have been a strengthened and not a weakened Agricultural Adjustment Act.

Nevertheless, we cannot deny the fact that too many farmers became confused about the farm issue in the campaign and voted against our party on November 2. As I said a moment ago, we must demonstrate in this next session of Congress that the Republican Party stands for a sound and fair Agricultural Adjustment Act.

To my great surprise, in campaigning for Dewey, I found that many small-business men were impressed with Truman's arguments that continued prosperity could best be assured through a Democratic administration.

We have an obligation to our party to make perfectly clear that we are not an anti-business party. In speech after speech before labor audiences during the campaign I

stressed the point that the standard of living of American workers depends upon a successful operation of our capitalistic system. The soak-the-rich philosophy which characterizes the thinking of many so-called liberals cannot be reconciled with the public interest. The soak-the-rich attitude is but another example of class-conscious bitterness which we must guard against in America. The notion that special privilege through big business and American monopoly controls the Republican Party is without foundation in fact. Unfortunately, we cannot escape the political reality that too many Americans believe that our party is controlled by big business. Whenever special privilege, be it in the form of big business or labor or agriculture or the pressures of any other economic group in this country, ever seek to foist upon the American people a legislative proposal which is not in the interest of the common good, we must make clear that the Republican Party can be counted upon to oppose it.

Likewise, we must make clear that we stand for a legislative program which will protect the legitimate rights of business as well as of labor and the farmer and the professions and all other economic groups. Take, for example, the need for a complete revision of our tax laws in this country. Such a revision is necessary if we are to encourage venture capital in this country to invest in productive enterprise which will create new jobs and new wealth out of which we can obtain the new tax dollars to meet the tremendous obligations of government which will be with us for years to come. Any system of confiscation through taxation which has characterized many of the tax proposals of the Democratic Party in recent years truly threaten the economic welfare of the people of this country as a whole and of each economic segment within the country. Likewise, a tax-reduction program which is not based on a sound revision of existing inequities in our tax structure will always cost our party dearly at the polls as it did on November 2, 1948.

Another group the Republicans lost in the last election was the teachers of America. Their votes are not numerous, but their influence is great. Some way, somehow, they developed a notion that the Republican Party could not be counted upon to raise the minimum standards of education in America, and they blamed the Republican House of Representatives in the last session of Congress for knifing a sound Federal aid to education bill. Contrary to the arguments of some very sincere opponents of Federal aid to education, BOB TAFT'S bill on this subject, of which I am one of the co-authors, does not endanger our educational system to the evils of socialization and nationalization. If there is any amendment to that bill which anyone wants to offer which will make it any clearer that the local school authorities shall have complete control over any funds allocated to any State under the bill, I shall be glad to introduce the amendment. I am satisfied that the Taft bill, which is a Republican Federal aid to education bill, has within it all the safeguards necessary to protect local control of our schools. However, we must as a great political party recognize that the educational opportunities of an American boy or girl should not be dependent upon the tax-paying ability of the district into which he or she has been so fortunate or unfortunate enough to be born. The development of an enlightened citizenry through high standards of education across the Nation is our hope for intelligent voting. The right to a free ballot is democracy's answer to totalitarianism. An enlightened and well-educated citizenry is democracy's assurance of preservation.

Republicans, young and old, need to recognize that constitutional liberalism does not mean any form of socialism or economic statism. It does mean that representative government has the responsibility of maintaining those minimum checks and regulations necessary to prevent our free enterprise system from degenerating into license to take advantage of the economic weak. It means having our Government cooperate with all segments of our economy to the end of doing for the people as a whole in cooperative effort with business, labor, agriculture, and the professions only those things which they cannot do for themselves, as Lincoln put it and which need to be done for the common good.

To illustrate the point, let us take the problem of national health. In my judgment, it is sound Republican policy to work for an improved Public Health and Welfare Department, for cooperation of the Federal Government in establishing a sound National Science Foundation, for Federal assistance in cancer research and heart disease research, for improved hospital facilities, for assistance to medical schools and similar aids to improve health facilities in America. However, such a program is a far cry from any proposal to make private practitioners of medicine the employees of the Federal Government. Thus, I have always stood opposed to the basic principle of the Wagner-Murray-Dingell bill because it rests on the clear proposal to socialize the medical profession. There are those in Oregon who persist in trying to create the false impression that I favor the Wagner-Murray-Dingell bill. My record in the Senate is a complete denial of such falsehoods. In this last session I voted in committee against reporting the bill favorably to the floor of the Senate and on previous occasions since I have been in Congress I have spoken against the bill as I did in my 1944 campaign. Apparently, what bothers some people is that I do not share the view that Congress should not consider any problem that involves public health problems. Medical statesmen among the doctors of this State and this county do not share that view and I intend to continue to work with such medical statesmen in an endeavor to meet the public health needs of this Nation without in any way socializing the medical profession.

If we are to meet successfully the new crisis in the Republican Party, the Young Republicans must take our Republican cause to the young people of America. You are entitled to and must receive the wholehearted support of all Republicans, young and old. In this State, for example, you must be given a large allotment of Republican organization funds so that your program and work can be carried on 12 months of the year, every year. We must stop the mistake of thinking that we can win campaigns by working hard just during the 3 months preceding a national election. We have a 4-year job of political work cut out for us, starting right now, if we are to win in 1952, and win we must. However, we must stop talking to just fellow Republicans. That is one of the troubles with us. Votes are not made at Republican dinners given by Republicans for Republicans. Let us get out and talk to the independent voters of America—to the farmer, laborer, housewives, students, professional men and women, to consumers generally. Your obligations as Young Republicans are mighty important ones and our State and National organizations cannot spend party funds to a better purpose than seeing to it that your organization is generously financed.

The future of the Republican Party, as I see it, will have further defeats unless the party can unite its forces in support of a sound, middle-of-the-road program of constitutional liberalism. Such a program will be unacceptable to the leftists who seek to destroy our capitalistic economy and set up economic statism; it also will be opposed by the political and economic reactionaries—and there are too many in both major political parties—who stand for a laissez faire economy and a return to the normalcy of the boom-and-bust cycle of the 1920's. The election has demonstrated, in unmistakable terms, that these extremist philosophies are not favored by the American people. It is plain, therefore, that constitutional liberals within the Republican Party have a real opportunity. They must offer a program based upon the view that one of the primary objectives of the American system of representative government should and must be to protect the economically and politically weak from the exploitation of the economically and politically strong. Such a program, however, must be achieved within the framework of a private-property economy and in accordance with the legal principles and guaranties of the Constitution, including its precious Bill of (human) Rights.

The Young Republicans of Oregon and the Nation have a great opportunity to revitalize the Republican Party by reorganizing it along the lines of constitutional liberalism. Unless we win the confidence and support of the young voters of America future defeats rather than victories will confront us. Although the crisis in our party is a serious one, the challenge facing Young Republicans to lead the Republican Party down the road of constitutional liberalism is a great one. The hour is a historic one, and the opportunity for political statesmanship squarely confronts us. You must not fail either our party or our country meeting the challenge of political leadership essential to a Republican victory in 1952.

America, the Last Hope of Mankind

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Last Hope of Mankind Rests With Us," delivered on August 21, 1948, by Daniel L. Marsh, the distinguished president of Boston University.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LAST HOPE OF MANKIND RESTS WITH US

(Commencement address, August 21, 1948, by Daniel L. Marsh, president of Boston University)

The most intelligent and serviceable patriot is not necessarily blind to the intermittences, exceptions, and faults of his native land. Intelligent patriotism seeks the improvement of one's country, and the correction of errors which may be found in it. Thus, if a patriotic American sees anything menacing the freedom upon which our Republic rests, it is his duty to warn his fellow patriots.

Democracy is the catchword of the hour. Unfortunately, it has been bandied around so much by so many different kinds of persons, and has been made the vehicle for as many pet "isms" that it stands in need of new definition for the new generation. The word "democracy" comes from the Greek word demos, which means the people. Democracy is the rule of the people. It stems from the principles of liberty and equality, and is

plainly a progressive aspiration. With the dawn of history we can dimly see the principle of democracy at work in the embryonic government of the hunting or collecting tribe or group. From that simple beginning we can trace the rise and fall, the emergence and submergence, the development and destruction of democratic elements in governments across the continent of the years.

Historic is the democracy of the city state of Athens and of the other parts of the Greek world; but in time it ceased to be. We note also the representative democracy of Rome through several centuries; but it ceased to be. We see the principle of democracy at work among the Germanic and other peoples, but it ceased to be.

Hope for the larger share of the good things of life—food, shelter, pleasure, education, beauty, security, and all the other good things—has lured mankind up from slavery through feudalism to full democracy. The history of mankind has been a struggle for freedom. Freedom is the most sovereign idea of democracy. It is an indispensable condition for the realization of the good life. Hegel concludes his Philosophy of History with the oft-quoted declaration that the history of the world is nothing but the development of the idea of freedom. The idea of freedom has been given sporadic application in democratic governments across the ages, and has come to its finest flower and fruitage in our American form of government.

Ours is a republican form of government. It is a government by law and not by men. Its theory rests upon the idea that chosen representatives make the laws, and that all citizens give to the laws due and reverent obedience; for it is by law that individual conduct is socially controlled. As Samuel Johnson once said, "The law is the last result of human wisdom acting upon human experience for the benefit of the public."

At the laying of the cornerstone of Bunker Hill Monument, Daniel Webster said: "Our history hitherto proves that the popular form of government is practicable, and that with wisdom and knowledge men may govern themselves; and the duty incumbent on us is to preserve the consistency of this cheering example, and take care that nothing may weaken its authority with the world. If, in our case, the representative system ultimately failed, popular governments must be pronounced impossible. No combination of circumstances more favorable to the experiment can ever be expected to occur. The last hope of mankind therefore rests with us."

The ideas and ideals upon which democracy rests are the sacred worth of the individual; equality of opportunity, equality of rights, and equality before the law; justice, which is the maintenance of that which is right, and the practice of the Golden Rule in everyday life; the brotherhood of man under the fatherhood of God; service as the mark of greatness and freedom.

The fundamental concept in our political philosophy is that this equality and this freedom are inherently our rights. That is why mankind uniformly and universally applauds Patrick Henry's demand: "Give me liberty or give me death." Freedom and equality are ours by nature. We do not need to beg anybody for them, and nobody can confer them upon us. Herein lies the difference between the Magna Carta and the Declaration of Independence. In the case of the Magna Carta, tyrannical King John was forced by the barons to sign the statement that he gave to the English certain rights and privileges. He was so mad about it that after the barons went away, gleeful over their achievement, King John flung himself upon his face and gnashed his teeth in the dust as he exclaimed: "Why didn't they ask me for my kingdom while they were about it?" In the case of our Declaration of Independence, our forefathers boldly asserted that "all men are endowed by their Creator with" these inalienable rights.

But no democracy, no republican form of government, will automatically remain pure and vigorous. Every generation is faced with the necessity of saving society. Its accumulated moral strength will subside and ultimately end in a spurious democracy, if not actually in a dictatorship or some other form of despotism, unless its strength is renewed in each new generation.

Recall the warning of Daniel Webster, "The last hope of mankind rests with us." Are we so accustomed to the justice, the tranquillity, and the blessings of liberty secured for us and our posterity that we take them for granted, or as a matter of course? Will the forces that have ruined former attempts at self-government ruin ours? Will some future historian write the Decline and Fall of the American Republic? Is our form of democratic government to disappear as all others have in the past? Are we to lose our freedom? Are we to suffer the perversion of our rights? To make certain that such a calamity does not befall us, would it not be sensible for us to ascertain from a study of history what have been the principal factors in encompassing the ruin of former efforts at self-government? I have been a student of history for a good many years, and I give it to you as my calm judgment that three forces have more often wrought the destruction of free government than all other forces put together; that under three headings can be classified nearly all the factors contributing to the failure of self-governments across the ages. Let me name them for you.

The first is war. "War," declared Napoleon Bonaparte, who was in a position to know something about the subject—"War is an anachronism." War is worse than that. It is organized insanity. It is a recrudescence of the jungle. War never solved any problem. We were assured, at the beginning of World War I, that we were waging war to end war; that we were offering our lives and our treasure "to make the world safe for democracy." We have had terrible evidence ever since that that war did not end war, nor did it make the world safe for democracy.

At the beginning of World War II, we were glibly assured that we were fighting to establish "four freedoms": Freedom of discussion, freedom of religion, freedom from want, and freedom from fear. The first two of these were named in the Constitution of the United States, and therefore could not be called new objectives. The other two objectives which were sought at tragical cost turned out to be empty mockery. Never in the history of the world have gaunt want and famine stalked among more human beings than since that war closed, and never before have so many persons been racked by fear.

History teaches nothing more plainly than that such freedom as the people may have is sooner or later a casualty of war. That, as any truthful and accurate historian will testify, is the story concerning Babylon, Assyria, Greece, Rome, Spain, Germany—each of these was in its day the great nation of the earth; but where are they now? Each took the sword and perished with the sword. It was naval defeats that brought an end to the Grecian Empire. It was extended wars that spelled the collapse of Rome. It was the First and Second World Wars that not only brought a practical end to the Germany that was great, but that also started the disintegration of the British Empire. It was the First World War that gave Russia communism. The Second gave it to the countries that we now describe as Russia's satellites. A third world war will probably give communism to the world.

No matter how democratic a government may be, and no matter how much freedom the citizens may enjoy, when the nation is at war the citizens yield more and more of their rights and their liberties to the government. They must in order that the war may be carried forward; for the very organization of war is dictatorial, and its conduct is bound to be despotic. Then in its wake the people find that the nation has come to rely upon physical force and violence; that the idea of the sacred worth of the individual has been scrapped; that there is a changed attitude toward private property; that control for the average warrior's daily life has been transferred from self to others; that hate and intolerance have been engendered; that family life has been broken down, and that reverence for things sacred has been lost. Every war takes from the people more than it gives back, not only in the way of life and treasure, but also in ideals, liberty, and self-government.

It appears that the full Christianization of international law will have to wait the slow action of Christianized public opinion. One thing is certain, we must have an international organization that will possess power to enforce its decisions. Nations must be willing to surrender some of their sovereignty to a representatively constituted United Nations. The international organization must make its decisions in a democratic way, by vote of the majority rather than by veto of a single member. It must have at its disposal an international police power to enforce its decisions. And certainly the nations of the earth must agree upon some form of gradual disarmament; for history has proven that a high state of military preparedness inevitably leads to war.

Education cannot escape its responsibility in this matter. Gen. Dwight D. Eisenhower wrote a letter last January, explaining why he would not allow any political party to nominate him for the Presidency of the United States. In the course of that letter, he said: "It is my conviction that the necessary and wise subordination of the military to the civil power will be best sustained and our people will have more confidence that it is so sustained when life-long professional soldiers * * * abstain from seeking high political office. * * * Nothing in the international or domestic situation especially qualifies for the most important office in the world a man whose adult years have been spent in the country's military forces."

If this is sound (and it is sound to the core), then by the same token, no professional military man should be made Secretary of State, and no professional military man should be appointed as an ambassador to a great foreign country; for a professional military man is accustomed to giving orders and having them obeyed, and that is not the way it is done in diplomatic circles. No professional military man knows how to compromise, nor does he know that political and civic progress is usually the result of compromise. The typical military mind is more likely to be concerned with face saving than with peace saving.

Just a year before General Eisenhower uttered his wise decision, he was present as an honored guest at a dinner which the trustees of Boston University, and others, tendered me on the twentieth anniversary of my presidency of the university. In the course of his address, General Eisenhower said: "I venture almost to challenge, why doesn't Dr. Marsh and the president of every great university throughout the world teach his people to put people of my profession permanently out of a job?"

We must teach the peoples of the world to stop glorifying war. We must teach them the ugly naked truth that war is the summation of all villainies, and that it is generally worse than the thing it is waged to overcome. We should educate them to develop a sense of national humor equal to their sense of national honor.

The second cause of loss of freedom, as historically demonstrated, is too much regimenting, controlling, and "Santa Clausing" by the Government and other agencies. Freedom of choice and freedom of initiative are indispensable to progress. Anything that trammels or restricts individual initiative, independence, or self-reliance leads inevitably to a loss of national freedom and democracy. Compare the material progress alone in the United States for the past 150 years with other countries, ages, and civilizations, and you will find that more substantial progress has been made here than was made in the 2,000 years preceding. It is not accurate to say that this is because of our unlimited natural resources; for the savage Indian had the same resources. Neither is the explanation found in our greater industry; for all over the world and through all ages, human beings have generally worked harder than Americans work. We cannot claim it is because we are inherently superior; for that is probably not so, even though it flatters our ego to think so.

The real reason is found in the dictum of the American Economic Foundation, namely: "Man's material progress depends upon natural resources plus human energy multiplied by tools." It is the release and control of human energy, and the extension of that energy by tools which human ingenuity has devised, that makes the difference. The energy of an individual can be used effectively only when he himself is free to use it.

Americans have been free to seek the truth in their own ways; free to investigate; free to express opinion; free to reach their own conclusions and to announce their own convictions; free to invent and to make the best possible use of inventions. It was this freedom of initiative and the virtue of self-reliance that nerved Americans to the physical conquest of this continent in a relatively short time, which is the greatest physical accomplishment in the history of the world.

Now take away incentives to excel and to achieve, take away the necessity to dare and to do, take away freedom to produce and encouragement to productivity, and you have taken away the secret of human progress.

This is the verdict of history. When the Roman government began to provide food and amusements for the citizens, and to do everything for them, then Rome was on its way out. When the Government of France began to issue orders defining exactly what businessmen might do—what amount of wool might be used in a factory, and what color of warp and what color of woof should be used—then France was on the toboggan. When Spain became a government of bureaucrats, each bureaucracy limiting and trammeling and restricting the freedom of the citizens, issuing orders across the wide expanse of the Atlantic to Central and South American colonies, giving them orders in the most minute detail, then Spain had passed the zenith of her power and glory.

So it is with every nation: Self-government is lost because the freedom upon which it rests is lost. When a government undertakes to do everything for the people—to order their business and private lives, to prescribe now an economy of scarcity, now control of production, and now subsidy for this and that and the other thing, then the cost of government mounts terrifically. The natural consequence is such an increase in taxation that the nerve of business adventure and business initiative is cut. It is pleasant to have the Government take from me the necessity of arranging my own affairs while I work, and to provide for me when I loaf. It seems pleasant until I awaken to the fact that the very Government that I thought was doing everything for me is headed toward the destruction of the blessings of liberty and self-government which, according to its Preamble, the Constitution of the United States was adopted to insure.

The founding fathers knew that soundness of our Republic's economic structure was interknit with protection of the individual citizen's right of free enterprise.

Individual corruption is the third principal cause of freedom's collapse. When the citizens become corrupt, they lose their liberties and despoil their democracy. In 1787, Benjamin Franklin (who was one of the most influential members of the Constitutional Convention) said: "I believe that this Constitution is likely to be well administered for a course of years and can only end in despotism as other forms have done before it when the people shall become so corrupt as to need despotic governments, being incapable of any other." It would be a good thing to have that statement printed in bold-faced type on the front page of every newspaper in the United States on the 17th of every September.

President Monroe in his inaugural address gave expression to similar convictions, thus: "It is only when the people become ignorant and greedy, when they degenerate into a populace, that they are incapable of exercising their sovereignty. Usurpation is then an easy attainment, and the usurper soon found. The people themselves become a willing instrument of their own debasement and ruin."

The French historian, Guizot, once asked James Russell Lowell, "How long will the American Republic endure?" Lowell replied, "As long as the ideas of the men who founded it continue dominant."

To such warning we should give heed. One country after another has risen to power, only to decline and fall. One civilization after another has risen to preeminence and then has collapsed—and in every instance, the fall, the collapse, has followed in the wake of corruption on the part of the people. Verily, the ancient scripture is true, "Where there is no vision, the people perish," and again, "Righteousness exalteth a nation, but sin is a reproach to any poeple."

Herbert Spencer declared: "The republican form of government is the highest form of government; but because of this it requires the highest type of human nature."

That means that any American who is intelligently devoted to the preservation of our form of government must live a life of personal integrity. When I was in Washington recently, I had time between engagements to stroll along its magnificent streets. As I passed the building which houses the United States Department of Justice, I read on one facade these words: "Law alone can give us freedom," and on another facade, I read: "Justice in the life and conduct of the state is possible only as first it resides in the hearts and souls of the citizens." The same thing can be said concerning all the other virtues that make for the safety of our Republic: honesty, efficiency, courage, temperance, tolerance, good will, thrift, industry, fidelity to duty, and all the rest. Socrates called morality the art of self-possession and self-government. The only fundamental freedom he taught was "rule over one's self."

Reorganization of the Federal Government

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by my colleague from Massachusetts, Hon. CHRISTIAN A. HERTER:

EVERYBODY IS FOR IT, BUT—

(By Representative CHRISTIAN A. HERTER)

No crystal ball is needed to predict the reception which will greet the report on the reorganization of the Federal Government when it is made public. The newspapers will hail the potential saving of billions of dollars. Our political and business leaders will praise the vastly more efficient executive machinery of the future. For some time it will look as though the reorganization plan submitted by former President Herbert Hoover and his commission will become law without difficulty.

It won't work out that way, however. It never has. Even before the cheers have died away, groups all over the country will be starting quiet campaigns to block this or that section of the proposal. And some of these groups, I am sorry to say, will include the very businessmen who have been loudest in their praise. Their attitude, if unfortunate, is perfectly understandable. But they ought to realize that, if they persist, reorganization of the executive branch of the Government has as much chance of success as a fur coat salesman in Africa. For all the other vested interests—including Federal employees—will be encouraged to turn on their own varieties of heat.

All my friends in industry and finance constantly tell me they want less government in business. They think they mean it, too. But the fact is that business demands, year by year, more and more services from Washington. Executives have long since grown accustomed to getting what they want from specific agencies. Their relationship with the officials who run them is cordial. If a particular agency is abolished for the sake of greater efficiency, some businessmen will have to make their contacts all over again. Like nearly everybody else, our business leaders are often allergic to change.

Further, the services rendered American industry by Washington often result in substantial financial savings. Let me illustrate what I mean by describing an imaginary board meeting of a fictitious corporation. The concern manufactures a type of oil used for precision machinery. Now I am not familiar with the recommendations to be made by Mr. Hoover's commission. But suppose, just as an example, that the Bureau of Mines were absorbed into some other agency. The board of the XYZ Oil Co. is meeting to discuss the change:

Director Jones: "We can't do anything to upset that bill. We all know that. It means savings of billions to the taxpayers."

Director Brown: "That's right. All the industrial leaders of the country must support it."

Director Smith: "I'm for the reorganization plan as a whole—heart and soul. But take this idea of shifting the Bureau of Mines."

Director Jones: "What of it"

Director Smith: "Well, those folks have been doing a good job for us for years. They analyze our oil. How do we know the new agency will continue to do it?"

Director Brown: "Why can't we test our own oil?"

Director Smith: "Well, I've looked into that. I estimate it would cost us a couple of hundred thousand dollars a year."

And in due course, if the XYZ Oil Co. happens to be in my district, I receive a letter from its board chairman. This assures me that he is enthusiastically in favor of reorganzing the Government. He has publicly so stated. But his associates and he would like to point to the minor matter of the Bureau of Mines. Why make this change? So I am supposed to offer an amendment to

the reorganization bill which will preserve the Bureau of Mines.

Perhaps it wouldn't matter so much if requests for such special amendments were isolated One Congressman fighting single-handed to save a lone bureau could scarcely thwart the reorganization program. He might be an impressive debater and fill the CONGRESSIONAL RECORD with material that would convince his constitutents he was on the job. But, no matter how forceful his arguments, they could not prevail against the logic of reorganization were his the only plea of its kind. Unfortunately, there may be many such pleas.

Take any Representative. We shall assume that he refuses to back that amendment to the reorganization bill which will maintain the status quo of the Bureau of Mines—the one my constituents have asked me to offer. The day that he reaches this high-minded decision he gets a barrage of telegrams from his own district, in California. He learns that adoption of the reorganization plan will mean the shutting down of a Pacific Coast navy yard, as of no possible value.

When I meet this colleague in the House restaurant he is in deep gloom. He tells me the curtailment of that navy yard will throw 1,000 of his constituents out of jobs, and the loss of pay roll will be bad for business. Over the potato salad he recalls my interest in the Bureau of Mines and tells me I can count on his support to save that Bureau if I will help him keep his navy yard.

Soon things start to snowball. A third colleague, from a farming area, says he's under pressure to prevent any change in the Department of Agriculture. A fourth, from a railroad center, wants to preserve the Railroad Retirement Board as an independent agency, and so on.

What started out as a lone Representative asking for just one little amendment to preserve just one little bureau has become 300 Representatives joining hands to support 300 little amendments to preserve 300 little bureaus. Whether we like it or not, that is the way Congress works, and such is the situation that the reorganization bill faces at this session—unless, of course, the folks back home want things done differently.

On the one hand, voters send Members to Congress to represent them in the Government of the United States. As such, the Representative is expected to legislate with a view to the national interest. When considering the general welfare, the Member from Massachusetts is expected, in theory at least, to be as much concerned about the effect of a law on the people of California as on those of his home State.

CONFLICT OF INTERESTS

On the other hand, the voter often asks his Congressman to give first loyalty to his district and even to special interests within that district. When there is a clash between the national interest and the local interest and the Representative is called on to make a compromise that will keep his constituents satisfied, he is statesman enough to see the larger view and bargainer enough to make a good deal for the old home town.

In January 1933 President Hoover was awaiting his successor in the White House. He was making a final effort to reorganize Government departments. In a press conference he quoted remarks he had made 5 years earlier:

"Practically every single item in such a program has inevitably met with opposition of some vested official, or it has disturbed some vested habit, and offended some organized minority. It has aroused the paid propagandists.

"All these vested officials, vested habits, organized propaganda groups, are in favor of every item of reorganization except that which affects the bureau or the activity in which they are specially interested. * * * In the aggregate, these directors of vested habits surround Congress with a confusing fog of opposition."

The fogs of similar confusion will surely be rolling across Capitol Hill before spring touches the trees this year. Unless, that is, those who might suffer by details of the reorganization plan subordinate their selfish interests to the greater good. Reorganization has been a primary objective of every President and every Congress for the past five decades. Never before, however, has so searching a study of possible improvements been made or the problem approached on so broad a front. The Nation's business leaders would do well to ponder the quality of the men serving the Hoover commission before they presume to oppose its findings. The members are, in the main, businessmen.

The Federal Government has grown so vast that no group could effectively examine all of it. So the job was broken down into 22 projects with experts working on each. Here are the names of a few of the men: Robert R. Nash, formerly director of the purchase analysis division, Ford Motor Co.; J. H. Geary, formerly assistant manager of stores, Erie Railroad Co.; Leon J. Jacobi, inspection and standards engineer, Detroit-Edison Co.; Franklin D'Olier, former board chairman, Prudential Life Insurance Co.; Thomas M. Searles, president, Equity Co.; Thomas Jefferson Coolidge, board chairman, United Fruit Co.; John A. Stevenson, president, Penn Mutual Life Insurance Co.; Ferdinand Eberstadt, president, F. Eberstadt & Co.

GREATER EFFICIENCY

The report now being presented will go much further than recommendations for better housekeeping in Washington. Such minor improvements might save $300,000,000 or more and would arouse slight opposition. It is safe to predict that the Hoover commission changes will be basic. In addition to grouping or eliminating overlapping functions, they will seek to eliminate some of the checks and balances which, because they seemed essential to honesty in government, have grown to such a degree that they threaten to bring the whole executive machine to a dead stop. In the past year, I am informed, the Veterans' Administration made 1,000,000 separate purchases which averaged less than $10 each. But it actually cost $24 per article to authorize, check, inspect, approve, and audit each $10 purchase.

During the early stages of World War II it was sometimes said in Washington, not wholly facetiously, that the surest way to win the struggle would be to burn the General Accounting Office.

I did not share this yearning for arson, but I did sympathize with harassed procurement officers as they struggled to disentangle themselves from the binding red tape of this or that agency. Inherent in the forthcoming plan will be simplification of the Federal Government. This will result in some cases in fewer branches which means, or should, a cut in the number of employees. Strange to say some business leaders will take the side of the Federal workers in their efforts to save their jobs.

Take again, just as an example of possible economies, the field offices of many of the departments. These offices, like many others, offer special services to industry and to the farmer, for which all of the taxpayers are assessed. But let me presume to say what will happen if some of them are shut down. The original protest will probably arise within the agency. A representative of the endangered workers will appeal to some official in the local chamber of commerce or in a trade association.

"Look, Joe," he will say, in substance, "I know your crowd is on record for the reorganization bill. And you're right, perfectly right. But you can't go along with the section which proposes to shut down our office here. We've worked with you for years. Your members use our statistics every day in their business. We've saved you countless trips to Washington. And what's the saving? A mere half a million, while we're spending billions in Europe."

LITTLE HEART FOR ECONOMY

Our business leaders should be on their guard against such arguments. They sound persuasive. They can be effective. The sad truth is that Americans really have slight taste for economy. They are generous and open-hearted. Whether in business or not, they like to do a favor for a Government official—particularly when he may be in a position to return it at some later date. Sometimes, on the other hand, Americans suddenly get disgusted with extravagance in their Government and demand cuts which go too deep. The Hoover commission's plan may be a last chance to effect intelligent economies.

Businessmen do a lot of talking about the multiplicity of agencies, about the hours they must spend in filling out questionnaires, being inspected and regulated. But some of them prefer a known nuisance to an unknown improvement. At least three agencies now regulate the Nation's banks—the Comptroller of the Currency, the Federal Reserve, and the Federal Deposit Insurance Corporation. I must repeat that I have no advance knowledge of the reorganization plan. But suppose the powers of the Comptroller of the Currency were trimmed: I am fairly sure a howl would arise from a lot of normally dignified bankers. They have worked with the Comptroller of the Currency for many years. They understand the methods and policies of his staff.

I don't want to give the impression that businessmen, alone, will fight parts of the plan. Opposition will come from doctors, from lawyers, and other professional men. A distinguished committee of physicians has been spending months looking into the hospitals operated by the Veterans' Administration, the Army, the Navy, and the Air Force, and their relationship to existing hospital facilities. Duplication and waste are unquestioned. Yet here vested interests are again at stake.

DESIRE FOR LOCAL OFFICES

Local doctors will not like the prospect of some installation being closed. So there will be resolutions by county medical societies which will reach the desks of my colleagues and myself. Do we oppose, these will demand, adequate medical treatment for our boys? Election day is never less than 2 years off to an unhappy Representative. Some of us will conclude that it is rash to cut medical services, even when they are a duplication of adequate existing services.

But, unless the business and professional men of America really do give their wholehearted support to reorganization, it is doomed. For opposition, bitter and effective, may be expected from the professional politicians. No branch of our Government, whether county, city, or State, is any longer unrelated to the Federal system. Enormous financial grants are made in Washington for education, highways, health, and other benefits. The actual administration of these funds is frequently left to the States, under certain regulations. Contractors, builders, and supplymen get their share of the funds. Their share, obviously, increases in direct ratio to the inefficiency of government.

Our Navy

EXTENSION OF REMARKS
OF

HON. J. FRANK WILSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 6, 1949

Mr. WILSON of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Rear Adm. James L. Holloway, United States Navy, Superintendent of the United States Naval Academy, Annapolis, Md., delivered at the twenty-first national convention of the Fleet Reserve Association at Dallas, Tex., on August 30, 1948:

Gentlemen of the Fleet Reserve Association, I am at once honored and delighted to have been extended your invitation to speak to you here in Dallas at the twenty-first annual convention of our great Fleet Reserve Association. For many years I have been keenly interested in and appreciative of your objectives and accomplishments. As some of you may know, I was privileged greatly in April 1947 to have been made an honorary member of the Fleet Reserve Association at Branch 24, Annapolis.

I also want to convey to each of you here and to all members of the association warm personal regards, and best wishes for continued success both now at this convention and on into the future from my great chief, Admiral Denfeld. You all know that he is an honorary member of long standing of your organization. I will read you his greeting, which I have brought with me.

This is a unique and distinctive organization. Your membership is distinctive in that 6 years' service in the Regular Navy or Marine Corps is a prime prerequisite; no other service may be counted. It is also unique in the fact that it owes its existence to the fact that Congress, in order to carry out its constitutional power of providing a Navy, has provided for a Fleet Reserve. It is an identifying feature that this association is therefore composed of both those who are still on active duty and those who have been retired from active peacetime duty. I do not believe that there is anywhere else an organization quite like this. It is the voice of the enlisted career man of the Navy, and is so recognized by the senior officers of the Navy, and by the legislative bodies whenever they have any action pending concerning this subject. An important example of this reliance and interdependence was evident when the Roper board, which was making recommendations concerning the revision of the Reserve Act of 1938, submitted copies to your national directors and service committee for their recommendations and comments. In a sense, you are the alumni club of those who have devoted at least 6, and usually more, years to service in the world's greatest training organization.

There is another unique feature of your organization. I refer to the fact that although you are called Reserve, you are the very essence of the highly developed professional and Regular Service man. Your 6 years active service man likewise adds to the current career synthesis of the Fleet Reserve Association.

I believe that from time to time as indicative of a healthy condition, we should all pause to summarize the prominent features of the noble institution, the Navy, of which we are a part. Otherwise we may become so involved in the routine details of every day living that we will soon lose sight of those ideals for which we must strive and we will soon arrive in the position of the man who said he could not see the forest because of the trees.

To me one of the most prominent features of the Navy was originated more than three decades ago in the establishment of the Fleet Reserve System. It was recognized, then as now, that some such system was vitally necessary for the welfare of our country and of our Navy. We are a democracy, and as such we have never believed in the necessity or the advisability of maintaining during peace a large permanent military force; on the other hand we do not want to lose those hard-won and jealously guarded freedoms for which we stand through insufficient preparation. To be adequately prepared therefore, it is necessary to have a ready reserve of highly trained personnel who, when our fundamental rights are threatened, will be ready to resist and destroy those who would destroy us. So, in times of peace we turn our energies to planning and training.

If ever a system paid for itself a thousandfold and justified every penny put in it, it is the Fleet Reserve Organization. Wherever I served during World War II, whether it was in the field in command of a destroyer squadron, a task group, or a fast battleship, the steading influence and tenacious fiber of the Fleet Reserve and long-service enlisted man was everywhere present. Likewise in the training establishment it was indeed magnificent to see the retired men of the organization called forth and pass the torch of training and ideals of service on to the neophytes that joined us with such delight and loyalty. Again and again during this last war we found synthesized in the key activities the mature wisdom and experience of the Fleet Reservist with large groups of enthusiastic and able personnel drawn in for the war from other sources. It was this combination of talents and capacities and know-how, this wise synthesis, that produced dynamic and brilliant organization of our wartime Navy that spearheaded across the Pacific to victory in 1945.

That we had such a force is, I believe, proved in various ways, foremost of which is the establishment and growth of this association. Twenty-four years ago, on Armistice Day, November 11, 1924, a charter was granted in Philadelphia, Pa., to a small group who have so well expressed their reasons for uniting in the preamble of the association's constitution, and in the motto: Loyalty, protection, and service.

From this beginning the association has grown until now we have more than 100 branches, and over 30,000 members. I am positive that the association will continue to grow, and I know that opening membership to those who have had 6 years' service was a step forward. The association is indeed a unique and distinctive organization not only because its members are those who have had at least 6 years' active service in the Navy or Marine Corps exclusively, but it is the only organization which represents the Regular Navy and Marine Corps enlisted man. It is founded on the basis of being shipmates, which is our Navy way of expressing the golden rule of doing for others what you would have them do for you.

Another reason for thinking that we have reached our objectives is most cogently set out by the record established collectively and individually by those members of the Fleet Reserve who were recalled to active duty. From September 1939 until December 1945, some 15,000 members of the Fleet Reserve were recalled to active duty. This put into practice one of the chief reasons why the Fleet Reserve had been inaugurated many years prior, and to no one's—unless possibly our enemies'—surprise the system accomplished its objective of providing trained, loyal personnel when and where they were most needed. The Navy recognized the value of those people who were recalled by offering to a very high percentage of them the opportunity of a commission with its increased privileges and responsibilities. There are still on duty many of those officers of the Fleet Reserve whose know-how and ability is still needed to accomplish those purposes for which they are so eminently fitted.

Many years ago the framers of our United States Constitution stated in the preamble various purposes and aims which made the drawing of this Constitution necessary, among them were to establish justice, to provide for the common defense, and to promote the general welfare. In order to achieve these goals, however, it would be necessary that each participant would have to relinquish some of the sovereign acts which it had heretofore exercised. It was more than astonishing that this could be accomplished; nevertheless it was. The provisions of the Constitution which provide authority for the laws governing the Navy are in two categories: the power of Congress and the power of the Executive. Among the congressional powers are those to provide and maintain a Navy, and to make all laws and regulations necessary to execute these powers. It is the President's duty as the Executive, and Commander in Chief, to see that laws so established are faithfully executed. His function as Commander in Chief authorizes him to issue, personally or through his military subordinates, such orders and directives as are necessary and proper to ensure order and discipline in the Navy. His function as Executive empowers him personally, or through the Secretary of the Navy, to prescribe rules, where requisite, for the execution of the statutes relating to the Naval Establishment.

Among the regulations and instructions issued for the information and guidance of persons in the Naval Establishment are Navy Regulations, General Orders, Courts and Boards, Uniform Regulations, and the manuals of the various bureaus. These regulations may be considered as being in aid or complement to the statutory laws. Also in aid and complement to the statutes are the many administrative directives which are issued by the various departments, bureaus, or by commanding officers. All of these statutes, rules, regulations, and directives are tested for legality before they are issued and promulgated to the Naval Establishment. Ordinarily there is no question but that the regulation sought will be a valid one, but if any question at all arises it is given a thorough and exhaustive scrutiny. Naval custom, too, has the force of law, much in the nature of the English common law, but one of the limitations of a custom is that it must not be in opposition to the terms and provisions of a statute or lawful regulation or order.

The result of all of this is that each and every act in the naval service, whether in war or in peace, is neither capricious nor arbitrary, but falls within a legal pattern. This pattern has been designed to encompass the activities of those who have committed themselves to a higher discipline of loyalty and patriotism to defend their country and its institutions of fundamental freedoms against those aggressors who would destroy them.

It is thus evident that when a person enters the naval service he has changed his legal status. He has given up certain freedoms which he would otherwise enjoy, and is dedicated to loyalties in sharp focus specifically calculated to guard the larger whole. This sacrifice of certain freedoms and acquisition of others, however, and the complete regulation of every act either directly or indirectly by law, gives an individual a moral independence of the highest order.

As a matter of fact, I mean that we in the Navy possess a particularly high order of responsibility and moral independence through this very pattern of law and reg-

ulation whicl encompasses us. We unhesitatingly "render unto Caesar the things which are Caesar's," so to speak, without sacrificing those personal and human dignities so dear to Americans and to western civilization.

During the period of the emergency from September 1939 to December 1945, 15,000 (15,200) members of the Fleet Reserve were recalled to active duty; of those who remained on active duty, about 2,700 accepted temporary commissions. In the recent transfer program the selection board for permanent appointment to the Regular Navy has considered, as of August this year, 37,303 applications. Of these 14,502 have been selected and have accepted, and of these 4,288, or 30 percent, were from officers in a temporary status and 10,214, or 70 percent, were from Reserve officers. Public Law 381 of the Eightieth Congress, on the advice of the Navy Department, set up the provisions for accepting certain qualified and enlisted personnel as limited-duty officers. The Bureau of Naval Personnel has, after considerable study, established 12 classifications: 6 in the general-line categories (deck, ordnance, administration, engineering, hull, and electronics), 4 in aviation (aviation operations, aviation ordnance, aviation engineering, aviation electronics), and 1 in supply, and 1 in the Civil Engineer Corps. Applications have been accepted from chief warrant officers, warrant officers, chief petty officers, and petty officers first class. Of the 6,000 applications received the board has just recently offered commissions to the 930 who have been selected thus far. Of the 930 selected 89 will be in the Supply Corps, 14 in the Civil Engineer Corps, and 727 in the other branches. There are 101 lieutenant commanders, 373 lieutenants, 276 lieutenants junior grade, and 230 ensigns selected. After August 7, 1949, when the program has become stabilized all appointments will be made, by law, in the grade of ensign. The establishment of this limited duty classification is of great importance. Heretofore many enlisted men have been discouraged from seeking commissions in the line because to do so would place them at a distinct disadvantage because they would have to compete with all other line officers for promotion who had generally considerably more formal education. It was, however, a waste of valuable experience when a man who had all of the officer-like qualities was prevented from attaining officer status because he had sacrificed formal education for on-the-job experience. To circumvent this and to make the best use of these men, the law provides that those in limited-duty status will compete with each other and not be subject to the same conditions for promotion as an unrestricted officer. In addition the rate of attrition has been placed at a very low level, which insures to those who do accept a good possibility for an uninterrupted career. Moreover, line limited-duty officers will be eligible to succeed to command when fully qualified and specifically designated. Supply Corps and Civil Engineer Corps limited-duty officers will be eligible to succeed to command of those activities which officers of their respective corps may command.

Nearly half, or 46 percent, of the 36,737 active Regular Navy officers have had previous enlisted service; this does not include those officers who held permanent commissions prior to 1941, or those Reserve officers who had enlisted service and were permanently commissioned in the transfer program.

I believe you will see and agree that the Navy today as never before offers an excellent professional or career opportunity. To those who have the desire and either the formal education or the experience, it offers a commission. To the younger man it offers the opportunity to follow either of these courses of advancement; once he has been sworn in the door is open. He has a tremendous opportunity for advancement, and the Navy will advance him—commensurate with his background, ability, aptitude, and interest along the path which he himself selects. For the man who does not desire more formal education, such as provided by college or post-graduate work, the Navy provides professional training. The Navy is actually the most extensive scientific and professional school in the world; operating afloat, ashore, in submarines, and in the air, there is a constant demand for technically trained men. To accomplish this end the Navy has 80 professional training schools which offer such varied courses as commissary, pattern making, fire control, deep-sea diving, refrigeration, and welding. In addition to these schools the man has available facilities for enrolling in and studying courses offered by USAFI, college extension programs which offer courses in both professional subjects and in the social-humanistic field. For the enlisted men who would pursue further a formal education there are also many opportunities. For those who have not finished a high-school course there are several ways in which they may accomplish that objective. For those who have completed high school and desire to take work on a college level there are again several possible ways in which it may be achieved. Ten percent, or for this year 200 candidates, will be selected from the enlisted personnel on active duty, for training in one of the 52 colleges and universities throughout the country which participate in the NROTC training program. This program provides a college education and may eventually lead to commissioning. In addition, 320 Regular Navy and Reserve enlisted personnel will be appointed by the Secretary of the Navy to the Naval Academy during 1948. These enlisted personnel may be appointed from the Regular or Reserve Navy or Marine Corps. Any enlisted man desiring to become a candidate makes this known to his commanding officer as soon as possible. Those in the Regular Navy or Marine Corps must have 1 year enlisted service prior to July 1 of the year in which they enter the Naval Academy.

Those who come from the Reserve must have had at least 1 year in the Reserve by July 1 of the year of admission to the Naval Academy. Formerly it was necessary for the Reserve applying for admission to have a minimum of 27 drills, or its equivalent, between July 1 and the third Wednesday of April of the year following. This requirement has but recently been liberalized, so that 2 weeks' active training duty is equivalent to the necessary drills. This offers encouragement to those who for various reasons not within their own control could not perform the requisite drills.

Those enlisted personnel on duty in the Regular Navy who have taken the preliminary physical and have been recommended by their commanding officers are then given a special examination to determine their aptitude for those subjects involved in the Naval Academy entrance examination. Those who are successful in passing these preliminaries are then sent to the United States Naval School, Academy and College Preparatory, at Bainbridge. From October until the April entrance examination they are given courses which will enhance their preparation for the entrance examination, and in the cases of those who are successful therein continue further to prepare them for the first year's work at the Naval Academy. This school is also open to enlisted men on active duty who hold nominations from any other source. It is not, however, open to those nominated from the Organized Reserve.

The law provides that 160 shall be taken from each of these sources, so that those 160 who stand highest in the entrance examination from each component receive the appointments, but the others who pass become alternates and are appointed if for some reason the eligible candidates do not enter as midshipmen. There is also a degree of flexibility at this point since the vacancies in the Presidential quota, which at present is set at 75, may be filled by either men from the fleet or the Reserve, and any vacancy in the fleet or the Reserve quota may be filled by the other.

In addition to the technical and professional training offering so many and so varied a selection of opportunity to all of us in the Navy, regardless of our mode of entry or our rank or rate, is that education and development of the spirit and of the heart without which there is no life or substance insofar as accomplishment is concerned in the organization. This is a difficult field to describe—there are intangibles and imponderables which we share and appreciate. However, if there is anything that to me characterizes the Navy spirit which we all absorb and to which we all adhere, it is the cheerful, tenacious, loyal approach to our mutual tasks which is so evident in our service. I know of no organization where there is such a complete mutual recognition of respect, a mutual recognition which by its very existence ensures a loyalty unsurpassed in any organization in the world. We find this in the Navy team, whether it is in the submarine, or the cruiser, or the battleship, or the airplane; each officer and man recognizes that his effort is integrated with that of others and appreciates that his own success and contribution is at once necessary to his brethren just as their effort is necessary to his effort.

It is this high sense of loyalty, this sense of responsibility that over the years has made an honorable discharge from the Navy one of the finest letters of recommendation a man could present upon seeking employment in any field.

The new Selective Service Act specifically requires that all services vigorously prosecute an enlistment program, to the end that the required number of voluntary enlistments be obtained, and the number of inductees will correspondingly be reduced to a minimum. This is the present plan and there is every indication that the Navy will be able to obtain the necessary number of recruits with the present mental, physical, and moral standards. The Navy has traditionally relied on volunteers, which I think we all agree is a healthy way to ensure participation in responsibility. But to maintain this it will be necessary for all of us to individually and collectively help sell the Navy to as many young men as we can find who are eligible. A sale in this case should be very simple since it is something we all know and believe in. The Fleet Reserve Association is continually of inestimable help to ensure that we can continue to follow the volunteer method.

The total strength of the Navy on June 1 of both officers and enlisted men was 389,086. Of these the officers accounted for 42,980 and of these 38,400 were Regular and 4,573 were Reserves. Three hundred and forty-six thousand one hundred and six were enlisted; of which 344,095 were Regular and 2,011 Reserves. The ceiling which has been placed by the President on the present size of the enlisted Navy is 430,000. However, the Navy has set a limit of 409,900, which means that the average daily strength will be about 386,000. To maintain this average it has been determined that we must enlist an average of 10,000 per month. Of course this will vary from month to month, and sometimes it will be necessary to put on a restricted recruiting program because the recruit-training bases can only accommodate so many at a time. This restricted recruiting is in effect at the present time because during June and July we were able to recruit considerably more than the training establishment could train. The figures which we have for June, July, and August,

of this year, are to me very pleasing and I hope indicative of a trend which will increase as time goes by. As an over-all figure 35 percent of those whose enlistments expired during the past year have reenlisted and it is believed that this percentage will be increasing over the next few years.

Of those first enlistments in June and July, 50 percent of all enlistments were high-school graduates. And for the first part of August this percentage has risen to 60 percent, which in round numbers shows that for a little more than 2 months we have 16,000 high-school graduates. This fact is very encouraging since it means that we are receiving a recruit who has a good foundation on which we can build a good career Navy man. And in addition these men have not been produced by lowering any of the present physical or moral standards. The Navy does not and cannot spend money for direct advertising in daily newspapers or local and national magazines, but must rely on the cooperation with civilians and civilian enterprises. There are, however, issued posters and pamphlets describing Navy life; work is now being conducted toward making movie shorts showing the various phases of life in the Navy, of which the first two are presently available, and the others will be released from time to time over the next year.

In order to do the most effective job of recruiting, however, a survey was made of a representative group of young men to find out among other things why they would like the Navy, and what had influenced them in making the Navy their service career.

The main reasons given by all of the young men for liking the Navy were, in order of precedence: Travel and adventure, health and physical training, specialized training, good pay, educational opportunities, and job security.

To me, however, the most important point of the survey was the fact that almost half of the boys said that their opinions of the Navy had been influenced by parents, relatives, and friends, including ex-Navy men. This indicates that word-of-mouth is one of the best methods and that although formal recruitment by posters and recruiting offices is not to be neglected, both together will produce the maximum results. Who has the inside track on how the Navy operates, who can give these boys the encouragement needed, who knows the best type of men who will make Navy careers? Who, by their loyalty, can personally demonstrate that the Navy is a great team? I think the answer is obvious. The members of the Fleet Reserve Association, and you are certainly needed.

In fiscal 1950 the President has authorized the enlisted strength of the Navy to be raised to 500,000. This means that from our present strength of 409,900 we would have to secure 90,000 new recruits. That may look easy; however, there will be about 90,000 persons during this time who will be discharged. So you can see that means we must secure 180,000 recruits, which is not easy. The members of the Fleet Reserve Association can be of considerable assistance in filling this quota. Each member must have had at least 6 years' active service, therefore you are all well prepared to give the best possible information to those young men whom we need. You know 90 percent of the Navy's recruits are only 17 or 18. Many of them take formal recruiting with perhaps the proverbial grain of salt, but they will take the advice of someone whom they may know from a more personal angle—Fleet Reservist. You men on the other hand know what type of man will be a credit to our Navy and an eventual member of the Fleet Reserve, so why not hand pick your potential shipmates for yourself? In addition to the professional and career possibilities I have mentioned before, there are many other features such as life insurance, medical and dental care, the fact that the Navy dollar's pay is worth much more, or is equivalent to a civilian pay of a great deal more than the actual cash. And especially you know those intangible things which we all know and call being a shipmate.

As we become more stable, and I believe we are becoming increasingly so every day, that average will rise. To the career man the outlook is much better than ever, in addition to the limited-duty officer scheme which makes the attainment of officer status more equitable, the enlisted personnel can look forward to certain features which I am sure you will agree are most desirable. In addition to retirement benefits I should like to mention some things which are important to the welfare, morale, and comfort of those who are still on active duty and who are of course of interest to the association because you are unique in having those men on active duty in your membership.

At the present time plans are being drawn which will provide for the definite assignment of men being transferred. Previously it has been the practice to assign men to a station for further transfer. Soon, however, several months before a man is being transferred he will indicate his choice for duty, and insofar as possible it will be granted. The ship or station which he has selected will be informed well in advance and his request will be integrated into that organization at the point he desires, so that when the time comes for his actual transfer, he will have a fairly good idea of exactly where he will eventually settle down. This will permit those career men, especially those who have families, to make plans for transportation along with their household goods.

The Bureau at the present time is working to alleviate the bottleneck which had developed in the seashore rotations program. The main cause for this has been the disparity between sea-and-shore billets for certain rates, and the fact that there was overcrowding in certain rates and in certain levels. A plan is now in operation which calls for those officers who have planning within their cognizance, to make room in certain places by opening up billets for those rates who have had more than the required sea duty and are eligible for rotation. The number of months of sea duty required for shore duty eligibility varies from 21 months to 48 months between the various rates and pay grades. There are, however, certain other requirements to justify the cost of transportation from sea to shore. A man must have 2 years' obligated duty, or if he has his dependents with him at an overseas station, he must complete his normal tour of duty at that station, but he is not penalized, however, if he cannot accept shore assignment for that reason. Those personnel who can show that a hardship exists at home are given preference, and even those who are not on an eligibility list may apply and be given up to 4 months' shore duty. If they are not eligible and need more than that time they may be given a hardship discharge.

The man who is eligible has three choices for duty ashore: first the naval district including naval missions or office of naval attachés, and a particular place therein. Second choice is other naval district. Third choice is anywhere in the United States for those without any particular preference. Orders for the place which is then available will be issued 2 months in advance of expectant date of reporting. If the man does not like the place assigned he can have the orders canceled. However, in that event, he must wait 1 year before he may again apply.

Housing is another critical factor regardless of whether you are in or out of the Navy. It is recognized as being a very definite morale problem and everything possible is being done to alleviate the existing situation. The standards set up by the Bureau of Yards and Docks call for approximately 20 percent married housing for enlisted personnel. This is estimated to take care of the first three pay grades, which means again that the career man is being given consideration.

At the Naval Academy I have been especially interested in providing for a pattern of the very best in all things. I believe it to be a fundamental necessity to provide there at the very beginning of naval life a model condition in everything for everyone which will result in the furtherance of mutual confidence, mutual respect, and mutual appreciation which will come from such a condition. To provide for this a model village for enlisted families containing 260 units has been built and is now occupied. In conjunction with the houses and as an integral factor therein a commissary store, a ship's service store, and a church have been built. The interior of the church, the altar and its adjacent area were built and installed by the men themselves on their own suggestion.

The Organized Fleet Reserve of Anne Arundel County, Branch No. 24, is also calculated to be a model. Recently, after many years of untiring effort, a new clubhouse, costing nearly $100,000, was commissioned, and I had the distinct pleasure of being present on that occasion. The Naval Academy assists the branch as far as practicable with its officers and its facilities for drill; and its membership and attendance places it high in the entire area.

The Fleet Reserve and the Fleet Reserve Association are pillars of our naval organization. They represent in synthesis the career men of our Navy. They have been tested in peace and in war, and have proven their value many times over. It has been and will be the policy of those senior officers of the Naval Establishment to collaborate with the Fleet Reserve Association and to seek its advice in matters which concern the welfare of our men, since it most adequately and articulately represents the men in the service and out who have devoted at least 6 years to the Navy. It is a noble organization because it carries on those principles of loyalty, service, and protection. It is, in a manner of speaking, the alumni association of one of the world's greatest organizations.

Department of National Health and Welfare

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, January 13, 1949

Mr. MILLER of Nebraska. Mr. Speaker, I am today introducing a bill to provide for a Department of National Health and Welfare. This would be headed up by an individual who would have Cabinet rank, and will handle all the problems pertaining to health and welfare.

It is interesting to note that the Commission on the Reorganization of the Executive Branch of the Government reports that there are 44 separate Federal agencies who now deal with some phase of health and medicine, and they spent a billion and a quarter dollars on these medical services in 1948. It shows that one out of every six people in the United States received medical aid from the Government in 1948. It would seem that it is high time to bring all agencies

dealing with health under one umbrella in order to eliminate the duplication, waste, and inefficiency in the program.

The Government's building and operation of Federal hospitals has been a costly procedure. In the building field, the survey notes that the cost per bed in Federal hospitals ranges from $20,000 to $51,000. The average cost in the building of private hospitals is $16,000 per bed.

The armed services have 276 hospitals supported by the tax dollar; there are 125 veterans hospitals in the United States; the Interior Department has 67 hospitals mostly for Indians.

There seems to be little coordination not only in the building of Federal hospitals, but in their purchasing program. The same can be said in the use of professional personnel and the general availability of the hospitals to the patients outside of the agency concerned. This all adds up to a waste not only in professional services, but of the taxpayer's dollar. The entire hospital program should be coordinated in order to bring efficiency and to eliminate the terrific waste of the taxpayer's dollar.

Will the People Give Up These Powers?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including an editorial which appeared in the Janesville Gazette, Janesville, Wis., for January 6. It is a timely editorial on a subject about which we are all concerned:

WILL THE PEOPLE GIVE UP THESE POWERS?

President Truman's recommendations in his state of the Union speech to Congress Wednesday reveal the symptoms of a change that no American citizen can ignore.

Something has happened to American individualism and integrity. We have been schooled for 16 years in a new scheme of things American, a new concept of the citizen's relationship to his Government and to himself.

In the founding of these United States our early statesmen were imbued with the determination that individual freedom is paramount. In order to make the new democracy work the key figure in America was to be the individual citizen.

Here, on these shores at last, was to be a new Nation and this was to be a government of the people, not of the States. "We the people of the United States," begins the preamble of the Constitution. It was a new Nation, deriving its just powers from the consent of the governed.

Our Government is one of delegated and enumerated powers. The powers named in the Constitution are all that the United States Government possesses. All others are retained by the people.

"I ask for no straining of words against the general government," wrote Thomas Jefferson in 1823, "nor yet against the States. I believe the States can best govern over home concerns and the general government over foreign ones. I wish, therefore, to see maintained that wholesome distribution of powers established by the Constitution for the limitation of both, and never to see all offices transferred to Washington."

Concerning surrender of powers of the State to the National Government, the Supreme Court in 1911 used this language:

"Among the powers of the State not surrendered—which power therefore remains with the State—is the power to so regulate the relative rights and duties of all within its jurisdiction as to guard the public morals, the public safety, and the public health, as well as to promote the public convenience and the common good."

We quote these authorities merely to emphasize the fact that most of the President's recommendations run counter to the purposes so well expressed by this country's founders. He would take from the individual and from the State powers which would be centralized in Washington.

His proposals express a weakening of the powers vested in the people, and eventually this centralization of power in Washington would react to the detriment of the people.

To attempt control of inflation the President asks for more control over bank credit and continuation of control over consumer credit—powers he already has to a considerable extent.

Rent control should be relaxed as housing is made available, but the President wants that control extended and strengthened.

He asks for authority to regulate commodity speculation, allocate scarce key materials, and control wages and certain prices, if necessary. Members of Congress have doubted the need of this drastic authority to date.

He asks for power to put the Government in the steel business, build plants and run them, if industry can't do what is needed. This is not the first direct attempt to take private enterprise out of the hands of the people and place it in the hands of politicians, but it is obviously a first step toward nationalization of industry.

When Government takes over industry it also takes over labor. Americans should readily see the dangers in such proposals, for their freedoms, their incomes, their jobs, their opportunities would thus be jeopardized.

Are we ready to hand over to Government these precious heritages which our Constitution guarantees to each individual? Are we ready to succumb to the power of a centralized, dominant bureaucracy in the hope of gaining some elusive security?

This kind of program calls for straight thinking. It calls for individual action to preserve the kind of America we inherited. It calls for backbone and hard-headed realism.

Will Americans ignore the dangers that face them and their freedom to be Americans?

The Atomic Bomb and the Isthmian Canals

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. MARTIN of Iowa. Mr. Speaker, in certain technical magazines, in recent months, the subject of the atomic bomb with relation to isthmian canals has received considerable attention, but very few authoritative articles of like import have appeared in nontechnical publications. However, in the Cosmopolitan magazine for January 1949 there is carried a most informative discussion of the destructive power of the atomic bomb, written by Lt. Gen. Leslie R. Groves, former head of the Manhattan atomic-bomb project, entitled "Can New York Hide From the Atomic Bomb?"

In this article General Groves does not specifically deal with the Panama Canal, but he does present some of the features of atomic destructiveness in such a way as to lead—as many informed and thoughtful people believe—quite necessarily and inevitably to the conclusion that the same kind of devastation which might be expected from atomic-bomb attack on the Nation's greatest metropolis would result from a similar assault on any type of isthmian canal and its defenses whether of lake-lock, sea-level, tidal-lock, or other construction.

Under leave accorded, I am placing in the Appendix of the CONGRESSIONAL RECORD, as a part of these remarks, this most timely and informative contribution on this tremendously important subject, and it would be well, indeed, if all Members of Congress and our citizens in general should read and ponder what one of the world's greatest authorities has to say in this connection.

The matter follows:

CAN NEW YORK HIDE FROM THE ATOMIC BOMB?
(By Lt. Gen. Leslie R. Groves, U. S. Army, retired)

Just what would an atomic-bomb attack do to New York? Less than a year ago the city was hit, not by a bomb, but by just a snowstorm. True, it was the greatest snowstorm on record, and also it was a complete surprise. The morning weather forecast on December 26, 1947, had read: "Snow, ending in afternoon. Fair tomorrow." But the papers the next morning told of a record 25-inch snowfall, of a city crippled. Thousands of workers were marooned. Avenues and side streets were blocked by mountains of snow and by thousands of abandoned automobiles, taxicabs, buses, and trucks. Snow plows experienced the greatest difficulties in their attempts to clear passageways through the main downtown traffic arteries. Fire was greatly feared. Citizens' groups were called upon to help open potential fire runs on the main arteries and to clear spaces around fire hydrants.

The Long Island Railroad suspended service out of New York early in the evening, bus lines were brought to a standstill, even the subways ran badly behind schedules. The suburban highways, on Long Island, and to New Jersey, Westchester, and Connecticut, were completely blocked. Thousands of New Jersey commuters walked across the George Washington Bridge. Many workers did not get home until well into the next day.

The city hospitals had the greatest number of calls in their history. The major number of the police patrol cars had to be assigned to emergency ambulance service. Policemen acted as doctors in many cases. Weeks passed before the city was completely back to normal. But there were few deaths and little permanent damage to any of the buildings.

An atomic attack on New York would probably be the first attack of the war. There are many possible variations. It could consist of a single bomb or of many. The bombs could be dropped from long-range airplanes with fuzes adjusted so they would explode at ground level or at a considerable altitude, as at Hiroshima and Nagasaki.

The bombs might be exploded under water, as in the second test at Bikini. In this case, they might be dropped from planes, or they

might be discharged from enemy submarines or even from merchant ships. While the latter might be ships of the attacking power, they might—particularly if tension had been mounting—be those of an enemy's secret ally, or even of a supposedly friendly power.

There is still another way in which the bombs could be delivered. That is by the surreptitious importation of the bomb parts and their secret assembly within our borders. While I am inclined to believe that such bombs would probably be exploded in the same rooms in which they were assembled, it is also conceivable that they could be placed in trucks, moved to the desired points, and exploded without removal from the trucks.

Of one thing we can be certain; the more bombs that are to be exploded in a single attack the more careful must be the planning by the attackers. And such planning would have to be based upon the belief of the enemy participants that they have an excellent chance of escaping unharmed, not only from the actual blast but from the general area afterward. Men possessing the highest degree of technical knowledge, courage, initiative, and good judgment would be required. They would also have to be men who, while they might be appalled at the prospective loss in human life, would be firm and unwavering in their convictions that the best interests of their country, of the world, of all humanity, would be served by their action. The slightest doubt on the part of any of the participants might well imperil the success not only of the entire operation but even of the contemplated war itself.

If an atomic attack comes, it will certainly come by surprise. We cannot rely on normal air-warning facilities to give us any advance notice. Atomic bombs are so valuable that the enemy will take every precaution to avoid successful interception. We must assume that they will be delivered to the target successfully. Successful delivery implies effective surprise as well as accuracy. An atomic-bomb attack carried out under conditions which would permit of any preparatory defense measures whatsoever would be uneconomical to the aggressor.

Let us assume that a single bomb, of the power of the Hiroshima and Nagasaki bombs, is detonated in the air at a point about midway between the Battery (at the tip of Manhattan Island) and Central Park around 5:30 (the heart of the rush hour) of a summer afternoon. The huge ball of fire and the characteristic mushroom cloud, rising to a height of 40,000 feet, convey the signal to the people within a radius of more than a hundred miles. Directly below the point of detonation, there is immediate, utter destruction. People are killed instantly by the tens of thousands. An equal number are seriously injured. Hundreds of buildings crumble into piles of rubble, and fires are raging in all directions. The extent of the damage decreases in proportion to the distance from the target center (that point on the ground directly below the point of detonation), but even 11 miles away there is some blast damage.

The destruction and damage from an atomic bomb is caused primarily by flying debris, fire, blast, and radiation. At the instant of detonation deadly neutrons and gamma rays are emitted. Exposure to this radiation, which lasts for less than a second after the detonation, takes a heavy toll of casualties. Persistent or lingering radioactivity is negligible in the case of a bomb detonated at a considerable altitude, as practically all of the radioactivity is dissipated in the atmosphere. Almost all of the radiation injuries result from exposure to gamma rays during the first second. Nausea and vomiting, diarrhea, and fever are the usual symptoms. Severe exposure causes death within 9 or 10 days. In less severe cases temporary loss of hair, emaciation, and a variety of disabling symptoms are prevalent.

The fire damage is, in part, a direct result of the intense heat generated by the bomb. No one knows exactly what the temperature of the ball of fire is at the time of the explosion. Attempts have been made to measure it approximately, but that is a figure which I feel it is not in our national interests to disclose to the scientists of all nations. It is sufficient to say that this temperature is beyond the understanding of the average man. An emission of intense heat rays takes place after detonation and lasts for a very short time. In that time, however, much damage is done. Flash burns on the surfaces of objects will occur up to distances of 13,000 feet from the target center. The flash burns on human beings vary in degree, depending upon the distance from the target center and the amount of shielding. A great variation in the protective effects of simple clothing results from whether the color is a reflecting (white) or an absorbing (black) one. It has been estimated that over 50 percent of the total deaths at Hiroshima and Nagasaki were caused by such burns. These intense heat rays also result in the ignition of combustible material, which in turn generates many conflagrations. Most of the fires are started, however, as a direct consequence of the enormous physical destruction by the blast. Badly damaged buildings with broken gas lines and power lines, upset furnaces and stoves, broken oil lines, are extreme fire hazards.

The blast effect of a Hiroshima- or Nagasaki-type bomb is equivalent to that produced by approximately 20,000 tons of TNT. The enormous pressures developed produce a shattering and crushing effect which varies from pulverization at the center of the affected area to minor damage, such as broken windows, over 3 miles away. Within a radius of 1 mile practically all buildings, except those of heavy reinforced concrete and steel construction, will be completely destroyed. And even these, though standing, will have door and window frames and interior partitions ripped out

Possibly the greatest number of casualties will result from the flying fragments that will be hurled about at high velocities. At the flash of the explosion, many poeple will rush to the windows to see what has happened. Tens of thousands will be killed or injured by flying glass.

The biggest death toll will come in the streets where pedestrians and those in vehicles will be bombarded with flying bricks and stone stripped off the faces of almost every building in the serious blast area. A brick falling from 5 to 30 stories is a decidedly deadly weapon by the time it hits the street. Such missiles will be coming down not singly, or by twos and threes, but by the thousands. They will be as impossible to dodge as the drops in a driving rainstorm.

These, then, are the general effects of a high-burst, conventional atomic bomb. It has been exploded at a high altitude to eliminate any persistent radioactive contamination on the ground. In addition, this is an altitude which, though well above the highest building in Manhattan, will cause the maximum damage to buildings over the largest area. On this basis the height of detonation was selected for both Hiroshima and Nagasaki; in neither case was there any persistent radioactive contamination on the ground. The deaths and injuries resulting from radioactivity occurred at the instant of the explosion, not later. The percentage of such deaths was comparatively small. In Japan there were no high buildings, but it is quite possible that there will be some persistent radioactive contamination on upper floors of Manhattan skyscrapers directly under the center of the blast.

What is the picture in New York City after the blast? If the enemy's aim was good, the center of the destroyed area is in Washington Square at the foot of Fifth Avenue. Within a radius of a half mile, perhaps 30 or 40 percent of the people have been killed instantly as a result of intense burns and falling debris. An equal number will soon die from the same causes. Most of the survivors have been injured more than slightly from the same causes. Many of those who escape death, possibly 5 or 10 percent of the total, have been exposed to so much gamma radiation that they will die in 9 or 10 days. Even if facilities were available to treat them, they could not be saved.

For 10 blocks in all directions streets are no longer usable. They are hardly discernible because of the piles of debris which have fallen into them. Fires are spreading out radially, engulfing all burnable material in their paths. All means of surface communication are gone. Fire trucks, ambulances, and the other emergency vehicles which handle the city's minor disasters cannot move into the area. All assistance from our machine age is gone, and we are reduced almost entirely to what we can do by manpower alone. The subways are troubled with water from broken water lines. Power-line failures have already stalled the trains. Surface cave-ins have trapped thousands underground.

Within a radius of a mile and a half, an area extending from about Thirty-fourth Street to the City Hall, and from the Hudson to the East River, there is very heavy damage to most of the buildings. The Empire State Building, at the northern edge of this area, will have suffered heavy damage to its upper floors. The tower may be riddled. Many of the panel walls on the north and south sides of the building will have been blown out. Stuyvesant Town and Peter Cooper Village, the enormous new apartment developments on the East River, are a mass of rubble and twisted steel. Just north of these, Bellevue Hospital, with its adjoining medical center, is wrecked to the point where it needs help instead of giving it. The superstructure of the Hudson River docks between Houston Street and Twenty-third Street has been crushed. Fires are raging along the water front.

Appreciable damage from the blast effect extends all the way to Times Square. Many buildings, which might otherwise have been saved from fires, must be sacrificed. There is no pressure in the water mains because of the thousands of broken hydrants and service lines. For the thousands of wounded and burned victims there is no hope. Few persons are venturing into the area. Those who try to enter are overwhelmed by movement in the other direction, for most of those who can move are fleeing in panic.

Everyone is trying to get off the island, by public and private transportation and on foot. All exits are one-way streets, but broken-down vehicles block most of them. These blocks are cleared only by the desperate drivers, struggling to get through, who throw the vehicles off the pavements where that is possible. Who knows but what another bomb is scheduled to drop momentarily, north of Central Park or in Wall Street? As in the case of Hiroshima, the most significant effect of the bomb is not the physical damage, death, and injury; it is the panic among survivors.

In the event of another war, New York City could be completely destroyed as a strategically valuable seaport by seven well-placed air bursts of conventional-type bombs. A map and a compass can prove this quite readily to the interested. Two of the bombs, as has already been indicated, are sufficient to destroy Manhattan. One bomb dropped over city hall and another over the Pennsylvania station would knock out practically

all of the Manhattan dock facilities. On the New Jersey side of the Hudson, neutralization of all major shipping facilities and railroad freight terminal yards could be effected by one burst over the Lincoln Tunnel Plaza, one over the Jersey City city hall, and one over the Bayonne Navy Yard. Along the Brooklyn shore, the targets would be the Navy Yard and Red Hook. These seven bombs would eliminate New York City as a major factor in our war potential for many months. To rebuild the city as a major port would probably take 5 or 6 years.

What would be the effect if these bombs were to detonate near the ground? First of all, although the destruction in the immediate vicinity, say within a quarter-mile radius, would be absolute, the effective area of damage would be diminished because of the rapid dissipation of energy as the pressure wave moves out along the ground. Persistent radioactivity fission products would not be dissipated so readily in the atmosphere, in this case, and would induce further radioactivity in all matter with which they came in contact. This would, of course, deny access to the affected areas for a considerably longer period of time and would thereby retard reconstruction.

If one or two or three more bombs were added to the original seven and were exploded in the deep water of the rivers, the results would be even more horrible. This would be due to the persistent radioactivity from the spray. As we learned at Bikini, if there was a breeze, thousands of tons of water would drench the area, leaving a deadly radioactive contamination which would persist for years. I won't venture an estimate of loss of life from radiation alone, but the figure would be staggering.

What can be done to lessen the damage to be expected from a possible attack? We must not assume that we can be certain of intercepting or preventing any bomb attack. Passive defense measures must be exploited to the maximum degree. Dispersion of industry and population would obviously be effective in reducing damage and loss of life, but they are difficult to accomplish without seriously impairing our normal standards of living. A reasonable realization of the tremendous power of the bomb should, however, influence future industrial development. We cannot afford to keep building big targets.

The only effective protection against the bomb is to make certain that no bomb will ever reach us. This can be done only by the maintenance of our national security on such a level that no aggressor nation will be anxious or even willing to attack us.

We must—by the maintenance of well-balanced, effective, military strength—serve notice that no matter how powerful a surprise attack may be, we will eventually win any war in which we are engaged. Until such time as effective international control of atomic energy and of other weapons of mass destruction becomes a reality, the only deterrent to an atomic-minded aggressor is certain retaliation. We must remain strong. We must continue to develop our own atomic-warfare potentialities. But, at the same time, we must continue to strive for the abolition of war. For then, and only then, can we be reasonably sure of achieving a lasting peace.

Pumpkin Pie

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a poem written by Dr. John Ashton, of College Station, Tex., and entitled "Pumpkin Pie":

PUMPKIN PIE

(By John Ashton)

When nations speak of pumpkins,
It makes one wonder why:
There's something in the woodpile—
Some traitor, foe, or spy!

Whoever heard of pumpkins
All hollowed out to hold
Microfilms and secret pacts?—
Not half has yet been told!

Don't talk to me of pumpkin pie,
Nor of Jack o' Lantern sing,
For pumpkins now are used to hide
Some grave top-secret thing.

Our country looks to Truman
To purge or not to purge:
The guilt lies in the pumpkin;
Just watch the truth emerge!

Now when you buy a pumpkin, dear,
Be sure that deep inside,
No microfilms in secret code
Were put in there to hide.

So long as spies steal vital facts,
And pumpkins grow from seeds,
So long, henceforth, will guilty men
In pumpkins hide their deeds.

—*John Ashton.*

COLLEGE STATION, TEX., *January 5, 1949.*

Truman Plan To Resume "Big Government" March

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Sunday Star, Washington, D. C., January 9, 1949, entitled "Truman Plan To Resume 'Big Government' March":

TRUMAN PLAN TO RESUME BIG GOVERNMENT MARCH—EXPANSION CALLED FOR IN STATE OF UNION MESSAGE INDICATES BIGGER FEDERAL PAY ROLL AND MORE POWER

(By Gould Lincoln)

The problem of big Government continues to press itself upon Congress and the country. President Truman's message on the state of the Union makes it clear that the onward march of expanding governmental functions and agencies, begun when the late President Franklin D. Roosevelt, 16 years ago, threw overboard his plans for governmental economy, is progressing.

The recommendations contained in Mr. Truman's message, if enacted into law, will enormously increase not only the civilian personnel of the Federal Government, but also will help to multiply the statutes which touch the lives of the people. Here are some of them:

Public power lines, in connection with further rural electrification.

More river valley development, after the Tennessee Valley Authority model.

Continued price supports for farmers.

Expansion of social security.

Federalized medicine.

Federalized public education.

Federal aid for public (subsidized) housing.

The civil-rights program, including a Federal fair employment system.

Extension of existing credit controls.

New controls on speculation in commodity markets.

Extension of export controls.

Continuation of the authority to allocate transport facilities.

Authorization of allocation and priorities in key commodities.

Continuation of rent controls.

Stand-by power to impose price ceilings on scarce commodities which go into industry or affect the cost of living.

Stand-by power to limit "unjustified" wage increases.

WILL NEED MORE HELP

These standby powers, if and when they are used, will require many new employees and officers. No estimate is made by the President of the number of additional Federal employees all these recommendations would place on the Government pay roll.

The most recent report of the Joint Committee on Reduction of Nonessential Federal Expenditures, dealing with Federal personnel and pay, is revealing. It shows that civilian employment in the executive branch of the Government during November totaled 2,104,585—an increase of 12,405 over October. November was the ninth of the 11 calendar months of the year (up to and including November) in which increases in personnel were recorded. Agencies reporting major increases in November were the Post Office Department with 9,764, the Military Establishment with 3,285, and the Veterans' Administration with 1,903.

Take a look at the cost of this army of Government employees—their pay only. For the first 4 months of the current fiscal year, which began July 1, 1948, the civilian Federal pay roll totaled $2,117,736,000. Multiply this by three and you have an estimate of $6,353,358,000 for the entire year.

Senator BYRD, of Virginia, chairman of the Joint Committee on Reduction of Non-Essential Federal Expenditures, has for years been a voice howling in the wilderness of Government spending. It is popular to spend Government money. It is popular to multiply Government jobs, and it is politically wise, judging from the returns at the election polls. So popular that the Republicans in Congress have become impressed. There is a quiet rumor going about today that the minority party will take a leaf out of the Truman book.

The problem of big government has several sides in addition to its cost to the taxpayer. It impinges upon the freedom of action of the citizens in many ways. The cry is for "security" today, security against poverty, against unemployment, against sickness and old age—all serious ills, when and if they arise. In this search for security, however, there is constant lessening of individual initiative, and constant increased reliance on the Government. It may be that in so large a country, with an ever increasing population, all of this may be wise and necessary to put the brakes on misfortune which might overtake people on a large scale. But even so, this galloping advance of Government seems to have only one ultimate goal—statism, socialism, call it what you will.

WHERE TO DRAW THE LINE

The Government of the United States is today a huge organization, the largest business in the world. It accomplishes many beneficial things for many people. The real question, however, is whether it is to continue expanding—where to draw the line. President Truman in his message to Congress suggested that the Government be given authority to build steel mills, if and when this may become necessary to fill consumption requirements. He did not limit the proposed action to steel—merely mentioning it as an example.

Those who believe in state socialism with the Government's hand in every enterprise, see this country on its way toward such a

system. The Presidential program, for which the White House claims the last election gave a people's mandate, contains many features of the platform adopted by the Communist Party. It undertakes to give aid to important minority groups—special privileges, but special privileges handed out by Government.

The lobbyists for special groups have descended on Washington like a flock of vultures. To them, this is the big opportunity. Most active of them all is the labor group, who loudly proclaim that they won the election for the Democrats. Certain farm groups are not far behind, with their demands for Government subsidy to keep farm prices high. Individually, these groups are not looking for State socialism. What they seek is an immediate gain for themselves.

Veterans' organizations are making their demands upon the Government, too. There is stirring a plan for a veterans' bonus—which would require a huge sum of money.

The recent change in the House rules, giving chairmen of standing committees of the House the right to demand recognition to move to bring up bills reported by their committees, if the Rules Committee does not report them out, may give the soldiers' bonus a big lift. Let the Veterans' Committee report such a bill, and even if the the administration leaders oppose it, there now seems no way to keep the measure off the floor.

The ever-increasing expenditure of Government money, with its drain upon the taxpayer, may result in driving industry to the wall. And if industry fails, the only step left will be for Government to take it over. It could happen.

Is the Dairy Industry in Jeopardy?

EXTENSION OF REMARKS
OF

HON. REID F. MURRAY

OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the dairy industry has been the orphan of the New Deal and now it appears to be the orphan of the Fair Deal.

Millions of dollars are used annually to subsidize crops producing vegetable oils, but the old dairy cow stands on her own four legs without the thought of subsidy. She converts the grass of noncrop land into the greatest single food ever known to man.

While much vocal concern may be expressed about the health of the people, the fact remains that milk is recognized as the most perfect protective food available to our people.

I hereby include an address delivered by me on October 26, 1948, at the annual meeting of the Pure Milk Products Co-op at Fond du Lac, Wis.

The address follows:

IS THE DAIRY INDUSTRY IN JEOPARDY?

(By Hon. REID F. MURRAY, Member of Congress)

My contention is that never before in the history of our country has the dairy industry been in jeopardy as much as it is at the present hour. While one of the main controversies on the subject is based on oleo against butter, the important issue is the battle between the vegetable oils and animal fats. Still another and perhaps greater issue, is between the soil depleting crop system of farming as opposed to livestock farming which up to this time has been recognized as the system of farming which maintains the soil fertility.

That we may orderly approach the consideration of this problem, permit me to make the following statements:

Chicago is the "food capital" of the world and comparatively few States around Chicago furnish a large percentage of the food of the Nation. Iowa and Illinois alone, provide nearly one-third of the country's total production of hogs. Wisconsin, Minnesota, and Iowa produce one-quarter of the milk.

This great Midwest is the largest area of rich, productive, fertile soil to be found anywhere in the world. There are times, however, when it appears that certain interest and certain sections have gone a long way toward ruining their own soils and now want to support an agricultural program which will ruin the soils of this great Midwest—which is not only the bread basket of the world—but the milkshed of the Nation and the largest meat-producing area in our country.

The dairy industry in the immediate future is confronted with the unfair competition of vegetable oils. In this connection I wish to point out that no experiment as yet conducted has proved that vegetable oils are nutritionally equal to animal fats.

The experiments conducted by Wisconsin and California showed certain results that have been interpreted as proving that vegetable oil is equal to animal fat, but the ridiculous part of the experiments has been that dairy products were used in conjunction with vegetable oils in order to prove that the vegetable oils are equal to animal fats.

The Chicago experiments in the orphanages, where some children were fed oleo and other children were fed butter, was not a real experiment and the conclusions were not justified because the children eating the oleo were also furnished butterfat in the form of milk to drink in addition to the skim milk contained in the oleo used in the experiment.

I repeat—there never has been any experiment which has proven that vegetable oil is equal to animal fat.

No experiment has been conducted by any agricultural scientist in any State or in the United States Department of Agriculture, that proves that a synthetic vitamin A is equal to a natural vitamin A.

There are many synthetic dairy products which now threaten the dairy industry. To mention a few:

1. Oleo, which propagandists would have us believe is equal to butter.

2. The "coconut cow" milk, which is made by incorporating vegetable oil with skim milk and which product is sold in competition with evaporated natural milk. It is a product which at this time cannot be shipped interstate, although Dr. Carlson at the Catholic Rural Life Conference in La Crosse on October 18 stated that in his opinion, is equal to evaporated natural milk.

3. Synthetic cheese, which has already been manufactured experimentally and which is just waiting until after the oleo bill is passed.

Here is some of this synthetic cheese made by the Dairy Division of the United States Department of Agriculture some 6 months ago. It is made of vegetable oil and skim milk. I gave some of this cheese to some people a few days ago and they thought it was pretty good, but I think anyone who knows anything about the cheese industry would not rate this synthetic cheese very highly.

4. Now, in connection with filled bottle milk, I am reliably informed that filled milk was made and distributed to the Mexicans last year. This same source advises that when the foot-and-mouth disease stopped the supply of fluid milk in certain Mexican cities, their first approach was to buy dried whole milk from the State of Wisconsin. However, this mixture appeared to be too expensive and so a certain company conceived the idea and put it into practice of taking skim milk and incorporating coconut oil, subjecting it to certain mechanical processes and selling it in lieu of natural cow's milk.

5. It might be well to point out also that ice cream manufacturers have already found competition where vegetable oils are being substituted for at least part of the butterfat in ice cream.

6. Did you know that considerable amounts of filled cream were sold illegally on some markets in large cities during the war? Vegetable oil was used to supplant some of the butterfat in this cream.

Here, then, my friends, are six direct threats to the dairy industry.

You will ask, "Where are we going to get the skim milk to make these synthetic products?" Well, I am sure you have heard of the reciprocity agreements which have been operating from the very beginning in opposition to the livestock industry and in favor of soil-depleting crops.

The duty on skim milk is only a fraction of 1 cent per pound, and there is no reason why large quantities of dried skim milk cannot be obtained from Argentine—the present source of huge amounts of casein imports. You might also be interested in knowing that Canada is stepping up its exports of dried skim milk to the United States since the duty on this commodity has been reduced to an insignificant amount.

It must be remembered that 30 percent of the evaporated milk is produced in Wisconsin. Now, if cheap imported dried milk and vegetable oils are to be processed and sold in competition to evaporated milk, do you think that evaporated milk plants could continue to operate?

In August 1948, 67,000,000 pounds of oleo were manufactured in the United States. One hundred and seventeen million pounds of butter were produced in the United States. In other words, at the present time, 20 oleo manufacturers produce one-third of the spread of the Nation, and it would not require a very long time for 60 oleo manufacturers to take over the entire spread-manufacturing business of the Nation.

If cheap imported skim milk is incorporated with vegetable oils in the manufacture of synthetic cheese, just exactly how many cheese factories do you think will be eliminated from the picture?

Mr. Fluid-Milk Man, you have deceived yourself in many instances if you have believed that it would not affect you if the Rivers bill had been passed, because you do not sell butter but sell milk. You should be appraised of the fact that it is just as mechanically possible to make synthetic products out of skim milk and vegetable oils to compete with your bottle of milk as it is to any other synthetic dairy products.

Oleo is 80 percent vegetable oil and 15 percent skim milk. If by passing certain legislation this product is made equal to a 100-percent dairy product such as butter, it is apparent that it is but a short step to pass legislation making "coconut cow's" milk—which is composed of 6 percent vegetable oil and 94 percent skim milk—equal to evaporated natural milk, which is composed of 7 or 8 percent butterfat and 92 or 93 percent skim milk.

Do you think it will be a very long step to legalize filled cream?

Do you think it will be a very long step to legalize filled ice cream?

There is no use trying to sidestep this issue. Facts are facts. If, by legislation or otherwise, vegetable oil is made equal to animal fat, who is there to say that the synthetic products which I have mentioned, should not be produced?

Let us get this question straight and get it on the record.

If any individual group, or organization wants to dismantle the evaporated milk business of this State; jeopardize the cheese

industry and allow all of the spread to be made by 60 oleo manufacturers and close up the thousands of creameries and promote filled cream and ice cream; or be a party or organization to promote the manufacture of synthetic whole milk—that is a responsibility that they may assume and one for which they must answer.

I have given considerable time and study to this entire problem. I have diligently sought out the facts and I have always kept my arguments based on scientific facts. I have accepted these scientific facts because they have been established by one of the greatest biochemists and nutritionists that the world has ever known, Dr. E. B. Hart, of our own University of Wisconsin. His experiments are beyond question. The statements which I have made concerning past experiments and tests have been cleared through this recognized authority on scientific facts.

So that no one will get the impression that the manufacture or production of synthetic dairy products and the controversy over oleo and butter applies just to the man who milks the cow, I hope that the people working in the dairy plants not only in our State, but throughout the country in handling the various forms of dairy products, will stop and ask themselves what kind of jobs they are going to have when a few plants manufacturing synthetic dairy products are given the green light. Ask yourselves what the effect will be on the dairy industry of our great State of Wisconsin.

It is evident that any State where the agricultural economy is based on the dairy cow, with 50 percent of the farm income from milk and milk products, will decline in economic importance.

The health of the State, of the country, and the world is closely allied with the dairy industry. We must be ever alert to the encroachments made upon it.

Mr. Truman Moves Far Over to the Left

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cumberland (Md.) News of January 10, 1949:

MR. TRUMAN MOVES FAR OVER TO THE LEFT

Restrained in style but extreme in content. That was President Truman's anxiously awaited message on the state of the Union. That Missouri twang more and more suggests mild-mannered Clement Attlee calmly "socializing" the economy of Great Britain. With his first message to Congress as an elected President, Harry Truman, of Independence, Mo., has swung far over to the left.

At the beginning of his address the President said that government and business must work together for the common good. He then proceeded to scare the daylights out of business with a program that would dangerously extend the powers of government over the American economy.

Everything that Mr. Truman demanded of the Eightieth Congress in that precampaign special session which was calculated to put the Republicans in a political hole was repeated here, and more was added. To avert a deficit, the President asked $4,000,000,000 in new taxes, chiefly on corporations but not neglecting higher income levies—of course, on the middle and upper brackets. Still harping on inflation even as prices fall, he asked again for power to allocate scarce raw materials and impose price and wage ceilings.

A new and deadly dart was aimed at the steel industry. If, said the President, Congress finds that the steel shortage is serious, it should authorize Government loans for expanded output. If private industry then fails to meet the needs, the Government should itself go into the steel business. That direct leap toward state socialism is of a piece with his demand for development of our river basins, with "power" named as the first objective.

As expected, Mr. Truman repeated to Congress all the promises he made to all minority groups during his campaign. Something is here for everybody—higher minimum wages, "improved" farm price supports; expanded social security, in coverage and payments, which will require higher pay-roll taxes; Federal aid to education; Government compulsory medical insurance; a public housing program to build 1,000,000 new homes in 7 years, and so forth. As expected, the President called for outright repeal of the Taft-Hartley Act and revival of the Wagner Act, with a ban on jurisdictional strikes and "unjustifiable" secondary boycotts. He repeated his civil rights program, in general terms.

What will be the reaction of Congress to this legislative program that would flatter and bribe every pressure group in the country? A purely negative reaction is undesirable as well as impossible. Some of the proposals are sound and will be supported by Republicans and Democrats. But even a Roosevelt rubber-stamp Congress would not approve everything in this message, and the new Congress is not likely to be a rubber stamp.

Under the new line-up in Congress, a Truman bill that had 7 Democrats against it could be defeated in the Senate; and there are 17 Democrats from Southern and border States. In the new House, 47 dissident Democrats could defeat a Truman measure; and 97 have voted in the past against the administration as often as with it.

For the Republicans, if they wish to be an opposition party in fact as in name, the course is clear. Stick together and work with anti-Truman Democrats to meet squarely the real social and economic problems facing the Nation; but keep always in mind that the heart of American power and prosperity is our basic system of free enterprise. Would that be opposing the will of the voters? Mr. Truman and the new New Dealers may be persuaded that he was given a mandate on November 2. Actually, he received less than 50 percent of the popular vote.

The President's extremist message should draw together the representatives of the real majority of Americans, who, regardless of party labels, do not look to Washington for the solution of their every problem.

Shipments Under the Marshall Plan

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. ROONEY. Mr. Speaker, I am sure that without exception every Member of this House is definitely against the proposal of ECA Administrator Hoffman to ship all bulk cargoes under the Marshall plan in vessels flying foreign flags. I have vigorously protested that this would help ruin our American merchant marine at a time when as many ships as possible should be in operation on the high seas. Such action would be contrary to the present law which insists that a minimum of 50 percent of bulk cargoes be shipped in American bottoms, and would deprive thousands of American seamen of work.

I am glad that the Seafarers International Union of North America, Atlantic and Gulf district, affiliated with the American Federation of Labor, has taken a prominent part in protesting Mr. Hoffman's proposal. Under the permission heretofore granted me by the House, I include with these remarks a splendid article which appeared in the January 7, 1949, issue of the Seafarers Log, weekly publication of that union:

THE FACTS, MR. HOFFMAN

In a letter to Senator STYLES BRIDGES, former chairman of the congressional watchdog committee on the Marshall plan, ECA Administrator Paul G. Hoffman tried to justify his infamous proposal to move all bulk Marshall-plan cargoes in foreign vessels by a statement that simply does not fit the facts.

He declared that the cost of shipping a ton of coal from the United States to France is sometimes as much as $4.50 less on a foreign ship than on an American ship. He strongly implies that this big differential was the rule rather than the exception, and he forgot to note that it was an exception that was no longer happening on December 3 when he wrote the letter.

The facts are these: The American rate for carrying coal from the east coast to France is $10.85 a ton. This rate is set by the Maritime Commission. On foreign ships the rate ranges from $8.50 a ton to about $9. This week, in an effort to get at the truth, a shipping official called three operators of foreign-flag vessels to inquire about the coal rate. Two of the operators quoted $8.50. The third wouldn't talk about any rate below $9, and seemed to prefer a higher one.

Thus, the actual differential about which Hoffman has been bleating turns out to be no more than $2.35 a ton at the most, and only $1.85 or less in some cases. And the story doesn't end there, because the differential is just about wiped out later so far as American taxpayers are concerned. Coal is not the only bulk cargo, but the coal rate continues to be the root of the controversy.

Another facet of the Marshall-plan shipping situation has been overlooked completely by Hoffman and his executive assistants. At least they have not mentioned it in their public statements. Whether Hoffman knows it or not, foreign operators are getting away with a scheme so obvious that one can only conclude that Hoffman is a very gullible gent.

It is no secret that representatives of French shipping interests recently told a member of the Maritime Commission that they deliberately depressed their rates in a maneuver to get a bigger slice of the melon. Later on, the Frenchmen continued, up would go the rates. The Americans would be hoodwinked.

Shipping men of other nations participating in the Marshall plan are reported to have said substantially the same thing, although they said it less bluntly than the Frenchmen. Foreign rates already are rising as the foreign operators smack their lips in anticipation.

Foreign operators haven't been worrying about making or losing money for the present period. If they lose money they expect to

be reimbursed directly or indirectly through the Marshall plan. This would mean American subsidization of European merchant fleets with low labor standards. And if they get the extra cargoes and raise the rates, too, their chances of losing money are very slight. Yet Hoffman, in his letter to BRIDGES, wailed that to pay the American rates was to subsidize the American merchant marine, and copies of that letter were sent to many trade unionists, Senators and Congressmen, who have taken up the cudgels in the SIU's fight to have the Hoffman order rescinded. In the early days of the battle, Hoffman and his assistants apparently believed that this letter was enough to fool everybody. Actually, it fooled nobody.

What of the rate differential that remains? Is it as devastating as Hoffman would have it sound? The answer is a resounding "No," after some of the elements in steamship financing are examined.

If a minimum of half of the bulk cargoes are to be carried under the American flag as the law now provides, despite Hoffman's peculiar interpretation, they will go for the most part in Liberties under bare-boat charter from the Maritime Commission.

When a company charters a Liberty from the Commission, it pays $7,500 a month in rent. If 150 Liberties should fail to operate because of the Hoffman order, it would mean a dead loss in revenue to the Government of $1,125,000 a month. The charter hire for Victory ships is $10,000 a month, and if any Victory should fail to operate because of the order the loss of revenue would be correspondingly greater.

Maritime Commission spokesmen point out that the money from chartering a ship is almost entirely profit to the Government. The loss to the Government is even greater, however, for a ship in the boneyard costs the Commission about $10,000 a year to maintain.

Then there is the matter of taxes. If a company charters a Liberty, the first 10 percent in gross profit on the capital invested in the operation of that ship is subject to normal corporate income taxes. When the profits go higher, the taxes spiral. After the 10 percent has been taxed separately, the Government divides additional gross profits by the number of days the company actually operated the ship.

The company is then taxed 50 percent of the first $100 a day profit, 75 percent of profit between $100 and $300 a day, and 90 percent of any profit above $300 a day. The steamship companies still pay substantial dividends while the Government gets millions and millions in taxes.

In short, if the Maritime Commission ships are in the boneyard, the Government loses: (1) Millions of dollars in charter hire; (2) millions of dollars in maintenance charges; (3) millions of dollars in corporate taxes; (4) millions of dollars in unemployment benefits paid to seamen and others in the maritime industry.

Hoffman maintains that if all the bulk cargoes go on foreign flag ships, this country will be able to ship more goods to Europe. This is a dubious argument at best, since shipping costs are only one item in the Marshall plan.

However, he might better insist that 60 or 70 or even 100 percent of the bulk cargoes go in American ships. And he might ask that the extra taxes collected by the Government from the shipping industry be appropriated to purchase the goods that the people of the war-ravaged nations of Europe must have, despite chiseling in shipping and other matters by some of their businessmen.

The SIU will carry on its fight to have the Hoffman proposal defeated. This battle is far from over, but each day we gain new allies in the labor movement and Congress. The SIU never has lost a beef and will not lose this one.

Investigations of Committee on Un-American Activities

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include two letters and one editorial—a letter from the Honorable Hamilton Fish to President Truman and the President's reply, and an editorial by Westbrook Pegler on a similar subject:

NEW YORK, N. Y., *December 23, 1948.*
Hon. HARRY TRUMAN, *President,*
White House, Washington, D. C.

DEAR MR. PRESIDENT: You have persisted in attacking the Un-American Activities Committee, duly appointed by the House of Representatives, and denouncing its recent startling exposures of spies and traitors in our midst as red herrings. I sincerely respect you, Mr. President, because you were a tough combat officer in World War I, and on account of your Missouri mulishness, but there is such a thing as carrying stubbornness too far. You must know by this time that you were wrong in raising the red-herring issue.

Who appointed Alger Hiss to the State Department?

Who appointed him as adviser to F. D. R. at the Yalta Conference?

Who appointed him as executive secretary of the Dumbarton Oaks conference in 1944?

Who appointed him as secretary general of the San Francisco Conference for the organization of the United Nations in 1945?

In order that I may not be considered raising a partisan issue I agree that the public is entitled to know from John Foster Dulles, a Republican, if he had anything to do with various key appointments of Mr. Alger Hiss in the State Department and as president of the Carnegie Endowment for International Peace.

We have already had too much secret diplomacy at Yalta, Tehran, and Potsdam which we are now paying for in Berlin and China, and not enough faith in the American people.

Why should any public official or loyal American want to protect Communist spies and traitors? Every individual implicated in this steal of secret documents from the State, War, or Navy Department should be publicly exposed and punished.

Mr. President, who is the State Department trying to cover up?

Mr. President, who were and who are the agents of the Communist Party in the State Department and other departments of the Government?

Mr. President, the American people are entitled to know how Alger Hiss and other Communist sympathizers and Red stooges infiltrated into important Government positions.

Mr. President, how long will Communist spies and traitors be permitted to infest the Federal service and abuse the patience of the American people? It is time that the various departments of the Government realized that they are the servants and not the masters of the people.

The diabolical espionage plot with its stolen documents and microfilms must be openly exposed, and everyone connected with it punished. Let no guilty man or woman escape, no matter how important or powerful, dead or alive.

The Un-American Activities Committee has rendered an important public service. It should be commended, not condemned, and its activities continued by the incoming Congress.

There can be no appeasement of Communist spies and traitors, or those aiding and abetting them. There can be no compromise with treason under any guise.

I am writing this as an American and not as a partisan Republican.

Respectfully yours,

HAMILTON FISH,
Chairman of the House Committee To Investigate Communist Propaganda and Activities in 1930–31.

THE WHITE HOUSE,
Washington, January 6, 1949.

Hon. HAMILTON FISH,
New York, N. Y.

MY DEAR MR. FISH: I read your letter of December 23 with a lot of interest and sometime or other I shall explain just exactly the situation to which you refer.

You naturally are looking at the programs, which you claim are wrong, with a partisan prejudiced eye for which I can't blame you.

Sincerely yours,

HARRY TRUMAN.

FAIR ENOUGH

(By Westbrook Pegler)

I know of no better way to illustrate to the American laity the squirming, trimming elusiveness of the overeducated Harvard doubledome of the Felix Frankfurter cult than to quote some gobs of the gummy text that Adolf A. Berle left in the record when he took his intellect up the Hill and blew the whistle, through his ears, on his old college chums in the State Department.

You will hear a thousand men allege that they covered Harrison Street Station in Chicago when the policemen really knew how to lead a witness, but I won't say any more than just that I used to study social science there on Saturday nights and got some lessons that might quiet a gabby guy like Berle and keep him on the subject.

There was a sergeant at Harrison Street who for some personal bigotry took a narrow view of the profession of pandering and I have an adolescent recollection of him sitting in his big armchair, facing a client of the Saturday night rush, who sat in a similar chair facing him, giving evasive answers.

The sergeant was cooing at him and smiling like a lover and the mackerel was using an awful lot of language to say nothing and thought he was getting away with it.

At a certain point, however, the sergeant whapped him a clop on the side of the head with a heel of a hand as big as a paving block and tumbled him clear across the room.

When he came up he popped yes-and-no answers, right names and numbers with the crackle and snap of a string of firecrackers, and just a flick of the sergeant's thumb was enough to bring him back to the subject. He gave a much better performance than Mr. Berle and the sergeant didn't thank him either as the committee thanked Berle, nor help him on with his coat.

Here is a brow from Harvard, a prodigy no less, who muzzled his way into the Peace Conference after the First World War and as some kind of expert at the age of 23, now testifying in a Communist dirty mess at the State Department.

These people can learn less out of a given situation than you would expect of an apprentice mongoloid and yet that magic name of Harvard law seems to hex the lower classes, for the Congressmen salaam and murmur thank you when they ought to throw this kind in the cooler to make up their minds.

Listen to this:

"Question. Did you do anything officially or unofficially about this information?

"Answer. (By the brain) Yes; I did a great deal. I was disturbed a good deal but not so much at the three or four men named. Mr. Pressman was out of the Government.

"To be blunt about it, Mr. Witt's statement and sympathies were so well known that what Mr. Chambers had said added nothing to anything that wasn't public knowledge at the time."

Now, let us count up and see what our flannel-mouthed friend said. He was disturbed. But not so much about the three or four men named.

No answer at all so far. And after saying he was disturbed he pulls the rug from under himself to make damn sure he hasn't said anything that anyone could sink a tooth into. That's Harvard law for you, where old Weenie carved the motto: "To derive plain meanings from plain words is pernicious oversimplification."

But all right. Take Berle at his word about Nathan Witt. The pair of them were happy hot dogs of the Frankfurter cult, so you can be sure he knows his man.

Yes; it is true that Witt was understood to be as red as a firecracker. He was known as the man who controlled the board during the bloody anarchy of the early thirties which gave birth to the misbegotten CIO with all its terror and its continuing corruption of the American system of life. But Berle never said so. Yet, he is an officer of the court, isn't he? He is a citizen, supposed to be patriotic, isn't he?

Well, then, what did he ever do to inform the public, to denounce Witt's "well-known sympathies" and protect the country against him?

Not a thing. Nothing.

He just thought it was amusing, that's all. Quaint fellow, Witt, Roguish.

But let Berle dribble along:

"I looked into the then position of the Hiss boys first."

He calls these twirps boys although Alger is 44 and the other is 42. They certainly get a lot of mileage out of adolescence up at Harvard law.

I must quit interrupting the mugg. I am acting like that sergeant with the fish at Harrison street.

Now remember, the question was, what did he do?

"Answer (by Mr. Berle). According to my recollection, neither of them (the twirps) had any position that amounted to very much in the State Department. My recollection is that at that time Alger Hiss was doing some relatively unimportant work in, I think, the legal department, and I have forgotten what Donald was doing, but neither was in a position where he either had access to confidential information or where he had much to do with policy, so for the moment there was no immediate danger.

"Further, the idea that the Hiss boys and Nat Witt were going to take over the United States Government didn't strike me as any immediate danger."

Still no answer, you observe, and the four-flusher hasn't really got his mouth open yet. And note how he cuts the ground from under himself with the stuff about "my recollection" and "I think" and "I have forgotten" and anyway it was all very harmless at worst.

But here we go again: "I checked on the two Hiss boys. Specifically, I checked with Dean Acheson and later I checked when Acheson became the Assistant Secretary of State and Alger Hiss became his executive assistant.

"That to my knowledge was the first time when Alger Hiss would have been in a position to do anything effectively. Acheson said he had known the family of these boys from childhood and could vouch for them absolutely.

"I further found that Mr. Justice Frankfurter would give them an exactly similar indorsement. You had therefore a chain of indorsements by the men for whom they worked, but reputable men, whether you agreed with them or not, and this seemed to negative any danger."

Remember now, Berle has just admitted before he goes into this dance of the dying swan that Chambers had told him the two Hiss children were preparing to go into the Communist underground in our Government.

"Schematically, I believed that Chambers was telling the truth"—and Berle dances back again—"Telling the truth as he saw it, so I caused the Department to establish very close relations with the FBI. A little later, a section was organized in the State Department known as the foreign activities correlation division.

"The name is meaningless and designedly so. Its business was to follow all of these various activities as they appeared in Washington and in respect of any group that might appear to be sympathetic either with the Communists or with the Nazi-Fascist point of view.

"I think a couple of weeks ago it was merged with the Security Division or some similar section in the State Department. We tried to trace out the groups which endeavored to have representation through any individuals in Washington, and we endeavored to reach back to see whether the Communist apparatus was beginning to try to activate the foreign-language groups in the United States."

Had enough?

How the United States Government fell into the hands of these Harvard maypole dancers you will never find out from any of them without the aid of the likes of my old hero of Harrison street.

But that is Harvard law to the life. There is your happy hot dog, slippery as an eel in a tub of soft soap and him an American, a patriot, and an officer of the court.

Don't ever ask this joker the time of day. It will be tomorrow night before he really gets going.

Progress in Palestine

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. KEATING. Mr. Speaker, as the new year begins, certainly one objective sought by men and women of good will the world over is peace and justice to all in the Holy Land. A singularly dispassionate analysis of both accomplishments and aspirations is contained in a letter from the executive council of the American Christian Palestine Committee to the New York Herald Tribune which, under leave to extend my remarks, follows:

PROGRESS IN PALESTINE—COMMITTEE EXPRESSES SATISFACTION AT ISRAEL'S EFFORTS TOWARD STABILITY AND PEACE

To the NEW YORK HERALD TRIBUNE:

As members of the executive council of the American Christian Palestine Committee, we express our satisfaction over the progress, internal stabilization and growing measure of international recognition accorded the new state of Israel. We express our best wishes to the Government and people of Israel on the occasion of the coming new year and hope that this year will ban the last vestiges of war from the Holy Land and will inaugurate a reign of peace throughout the Middle East.

We regret that the Arab part of Palestine, still an object of rival ambitions on the part of neighboring Arab countries, has not yet consolidated its separate political existence. We hope that the international intrigue concerning the Arab part of Palestine will soon cease, permitting the people of that area to live in peace and freedom.

We express our satisfaction over the scrupulous manner in which the Government of Israel is observing its well understood duties of respect for and protection of the Christian holy places and shrines on Israeli territory. Particular satisfaction is expressed over the way in which far-reaching measures have been taken by the authorities of Israel in the midst of a war to offer all facilities for the Christians in Israel to celebrate the holy day of Christmas in keeping with the dignity and tradition of that revered festival. We express our satisfaction that energetic measures were taken by the Israeli authorities to check any regrettable incidents of interference with Christian churches and shrines which occurred during the height of the battles last summer and we rejoice in the safety which Christian churches and institutions enjoy in Israel today.

We express the hope that international agreements will soon be entered into in order to place on a permanent and satisfactory footing the protection of and free access to the holy places of all religions, both in Israel and in the Arab part of Palestine. We are of the opinion that the old city of Jerusalem and the city of Bethlehem, which occupy a particularly revered place in the hearts of untold millions all over the world, should be placed under the direct supervision of an international body entrusted with the safeguarding of the holy places.

We regret the continued military and diplomatic pressure on Israel aiming at the detachment of all or part of the Negeb from Israel, a pressure evidenced by the continued presence of Egyptian forces in the Negeb and supported by diplomatic maneuvers on the part of Great Britain. We call upon the United Nations to demonstrate its faithfulness to its own charter by taking strong measures to insure the evacuation of all non-Israel forces from the entire Negeb area allotted to Israel under the UN resolution of November 29, 1947. In view of the concerted effort of the Arab states to nullify the effect of the UN partition resolution by force of arms, and in order to safeguard the state of Israel against similar attempts in the future, we recommend that western Galilee and the new city of Jerusalem be joined to Israel.

We regret the failure of the United Nations to admit Israel to membership and hope that such admission will soon be forthcoming, thus enabling the new state to take its due place in the family of nations, in peace and harmony with all other nations of the world.

We welcome the efforts of the international community and of the Government of the United States in giving aid and relief to Arab refugees from Palestine. We express our regret that the governments of the Arab states, whose initial aggression in Palestine and whose action in inciting the Arab population of the holy land to flee from their homes were responsible for the plight of the refugees, have not contributed their full share in relieving a problem which they themselves had created.

We respectfully draw the attention of the Government of the United States and of the international bodies dealing with the relief of Arab refugees from Palestine to the need to extend these activities so as to embrace the Jewish populations of Arab countries,

which are finding themselves uprooted and displaced because of measures of discrimination and persecution imposed by the governments of those countries.

We call upon the government of our friend and ally, Great Britain, to forsake the attitude of antagonism and rancor which it has hitherto displayed toward Israel, an attitude unworthy of the great Christian traditions of that realm. May the day come when the government of Great Britain, to its own greater glory, will deal with Israel in the same equitable and generous spirit for which the British people have been renowned so often in history.

We plead with our fellow Christians, in positions of strategic leadership in the American colleges and missions throughout the Middle East, to consider seriously their attitude and influence toward Israel. We would remind them of our great debt in the religious heritage which came to us through Israel's prophets and Jesus, a son of Israel. We know of no other solution to the tragic national homelessness of the Jewish people—who have suffered as have no other people through the ages—than is offered by the state of Israel now recognized by 21 nations.

We send our respectful greetings and best New Year's wishes to the President of the United States, the Honorable Harry S. Truman. We invoke upon him the blessings of the Almighty in his historic task of guiding the United States and of assisting the world toward peace, progress, and prosperity.

We express the hope that the President will direct the policy of the United States Government on all questions concerned with Palestine in keeping with his past pledges and in accordance with the suggestions formulated above.

NEW YORK, *January 3, 1949.*

Shepherd Versus Wolf Pack

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. ROONEY. Mr. Speaker, on the opening day of this new Congress I introduced House Concurrent Resolution 8, protesting the action of the Communist-controlled Government of Hungary in arresting and imprisoning Josef Cardinal Mindszenty, who received similar persecution at the hands of the Nazis.

Under the permission heretofore granted me by the House, I include herewith the following article, entitled "Shepherd Versus Wolf Pack," which was published in the January 12, 1949, issue of the Pathfinder News magazine:

SHEPHERD VERSUS WOLF PACK

Behind the iron curtain in Hungary the only voice still bravely raised against Communist tyranny was that of Josef Cardinal Mindszenty. Priest and prelate for 33 of his 56 years, the cardinal, spiritual leader of Hungary's Catholics, 68.2 percent of the population, fought the Communists as he had the Nazis before them.

The Nazis hustled him off to a concentration camp when he dared to intervene in their pogrom against Jews. The Communists used different tactics. They let the cardinal speak while they seized church lands, turned church buildings into Communist headquarters, suppressed Catholic magazines and daily newspapers. (Exception: one weekly permitted to publish 100,000 copies in a Communist-run print shop under strict censorship.)

NO QUARTER

A shining knight in threadbare cassock, the cardinal fought back with tongue and pen. Traveling fast and widely, he spoke from pulpits and at outdoor meetings, drew great crowds with defiant words like these: "Our bleeding country is floundering in the greatest economic, constitutional, and moral whirlpool in history. We are sitting by the waters of Babylon, and they want us to learn songs as foreign to us as the sounds of an unstrung lute."

A tall tale testifies to the cardinal's popularity. As the story goes, Communist boss Matyas Rakosi congratulated President Arpad Szakasits, a Communist stooge, on getting a whopping turn-out at a rally, asked him how he did it. Szakasits replied, "It was easy. I passed out word I would make a speech of resignation. That brought out 20,000. Then I said you would announce your resignation. That brought 40,000 more. Then I said Cardinal Mindszenty would speak and that brought out 200,000."

CLIMAX

The fight between the cardinal and his enemies went into the last round in June. The Communists took over the church schools—lock, stock, and textbook. Cardinal Mindszenty forbade nuns to teach in schools run by Communists who "see in the human soul only the future party member and party man."

Once Communist toughs stoned his battered automobile. The cardinal stopped the car, got out, walked up to the gang, and said, "Here I am. Stone me if you wish, but please leave the car alone." The stone throwers slunk away.

Not long after that mobs paraded in Budapest with placards screaming, "Mindszenty wants a kingdom. Hang him on a tree." The Communist Minister of the Interior vetoed the suggestion. "We have," he said, "no intention of obliging Mindszenty by making him a martyr."

LAST CHAPTER

But last week the cardinal lost his immunity. In the quiet of a Christmastide Sunday evening secret police invaded his episcopal palace and placed him under arrest. The Communists threw the book at him, charged him with plotting to overthrow the government and restore a monarchy, espionage, and black-market operations. In Communist courts, which mock at justice, conviction seemed certain. Likely sentence: A long term in prison or death on the gallows.

His arrest was no surprise to the small, wiry cardinal who once told an American friend, "Ultimately all that my enemies can take from me is my life." The cardinal's last pastoral letter was at once a "grave warning of grave times" and a challenge to his priests to carry on the fight. He wrote: "If the number of my pastoral letters diminish in the future due to conditions, read instead of them past pontifical encyclicals.

"Put your faith in the patron saint of the Hungarians—the Virgin Mary. When maligned, be happy. Be on guard and pray to be worth the events to come."

The Veterans' Rent Can Be Reduced and Increased Private Housing Units Constructed Through Exemption From Federal Taxation of Income on Obligations Issued by Nonprofit Housing Development Corporations

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. KEATING. Mr. Speaker, many States have enacted laws similar to one passed in New York, known as the redevelopment companies' law, which are designed to encourage the formation of corporations to construct and operate nonprofit low-rent housing projects. Pursuant to such enabling legislation, many communities, through public-spirited individuals and institutions willing to advance the initial capital, have made substantial progress in meeting the housing needs of the modest-income group. In the city of Rochester, N. Y., which I have the honor to represent, three extensive developments, Norton Village, Fernwood Park, and Romano Park, have been constructed under this law.

The pattern is for the city to turn over the land in exchange for capital stock; then the money for construction is borrowed from local banks or other interests to which are issued notes, later converted into mortgages. These mortgages are insured by the Federal Housing Administration under the provisions of the National Housing Act of 1934. An agreement is entered into providing that no dividends shall be paid on the stock and when the obligations of the corporation are liquidated the title to the property reverts to the municipality. The corporation is thus organized strictly to serve a public purpose and there is no possibility of any profit or gain for the stockholders.

Under Federal law interest and all obligations issued by the public-housing agencies in connection with low-rent housing projects are exempt from taxation. The Commissioner of Internal Revenue has ruled, however, that the holders of obligations such as I have described cannot have the benefit of this nontaxable feature, since they are not strictly public-housing agencies.

Since this ruling results in a higher interest charge than would pertain if such income were tax exempt, that, in turn, increases the carrying charges of the corporation, which results in raising the rent of the tenant. Since the profit motive is completely absent from these transactions, there is no more reason for assessing a tax against such income than there is in the case of public housing obligations. I introduced a measure at the last session to extend the advantage of tax exemption to these private nonprofit low-cost housing projects. Some objec-

tion was voiced tc the bill on the ground that it was too broad and should be limited only to those corporations which are subject to supervision and control by a department or agency of the United States or a State or local government.

I have today introduced a bill which I believe meets this objection and also provides expressly that the only corporations embraced within its terms shall be those that agree that no dividends shall be paid on their stock and that all profits realized from their operations will be applied in payment of the cost of the project, including any mortgages issued and that the balance shall revert to the State or one of its political subdivisions. This insures definitely against the possibility of any private interests realizing a profit exempt from the usual operation of the taxing statutes.

In offering this legislative suggestion no contention is necessarily implied that private enterprise and initiative will be able to solve all of the problems connected with providing homes for those of modest incomes. This measure is by no means intended as a cure-all; undoubtedly it must be supplemented by other housing legislation. Nevertheless it certainly seems to me that every legitimate encouragement should be extended to those who seek, through the medium of private enterprise and local management and control, to assure moderate-cost housing accommodations to tenants of modest income, among whom are numbered so many of our veterans and their families, as well as the millions who served faithfully and patriotically on the home front. This legislation, if enacted, will result in substantial rent reductions for those occupying such housing units and will materially assist those who, when their country turned to them in its hour of emergency, responded without hesitation and without condition.

Since this is a Nation-wide problem in all States which have enacted laws similar to the redevelopment companies' law of New York, it is my hope that many Members will support the legislation and urge its favorable consideration by the Committee on Ways and Means.

China Can Be Saved

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the New Hampshire Morning Union of January 10, 1949, entitled "China Can Be Saved":

CHINA CAN BE SAVED

Former Ambassador William C. Bullitt has confirmed the opinion of Representative WALTER JUDD and other authorities on Far Eastern affairs that the conquest of China by the Communists may yet be prevented by a positive, aggressive United States policy.

Bullitt was sent to China by the congressional watchdog committee, of which Senator STYLES BRIDGES is chairman, to study the situation first-hand and report for the information of the committee. His competence for a job of this kind has never been questioned.

Briefly Bullitt's decision is that while it is very late, it is not yet too late to save China. The Communists, he believes, can be stopped at the Yangtse River, if definite steps are taken by the United States Government. Among these steps he proposes:

1. Military and economic aid to China.
2. Assignment of an American military officer to direct the Chinese Government's military operations.
3. Re-creating the Flying Tigers as proposed by Gen. Clare Chenault.

These are practical recommendations, and they should be promptly adopted. There is no time for further delay. We should recognize, as Bullitt said, that we are at one of the turning points in history in this Chinese situation and that we cannot afford to be wrong. The stake in China is not only the independence of that country, but it may well be the independence of the United States.

If China is dominated by the Communists, all Asia will speedily become alined with the enemies of the United States. Consider what it means if an area embracing half the population of the globe is swung into the Communist camp.

No issue today is more crucial to American welfare than this one. Make no mistake about that. For a generation American policy has been based on the demand that the independence and integrity of China must be respected. We fought a war with Japan in defense of that policy. By what mental twist or ignominious surrender is that policy now suddenly abandoned and China turned over to an enemy far more dangerous to American welfare than Japan ever was?

This pusillanimous attitude does not make sense. The time has come for action, to put an end to what Senator BRIDGES has called a "tremendous gamble" in which not only the future of China but of the United States is at stake.

New Rules Committee Method More Democratic

EXTENSION OF REMARKS
OF
HON. ANTHONY CAVALCANTE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. CAVALCANTE. Mr. Speaker, it is most encouraging to note how favorably certain sober-minded press editors have received the action of this House in democratizing its rules so that the President's platform may have a fair chance to be enacted into law. Under my permission to extend my remarks in the RECORD, I submit the following editorial from the Evening Standard, of Uniontown, Pa.:

NEW RULES COMMITTEE METHOD MORE DEMOCRATIC

It has been argued that the House of Representatives' decision to limit the power of its Rules Committee simply transfers a potential dictatorial power from the committee to the Speaker. It has also been argued that this decision is a triumph for Mr. Truman and a first step toward putting through the legislative program that he promised the voters in his campaign.

Those arguments are debatable, and incomplete. To take up the second point first, this reform, like many others, is not limited to the present. Unless repealed, the new procedure for bringing bills before the House will continue indefinitely. The question is not whether it helps Mr. Truman, but whether it helps to translate the people's wishes into law more effectively.

There are indications that the new procedure will make legislation a more truly democratic and representative process. They may be no further back in history than the record of the Eightieth Congress. Polls showed—and polls do show, in spite of their record in the Presidential election—that the majority of Americans favored universal military training. The November vote, we believe, showed that a majority also favors a program of public housing and slum clearance.

Both these measures had strong bipartisan support. Mr. TAFT, leader of the late Republican Senate, was coauthor of the housing bill approved by the Senate and appropriate House committees. But the Rules Committee would not even permit the House to consider and debate these two highly important bills, much less vote on them.

That is not democracy. Neither is it a proper function. The committee was conceived as a channel—a bottleneck, perhaps—through which a mass of legislation could pass from committees to the House in orderly fashion. It was not meant to be a bottle stopper. And that is what it had become. Under both parties, the Rules Committee has often exerted the power of censorship.

The first major decision of the new Congress curtailed this power. Formerly it took a petition with 218 signers to bring a bottled-up bill before the House. Now the chairman of the committee which has approved a legislative bill can move to have it brought out after the Rules Committee has had it for 21 days. To do this he must first be recognized by the Speaker.

Opponents of the change say the Speaker can fail to recognize a chairman and thus censor bills as effectively as the committee. But there are important, if perhaps intangible, differences. The Speaker is a powerful officer of the Government, and there have been men who abused that power. But it is highly debatable whether their abuses match those of past Rules Committees.

The very nature of the Speaker's office works against this. While the average citizen may know little and care less about the Rules Committee chairman, he is likely to know the Speaker. The Speaker is elected by the majority party of the House. His is a position of honor. And, unlike a committee chairman, he works in the open and in the full view of the press and public.

For those reasons alone we believe that the average Speaker conducts himself with a consciousness of the dignity of his office and of his personal responsibility and vulnerability in fulfilling its duties. And for those reasons, we believe that the change in House procedure will produce its obvious benefits in spite of its possible dangers.

Hazleton: City of Courage

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following article from the Hazleton (Pa.) Standard Sentinel of January 7, 1949:

HAZLETON: CITY OF COURAGE

What a let-down. That was our feeling after reading City of Courage by Henry M. Lewis, Jr. This story about Hazleton and its successful industrial fund campaign was published in the Everybody's Weekly magazine section of the Philadelphia Inquirer last Sunday.

The article was a great disappointment, for we had advance information that a story about our city was going to be released. We even called our readers' attention to it in our columns last week, thinking, of course, it would be excellent publicity for Hazleton and a great boost for the city and all its people.

Proud of the accomplishment of our city, we started to read City of Courage. As we progressed in our reading, we began to wonder, What is this all about? It's been many a day since we have read a newspaper story which in so many ways is so far from the truth.

We don't know where Mr. Lewis got some of his information. He never came to Hazleton and talked to anyone in the know. Vic Diehm, president of the chamber of commerce advises that he never saw the author, but that he did receive a telephone call from him several months ago. Mr. Lewis was seeking human interest material for his story. Vic Diehm referred him to the chamber of commerce office, but no records exist to show that any information was supplied by that office. We're not objecting to the human interest angle of Mr. Lewis' article in which he relates the reaction of the retired railroader, the marine veteran, the shoeshine boy, the high-school student, etc., to the campaign. We are objecting to his misstatements about our economic condition, which information, we know, he never secured from our chamber of commerce. No copy of the story was ever submitted to anyone connected with the chamber for their suggestions or corrections; in fact, since the first telephone contact, nothing further was heard about the matter until the article appeared in print in the Sunday Inquirer.

The Hazleton Industrial Development Corp. was never contacted, nor were we at the local daily newspapers. Therefore, it's very obvious Mr. Lewis was content to accept second rate information, never checking the accuracy or authenticity of his informers' statements; and as a result Hazleton received very much of a left-handed compliment. We don't hesitate to tell the Philadelphia Inquirer that Hazletonians, full of civic pride, were plenty nettled by Mr. Lewis' ideas about our city of courage.

For the benefit of the Philadelphia Inquirer and Mr. Lewis, we would like to state that Hazleton never was, is not now, and never will be a ghost town with grass growing in its streets. Hazleton was never "down at the heels, industrially, as no other city, town, or village in the United States has been in a decade," as friend Lewis puts it. And we challenge his statement that our "seventy-odd small industries were like a bunch of ribs without a backbone," despite the fact he attributes this opinion to Frank Mantz, former executive secretary of the chamber of commerce, who hasn't been around these parts for more than a year and a half.

True, we wanted more industry in our community. We needed a large, male employing plant, but so do all the other cities and towns in the anthracite field and, as a matter of fact, so do hundreds of other wide-awake small cities throughout the entire United States of America.

For many years our businessmen through the chamber of commerce had been bringing new industry to Hazleton. Granted the majority of the new plants were small, but it was industry nonetheless, giving employment, providing pay rolls and helping all of us to grow and prosper. Our civic leaders were angling continually for another large industry that would come here and take its place alongside our major, well-established concerns. Success finally came with the acquisition of the Electric Auto-Lite Co. plant and we are sure this concern would not be interested in locating here simply to revive a dead city. Auto-Lite officials were convinced Hazleton had a promising future. They were happy to come here and we are happy to have them, knowing the industry will help to guarantee our industrial well-being in the years ahead.

Brother Lewis says, "Hazleton calls itself the highest city in the Commonwealth, but frankly admits that during the last few years its industrial health has been hovering around sea level." As mentioned above, Hazleton already had some large and thriving industrial plants before our drive for new industry was contemplated. Just for the record and to refute the intimations that Hazleton didn't know where its next industrial pay roll was coming from, we would like to mention a few of our "backbone" industries and list some facts and figures on employment.

First of all, there is the Duplan Corp., a concern that in 1948 celebrated its fiftieth anniversary. During all that long period, it has been a mainstay in the industrial life of Hazleton, employing during recent years approximately 1,800 persons with an annual pay roll of $5,000,000. Then, to mention only a few of our large industries, we have Publix Shirt Corp. (Liebovitz), Shirtcraft, Tung-Sol, all with 500 to 1,000 employees; Oliver United Filters, Inc., Hazleton Dress Co., Geissler Knitting Mill, Barrett Haentjens & Co., Reidler Knitting Mill, Luxite Silk Co., Columbia Novelty Slipper Co., Freeland Shirt Co., Spaulding Bakeries, Ashmore Shops, Janov Shirt Co., Eikov Manufacturing Co., Hazleton-McAdoo Sports Co., Weatherly Foundry & Machine Co., Wilmot Engineering Co., Atlas Powder Co., each employing between 100 and 500 people. There are countless other smaller industries, too numerous to mention individually, but all are an integral part of our community. In all our industries large and small, approximately 11,000 persons have been employed during the last few years. This figure does not include employees of the utility companies, such as Pennsylvania Power & Light, Bell Telephone Co., the railroads and other transportation companies. Add approximately 2,000 workers for this group. Then add the 8,800 workers of the coal companies and stripping contractors. Now if we take into account some 2,900 miscellaneous workers not previously classified, we find that in the Hazleton area we have had during recent years about 25,000 wage earners.

We think this is quite an impressive industrial picture. It is an economic condition of which we can be proud and certainly not indicative of a city down at the heels industrially, as no other city, town, or village in the United States.

Just this week, taking a cross section of employers in the Hazleton area, we made a spot check of conditions in March 1947 the time of the industrial fund campaign. Our survey reveals conditions were very good. Things, literally, were humming. The mines were working full schedule, 6 days a week. Railroads were busy with coal and freight hauling. All our factories and machine shops were enjoying good business, many working 6 days a week and also operating 2 and 3 shifts a day. Most industries were on the way to the best year in their history.

Mr. Lewis, in his story, mentions Vic Diehm as president of the chamber of commerce and chairman of the industrial fund campaign. That is as it should be for Vic, as the chairman, spearheaded the drive and did a splendid job. All of our citizens should be praised for their respective parts in the campaign; for their all-out effort and unbounded civic pride. There are several men, however, who should be referred to by name whenever the story of the campaign is told and honors are being conferred. Four men, together with Vic, namely, John Davidson, Frederic Deisroth, James Koch, and Allan Holman rendered such outstanding service to their community that Mr. Lewis would not have omitted them if he had come to the proper source for his information. These five civic leaders got the tip on the Electric Auto-Lite Co.'s desire to locate a plant in the East, sold that company's officials on the idea of coming to Hazleton and then acted as the steering committee in presenting the plan to Hazleton and in pushing the campaign through to a successful conclusion.

And finally, Brother Lewis says we raised $500,000. He failed to explain to his readers that the campaign goal was set as $500,000, but that when the drive ended on scheduled time and we counted the last dollar, we had collected in cold cash through outright contributions a grand total of $658,000.

Well, that brings to an end our rebuttal on Mr. Lewis' masterpiece. And we hope the writer of City of Courage as well as the Inquirer will understand that Hazletonians don't like half-truths about their fine mountain city and they don't like the kind of a pat-on-the-back that knocks you down.

Deceitful Propaganda—The People of the West and South Must Wake Up, Realize What Is Attempted in Congress Against Their Interests and Take Immediate Steps To Prevent It—Many Sections of the North and East Should Be Equally Interested

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. PATMAN. Mr. Speaker, Big Steel is making a desperate effort to deceive the people into believing that the Supreme Court committed an awful error when it held that it was unlawful to fix prices, through a conspiracy among competitors by using the basing point as a vehicle.

In 1945, the Supreme Court handed down an opinion to that effect in the Corn Products case without a murmur of protest. But in 1948, when the same kind of opinion was handed down that stepped on the toes of Big Steel and Big Cement, a noise of protest went up that could be heard around the world; they got real attention quickly. The newspapers were filled with articles and news items advising the people how their interests had been trampled under foot by the Supreme Court and prophesying the immediate death of the private-enterprise system; something had to be done at once, according to these propagandists.

One thing should be made clear. The basing point has not been outlawed except when it is used illegally. There is

no confusion about the Supreme Court's ruling, but clarity instead.

ALARM SOUNDED—LOOPHOLES INSTEAD OF NOOSES

Big Steel is trying to deceive the people into believing that there is such confusion that business cannot continue unless a law is passed at once that will give the proper relief. What is proper relief, according to Big Steel? It is taking the nooses out of the antitrust laws and putting loopholes there instead. It is denied that a repeal of the antitrust laws is contemplated; the goal of Big Steel is only to make them wholly ineffective.

AMENDMENT DESIRED

It is lawful for a person to use a gun for hunting. But because it is lawful for a person to have a gun for that purpose does not mean that he is authorized to use the gun to commit murder and be exonerated because he legally possesses the gun.

The basing point is perfectly legal and may be used by any concern, but it is illegal for the concern using it to frame up against the people and fix identical prices with competitors; that is what the Supreme Court outlawed and that is what Big Steel and Big Cement want made legal.

NEW STEEL AND CEMENT PLANTS

If the basing-point system is allowed to operate as in the past, new steel plants and new cement plants will not be built. No sane person would, under normal conditions, invest his money to construct either, if his big competitors are allowed to destroy his business by the wrongful use of the basing-point system.

PEOPLE IN GRIP OF CEMENT MONOPOLY

We have 175 cement plants in the United States. During the past 20 years, only two new ones have been constructed—one by an exporter of cement in Pennsylvania, who doubtless had a backlog of orders that enabled him to get the money for that purpose, and the other by Henry J. Kaiser, constructed in California to furnish cement at 30 cents a barrel less than the Cement Trust had bid to build Mount Shasta Dam. Mr. Kaiser's bid saved the Government $1,500,000 on cement for that dam alone. When Mr. Kaiser proposed building a plant to furnish the cement, his credit for that purpose was attacked, because the project was heralded by the Cement Trust as a rank and useless undertaking. For more than 15 years the cement companies—many of them owned by Big Steel—have bid identical prices, down to the fifth decimal point on contracts to furnish cement for all purposes. That is one reason more tax money has been necessary to provide highways; there has been no competition in the sale of cement to individuals, corporations, or to the United States Government.

HAND OF GREED

Big Steel does not want any steel mills built unless built by Big Steel. Any intruder into the steel business would not be welcome. If the people can be deceived to the extent that Congress will be persuaded to pass a law legalizing the wrongful use of the basing point, neither Big Steel nor Big Cement will have any competitor troubles to worry about. But the people will again feel the cold hand of greed and monopoly on their throats.

CARPET-BAGGERS

Carpet-baggers are descending on 30 principal cities in the country from Pittsburgh, Pa., for the purpose of organizing local groups in these cities to help the Big Steel Trust convince Congress that the Hitler-cartel basing-point system should be restored to steel and cement.

MOST POWERFUL LOBBY

The big steel and cement interests have hired a Pittsburgh publicity man as their lobbyist to get the job done. He is to receive the unprecedented amount of $11,000 a month, or $132,000 a year, plus all expenses, to form what he calls chapters in these 30 cities to high-pressure Congress. This is the fattest salary by far of any registered lobbyist. It is very unusual that Big Steel representatives expect Members of Congress to believe they are sincere when they make the argument that the basing-point system is against their interest—that they can make a lot more money if it is outlawed—but they want to help the little fellow, and in the interest of the little fellow, they are asking that the wrongful use of the basing-point system be restored.

SMALL BUSINESS THREATENED

One thing they fail to tell and that is, the basing-point system has never been outlawed except where used as a vehicle to fix prices or create a monopoly. So, in effect, what is attempted now is to get Congress to legalize price-fixing and monopolies, which, if adopted, would be a death sentence for a substantial number of small businesses.

All Americans Profit

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article from the front page of the January 10 issue of the Detroiter, a weekly publication of the board of commerce of the city of Detroit.

Our whole economy is based on the profit motive. Destroy profits and we destroy employment. Every wage earner's pay check must be paid out of profits.

The hue and cry at the moment seems to be that profits should be eliminated by Government competition, the threat of public ownership, and the promise to tax and tax. That philosophy means the destruction of the free, competitive-enterprise system, which has given our people more of the better things of life than any other people on earth and a wider distribution of the goods of the country.

Why should that system be destroyed and replaced by state socialism, as proposed in the President's message of January 5?

The article follows:

ALL AMERICANS PROFIT

Politicians, Government economists, labor leaders, and rabble rousers are shouting about the peril of business profits. No one need apologize to anyone for the success of business. Profit is the magnet of America's dynamic enterprise system. We should proudly boast of our profits.

They built the vast Ford industrial plants, furnishing employment to tens of thousands of people and helping to put America on wheels. GMC profits, poured back into research, development, and job-making facilities, have produced a parade of progress in automobiles, Frigidaires, Diesel engines, and locomotives. Parke Davis profits paid for the development of many chemical and pharmaceutical items that improved health and lengthened lives of people around the world. Profits of du Pont gave the world rayon and nylon. Profits from radio now give us television, far in advance of expectations.

What's all the shouting about? Are the shouters sincere? Politicians who want to tax and tax and spend and spend demand that corporations distribute most profits and then go to stockholders for new capital. Do you know why? They want government's iniquitous double tax take—38 percent from the corporation and 20 percent to 91 percent more from the stockholder. Should millions of stockholders—substantial American voters—be even more discouraged? Why should risk capital be repulsed?

Remember when labor leaders and Government officials demanded expansion of the steel industry and threatened Government construction and operation of new facilities if steel didn't comply? Now the steel industry has poured millions of dollars of profits and new capital into expanded production—and it is charged that too much of earnings went to plant expansion. Sincerity?

Profits are not too high. For many corporations they are too low. Inflation has increased the cost of living for business enormously. Added cash demands are tremendous and result in less take-home pay or real earnings for stockholders—and a threat to all insurance policyholders.

Taxes take two and one-half times as much of our national income as all net profits. Candid public officials would recognize tax reduction as a profit shared by all people.

An attack on profits is an attack on job security, investment security, and the progress of dynamic America.

WILLIS H. HALL.

JANUARY 10, 1949.

Bill Benton: American

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD, an article on Bill Benton, Idea Man on the Run, which was published in the September 1948 issue of the Coronet.

Bill Benton is much more than an "idea man." He is a statesman in the best meaning of that word; he is a man of integrity and ability; and he is an American of whom all of us should be proud.

Bill Benton is a rare public servant who serves his country with his whole

heart and soul because he believes in its people, respects its past, and unselfishly works for its future. A thinker who keeps his feet on the ground; an organizer who does bring order out of chaos; and a builder with the long view—all these typify the man.

In these difficult times we need men of Bill Benton's courage and vision. Our country can benefit tremendously through his services, and it is my hope that before long he will once again occupy a position where his many talents can be put to the best possible use in behalf of our country. We need more men like Bill Benton.

BILL BENTON: IDEA MAN ON THE RUN

(By Arthur Bartlett)

William Benton used to be an advertising man. He was, in fact, so sensationally successful as an advertising man that most people still think of him as such. Which just goes to show how hard it is for a man to live down his past.

When the New York Herald Tribune recently referred to Benton as a publisher, he was as elated as a teen-ager being addressed as Mister. For 12 years he has been in the unusual situation of a man struggling to rise above his own success. In the process, he has been an educator, a radio impresario, a film producer, a music dispenser, an economist, a statesman, a patron of the arts, and a publisher.

Benton has probably stirred more cultural pots to a boil than anyone else in America—and he has also made several million dollars. But he does not consider the money making important, for he could have done that as a top-flight advertising man.

Part I of the Benton saga is a fabulous Alger success story. He was the poor boy from the West who came to New York. He was the $25-a-week beginner who skyrocketed to $250,000 a year. He was the young man who started a business on a shoestring 3 months before the 1929 crash—and pushed it to the top while all old and established companies found it difficult to hold their own. Finally, the Alger story has an O. Henry ending.

It came in 1936, when Benton was still only 36. He had made money—reputedly a million—but bigger and easier earnings lay ahead. He had become one of the great men of advertising while he still had half a lifetime in which to enjoy his commanding position and profit from it. Instead he sold out and retired from the advertising business. It was time, he announced, to start reaching for higher things.

Currently, he is chairman of the board of the Encyclopedia Britannica, of Encyclopedia Britannica Films, and of the Muzak Corp. He is special consultant to Secretary of State Marshall on matters concerning the United Nations Educational, Scientific, and Cultural Organization (UNESCO), which Benton was largely responsible for vitalizing during a recent term as Assistant Secretary of State.

He is vice chairman of the Committee for Economic Development, a group of long-range planners in the higher brackets of American economic life, which he helped to form. He also has numerous other interests, but none whatsoever in the thriving advertising firm of Benton & Bowles, from which he retired in 1936. From 1937 to 1945 he was vice president of the University of Chicago, a longer time, as he points out, than he spent with Benton & Bowles. Yet people still insist on thinking of him as an advertising man.

This insistence is not difficult to understand. Now 48 years old and well groomed, assured, and almost professionally affable, Benton might well be picked by the student of occupational types as an advertising man. Moreover, he is still by nature the archetype of American advertising man—eager, intense, bubbling with ideas, and always under such mental steam pressure that he invariably makes trains with only seconds to spare, and long since stopped using his middle name, Burnett, because it took too much time to write a middle initial.

Characteristically, Benton spent his first day as vice president of the University of Chicago in preparing a presentation aimed at selling the Rockefeller Foundation on investing $4,000,000 in an educational-film project which he had dreamed up for the university.

At 11 o'clock that night, with an assistant, Benton put the finishing touches on the presentation; then was ready to drop into a night club for a bite of supper. (Incidentally, he didn't get the $4,000,000, but he later launched the educational-film project anyway.)

Benton considers the Ediphone an indispensable tool to record instantly the ideas that are constantly effervescing from his mind. On his first day as Assistant Secretary of State, he indicated where he wanted one of these instruments placed in his office.

"Oh, we never use Ediphones in the State Department," he was told.

"You do now," said Benton.

This was only the first of many shocks experienced by the staid old State Department during his hectic sojourn in its hallowed halls. In that job, he was officially in charge of public affairs, but even this high-sounding phrase failed to convince people that he was not an advertising man. His task was to sell America to the world, and when he resigned, the New York Times rubbed it in with well-meant praise:

"It needed an advertising man of Mr. Benton's energy and persistence to tune up and get this new organ going, and to persuade and browbeat a reluctant Congress not to cut the whole overseas program out of the budget."

Benton is obviously proud of his triumphs as an advertising man, but his friends think he is also secretly embarrassed by them. He is a man who likes to be called Bill, and his urge to associate himself with things on a higher plane than soap and breakfast food, they explain, carries with it no parallel urge to wear a high hat, but comes from a feeling somewhat akin to guilt; for Benton comes from a long line of poor but high-minded clergymen and educators, and he was the first in his family for generations to devote any time or effort to getting rich.

Benton was born in Minneapolis in 1900. His father, an ex-minister who had become a college professor, could write three degrees after his name. His mother had been superintendent of schools in Otter Tail County, Minn., when she married Professor Benton. After his death in 1913, she filed a claim on some free land in Montana, and mother and son lived there 4 years, proving up the claim. Thus Benton is one of those rare men in America today who experienced the pioneer struggles of a homesteader in his youth.

By 1917, the homestead had been secured, and Mrs. Benton, going back to teaching, set her son's feet firmly on the academic path. A good boyish voice helped him get a scholarship at Shattuck School in Fairbault, Minn., which had a choir. From there, he went on to Carleton College, also in Minnesota, and then transferred to Yale, where his father and grandfather had preceded him.

Unlike them, he failed to make Phi Beta Kappa; yet as chairman of the board of editors of the Yale Record, he demonstrated his own kind of talent by developing an editorial campaign which boosted the Record's circulation and profits to a new high, meanwhile earning $1,200 for himself.

One of his classmates was Robert M. Hutchins, a serious-minded young man who later was to become president of the University of Chicago. Three years after him, in 1924, was a young man named Chester Bowles, whom Benton did not know at Yale but who was to become his partner in Benton & Bowles before heading the OPA during World War II.

After Benton retired from Benton & Bowles, the legend grew that he had vowed, while still a Yale student, to make a million by the time he was 35, and then retire. Today he smiles at this story, but admits that by the time he was graduated in 1921 he was thinking definitely of a big business career.

Upon departing from New Haven, Benton's first job was selling cash registers, which he carried from store to store in upstate New York in a truck. His mother, however, was still not reconciled to the idea of his becoming a mere businessman. If he was determined not to be a teacher or preacher, like his forbears, she wrote him in 1922 from St. Louis, where she had become head of a girls' school, he could at least be a lawyer—and she had taken steps to enter him at Harvard Law School.

Until she died in 1942, Benton was devoted to his mother, and her firm view as to his proper future swayed him—at least temporarily. He took a train and started for Cambridge. But when he reached New York, ambition again overcame his sense of family tradition, and he walked into an advertising agency to apply for a job. He was hired—at $25 a week.

From this point onward, the success story moves rapidly to its unusual ending. He began his climb, while still an obscure novice, by offering to talk at the regular weekly conference of the creative staff. By 1928, having had a constant stream of ideas about everything in the advertising business, he was a junior partner in another firm, making $12,500 a year. Then he met one of the seldom-mentioned hazards in the standard success formula. He stepped too hard on the toes of the president, and was fired.

With the self-assurance of the perfect advertising man, he went back to the first agency for which he had worked and landed a job as general manager of the Chicago office. Within 6 months he was making $25,000 a year.

By this time Benton, only 28, was looked on as a 9-day wonder. Devising questionnaires to be submitted to women all over the country as the basis of sales campaigns for household items, he had given the advertising business a new concept of the value of what has now come to be known as product research.

He helped sign up beauty-shop operators all over the world to endorse Palmolive Soap, and assembled so many charts, statistics, procedures, and plans for a proposed advertising campaign that it took all day for Benton to explain them to Palmolive executives—and made old-fashioned advertising methods look amateurish.

Chester Bowles, whom Benton had hired as his assistant at the George Batton agency (later Batten, Barton, Durstine & Osborn), had also come up fast in the business; and now the two young men decided to form an agency of their own. Benton was then with Lord & Thomas, whose boss offered him $50,000 a year to stay. He declined. It was the summer of 1929, and America was booming.

Benton & Bowles started on $18,000 capital. Three months later the stock market crashed, and business—including the advertising business—began its long dive. Benton, however, ignored the depression and went after new business with techniques that made even advertising men marvel. He was not interested in small accounts, he announced Benton & Bowles would take only accounts with a lot of money to spend. This attitude frightened off many prospects, but it worked with some.

"Bill was always a good salesman with about 10 people out of a hundred," Bowles reminisced recently, "and that is what counts in the advertising business—to knock one guy over, even if you lose 10 others."

It is a point of pride with Benton that the agency took on fewer than 20 clients during the years he was there, yet business kept going up and up. By the time he quit, the firm was doing a business of $18,000,000 gross billings per year, and he was drawing $250,000 a year.

The agency's first account was Certo, and Benton went to New Jersey and Bowles to Connecticut, to ring doorbells and ask housewives pertinent questions about jelly making. After 4 months the partners had compiled 533 pages of data, which they used to such good effect that General Foods, which owned Certo, gave them a dozen more products to handle within the next few years.

Benton & Bowles put most of their clients heavily into radio, starting such stars as Fred Allen and Gladys Swarthout on the air. The elaborate hour and half-hour variety shows which the agency pioneered seemed fantastically expensive—until business got used to the idea and other agencies began doing the same thing.

When Benton suddenly quit the agency after its meteoric rise, his business associates—and competitors—were open-mouthed in wonder. In explanation, Benton said he didn't want to get into a mental rut, and saw no reason to go on merely piling up money.

"I was never interested in yachts, or things like that," he declared.

Whether he had made a round million or not, he had enough so that money no longer seemed urgently important. In the $25-a-week days, he had paid $10 for room rent, and had stretched the remaining $15 so thin that his regular breakfast was a chocolate bar, bought on the way to the office. As he grew more prosperous, he drove the agency so hard that copy writers sometimes muttered about its being a sweatshop. Yet he became more and more liberal with salaries, and thought nothing of sending a secretary abroad when he decided she had been overworked.

Old friends who found the going hard during the depression could always look to him for a stake; and he started his present sizable collection of paintings by his college classmate, Reginald Marsh, by buying them on a picture-a-month basis for a time during the depression.

In the best-seller, The Hucksters, author Frederic Wakeman has his hero express a superbly cocky and contemptuous attitude presumaby peculiar to advertising men: "It's only money." Benton, although he has always had a keen grasp of finances, displays a measure of this confident unconcern. In fact, his wealth has been considerably enhanced by his lack of hesitancy in writing a check when he has confidence in a man.

Some years ago, a friend decided to go into the shoe-manufacturing business. Benton put up $5,000 to help him get started. The Joyce shoe company became so successful that Benton eventually sold out his interest for $125,000.

When the newspaper PM was being started in New York, editor Ralph Ingersoll persuaded Benton to serve as consultant, and gave him $7,500 in stock as payment. After the paper had been launched, Benton found himself in disagreement with its policies, and asked that his stock be taken up. Meantime, another friend, Emory Thomason, had asked him to invest in the Chicago Times, which he was trying to build up. Benton transferred his PM check—amounting, with increment, to $7,825—to the Times, agreeing, as he had with Joyce, that his friend could buy him out whenever he wished. His interest was eventually taken up for $55,000.

Such investments, however, are not purely casual with Benton. He decided, when he withdrew from Benton & Bowles, to invest in small businesses rather than in the stock corporations. "Big business did not build the wealth of this country," he wrote in a 1944 magazine article. "It was individual, hard-hitting, and hard-working men who started small, independent, competitive businesses."

As if to emphasize his break with his past, one of Benton's first investments of this sort was in Muzak, a company which pipes recorded music, without advertising, into restaurants and other subscribing institutions. When the company was still in the idea stage, Benton bought a one-third interest for $30,000. Later he bought another third, and then the rest of it, raising his total investment to $132,500. He has since expanded Muzak into record-making and allied activities, and has been offered more than 20 times what he paid for it.

When he quit the advertising business, Benton told friends that he didn't know just how he was going to occupy himself, but that he might go into missionary work—a field in which some of his forebears had been active. Instead, his Yale classmate, President Hutchins of the University of Chicago, persuaded him to join the university as vice president and overseer of public relations.

Promptly, Benton asked for a comprehensive report on research activities, and when he was handed a sheaf covering about 50 projects, his mind started popping ideas faster even than had his questionnaires about jelly making. Plans for magazine articles, news releases and radio programs came forth in a steady stream.

Benton's chief aim was to broaden the university's services as a cultural and educational force in the national community. The making of educational films was one way to achieve the goal, and although the Rockefeller Foundation failed to respond to his $4,000,000 appeal, he arranged the purchase of the Western Electric Co.'s film facilities and also persuaded the Eastman Kodak Co. to donate its collection of classroom films to the university.

Benton also exploited the radio, receiving a $50,000 grant from the Alfred P. Sloan Foundation to build up the University of Chicago Round Table, on which world-famous authorities tackled political, social, and economic problems. To dramatize research work at the university, he also developed a science program called The Human Adventure, which was so popular with the public that he was able to turn it over to a commercial sponsor and make money for the university, instead of sharing its production cost.

The program managed to interest radio audiences in such unlikely subjects as chlorophyll, cosmic rays, Pavlov, and blood; and a program on the Einstein theory of relativity, of all things, had to be rebroadcast by popular demand.

Probably Benton's most effective coup in making the university—and himself—a more powerful cultural force was the taking over of the Encyclopedia Britannica. Many years before, when the Britannica had seemed doomed, Julius Rosenwald, the Chicago philanthropist, had bought it as head of Sears, Roebuck & Co. When he offered it to the university, the trustees declined. Under new management, it became a paying property, even though Sears had little interest in publishing or academic research.

After Gen. Robert E. Wood took over the direction of Sears, Benton characteristically reopened the subject of the Britannica with the abrupt query: "Do you think it appropriate that a mail-order house should own the Encyclopedia Britannica? Why don't you give it to the university?"

Wood looked startled, but a few hours later formally offered to do so. The trustees, however, again balked at using university funds for what they considered a risky venture. Benton, quick as ever with the check book, offered to put up an amount said to be $100,000, under a stock deal acceptable to the university. Today, Benton owns all the company's outstanding common stock; and has built the company up so that it now pays the university several times as much every year in royalties as he originally invested in working capital.

The educational-film project was incorporated as a subsidiary, Encyclopedia Britannica Films, into which Benton put a million dollars of Britannica money. He has also branched out into allied publishing fields, with the result that Britannica has a series of educational picture-story books for children, as well as the Britannica Junior, the Book of the Year, and the Britannica World Atlas. Soon to appear is a 54-volume set, The Great Books of the Western World, on the preparation of which the company has spent $1,400,000.

In 1945, Benton was appointed Assistant Secretary of State. Since then, he has said that he went to Washington thinking that he was to do a job that everybody wanted done, and found out that hardly anybody was interested. The job involved the liquidation of the old Office of War Information and the Office of Inter-American Affairs, neither of which was popular with economy-minded Congressmen and the integration of their functions into the State Department.

Benton had to spend most of his time selling his ideas to Congress and, to some extent, to the State Department itself. When he resigned a year ago, President Truman wrote him a "Dear Bill" letter, saying that he knew "only too well the difficulties and frustrations which you have encountered," and praising him for the solid foundation which he had laid.

Benton was characteristically busy in Washington, using luncheons, cocktails, dinners, and frequently breakfasts as occasions for conferences, and keeping his Ediphone busy far into the night. It came nearer to satisfying his urge to be a high-powered modern missionary, his friends think, than anything else he ever experienced; and many predict that he will soon be back in public service, one way or another.

An indication of his inclinations in this respect took form last March after he left for a 3-month vacation at his winter home near Phoenix, Ariz. Unhesitatingly, he abandoned his vacation when he was asked to become chairman of the American delegation to the UN Conference on Freedom of Information and hastened East to catch a boat for Geneva.

Just how much he would have relaxed, even had he stayed in Arizona, is questionable. His usual routine when sojourning there is to start the day with a swim, then spend most of the rest of it dictating into an Ediphone installed at the edge of the pool.

Benton has been married since 1928, and has four children; and when his mind is on family affairs, it is the same effervescent mind which has created so many sales ideas. Not long ago he was visiting the home of a friend where the family cat had just had kittens. What a wonderful way for children to see Nature reproducing herself, he said; and his little black notebook came out of his pocket for a notation: "Get a pregnant cat."

The cat acquired by his secretary next day turned out to meet the specifications so thoroughly that it had kittens even before it could be introduced into the Benton home. "Perhaps I shouldn't have been in quite such a hurry to put the idea across," said Benton.

It is a habit, however, which the ex-advertising man shows no signs of breaking.

Oppose International Gangsterism

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement in the form of a paid advertisement, appearing in the New York Times on Tuesday, January 11, 1949. The statement, entitled "Bevin's Blockbuster," is a reprint of an editorial from the Washington Post which is sponsored by International Latex Corp. It is prompted by the recent regrettable incident in which five British RAF planes were shot down in the conflict between Israel and Egyptian forces.

Mr. Speaker, we are seeking a world truly at peace. We want an end to armed conflict and we must use this Nation's mighty influence and resources to assure the settlement of international disputes in a peaceable manner. The United Nations was intended for, and was established as, the instrument by which such differences might be settled in accordance with the practices of reasonable men and our efforts must be devoted unceasingly toward strengthening that body and bringing it to ultimate fruition.

I resent very much the efforts of Great Britain to overthrow, by its unilateral action in the conflict, the effort of the United Nations to bring armistice between the Arabs and the Israeli in the creation of its conciliatory commission. I object to international gangsterism as much as I object to criminal gangsters within this country, and I sincerely trust that President Truman and our State Department will do their utmost to thwart Britain's attempt to "muscle in" on the Middle East dispute. Only with the cooperation of all its members can the United Nations exist as an effective tribunal. Unilateral action by any nation in opposition to the will of the family of nations can only lead to its early destruction.

Although the following article appears in the form of an advertisement, I believe it correctly states facts and I sincerely recommend it to all Members of the Congress for their reading.

BEVIN'S BLOCKBUSTER

(Editorial from the Washington Post)

That Mr. Bevin is engaged in a personal war with Israel has long been apparent. The proof is evident even to a schoolboy in the deplorable clash on Saturday on the Egyptian frontier of Palestine. On December 30 the State Department, ignoring a British appeal to President Truman to reprove Israel, addressed a tactfully worded request for a definite cease-fire to both Tel Aviv and Cairo. Both sides accepted, the Egyptians for the first time leaving out reservations. On January 6 Azzam Pasha, the Egyptian secretary of the Arab League, after a review for home consumption of Egyptian victories, said that the Egyptians had decided to bow to a cease-fire because of the American appeal. Everything was set for the cease-fire to take effect 2 days later, or Saturday morning.

An hour or so before the dead line, however, four British planes and one Egyptian plane appeared over Rafah, a base on the border spread, like Goritzia in Venezia, between two jurisdictions. The moment was as delicate as the place. The Israeli gave battle, and three British pilots, flying armed reconnaissance planes, were downed. Later another 12 British planes flew over the area to find out what had happened to the previous group, and two more were grounded. Three of the British pilots are presumed dead, and the others whose machines were destroyed were captured by the Israeli, presumably on Palestine territory. The British have responded with all the preliminaries—diplomatically at Lake Success and militarily in the Middle East—for a show-down with tiny Israel.

If anything were calculated to obstruct Israel-Egyptian agreement, it was this appearance of British aircraft. All along Tel Aviv has expressed fear of British interference. It warned the world ahead of time of British troop movements in the direction of Aqaba, Transjordan port in the Red Sea. The report was stigmatized in London as propaganda, but in due course the reinforcements did arrive, as Tel Aviv had warned. The planes that came over Rafah, however, hailed from the Suez Canal zone, and if the Egyptians requested this aid, they have not announced such request. Nor, of course, have the United Nations. The British seem to have acted on their own responsibility in launching a sightseeing tour of the worst danger zone at the most critical moment.

What are the British up to? The answer in the context of everything we have said on the situation in the Middle East is clear enough to this newspaper. Mr. Bevin is desperately anxious to insure his strategic position in the Middle East. It is a preoccupation against which Mr. Churchill has never ceased to inveigh. Last week he and Mr. Eden raised their voices against the dispatch of reinforcements. But Mr. Levin, with what the London Observer yesterday called a blustering persistence in error, has acquired an obsession that has become pathological. It looks as if he is a kind of Dr. Jamieson, the Englishman who led an unofficial raid into the Boer Transvaal, and set the match to the South African War. If there is no settlement with Britain in the role of honest broker, then he will wreck it. He wants all the parties to be beholden to the British, so that he, acting in the interests of a nineteenth century concept of strategy, can insure an imperial overland line between the Mediterranean and the Persian Gulf. Egypt may well ask to be saved from her friends in her present predicament, and the reaction in Israel, now holding its first elections, will be to encourage extremism. The United States simply cannot afford to be entangled with persons with brains located in their spleens, as Mr. Bevin's is. It should press the cease-fire and a direct settlement without allowing itself to be deterred by the Israeli-British collision.

Presented as a public service by International Latex Corp., Playtex Park, Dover, Del.

"You and every man in business are trustees of this Nation and the world."

The Power To Tax Is the Power To Destroy

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. WEICHEL. Mr. Speaker, the power to tax is a mighty one, and I want to include a timely editorial by Spencer Canary, editor of the Sentinel-Tribune of Bowling Green, Ohio:

It is interesting to note the difference of opinion which close associates have regarding statements and problems of the day. This is illustrated by the comment in the Cleveland Plain Dealer regarding President Truman's message.

In the editorial column it says that "much of the message was predicated on the thesis of continued inflation." On the other hand, Walter Weisman, its economist, who writes daily columns and is a professor at Western Reserve University, thinks the message had a deflationary tone.

Mr. Weisman suggests a point worthy of grave consideration. It is that a reduction of 15 percent in incomes would automatically reduce revenue from taxes. This, he says, would prevent a balancing of the budget short of tax rates that would be clearly confiscatory. As someone has said: "The power to tax is the power to destroy."

During the war the rates of taxation of the largest incomes, corporate and personal, dangerously approached confiscation. It is actually being done in some cases in England today as some people there have to sell a part of their property to pay taxes which are even more than their income. Excessive taxation is the biggest cause of unrest in China today but this is due to the system of imposing and collecting them; tax officials along the line are ruthless and greedy for personal gain and get it.

But let us see what Mr. Weisman's suggested 15-percent reduction of incomes and, hence, revenues, might do. On the basis of $42,000,000,000 being collected in income taxes for 1948, a 15-percent reduction would be $6,300,000,000. This would mean that the Government would get $35,700,000,000 instead of $42,000,000,000—and would go in the hole.

Let us carry the idea further. Recently an estimate of the Nation's total income in 1948 was two hundred and twenty-five billions. If this were reduced by 15 percent, it would be thirty-three billions seven hundred and fifty millions less. If your income of $2,500 a year were reduced 15 percent, you would receive $375 less for your services. If your income were $5,000, it would be reduced to $4,250.

This shows reasons why the Government must exercise as much economy as the world situation will permit. The power to tax is the power to destroy.

The West Virginia Plan

EXTENSION OF REMARKS
OF
HON. E. H. HEDRICK
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. HEDRICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the West Virginia plan for veterans' housing:

THE WEST VIRGINIA PLAN

Housing: Corporation-sponsored, for World War II veterans.
Erection: Production-line methods.
Financing: Title III, Public Law No. 346.

I. PROPOSAL—WHAT IT IS

A. To suggest a way to contribute to the solution of veterans' housing problem, viz, by corporation sponsorship of home construction projects for resale at cost to World War II veteran employees of the corporation.

B. Making use of production-line methods for building homes as developed by the Byrne organization, at Baltimore, Md., Moline, Ill., and elsewhere.

II. OPERATION—HOW IT WORKS

A. Finance arrangements made by corporation to—

1. Procure extension of bank credit to—
(a) Acquire suitable land.
(b) Develop the subdivision re—
(1) Surveying, landscaping, plotting.
(2) Water.
(3) Sewerage.
(4) Streets.
(5) Electricity.
(6) Gas.
(7) Parks and playgrounds.
(8) Schools (if necessary).
(9) Stores (if necessary).
(10) Miscellaneous improvements.
(c) Coordinate construction of houses.

2. Contract with veteran employees to purchase houses and lots at actual accrued cost by—

(a) Loans from banks and loan associations for 100 percent purchase price which is guaranteed under title III of Public Law No. 346, under escrow trust agreements.

III. RESULT—WHO BENEFITS

A. To corporation:

1. Will improve corporation's relations with its (a) employees, (b) community, (c) customers.

2. Will indirectly increase production.

B. To veterans:

1. Will ease housing shortage by (a) enabling war veterans, who cannot presently purchase building lots or make usual down payments, to purchase corporation-sponsored houses at cost; (b) enabling corporation's war-veteran employees to move into their own homes, thus releasing additional housing for its nonveteran employees and other community citizens.

IV. GENERAL

A. Fortifies private enterprise methods for solving problems of public concern by—

1. Financial sponsorship by corporations to provide homes for their veteran employees.

2. Utilization of banks and loan associations to finance veteran home loans.

3. Multiple construction methods which maximize values and minimize costs.

V. FEASIBILITY OF WEST VIRGINIA PLAN

A. Plan in operation in West Virginia and other States.

B. The John Byrne organization has demonstrated that by using production-line methods the cost of housing can be reduced from one-third to one-half. In this manner veterans can secure good homes within their incomes.

VI. ENDORSEMENT OF WEST VIRGINIA PLAN

A. National convention of the American Legion, August 28, 1947, at Madison Square Garden, New York, N. Y.

B. West Virginia Bankers Association in convention at Wheeling, W. Va., October 26, 1947.

Mr. Speaker, a method has been developed whereby World War II veterans who have regular jobs but who have no substantial savings with which to buy building lots or make down payments on homes could purchase suitable homes under the loan guaranty provisions of title III of Public Law No. 346.

These loans are particularly attractive because, first, under corporation sponsorship the veteran would get full value for the money he puts in his home; second, the veteran has a steady job whereby he can keep up his payments; and, third, the loan is guaranteed by the United States Government.

These loans would also be attractive to banks as the servicing of such a large number of loans could probably be arranged with the corporation sponsoring the project.

This plan eliminates faulty construction and thereby decreases the number of defaults on veterans' loans.

The proposal is that the original finances can be provided by some corporation, labor union, or cooperative, which can arrange for the purchase of a site of land on which to construct a substantial number of homes, on a multiple-construction basis, such as worked out by the Byrne organization, thus effecting substantial economies of construction and making it possible for the corporation, labor union, or cooperative to sell the completed homes to World War II veteran employees on an actual cost basis, including the cost of landscaping, surveying, plotting, and improving the land, under a contract for sale that could be worked out ahead of time, supplemented by regular trust agreements with a bank or building and loan association, which might be persuaded to advance the necessary funds, particularly where all the coordinating planning should have been approved by the loan guaranty division of the regional office of the Veterans' Administration, as to the contemplated individual loans to be advanced by the bank or the loan association to the individual veteran home purchasers.

Upon completion of such an arrangement the sponsoring corporation, labor union or cooperative would thus be reimbursed as to all of its original expenses. The bank or the building and loan association would feel secure as to its individual loans on the basis of the loan guaranty under title III of Public Law No. 346, extended by the loan guaranty office of the Veterans' Administration. The loan guaranty office of the Veterans' Administration could feel assured of the repayment of such loans, that is providing, of course, that the planning has been coordinated and the construction had been safely performed and supervised, because of the fact that all such veterans would be regular employees of a particular sponsoring corporation, or members of the particular labor union or veterans' cooperative.

Ordinarily, it would be more feasible for a corporation to sponsor such a multiple-construction project as to its own World War II veteran employees, than would be the case as to a veterans' cooperative, or as to a labor union, because of its ability to give assurance of the probable continuance of employment of its World War II veteran employees and purchases of such sponsored homes.

Sponsorship of such homes for its World War II veteran employees by the corporation would probably directly bring considerable additional good will to the corporation, on the part of its employees, on the part of the local community in which its plants may be located and on the part of its customers. Satisfied employees—not constantly worried about the housing shortage—would be relieved of much of their anxiety, and consequently their energies would be converted into greater productiveness and serviceability to the corporation, that had assisted them in the solution of their housing problems.

The feasibility of the West Virginia plan nationally is established because it is already in operation on a sound basis in several States.

As the Year Expired

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. ROGERS of Florida. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from one of our leading and outstanding newspapers in Florida, the Miami Daily News of Sunday, January 9, 1949, summarizing the significant events of the year 1948, entitled "As the Year Expired":

AS THE YEAR EXPIRED

(For by thy words thou shalt be justified, and by thy words thou shalt be condemned.—Matthew 12:31.)

The year 1948 expired with a sigh of sadness, a frown of frustration, an air of apprehension—yet by no means without a breath of hope, hope based on achievement fully as much as on man's incorrigible drift into wish-thinking.

The year 1948, to be sure, was crammed with discouragements.

The cold war was intensified. The Russians showed less and less sign of a willingness to understand the west and to work with it in the spirit of the old inter-allied agreements. The severest of all challenges short of war they laid down when they decided to blockade Berlin.

The Russian tide rolled westward in Europe and extinguished a democracy of noble aspirations and fine traditions. In its rape of Czechoslovakia, the Kremlin tore off the mask. Cynically destroying the vaunted "bridge" between east and west, it left no further doubt of the fate in store for democracies which think they can do business with the Communists.

The Communists, toward the end of the year, began making seven-league strides in Asia. The year's end saw the government of Chiang Kai-shek in virtual collapse, the Communists threatening to dominate most of the half-billion people of China.

War was the portion of 1948 in Palestine. The Arabs invaded the Holy Land, and war has raged there with only temporary interruptions. The end now seems in sight, but still the guns are speaking.

In India there was war in Kashmir, successful aggression against Hyderabad, communal rioting in many places, though on a decreasing scale, and, most tragic of all, the assassination of the saintly apostle of independence, peace, and brotherhood, Gandhi.

In southeastern Asia there was strife—strife in French Indochina, assassinations in the new free state of Burma, civil war and an exercise of repressive colonialism in Indonesia.

In South Africa the government of the fine old warrior-statesman, Jan Christiaan Smuts, was voted down in favor of an administration devoted to racism and supernationalism.

In Latin-America there were coups and palace revolutions. A fine Liberal government, one of the most democratic in the hemisphere, was overthrown by a military putsch in Venezuela. An overturn in Peru gained no ground for democracy. Costa

Rica, a democratic land whose President announced that he was about to disband his army, was invaded by Nicaragua. Peron, through a typical "Ja" plebiscite, got his Presidential term extended to life in Argentina.

In the United Nations there was much fruitless arguing and a full quota of vetoes. There was a hopeless impasse, an indefinite break-down of negotiations, in the search for a secure international control of atomic weapons. No progress was made in the talks that were supposed to lead to mutual reduction in conventional weapons. Indeed, the year 1948 was given over to a full-fledged armaments race, and it looks as if neither side in 1949 will dare to stop it.

On the domestic stage there was a full share of substandard performances. Three-quarters of the year was dominated by the Eightieth Congress, which worked, not for the people, but for the pressure groups and special interests. Pitiably small progress was made toward the goals of more abundant housing, better public health, and improved educational opportunities.

Savage and selfish raids were made on America's vital national resources. There were fewer strikes than in recent years, but some that occurred were bitter, long-drawn-out, and damaging to the public interest. The President's civil rights program for minority groups was stalled pretty much on dead center, and civil rights long taken for granted under the first 10 amendments to the Constitution were placed in jeopardy, faintly, on occasion, by the President's loyalty boards, more crassly by the House Committee on Un-American Activities.

Inflation continued its sway through most of the year, and when, led by foods, prices began to level off, there was no comforting certainty about what would happen. Perhaps inflation would gain a fresh start after the first of the year. If not, if things continued to move the other way, they might move too far and too fast and plunge us into a depression.

Yet 1948 was anything but a year without achievement, a year without hope.

In 1948 the people of the United States made full and final their commitment to military and economic support of freedom's outposts.

It was the year America committed itself to the Marshall plan, and by the end of the year the program was achieving startling results. It was the year of the Berlin airlift, with Russia effectively checkmated in the German capital and on the Elbe. It was the year in which western union took its provisional economic shape and began to prepare for military collaboration by speeding negotiations toward a North Atlantic security pact.

During the year—indeed, at the very end of the year—a basic decision was made on the economic role of the Ruhr industries. Under the program adopted the Ruhr will be restored as the industrial heartbeat of western Europe, but international control will prevent its perversion into an arsenal of a recrudescent nazism.

During the year past the Communists were turned back in the French and Italian elections. The guerrillas were contained in Greece, thanks to the Truman doctrine. Stalin had unlooked-for trouble from one of his satellites; no one can tell for sure the extent or final outcome of Tito's disaffection.

The Jewish national state was born, in travail to be sure, but became a lusty, well-established infant. India and Pakistan got through their first full year of independence without a general war between them. Gandhi's murder was not the signal, as so many with good reason had feared, for break-down and chaos. And Gandhi's spirit marched on and was written on the historic decree of the Hindu Government banishing untouchability. Final, titular freedom from the shrinking British Empire was won by Ireland.

The United Nations held together, in spite of specific and implied threats of desertion. Its commission on human rights framed a noble document—one whose terms will be honored partly in the breach, but which stands nonetheless as a fine text of freedom. Good work was done by UNESCO, by the world-trade organization, as reflected in the Geneva and Habana agreements, and by the food and agricultural organization.

In the United States, prosperity and employment were carried to record levels, even if the year's end was clouded by the potential overhang of recession. Inflation, strikes, all sorts of unpleasant phenomena took their toll—but on the whole the Nation ended the year united, solvent, vigorous, and producing. Crops were the best ever, spelling stabilization in our economy and succor to the world's hungry hundreds of millions.

Social progress was restrained during most of the year but the elections seemingly decreed an advancing tempo. The threat of ruthless exploitation of dwindling national resources was pretty well dissipated. As to the election itself, be its ultimate outcome for better or for worse, it demonstrated the freedom with which Americans vote, the spontaneity of their decisions, their insistence on thinking for themselves, their refusal to rush for the bandwagon.

In science, startling advances were made, even if largely in the name of preparation for war. There were some heartening trends in the Nation's cultural development, perhaps enough of them to offset the scatterbrained escapisms that seized the souls of so many of us.

All in all, 1948 deserved to pass on with no more censure from us who lived through it than words of blessing. And 1949 stands before us an open page—a page on which men and women of high minds and brave hearts can write a message to posterity worth preserving.

Disgrace in Georgia

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. DOLLINGER. Mr. Speaker, the following editorial which appeared in the New York Herald Tribune of January 13 indicates clearly the urgent need for a Federal law to punish crimes like lynching, in such manner that this country will be free for all time of mob terrorism.

It was disgraceful to read in the press of the calling of two white jurors from the jury box, at Lyons, Ga., to testify as character witnesses for the defense in the trial of a white man accused of the lynch murder of a Negro.

They said they were well acquainted with the defendant, considered his reputation good, and would not believe the chief witness for the prosecution under oath. Shortly after they testified, they joined the other jurors in returning a not-guilty verdict.

News accounts say that the white prosecutor did not object to letting the two jurors appear as defense witnesses, and that such procedure, though rare, is not illegal in Georgia. Certainly, however, it made the trial a travesty of justice. And certainly incidents of this kind build up sentiment behind demands for Federal law to punish crimes like lynching in States like Georgia.

I am introducing this morning a bill known as Federal Antilynching Act, which, in my opinion, would wipe out this curse for all time. I trust the House will give it immediate and favorable consideration.

DISGRACE IN GEORGIA

Georgia, where Herman Talmadge rules and white supremacy is doctrine, has reason to feel uncomfortable. A Negro was lynched last November, apparently because he was too uppity for Toombs County taste. A white-robed mob waylaid him on a country road, murdering him in the sight of his wife and two cousins. This was the evidence of the survivors; it was the only Negro lynching in the country last year. Some people in Georgia were outraged, others remained lethargic. There was an investigation, considerable clamor, two white men were indicted—and acquitted in 20 minutes. No surprise need be expressed. The prosecution's case apparently depended chiefly on the widow's identification. But far more important was the defense lawyer's contemptuous gesture (legally permissible, to be sure) of calling two jurors to convert themselves for a quick moment into witnesses who blandly asserted that the widow's word under oath was worthless. It was a shabby trick, an expressive footnote on a foul episode. Here was mockery complete. In one day Georgia took a long step backward.

If this is a fair example of States' rights in operation, the practice of the theory that a locality knows the best solution of its own problems, then the prospect is indeed depressing. Within recent weeks Governor Talmadge, a subtle reincarnation of his famous father, has proposed a program which aims to disfranchise the Georgia Negro up to the legal hilt. By stern qualifications, mostly educational, about 80 percent of the Negroes may be barred from voting. White supremacy in Georgia has no intention of yielding; its full and ugly force as a political cry is to be feared. Possibly the lynching is merely coincidental, but the atrocious affair, and its attendant circumstances, gives grim warning that all is not well in Georgia.

Communist Conquests in China Another Defeat for Us in Cold War

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. JUDD. Mr. Speaker, at a time when the State Department and our proleftist and liberal writers have persuaded so many Americans that almost our sole concern and effort in foreign policy should be to stop communism in Europe, it is revealing to learn with what realistic apprehension the Europeans themselves view events in China. Out of their greater experience in world affairs, they realize, as we have not yet done, what a disaster the Communist conquest of China—while we stood by and gave moral lectures to the Chinese Government plus some relief to the people—means to

Europe's hopes for security, as well as our own.

Under leave to extend my remarks, I include the monthly European supplement to Human Events, written by the distinguished French observer, Bertrand de Jouvenel:

EUROPEAN SUPPLEMENT TO HUMAN EVENTS

(By Bertrand de Jouvenel)

For every thoughtful European, local events are completely overshadowed by the Chinese collapse. This major disaster brings home the brutal truth that we are losing the "cold war."

Western eyes have been concentrated upon "the remnant that has escaped" of Europe, the countries which were liberated by American and British forces, and, as a consequence, have not been overrun by the Red Army and subjected to Soviet rule. American efforts have been directed to the bolstering-up and consolidation of this remnant. The elimination of Communists from the French and Italian governments, the political encirclement of the Communist parties in these countries and the failure of their counterattacks, have been accounted great victories. In fact they are no more than the gradual reduction of far-flung vanguards, unsupported by any forward push of the main enemy force. Moscow has attempted nothing in the West.

All well-informed observers agree that even the local Communist forces have on no occasion really mobilized and exerted their full power. Their appointed task appears to have been to make themselves a nuisance, to slow up recovery, to waste a part of the American gifts. No more was attempted.

In the meantime, the Soviets have directed their attack in a far more promising direction. Asia was chosen as the field for the offensive, with good reason. For here President Roosevelt had bountifully provided the geographical means for Communist expansion, making over to Soviet Russia the operational basis which Czarist Russia had formerly procured for itself with the selfsame intention of subjugating China. It is indeed ironical that Roosevelt should thus have returned to Soviet Russia those very means of aggression which the State Department and the Foreign Office 40 years before had been so anxious to wrest away from Czarist Russia—using Japan as their weapon for that purpose, at that time.

This time the Japanese makeweight had been conveniently removed by American arms, while Chiang Kai-shek's government was starved of American military help.

The Communist offensive in Asia was started on the southern tip of the Continent, farthest away from Russia. Thus it benefited from American incomprehension, indifference, and even sympathy with what was pictured as revolt against imperialism. Indochina, Indonesia, Burma, and Malaya successively flared up. The fatal misreading of Indochinese events by American opinion was a godsend to Soviet plans. Then China's efficient Red armies started their infiltration into the soft belly of Chiang's state.

Now Stalinism is from every angle seeping into the largest continent of the planet. A most desirable prey. For nowhere has Stalinism a better chance of being willingly received.

Marx thought of his doctrines as demanding for their understanding and execution a working class of the highest intellectual quality. England was his choice for the inception of the Socialist revolution, with Germany and France next in the running, but decidedly not Russia. Marx deeply distrusted that country and even his own disciples there, as he once wrote to Kuegelmann. Lenin himself shared these ideas of his master and regarded his victory in Russia primarily as providing in an unexpected manner means to spread the revolution to countries better prepared for socialism.

Stalin has changed all this. He has coarsened socialism to a Pharaonic system in the grand Asiatic tradition, with despotism, great public works, and the equal insecurity of all under the police. This doctrine is to Marxism as a tank is to a Rolls-Royce; it travels well over rough ground. It is eminently suitable to the Asiatic masses, who are used to arbitrary power anyhow and who in fact stand to gain when it is exerted to regiment them into some semblance of productive activity.

It may be argued that communism is more suitable to backward masses than representative government, which in such regions is only too prone to be corrupt and fraudulent.

Some say, remembering the fate of Japanese conquest, that Russian power will bog itself in the immensities of Asia. But Russian forces are scarcely employed at all. It is enough to send "advisers." The point is, not that the immense potentialities of the Asiatic masses may be used effectively against the west, but that the east may be close to the west, keeping the west away from its raw materials and throwing us back on Africa. Further, the installation of Stalinism in Asia cannot fail to have repercussions in the Middle East and to hasten the work which is already being done in Africa.

Can anyone fail to see the gradual realization of Stalin's solgan: Capitalist encirclement must be replaced by Socialist encirclement? That is, instead of Soviet Russia's being isolated, it is the west which will in time be isolated.

The countries where the love of freedom runs highest are the least susceptible to creeping conquest. There military occupation is a prerequisite to the installation of Stalinism. But the populations of these countries are in a small minority in the world. They can be encircled. More, they can be reduced to virtual starvation.

Is it not a fact that the standard of living of western Europe rests upon the imports of raw materials from the parts of the world most susceptible to Stalinist penetration? Will it not be lowered if we are bereft of rubber, oils, fats, tin, and petrol? And will that fail to cause unrest?

Is all this fanciful? Possibly. But these, I would wager, are the fancies which inspire Soviet politics.

No one should dabble in public affairs today who has not first achieved awareness of the major fact in twentieth century politics. That is: we are dealing with madmen. With earnest, systematic, highly scientific madmen. They may dandle little girls on their knee like Hitler or smile in a grandfatherly manner like Stalin, they may argue most reasonably and dispel the prejudices lurking in the Chamberlains and the Roosevelts. For all that, they are mad. They are in the grip of a titanic dream which drives them on.

As is the way with reasonable people, we of the West decline to think in terms of world destiny. Not so the Nazis or the Politburo. Hitler knew what was wrong with the world and was going to put it right. Stalin knows what shape the world will take and he is hastening the process. What was wrong with the world in Hitler's view was that "the best" were being drowned in the sea of mediocrity; the true Germans had lost their primacy in Germany. Germany had lost her primacy in Europe and Europe was losing its primacy in the world. Hitler's dream was to restore at all times and everywhere the primacy of those whom he held to be "the best"; his conception of "the best" was, as we know, disastrously crude.

Stalinians like to describe Hitler as having fought the "trend of history," which works for them. They call their purpose "to free the enslaved masses." The "enslaved masses" are all over the world: from China to South Africa, hundreds of millions of men have to be liberated from the thralldom of the colonialist, of the white capitalist, and of local oligarchies. Nor is it necessary to tell these masses much in order to arouse them. The first stage is to excite xenophobia—a primitive passion which the privileged classes, taught in western schools, can decorate with the more ornate concepts of nationalism and/or self determination. The second stage is to excite the masses against these elites in countries where there are no middle classes—an easy task.

The westerners can be indicted as the foreign conquerors and exploiters; "the foreign devils," as they were called in the Chinese Boxer rising of 1900. Where no other object is pursued, it is easy enough to stir up hatred. There is not today a single part of Asia or Africa where Moscow agitators are not at work. And they find grievances enough to feed their propaganda. If the European is no longer in control, the national leaders themselves can safely be taxed with incompetence and personal greed; that is the party line on Chiang Kai-shek.

This grand strategy was implicit in Lenin's teachings. Capitalism, he said, needs the overseas markets of undeveloped countries in order to dump there the surplus goods it cannot sell to its wage-earners, whom it refuses to pay properly. The argument is absurd, but from it was born the idea of "blockading" the west. It was then believed that the boycott of western goods was the proper means. Now it has been understood that the west needs to trade with these distant countries far less in order to sell than to procure its raw materials. And the idea is to cut the west off from these sources of supply.

Is it necessary to underline that, before the war, Continental Europe drew 8 percent of its imports from Asia, England 12 percent of hers, and the United States 22 percent of theirs? That, further, a great part of these American imports from Asia earned dollars for European countries and that the loss of these dollars together with the loss of their own supplies conspire to make Europe more dependent than ever upon United States bounty?

It is believed in Europe that efforts to maintain European positions in the whole of Southeast Asia, Indochina, Indonesia, Malaya, must be in vain if Chiang's state is allowed to collapse. Ill-disposed as American opinion is to colonialism of whatever nature, it is not to be expected that the United States will give to the colonial powers the active support which was withheld from the indigenous power of Chiang. It is recalled as characteristic that the Administrator of Foreign Aid denied France a paltry sum which was earmarked for Indochina, and this is held to be significant. In fact, short of very positive action by the United States in China, many will say, "Roll up the map of Asia."

The concept of cold war is coming in for a lot of criticism. What, in fact, is this cold war? It means that the United States is committed to arrest any and every offensive of the Soviets without striking back, to bolster up any sector of a world front which the Soviets, who have the monopoly of the offensive, may choose to attack, so that Moscow may plan and Washington may only improvise defenses. Can any war, cold or otherwise, be won under such a handicap? But that is not all. The enemy is given in the western camp every facility for information offered by a free press and every facility for propaganda offered by free institutions; there is not the slightest reciprocity. What outcome can any rational man expect?

The time has come, say some, when it is plainly necessary to make a bid for the support of the peoples behind the iron curtain. It is both immoral and impolitic never to refer to their liberation. Immoral, for it condones their oppression; and impolitic, for who will move without any promise of support? That the desire to move is there is attested by the history of proud peoples such as the Hungarians, the Poles, and the Balts. It is also attested by the news which

filters through along the various underground channels. But we should never forget that hope, however tenuous, is an indispensable condition of resistance. And no hope has been offered.

Worse, hope is expressly denied by authoritative voices which speak of two worlds, of a dividing line to be held between tyranny and freedom as if, east of the Elbe, tyranny did not matter.

The State of the Union

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. TEAGUE. Mr. Speaker, a columnist writing under the byline of Sassafras Sam has written a most interesting article on the state of the Union. This article appeared in print before the President delivered his message to Congress on this subject, and it is believed that a careful reading of the Sassafras Sam article will give you a better understanding of the President's far-reaching proposals.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article entitled "The State of the Union" by Sassafras Sam of Texas, which appeared in the Mexia Daily News, Mexia, Tex., on December 30, 1948:

THE STATE OF THE UNION

As promised yesterday, I herewith submit my idea of the state of the Union from my viewpoint deep in the heart of Texas. Please do not get this confused with the official one that Mr. Truman will submit to the Eighty-first Congress in a few days.

Point 1: We as a Nation are doing all right; we've got more of everything than all the rest of the world together so we are in a unique position, virtually "sitting on top of the world" in that respect.

Point 2: So while we are doing so well in every way, let's sit steady in the boat, quit wrangling and quarreling among ourselves and try to hold fast to all these good things we have; don't be too free-hearted with all our natural resources that we are fastly exploiting and do not dump them overseas to a bunch of unappreciative and potential enemy nations. Give to these people more moderately and teach them to dig their own coal and raise their own corn and potatoes like we are obliged to do.

Point 3: Very little legislation is needed as just stated; we are getting along all right as our financial preponderance clearly indicates, so we shouldn't start passing a lot of laws and tax burdens on our citizens who, if left alone, are going to continue to work, but if persecuted with new tax burdens and restrictions are liable to become dissatisfied and join the Communists.

Point 4: The imposition of a civil rights program that would force race equality or a permanent FEPC on the Southern States at this time would only stir up strife and discord in the Union and would be one of the most disastrous things that has happened since the Proclamation of Emancipation that brought on the Civil War between the North and the South. Relations between the two races in the South was never more harmonious than at the present and to attempt to change the present "Jim Crow" laws in these States would be imposing on States' individual rights and would stir up a hornet's nest of trouble that would continue for generations to come. This idea should be entirely abandoned.

Point 5: The Federal Government, spending $40,000,000,000 a year, should be satisfied with this budget and not try to increase it and finance same by taking the tidelands away from the seashore States. These beaches and shallow waters belong to these individual States and to deprive them of this property would be like a big bully taking candy away from a child. It would be much better to practice a little more economy in the Federal Government by dispensing with some of the overlapping agencies and bureaus than to attempt to derive more revenue by raising taxes or hijacking individual States out of their tidelands.

Point 6: If any legislation is needed at all, one of the first laws passed should be one that would prevent one big, powerful labor leader from rising up and tying up all industry of the Nation by a big strike which could easily happen and which event could easily cause us to lose a war should we be engaged in war at the time. This is the most dangerous hazard that confronts us today.

Mr. Truman's speech on this subject will contain many more points than this one does and it will be quite different also, so don't fail to hear or read it in the next few days. Adios.

Your friend,
SASSAFRAS SAM of Texas.

Does Bevin Want War?

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. DOLLINGER. Mr. Speaker, the following editorial which appeared in the New York Star of January 11, 1949, is not only essential but interesting reading for every Member of Congress.

We have extended ourselves to furnish aid under the Marshall plan. It seems as though Great Britain has abused the mandate of the American people as to the manner in which the aid given by us would be used by allocating a substantial part of it in its undeclared war against the State of Israel. The United Nations has arranged an armistice between the Israelis and the Egyptians looking toward peace. Bevin is doing all he can to prevent it. Bevin's blundering and disgraceful policies have created more than a Cabinet crisis.

There is even better ground for belief that we will not any longer countenance the Palestinian war. It has developed that, despite British pressure, advice from Washington to Egypt brought about the Egyptian appeal for an armistice and a cease fire under United Nations auspices. That note from the United States was delivered on December 30.

The United States has also announced that the State Department was not consulted by Great Britain in the movement of troops into Palestine.

It is probable that even more effective action may be required to block Foreign Minister Bevin's determination to continue his war.

Only the United States can take that action.

First, it must be absolutely clear that Israel's charges of deliberate violation by Great Britain of the United Nations Charter and even of the truce between Israel and Transjordan, imposed by the United Nations, are so solidly grounded on fact as to allow no possible defense.

The British by encouraging and supporting the Arabian defiance of the original United Nations decision clearly violated the Charter section prohibiting resort to force by any member; even more clearly her recent troop movements constitute the threat of force which is so absolutely barred by the United Nations Charter.

Bevin himself has publicly admitted, perhaps unintentionally to be sure, his determined violation of article 103 of the Charter, by citing as Britain's excuse for arming, training, leading, and now joining Egypt and Transjordan, her military treaties with those nations.

The United States, in support of Israel's charges before the Security Council, must demand a return to the Charter by Bevin, and a cessation of the British effort to reconquer Palestine by force.

If we merely stand on the sidelines and mutter our disapproval, or our dissent, Britain will succeed in prosecuting her war on Israel and will have demonstrated conclusively that the United Nations is dead.

Further, the most effective action remains, of course, for the United States to take unilaterally:

We could lift our arms embargo to Israel, cement our supporting friendship by extending de jure recognition, and approve the economic loans already being negotiated. But we can, and should, go a large step further. We should make it clear at once that our European recovery funds will be shut off at once to any nation, including Great Britain, that persists in financing a war of aggression.

If we falter now, the peace in Palestine and the hope of peace in the world will have been sacrificed to Ernest Bevin's bitter hatred of Israel and covetousness of the oil land of the Negeb.

The American people do not intend to finance a British war against Israel.

DOES BEVIN WANT WAR?

We can easily imagine the cries of outrage that would come from London and Washington—and rightly so—were Russia to stage such a show of military arrogance as the concentration of British warships and marines in the Mediterranean in an effort to inflict Foreign Secretary Bevin's version of a free Israel upon the world.

The naval concentration and the previous shenanigans of the British in and about the Rafah area near the Egyptian-Israeli border call for an immediate explanation to the United States Government, and to the United Nations Security Council. No such warlike gestures can be allowed to jeopardize our fundamental policy of peace not only for Israel, but for all the peoples of the Middle East. And certainly the UN can ill afford to continue to tolerate flouting of its decisions by any member, let alone one of its Big Four.

There are no well-defined boundary lines across vast stretches of desert between the Negeb of southern Israel and Egypt, the area in which five Royal Air Force planes were downed last week. It is therefore, not

too difficult for the British Government, for the moment, to stick by its story that its planes were shot down over Egypt, rather than inside the territory of Israel—as the Israeli Government maintains. But a more important question remains: What were RAF fighters doing over a battlefield in which, presumably, the British were not engaged? The Egyptian Foreign Office has reiterated that it has not asked Britain for assistance under the 1936 Anglo-Egyptian treaty. Lt. Col. Moshe Perlman, Israeli military spokesman, has stated that the two British pilot prisoners who bailed out over Israel, had said their squadron was on its fourth mission of armed reconnaissance in the Rafah area. Since neither the Egyptians nor the Israelis want British interference, what legitimate reason can the British Foreign Office advance for the presence of British troops and planes?

Fortunately, strong voices are being raised in England against Foreign Secretary Ernest Bevin's continuous and, now, not so silent war on the Jews. Sir Stafford Cripps, Herbert Morrison, and others in the British Cabinet realize that Bevin's policy can only lead to a complete misunderstanding with America and with the architect of its foreign policy, President Truman. If, for example, it should turn out to be true that British arms deliveries to Egypt in the last few months have amounted to around $200,000,000 and include jet fighters, naval vessels, heavy artillery tanks, heavy caliber shells, and aviation gasoline, this is bound to affect the Marshall plan itself. The American people do not intend to finance a British war against Israel. Furthermore, any extension of war in the Middle East, particularly by a major power, is an open invitation to Russia to intervene.

The United Nations has arranged an armistice between the Israelis and the Egyptians, looking toward peace. Similarly, Transjordan desires peace. The responsible elements in His Majesty's Labor Government should curb the warlike and intransigent behavior of Bevin. He is harming British prestige, and diminishing British honor. He is thwarting the will of the United Nations. He is playing cynical power politics in the Levant and destroying the remnant of integrity western civilization has in the eyes of middle eastern people. He is thereby giving aid and comfort to the detractors of that civilization.

President Truman has taken sufficient snide abuse from Mr. Bevin for the past 3 years, beginning with his remark about New York Jews. If Bevin wants war, then the United States and United Nations can and must put him in his place, lest he succeed in translating his warped views and ugly aims into action.

The Outlook for 1949

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an address made by Floyd B. Adlum, of New York City, one of the country's outstanding businessmen and financiers, a builder of business, industry, and employment, made on December 15, 1948, at the Town Hall dinner honoring Hon. Alben M. Barkley, Vice President-elect, at the Waldorf-Astoria Hotel in New York City.

While I have no opinion as yet on the main tax proposal contained in his address, any views expressed by Mr. Adlum are worthy of deep consideration of all persons, and particularly by my colleagues and those who will participate in the preparation of any new tax legislation.

THE OUTLOOK FOR 1949

I am a living example—said to be a rarity—of how to be a farmer, a Democrat, a glutton of privilege, and happy all at the same time.

I can remain happy even while contemplating the growing voice of labor for a little larger piece of the national pie. It's a very big pie. And I can remain a Democrat while still differing with some of the views of my good friend, Senator O'MAHONEY, with whom I worked in the newspaper field out in Colorado more than 30 years ago.

I have been carefully studying indicative national figures recently and I would like to generalize about some of them in what might be called headline fashion.

While employees today have slightly less of the national income percentagewise than they had last year or had on the average during the last 10 years, they have more in dollars than ever before. Neither of these statements tells the whole story, however, because the dollar which they are getting more of is inflated but, on the other hand, if corporate profits should go down to nothing as they did in 1932, the compensation of employees in percentage of the national income would go away up notwithstanding great unemployment and suffering. To draw a real conclusion as to fair division of the dollars of private business enterprises one must have a view as to the permanency of present levels of business profits.

Senator O'MAHONEY and others have expressed the view that through an excess-profits tax, through price reductions, and in other ways, corporate profits should be reduced. I affirm that both corporate employees and the United States Government have too great a stake in corporate profits to let them recede if recession can be avoided. A few facts will make this apparent.

If business is a gamble, then Uncle Sam is the greatest gambler in history, for he rakes in about 50 percent of everything that corporations have left after expense of operations. Uncle Sam gets part of this by direct corporate profits tax and part as a tax on shareholders when they receive their dividends.

Not only this, but nearly half of all that Uncle Sam gets to live on comes from the same corporations by way of these taxes on profits and dividends.

It is beyond argument that in these prosperous times the Government must have a surplus to apply to debt reduction. It is still debatable whether for the current and forthcoming fiscal years the Government will or will not need more taxes to accomplish this necessary result. I can tell you for sure, however, that this depends on whether corporate profits stay up. A 15-percent drop in corporate profits would mean a loss to the Government in tax revenues of more than $2,000,000,000 and would make a deficit a certainty. The Government had adopted a system of taxation that ties the Government's financial stability to a high level of corporate profits. If you are going to worry about the future of corporate profits, then also start worrying even more about the finances of your Government.

And if corporate profits are going to be reduced by drop in prices and rise in wages by, say, 25 percent, where is the Government going to make up the loss of about $4,000,000,000 in taxes?

The law of diminishing return tells me that the Government cannot get more out of the higher individual income brackets. That is one law that even Congress can't repeal. Every person's income in excess of, say, $50,000 could be confiscated and this would not begin to make up the difference.

The platform of the Democratic Party seems to tell me that the difference won't be made up by a higher rate on smaller incomes.

That leaves an increased tax on corporations as the probable alternative.

So I say get more taxes from earnings of corporations if greater Government revenues are necessary. Also avoid further inflation by all proper means, give employees their full, fair share of the national income, but let's for our own national sake do nothing to interfere with the soundness of health and the business activity of our corporate tax-collecting slaves.

I was always taught by my father that more flies can be caught with sugar than with vinegar. If I could show a way to get more Government revenues by actually reducing rather than raising taxes, it would be a neat trick, you must admit. I think I can do this and without the aid of illusion or mirrors. The magic unfolds itself in steps.

Common stocks are about the only thing that have not responded proportionately to the decreased value of the dollar, better known as inflation. Common stocks have gone down greatly since 1929 while everything else has gone up greatly. Common stocks are selling so low today in relation to either earnings or dividends that companies cannot afford to issue more stock to get the cash needed for capital requirements. In consequence, corporations are holding back earnings and using the same for plant additions. To the extent that earnings won't suffice, these corporations are to a large extent borrowing money. Why are common stocks selling at such a discount? In my opinion it is not because of fear of depression but because there is too little left for investors out of corporate earnings after all taxes are taken out to make the purchase of stocks worth while at anything short of a heavy discount. A corporation that is earning 20 percent on its invested capital before taxes is definitely on a prosperity basis. Yet, if that corporation should pay its taxes and declare out as dividends 40 percent of what is left, a recipient who is in the highest income brackets would have less than 1 percent left for himself as return on that portion of the company's capital that he has contributed. You can be sure that such a man will normally seek either a higher return by buying such a company's stock at 40 or 50 cents on the dollar, or a more sure return, or a tax-free income rather than take 1 percent. Even the man of middle income would have less than 3 percent left in the corporate example cited.

I now affirm that if stockholders were given a credit against taxes otherwise payable by them of some part of the dividends received so that even at worst a high income bracket stockholder would end up with more than obtainable by him from a tax-free municipal bond, the following would happen: Stocks would rise. Corporations would sell common stock to finance capital additions. Thus, earnings now retained would be freed for dividends. The Government, while not taking more than 70 or 80 percent of the dividend in any particular case, would get much more in aggregate dollars than it now gets from taxes on dividends.

If by such a sugar rather than vinegar process of catching golden flies, corporations could pay out 70 percent of earnings as they once did rather than less than 40 percent as they do now, the Government would get upward of $2,000,000,000 of additional income taxes. As I originally said, by tax rate reductions with no tax increases, in this way a budget surplus would be much more probable and everybody would be happy. Under

these circumstances, a further tax directly on corporate earnings might be avoided, thus making more certain for employees some further participation in national income with greater assurance of its stability when obtained.

It was Cardinal Richelieu, I believe, who told King Louis of France that the purpose of any tax measure was to get the most feathers with the least squawk. I think I have improved on the cardinal by actually growing more feathers. I have tried to remember my arithmetic which tells me that a lesser percent of more is oftentimes greater than a larger percent of less. And I am not unmindful of the reasonableness as applied to individual stockholders of the old saying in reverse, that is to say, if there is nothing to gain there will be nothing risked.

All people, including the economists of our Commerce Department, admit that more risk capital is necessary and the problem of raising it is important. I think if we are realistic about it, we can make 2 and 2 add up to 4 rather than to 3 as at present. In consequence, we should be able to see continued expansion and activity ahead.

Annual Report of the Massachusetts Fair Employment Practice Commission

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. HERTER. Mr. Speaker, I have just received from Mr. Elwood S. McKenney, a commissioner of the Fair Employment Practice Commission of the State of Massachusetts, a copy of the annual report made by that commission. This report is a summary of 2 years of operation of the fair employment practice law, and is, in my opinion, an extremely interesting document. For that reason, I am asking that it be reprinted in full in the RECORD. In particular, I wish to point out that even though the commission was possessed of strong powers, it, nevertheless, has attempted to accomplish its work by reason, instead of by force, and that its success in making settlements has been very noteworthy.

The report follows:

ANNUAL REPORT OF THE MASSACHUSETTS FAIR EMPLOYMENT PRACTICE COMMISSION

INTRODUCTION

Two full years have now passed since the effective date of the fair employment practice law. The law declared that equal opportunity to work without discrimination because of race, religion, or origin is an express right and privilege of the people of Massachusetts. It authorized the establishment of a commission whose duties are to eliminate discriminatory employment practices and to foster good will and cooperation among all groups and elements of our population.

From the beginning, this commission has recognized that the elimination of discriminatory employment practices based upon individual and group prejudices could be accomplished most effectively by reason instead of force. It has endeavored to deal fairly in every instance with complainants and respondents. It has appealed to the intelligence and sense of justice of employers and workers alike in each attempt to break down the barriers of racial and religious intolerance.

In short, the commission has not conceived of the fair employment practice law as an instrument of compulsion. Rather, it has regarded the statute as presenting an opportunity to wipe out the ignorance and doubts and fears which men have of other men who are different with respect to color, religion, or national origin. Thus in its whole work, it has attempted to substitute understanding for intolerance.

The question is often asked, "Is FEPC really working out?" It can be frankly stated that because of FEPC, people of this Commonwealth of all races, creeds, and origins have today economic opportunities which they never had before. These people are sharing now the benefits of American citizenship along with its obligations. They have a growing faith in the American doctrine of equal opportunity.

Important are every single new job opportunity which is created by FEPC and each old barrier which is broken down among people of different races and religions. For every time that opportunity and recognition are granted to any individual for achievement regardless of race, color, or origin, the cause of our national ideal of equality of opportunity is advanced.

ENFORCEMENT ACTIVITIES

In 1948, the fair employment practice commission processed 142 complaints of economic discrimination and settled 135 of these after investigation and conference; indicating thereby that some discriminatory employment practice had been eliminated in each case. From the beginning of its administration in the fall of 1946 the commission has handled a total of 445 complaints, involving business organizations employing over 350,000 people, and has not yet had occasion to conduct a single formal hearing or have a matter which it has settled through conference brought into a court of law for further consideration.

In addition, it is true that the procedures which employers established to remove barriers against the employment of workers because of their color, religion, or national origin have had a marked effect in certain fields of employment. So it happens, that the settlement of one case in a given field has opened up scores of job opportunities to persons belonging to a group which has been the victim of racial or religious discrimination for years.

For example, employment opportunity in the railroad industry in Massachusetts, which gives work to over 75,000 people, has been shackled for years by the restrictive racial policies of the big brotherhoods. In 1948, the railroad carriers sat down with the Massachusetts FEPC and the New York State Commission Against Discrimination and effected an agreement, in the matter of certain complaints, whereby Negroes have been employed as stewards and machinists and have been placed in other categories of employment from which they had been barred hitherto because of their color.

Again in 1948, as a result of a complaint, the Massachusetts FEPC conferred with representatives of the automobile industry in an atmosphere of respect and cordiality and worked out an agreement which resulted in the hiring of Negro workers in that field on the same basis as white workers.

More and more, captains of industry are becoming convinced, when agreements like these prove of benefit to the employer as well as to the worker, that there need be no real reason to fear friction among qualified American workers of different colors or religions.

Then there is the retail merchandising field. Some employers in this industry had been extremely skeptical about the employment of any but white people in selling jobs. In 1948, FEPC can point to many stores where, as a result of complaints, Negro salesgirls are employed in good number and are no longer a novelty. In these same stores, as a result of the successful experience of employers with Negro salesgirls, equal opportunity is now being given to men and women regardless of their color, religion, or origin, in clerical, operating, and supervisory positions. Some of the recent changes in this field have come about by agreement with FEPC, others have occurred through voluntary recognition of the spirit of equal opportunity before and after the fair employment practice law became effective.

In view of what is happening in Massachusetts, it is not at all surprising that the United States Department of Labor in 1948 pointed out that the cities which lead in the number of Negroes employed in white-collar, technical, and professional jobs in private enterprise are found in areas which have FEPC legislation.

Likewise, a recent Nation-wide survey by the National Community Relations Advisory Council disclosed that queries on religious affiliations by employers in Massachusetts (and in New York and New Jersey, which also have FEPC laws) have been occurring only one-sixth as often as in States not having FEPC laws.

Statistical report, Nov. 10, 1946–Nov. 30, 1948

Complaints:	
Initiated and received	445
Closed after investigation and conference	288
Closed for lack of probable cause	89
Closed for lack of jurisdiction	13
Withdrawn	11
Pending investigation and conference	45
Investigations without formal complaint:	
Initiated by the commission	60
Closed after investigation and conference	21
Closed for lack of probable cause	26
Transferred to complaint	3
Pending investigation and conference	10
Nature of complaints and investigations:	
Based upon alleged color discrimination	391
Based upon alleged religious discrimination	71
Based upon alleged discrimination because of national origin	39
Based upon alleged discrimination because of ancestry	4
Types of complaints:	
Against employers	313
Against employment agencies	30
Against labor unions	16
Against employees	2
Others	145

In noting the progress which has been made during the past 2 years in accomplishing the purposes of the fair-employment-practice law, attention should be called to the splendid cooperation which the commission has received from the daily and weekly newspapers which are published in the metropolitan areas of Massachusetts. Not only have they been fair and considerate in their reporting of the activities of this commission, but they also have been keenly alert to their own obligation under the law to eliminate help-wanted advertisements which specify or restrict color, religion, or ancestry of the applicant. For example, in December 1946, 104 violations of this type were noted in the help-wanted sections of Massachusetts newspapers. By November 1947 this figure had decreased to 14. A check of the newspapers in October 1948 revealed no advertisement at all of this sort.

In the summer of 1948 the staff of the commission conducted a survey of all cases which had been disposed of by May 1948 to ascertain

the extent of and reaction to compliance with the fair-employment-practice law. This survey revealed: (1) that there had been a considerable increase in the employment of workers belonging to groups which had been discriminated against in the past because of color, religion, or national origin; and (2) that the policy of giving equal opportunity to all people regardless of color, religion, or national origin had proved to be no burden upon employers with respect to either management-employee relationships or employer-customer relationships.

EDUCATIONAL ACTIVITIES

Investigations

Under the section of the statute which provides that the commission may study problems of discrimination in fields of human relationship outside of employment, 60 such investigations have been made in 2 years. Among these investigations, FEPC has looked into the matter of certain discriminatory practices which are alleged to exist in Massachusetts hospitals. Also, the commission was active in the summer of 1948 in eliminating discrimination against colored people by certain restaurants and other public places of recreation in the Cape Cod area. It has already taken the first steps to erase religious discrimination from the accommodation policies of certain inns and hotels in the resort areas of this Commonwealth. It should be noted with reference to these investigations that the commission has no power of enforcement but must rely solely upon educational methods.

Police departments

The executive secretary of the commission is contacting the various police departments in metropolitan Boston, which includes 39 cities and towns. A former member of the police force, he has done graduate work at Harvard in human relations. He is suggesting that any instances of tension between groups in the various communities be reported to the commission and is also available as a consultant in such matters. By invitation, he has addressed groups of policemen in different parts of the Commonwealth and has contacted the heads of police departments in many cities. As a result of this work, police officers and executive heads of police departments have taken steps to allay religious and racial tensions in certain areas and have assisted in enforcing the provisions of the act.

Councils

The statute authorizes the fair employment practice commission to establish councils throughout Massachusetts. It says:

"The commission may empower them to study the problems of discrimination in order to foster through community effort * * * good will, cooperation, and conciliation among the groups and elements of the population of the Commonwealth * * * and make recommendations to the commission for the development of policies * * * and for programs of formal and informal education which the commission may recommend to the appropriate State agency."

State council

Our State advisory council is made up of the following:

John J. Desmond, Jr., chairman, commissioner of education.

Willman E. Adams, former director, YMCA.

Rt. Rev. Robert P. Barry, LL. D., St. Clement's Church, trustee of Massachusetts General Hospital.

Thomas H. Carens, vice president in charge of public relations, Boston Edison Co.

Charles C. Dasey, former general manager, Cunard White Star, Ltd.

The Reverend David R. Hunter, executive secretary, department of Christian education, Episcopal Diocese of Massachusetts.

Judge Jacob J. Kaplan, former president, Boston Bar Association.

It has recently initiated a study of what the public school authorities are doing by way of developing democratic attitudes and behaviors. The findings of this study, as tabulated, reveal an encouraging increase of interest on the part of Massachusetts educators in one of democracy's most pressing problems.

Local councils

Two local councils have been organized. The first, in Springfield, has the following membership:

Roger L. Putnam, chairman, chairman of the board, Package Machinery Co.

Mrs. Richard B. Anderson, League of Women Voters.

Mr. Archie Burack, Springfield City Council.

Mr. Thomas G. Carr, president, Bay Path Secretarial School.

Mr. Maurice M. Chaffin, president, Bay State Thread Works.

Miss Alice L. Halligan, director, Bureau of Guidance Placement and Adult Education, Springfield School Department.

Mr. James F. Higgins, member, Springfield City Council.

Mr. Harry P. Hogan, carpenters' district council business agent, A. F. of L.

Dr. Gary deN. Hough, Jr.

Mr. Robert Hutton, Western Massachusetts Employers' Association.

Mrs. Thelma Keitlen, community consultant, western Massachusetts area, Anti-Defamation League.

Dr. Howard P. Kennedy.

Mr. Alexander B. Mapp, executive secretary, Dunbar Community League, Inc.

Mr. Raymond T. King, attorney for Springfield Shopping News.

Dr. Paul M. Limbert, president, Springfield College.

Mr. Frederick B. Robinson, director, Springfield Museum of Fine Arts.

Mrs. Albert G. Rivett, Parent-Teachers Association.

Mr. Charles Vivenzio, treasurer, Western Massachusetts CIO Council.

It has sponsored a study of employment in 24 industrial concerns in that neighborhood.

The greater Boston council has the following membership:

Harold D. Hodgkinson, chairman, vice president and general manager, William Filene's & Sons Co., president, Retail Trade Board of Boston.

Mr. Norman Abbott, director, Boston University Placement Service, former president, Eastern College Personnel Officers.

Mr. Noel S. Baker, second vice president, director of personnel, John Hancock Mutual Life Insurance Co.

Mr. J. William Belanger, secretary, Massachusetts State CIO, Industrial Union Council, State director, Textile Workers Union of America.

Mr. Robert G. Bleakney, vice president, personnel, New England Telephone & Telegraph Co.

Mr. Salvador Camelio, vice president, State CIO.

Mr. Norris G. Davis, funeral director.

Mr. Bradley Dewey, president, Dewey & Almy Chemical Co.

Mr. John I. Donovan, chairman, board of trustees, Eastern Massachusetts Street Railway Co.

Mr. Harry Grages, adviser to labor division, NAACP, secretary and business representative, Boston Central Labor Union.

Mr. Michael T. Kelleher, vice president, Marsh & McLennan, Inc.

Mr. Kenneth Kelley, secretary, Massachusetts A. F. of L., treasurer and legislative agent.

Mr. Thomas A. Pappas, president, Pappas Wholesale Liquor Co.

Col. Leonard T. Peters, Peters Employment Service.

Mr. F. Frank Vorenberg, president, Gilchrist Co., president, Greater Boston Community Council.

Mr. Clark Woodward, vice president, Liberty Mutual Insurance Co.

It has conducted a similar study of 30 concerns in the greater Boston neighborhood.

A council is being organized in New Bedford. Its membership is as follows:

Walter S. MacPhail, chairman, Wamsutta Mills.

Judge Samuel Barnet.

Mr. Allan Barrows, treasurer, Gosnold Mills Corp.

Mr. W. Kenneth Burke, superintendent of schools.

Mr. George Carignan, director, New Bedford joint board, Textile Workers of America.

Miss Joy E. Colvin, executive director, YWCA.

Mr. Joseph Dawson, president, Knowles Loom Reed Works.

Miss Dorothy Deloid, American Federation of Teachers, A. F. of L.

Mr. Joseph W. Desouza, director, Adult Civic Education Department, New Bedford schools.

Mr. Joseph P. Duchaine, president, My Bread Baking Co.

Mr. Alfred J. Gomes, attorney.

Mr. Joseph J. Harney, general manager, Firestone Textiles.

Mr. Harold Hurwitz, attorney.

Mr. C. Dudley Onley, funeral director.

Miss Susan Shannon, director, Vocational Guidance and Placement, New Bedford schools..

Mr. Joseph A. Sylvia, city councilor.

Mr. Fred W. Steele, executive secretary, New Bedford Cotton Manufacturers Association.

Dr. Xenophon Thomas, president, NAACP.

Mrs. Francis S. Winsper, League of Women Voters.

Mrs. Anthony Zielinski, board of trustees, vocational school.

Mr. John S. Barreau, chairman, labor and industry committee, NAACP.

Other educational activities

1. A quarterly news letter Toward Racial and Religious Understanding was published containing contributions from 49 organizations, most of them private. Increasingly, this news letter is becoming a record of the various efforts to promote intergroup understanding, respect, and good will.

2. Among the educational materials distributed are a summary of the act and an explanatory pamphlet, entitled "What Is the Fair Employment Practice Law?" both of which have been widely read. The Associated Industries of Massachusetts, the Massachusetts Technical and Commercial Employment Association, the A. F. of L., the CIO, and many other groups have helped greatly in the distribution of these materials.

3. The Scrapbook for Teachers, a cooperative undertaking of the commission and the Massachusetts Committee Catholics, Protestants, and Jews, contains book reviews and summaries of noteworthy magazine articles. It has been very popular with the general public as well as with teachers, for whom it was especially compiled.

4. Over 600 kits of material concerning the Fair Employment Practice Act have been sent to superintendents of public and parochial schools and to junior and senior high school principals throughout the State, together with a letter offering the services of the commission in furnishing speakers for assembly programs. The response to the letter has been enthusiastic, and a schedule of speaking engagements has been arranged with the schools.

5. In an effort to extend the work of the commission throughout the State, plans have been made for members of the staff to be located during 1 day or more in some of the larger cities for consultation concerning the purpose and functioning of the law and the taking of complaints.

6. The commissioners have welcomed opportunities to explain the philosophy and provisions of the act. Over 200 addresses

have been made by them, and about as many conferences have been held with widely varying groups in the offices of the commission.

The commission feels that its law-enforcing program, as well as its educational program, have been benefited by educational work preceding the passing of the fair employment practice law. Governmental groups and private organizations have worked hard and are still working hard to promote good will and fair play in Massachusetts. Their success has helped our commission, and their continued cooperation is earnestly desired.

The Remarkable Battle of 1948

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article, The Remarkable Battle of 1948, by C. W. Warren, of Mill Spring, Mo. This article taken from the Wayne County Journal-Banner of Piedmont, Mo., follows:

THE REMARKABLE BATTLE OF 1948

"And the winner, ladies and gentlemen, in the forty-eighth round by a knock-out is Harry S. Truman, of Missouri." Thus it was on Wednesday, November 3, that the radio announced to the American people that Governor Dewey and the overconfident supporters of the Republican Party was forced to bow in defeat for the fifth straight time to the Democrats under the leadership of the first Missourian ever to be nominated for President of the United States of America. The victory was a great personal triumph for President Truman, as his party was split three ways with Henry Wallace on the left and J. Strom Thurmond on the right and even the political chieftains of the Democrat Party gave President Truman only a slight chance for victory.

Two years previously the GOP had captured the House of Representatives and Senate and had set out to sell the people that President Truman was too small a man mentally to be elected President of the United States.

This program in fact was so successfully sold to the people that it no doubt proved a boomerang in favor of President Truman. When he took the stump and went direct to the common everyday man, he had the largest audiences ever to hear a candidate for office and his truthful and sincere battle for recognition gained momentum as the campaign progressed. Henry Clay said "I would rather be right than be President" and Harry Truman proved by his official record after succeeding Franklin D. Roosevelt that he would rather be right than succeed himself as President.

It is to the credit of the American people and to our democratic way of life that in this particular election they stood by their President and rebuked the politicians and hypocrites of both parties and it is to be hoped that in the future elections regardless of party that the candidates for the highest honor in our land will realize that they face an intelligent and discerning people who want facts not double talk, who want concrete examples not generalities, and who want a man who will be President of all the people and not the privileged few.

There are those in our land who profess to feel that democracy is waning and that totalitarianism is on the march. If in fact such folks do exist, I would refer them to the election of the Little Man from Missouri who started his march for the Presidency with one of the smaller States in the Union on his side and ended up as the victor in the most remarkable campaign in America's political annals.

C. W. WARREN.

MILL SPRING, MO.

Agriculture's Future Lies With Livestock

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD. I desire to include an article by the Honorable Charles F. Brannan, Secretary of Agriculture, which appeared in a recent issue of the Country Gentleman. This article, written by a distinguished career man in the Department of Agriculture and an able Secretary of Agriculture, contains some most worth while and thought-provoking information and I commend the reading of this article to the Members of Congress.

The article is as follows:

AGRICULTURE'S FUTURE LIES WITH LIVESTOCK

(By Charles F. Brannan, Secretary of Agriculture)

Sometimes we have the good fortune to be in a position where the things we want to do are the things we ought to do. That's about the way it is now with agriculture. The major change we ought to make in our agricultural production pattern is to increase livestock numbers and the acreage of soil-conserving grasses and legumes to support them. That would be good for the land, good for consumers, and good for farmers.

In fact, the economic stability of a large part of American agriculture, before another decade ends, may depend upon a big enough increase in livestock numbers to eat what otherwise may be surplus grain, and enough dollars in the pockets of city consumers to buy the resulting increase of meat and dairy products. At the same time, increased emphasis on soil conservation will be necessary in order to make sure that production will be adequate in the more distant future.

The fear has frequently been expressed that population increases would outrun the ability to produce food. But for the United States the prospects still are that farmers, teaming with agricultural scientists, will keep ahead of population growth as far into the future as we can see, assuming that we continue an aggressive national policy of conserving and improving soil resources.

Since the beginning of the war, farmers have increased food production at a much more rapid rate than the increase in population growth. Food production has continued in recent years at the highest level in history—about one-third above prewar. Consequently, as the abnormal foreign demand declines, a higher level of food consumption than in prewar years in this country will be necessary to make full use of expanded production capacity. There is no better testimony to this necessity than the fact that farmers have been able to supply more people with a better diet than ever before even during the period when the Nation was fighting two wars simultaneously and supplying food to its allies.

If the people of this country are to consume all of the increase that farmers are likely to produce in the future, the diet of the average American will have to include more meat and dairy products. There is good evidence to indicate that it would be possible to consume the increase in the form of livestock products, with high consumer income and purchasing power.

The last 3 months of 1945 witnessed the all-time peak for meat consumption which was equivalent to an annual rate of more than 180 pounds per person. And apparently consumption would have been even higher if more had been available. Milk consumption during the last year of the war was nearly 30 percent above prewar. Egg consumption in 1945 reached the all-time high of more than an egg a day for every person in the country—a total of 397 per capita. Consumption of poultry meat reached a high of 33.3 pounds per person in 1945 compared to 20.5 pounds per person on the average during the years 1935–39.

Record food production and consumption have been made possible by the phenomenal increase in production efficiency, including greater knowledge of how to conserve the soil and build up its productivity.

Between 1800 and 1940 the number of man-hours required to produce 100 bushels of wheat dropped from 373 to 47. During the same period the number of man-hours required to produce a bale of cotton dropped from 601 to 191.

When the first settlements were started in the United States, nearly everyone had to work at food production to provide enough to eat. By 1820, 1 farm worker supplied himself and about 4½ other people. By 1930, 1 farm worker was able to feed himself and 11 other people. Now 1 farm worker is able to produce enough food for himself and 14½ other people—13 people in this country and 1½ people abroad. Modern agricultural science not only has increased our efficiency but has done so at an accelerated rate. So, even though population continues to increase rapidly, it can be expected that fewer and fewer people will produce the Nation's food supplies.

Regardless of increased efficiency and greater volume of food production, population increases require greater soil conservation efforts. The more the population grows, the narrower becomes the margin within which the Nation can take chances on the care of the land. To see how that margin is narrowing, it is only necessary to take a look at what has been happening to population numbers within the last few years.

Since 1940, the population of this country has increased by 14,000,000 to the present number of about 146,000,000. Since the war, the number of people in this country has been increasing at the average rate of about 2,000,000 a year, and the population experts expect that the average increase for a long time to come may not be less than 1,000,000 annually. By 1975 we are likely to be a Nation of around 175,000,000 people. To be always prepared for that kind of population growth will require a vigorous program of development and conservation of soil resources.

The ideal situation of balance between production and demand is not likely to happen frequently. Weather and consumer buying power are subject to wide fluctuation and science has a way of forging ahead in long jumps with new discoveries.

It will be fortunate for everyone concerned and for the future of the Nation's soil resources if consumer purchasing power is high enough to encourage increased livestock numbers. The peak of the foreign demand seems to have passed and already the carry-over of grain stocks is increasing. Livestock farming returns to the producer a larger precentage of the consumer's dollar

and employs more labor on the farm for the amount of food produced.

For 1947, the farmers' share was 71 cents of each dollar spent by consumers for meats and lard. In the same year, the farmers' share for grain going into bakery products and other cereals was 28 cents per dollar. Meat animals, of course, require less processing than is given grain before it reaches the consumer.

Production of livestock products in the past, while supplying only about half of the Nation's food nutrients, has taken nearly 90 percent of the land and 75 percent of the labor farmers have used to produce the food we consume. Increased consumption of livestock products would be good for the national diet, too. A large part of the population does not normally consume enough livestock products. Milk, meat, and eggs have a much greater concentration of protein, minerals, and vitamins in relation to energy than most food crops. In the past, livestock products have supplied about 40 percent of the food energy and 60 percent of the protein in the national diet.

Relatively small shifts to more livestock products in place of foods obtained directly from crops would readily absorb expanded food-production capacity. A study made by the Department of Agriculture in 1942 showed that diets of higher-income families contain much more livestock products along with greater quantities of fruits and vegetables than the diets of lower-income families. On the basis of the 1942 study, 50 percent more land and 70 percent more farm labor would have been required to produce the diet of families with incomes over $3,000 than to produce the diet of families with incomes of less than $500.

While consuming greater quantities of livestock products and fruits and vegetables, the high-income families consumed only slightly less of other foods. If all of the people in the country in 1942 had diets similar to the group with incomes over $3,000, approximately 30 percent more food would have been consumed.

At a time when agriculture continues to produce about a third more than before the war, a national income to finance eating habits that would require 30 percent more food consumption involving greatly increased livestock production would be good news for farmers.

We in America have come to take our efficient agriculture for granted. We often fail to appreciate fully the effects of science and technology. Depression buying power and eating habits now, in the face of our increased food-production capacity, would be much more serious than they were in the early 1930's.

If employment and incomes declined generally until demand fell to the level of the period just before the war, the food supply per person now being produced could not be sold except at much lower prices.

For the good of the land and of producers and consumers, there is need for a continued high level of consumer income and purchasing power and the necessary expansion in livestock production among other foods to satisfy it.

A Wise Choice

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of January 8, 1949:

A WISE CHOICE

The resignations of Secretary of State George C. Marshall and Undersecretary Robert A. Lovett, both for reasons of ill health, and President Truman's selection of former Under Secretary of State Dean J. Acheson, considered from the standpoint of the Nation's foreign policy, yields assurance that there will be no drastic shift in what has become settled policy of stern opposition to Soviet expansion and active economic assistance to western Europe.

The departure from the President's official family of General Marshall is to be regretted. No finer, more sincere and dutiful citizen in several generations has occupied the top berth in the State Department. But, he is careworn and ill, exhausted by the labors of manning the bastions of the Nation's foreign policy against Soviet attacks. Dean Acheson now takes up the burden, and he is well equipped for the task.

It must be recalled that Mr. Acheson was one of the top-ranking individuals who could no longer afford to work for the Government because of the low salaries paid compared to those who in private employment could earn far greater compensation. He had served as Under Secretary of the Treasury and as Under Secretary of State when he resigned in May 1947 to return to his law practice.

Gifted with objective judgment and of such stalwart integrity that he broke with President Roosevelt and left the Government when he was Under Secretary of the Treasury because he disapproved of the gold-purchasing plan, Secretary of State Acheson is a capable successor of General Marshall.

He endeared himself to the proponents of consistent and sane foreign policy when he dismissed the vaporings of Maj. Gen. Patrick Hurley, onetime Secretary of War, on a special mission to China, as "Messianic globaloney."

Secretary Acheson has previously served as Acting Secretary of State, and has an established reputation for negotiation and debate, and also can boast of the undying enmity of Foreign Commissar Molotov, of the Soviet Union. It is certain that they are not throwing their hats in the air at the Kremlin today.

It is with reluctance that General Marshall is permitted to pass from the stage of international affairs, but his replacement by Acheson brings back into Government one of the most able men of this generation. Foreign policy has moved into the field of economics and finance. Therefore, the choice of Dean Acheson, assisted by James E. Webb, the Director of the Budget, as Under Secretary, is the wise and statesmanlike act of the best man available.

Optics and Politics

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. DOLLINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article as it appeared in the New Leader of January 8, 1949:

OPTICS AND POLITICS

(By Walter K. Lewis)

Every time a shutter on a 1948 model of Rolleiflex, Rolleicord, or a Zeiss camera snaps in the United States, Soviet economy nets some gain. By means of arrangement which, thus far, has been kept hush-hush by United States and British Military Government officials, lenses manufactured within the Soviet-occupied city of Jena have been imported into the joint occupation zones under the jurisdiction of the British and United States and there placed into the already exhorbitantly priced but popular Rollei class cameras. Without the lenses manufactured in the Soviet zone, the cameras would not have their present commercial value.

Also by special arrangement, one of the principal distributors in the United States of the Rolleiflex and Rolleicord cameras, Burleigh Brooks, of New York City, has the sole right to import the cameras into the United States. When the war ended, Brooks was able, through prewar contracts, to make a commercial monopolistic deal with the Heidicke company in the British occupation zone, manufacturers of the Rolleis, and the joint import-export agency in Frankfurt placed its stamp of approval on this deal, for the export of the cameras. At the manufacturers' level, the Rolleiflex camera is worth some $100, of which not less than half has been paid to the Soviet Government for the Zeiss lenses.

During the current period of the cold war, while an economic blockade is in effect between the Allied and Soviet zones, by an under-cover arrangement, lenses manufactured in the Soviet zone are paid for with American dollars, and exported into the American and British zones.

Attempts by former GI's to import the Rollei cameras have not met with full success or cooperation from military government and United States Commerce Department sources. By a curious ruling, the German manufacturer is permitted to do business only with the prewar American distributor of his wares. No attempts are being made to take the Zeiss patents now in our possession and to put them into competition with the Soviet-controlled lense works in Jena. The critical materials were ours for the asking when, during the last hours of the war, Gen. George S. Patton's tanks overshot their mark, and entered Jena, where the huge Zeiss lense works are located. Befor the American troops had to—because of military prearrangements—vacate Jena and relinquish the city to the Soviets, nothing was done to take the plants or the Zeiss technicians. The Soviets were wise enough to put both to work immediately.

Aerial lenses, which the Nazis were known to be working on before the war's end, the new prismatic lenses of which there are but a few in existence, and which promise to revolutionize the military and commercial photographic field, were being developed by the Nazis in Jena. We may find, in the event of an emergency that while lenses are not to be classified with quinine which could not be procured because the Japanese occupied its sources in the Pacific, or essential steel products cut off by Nazi cartelists, that their importance in the event of a military struggle in which optics are necessary, can be considerable.

Champion of Human Rights Wins

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Sheboygan Press of November 3, 1948:

CHAMPION OF HUMAN RIGHTS WINS

Franklin D. Roosevelt was frequently referred to as the lone man in the White House as he fought for human-rights legislation.

President Truman, who succeeded Mr. Roosevelt upon his death, assumed an almost superhuman task in dealing with the problems of the war and the attempt to bring peace to the world.

When the polls opened yesterday he was regarded as the forgotten man—listed as not having a chance in the world. Today he is back in the White House with a popular vote overshadowing that of Mr. Dewey and with enough votes in the electoral college to make him president for the next 4 years.

Due credit for this goes to a fighting President. When he donned his fighting clothes at Philadelphia in July on that historic early morning, he expressed himself as confident of victory, despite the leaders in his own party who gave him little or no support. Even his own Cabinet was cold and distant to his campaign, but he had confidence in the American people. He came from common stock, a haberdasher so to speak, and he had given the people of the Nation the best kind of an administration that it was possible for him to give.

President Truman was outstanding in his denunciation of un-American tactics. He believed in equal rights for all. In that vein he waged his campaign and he awakened a sleeping America.

Mr. Truman's elimination of Henry Wallace brought both friends and foes, but it likewise brought to him the support of Americans who believe in our form of democracy. Even when the public opinion polls, and there won't be many such polls in the future, were all against him he was not in the least discouraged. As he traveled across the United States he drew tremendous crowds. He characterized the Eightieth Congress as a disgrace, and the voters took him at his word and eliminated a majority of those who had been obstructionists. He carried his message on conservation and flood control to the very hearts of the sections affected. He impressed upon the farmer the prosperous era in which he was living, and the farm vote responded. The farmers recalled all too well the hectic days of the early thirties.

Mr. Truman gave all he had and the voters of the Nation responded with an endorsement of his administration. Even with the Dixiecrats and the Russian-controlled Wallaceites opposing him he came through with flying colors.

We supported President Truman because we admired his courage and his fighting qualities. We supported him because no man ever assumed the reins of office under more serious handicaps and came through with a better record.

From the foreign press today, those who believe in a world at peace, editorials speak words of commendation and faith in our form of democracy and Mr. Truman.

This was a victory for the common people, a victory that cannot be discounted. Mr. Truman will go into the White House in January backed by a Congress in sympathy with his program. Many of those Republicans who fought him vigorously are on the outside looking in, so to speak. The voters have expressed their choice. For 4 years we will have a democratic administration under the leadership of Harry S. Truman. Honest and sincere in every word that he uttered during the campaign, he brought home those facts which made him a winner in yesterday's election. He came from a small State and a small city and he was a small-business man. Today he is the head of the greatest Nation on the face of the earth and everyone is assured that we have a man in the White House sympathetic to every heart throb of the Nation. It is a proud day when we can say these things of a man who followed the traditions of Lincoln, Wilson, and Roosevelt. He is a religious man, a patriotic man, and added to this, an ideal family man.

May we say in conclusion that this was not a democratic victory, but an American victory. Men of all political faiths, admiring his qualities, gave him their vote.

Captain Courageous

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of October 27, 1948:

CAPTAIN COURAGEOUS

Boston, hub of New England, extends today to Harry S. Truman, President of the United States, a hearty, hospitable welcome. It is his first visit here since destiny made him the man to lead the Nation to a surpassing victory in the final furious hours of the greatest war that ever tortured mankind. In the welcome today the Boston Post not only joins. It espouses his cause. It urges votes for him next Tuesday.

The Post takes this stand after thoughtful consideration and not alone because it is New England's independent Democratic newspaper. It can find no outstanding reason to oppose and a heartening one why it should support him. Harry S. Truman—the ex-haberdasher—political detractors have undemocratically called him, is to our way of thinking as humbly honest, homespun, and doggedly determined to do what is best for America as Abraham Lincoln. Lincoln—the ex-rail splitter—also maligned, fought for great issues as fearlessly, regardless of his own fortunes. In common, between them, there is courage.

Let us look at the man. As a national guard captain to make men free he faced death in the Argonne. As a Senator from Missouri, the Truman committee was so efficient and effective that overnight, in the Nation, he became a statesman. When Franklin D. Roosevelt, zealous guardian of his prerogatives, sought a successor—knowing the end was near—he chose Mr. Truman, above all men, as the one to whom he could entrust his dreams and hopes for a better America and a finer world.

President Truman did not fail him. The same high courage which marked him as a Senator he brought to the White House. It was President Truman who dared to establish the bipartisan get-tough-with-Russia policy. It was President Truman who dared to halt the railroad strike which had stopped America in its tracks. And it was President Truman who dared to oppose a tax reduction, although vote-wise it was a blunder. And it was President Truman—alone—who, when others capitulated to the bold John L. Lewis, nevertheless—although politically minded he could have smugly withdrawn—dared to press the prosecution of the labor leader who had defied the United States.

Shall we go on? It was President Truman who dared to hold to rationing to keep prices down until GOP leaders and some of his own party aroused the country against him. He warned that prices would soar. They did. Was that a blunder? It was President Truman who dared to live up to his oath of office and stand foursquare for the unfulfilled command of our Government—that all men are as equal under our laws as they are in the eyes of God. Thereby he infuriated the South. Was that a blunder?

The man has courage—the courage to speak out—the courage to take a stand—the courage of the forthright citizen who, when faced with a problem, meets it head on, regardless of personal consequences. That courage to be a President instead of a politician has been responsible for a Nation prosperous, a world at peace, and communism halted at the crossroads of Europe. Or, again, were these blunders?

In standing by his party and its inherent principle of the greatest good for the greatest number, he has emulated other great Americans—Jefferson, Jackson, Cleveland, Wilson, Franklin Roosevelt, and Alfred E. Smith. Like them, in the words of the old song, he—

"Dared to be a Daniel,
Dared to stand alone,
Dared to hold a purpose firm,
And dared to make it known."

By that token he should win. America likes a fighter. In that respect and on the record, we urge votes for him, Harry S. Truman, captain courageous—the unflinching warrior.

Total Justice and Administrative Procedure

EXTENSION OF REMARKS
OF
HON. PAT McCARRAN
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Monday, January 17, 1949

Mr. McCARRAN. Mr. President, I ask unanimous consent, in connection with a bill I have introduced today, that there be printed in the Appendix of the RECORD an address entitled "Total Justice and Administrative Procedure" delivered by me before the graduating class of Notre Dame Law School on Friday last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TOTAL JUSTICE AND ADMINISTRATIVE PROCEDURE

It is a privilege and an opportunity for me to join you here this evening at a function of the law school of this renowned institution of learning. You and I both attempt to follow the paths of the law. You study the past and the present, whereas in my business I am supposed to do not only that, but to keep an eye to the future as well. I dare say, however, that you, too, have some thoughts about the legal future. I know I can profitably exchange ideas with you here this evening.

For want of a better term, I should like to talk about what I call total justice. It will do no harm first to recall the different meanings and methods of law and justice. Then, I think, we shall have placed ourselves in a state of mind to explore a particular dark corner of the law today and to consider what may be done about it.

I

Except for the totalitarians, we all base our law and law making upon the premise that there is a difference between right and wrong, between justice and iniquity, between goodness and sin. Occasionally there is some attempt to make it appear that law is not necessarily right, nor just, nor good.

Some legal scholars have distinguished between law and morals. Other learned men have delighted in distinguishing between justice and mercy. Perhaps a man from Mars would be puzzled by these seeming contradictions. But we know that they represent shades of meaning rather than conflicts. They express our self criticism. They mean that man-made law and man-made justice have a natural difficulty keeping up with morals, mercy, and the Christian ideal of perfection.

A more tangible difficulty lies in the several very different legal methods which go to make up our legal system. Of these, presumably no factor is more disillusioning than the fact that law must be applied by mere men to inexorably concrete cases. Thus we have on the one hand a plea for an ideal "government of laws and not of men," although there never was and never can be such a government; and on the other hand we have cynical surrender to thinly veiled anarchy or to the dictatorship of officialdom. Those are not so much conflicting points of view as they are the usual contrast of the high, hard goal, on the one hand—never fully attainable but infinitely worth while—with the dark, easy, barbaric level on the other. On this continent we have chosen the hard ideal rather than the easy level.

Still a third mooted premise of our legal system is the statement, or writing down, of our law. In ancient times when men's minds and words were more brutal and blunt than they are today, the situation was a dramatic one. There was, for example, the classic struggle in republican Rome to see whether the law should remain a mystery in the hands of the pagan priesthood or be written down for all to see and know and rely upon. The victory which gave the people of Rome their crude 12 tables is one of the earliest historic landmarks of government under law. Not only is there an almost perennial struggle throughout subsequent history as to how far the law should be thus written, but the difference has been refined and complicated by the further questions whether it should be written by kings, by legislators, by judges, or by less well defined state functionaries.

Let us consider whether the law should be written by legislators or by judges. An example and contrast will perhaps shed more light than any argument of mine. In England the law is indisputably made by the legislature and, as a consequence, courts merely construe and apply the very detailed statutes, as written by Parliament, to the facts they find in particular cases. There is no significant talk of judge-made law there. The courts do not have an overriding constitution to construe and apply, and for that reason they are not concerned with broad economic questions de novo. Indeed, lawyers do not even file briefs with the English courts; instead, after only oral argument, the judgment is almost invariably announced forthwith from the bench.

But in the United States we have a legal tradition which favors either judge-made law or administrator-made law. Yet, so far as judge-made law is concerned, this tradition is now rather largely honored in the breach. Congress and the 48-State legislatures produce the greater weight of law, although I do not know that they surpass the courts in word count. This situation was not always with us. In the last century the subject was fiercely debated for a period of years by the noted lawyers, David Dudley Field and James Coolidge Carter, in New York, with the Nation's entire legal profession as the audience. Although Carter appeared to win most of his point in New York, Field's codes have been adopted in substantial part in nearly half the States of the Union, and his idea of periodic legislative codification and revision of the law has won avowed or tacit acceptance in every jurisdiction in America. It would therefore appear fair to say that our law in the nineteenth century tended to be judge-made, but in the twentieth century it is primarily legislature-made. The change simply evidences, far more than any words of mine could, our gradual conversion to the theory that the law should be stated in writing by the people's representatives so far as the latter find it feasible to do so.

But we have now in this country a new phase of the law, in which these old struggles in the development of our legal system are being reenacted. In the field of administrative law we are just reaching the question as to how far the legislature should go in prescribing the rules of the game. This is not because the legislatures have been dilatory, but because administrative law is new in its significant scope and impact. It is a sign of growth and virility of our legal system that it should rebuild itself around each new legal field. Nor will such readjustment smother the budding field of administrative law. It will strengthen it by giving it recognition in our legal system and the tools to perform its task. Administrative agencies will continue to receive delegated powers. They will continue to adjudicate cases and issue what might be termed "sublegislation." But the legal framework within which they operate will be perfected by a statutory accretion slowly designed in the light of experience, reason, and the needs of modern government. This inevitable development may be achieved in major part in our time.

On the foregoing general background I venture to draw the conclusion that our people demand that our law be written, adaptable, and understandable. To the extent that it falls short of that standard, it does not represent total justice. But of course this does not mean that there is not a place for sound discretion case by case, as well as a place for precise legal rules. The cry of history and of reason is that we write and revise our laws as precisely as we may, so that they shall be as understandable as possible to the millions whose lives and fortunes they govern.

II

This continent—and the globe itself—have been so shaken by domestic and international crises for nearly 20 years that we are apt to overlook what has been done here in our own land to improve the administration of justice. Undoubtedly it would surprise many people in other parts of the world to learn that, in addition to weathering depression and war, we had been able to make vast improvements in our legal system in the current generation. I should like to devote the second half of my remarks this evening to the achievements, and the future, of one such line of development which has already brought order out of chaos in a large segment of our Federal law.

You will recall that we were hardly out of the depths of the great depression when, by the Rules Act of 1934, Congress provided for the formulation and operation of one set of uniform and simplified rules of civil procedure for all the Federal trial courts. Not only was that effort successful, but it finally closed the breach between law and equity which had prevailed for some 200 years. The legal profession has now been enjoying that simplified system for over a decade, and not a single voice has been raised to demand a return to the old days.

Indeed, so successful has that bitterly fought reform proved to be, that in 1938 a similar project was proposed for the field of Federal criminal law. Accordingly, we now have uniformity of practice and procedure in such widely different fields as law, equity, admiralty, and criminal law. Variation and complexity have been reduced to an understandable system. A few rule books which any lawyer can obtain have replaced great sets of speculative discourses on the morass of Federal practice and procedure. Thus our law has developed in the direction of consolidating and simplifying and explaining. Not the least of our pride in this achievement should rest upon the fact that these simplified restatements of the law were formulated in the first instance by the voluntary and uncompensated labors of lawyers and scholars acting in an advisory capacity. It is perhaps not too much to venture to say that this achievement represents democracy at its best.

But I should regard myself as remiss if I were to remain content to point with just pride at what has been so splendidly done. For I know that our labors to maintain and improve justice are never finished. Moreover, there are today dark forces at work over most of the earth who preach not only against law and against order, but who insist that the appointed agents of the state are the sole and infallible masters of human destiny. For that reason I shudder to think that any responsible servant of democracy, be he Democrat or Republican or bureaucrat, would want to leave any stone unturned to prevent the development of a lawless administrative law in this country. Yet even our process of simplifying and unifying the rules of practice and procedure has stopped short of administrative agencies.

It is no answer to say that we are engaged in other more important works of postwar legal rehabilitation. The situation recalls the remark of that eloquent advocate of law reform, who, reminding his hearers of the boast that Augustus had found Rome a city of brick and left it a city of marble, noted how much greater would have been Caesar's glory if he could have said that he found "law dear, and left it cheap; found it a sealed book, left it a living letter; found it the patrimony of the rich, left it the inheritance of the poor; found it the two-edged sword of craft and oppression, left it the staff of honesty and the shield of innocence."

I venture to say that the same would be true here today, even though our dwellings remain scarce and of wood instead of brick, for what good will many mansions do us if the legal fiber of the modern democratic state is to weaken and give way little by little?

Indeed, I doubt that the modern administrative state has much further to go unless it first puts its administrative house in order. Our wartime experience alone demonstrates that there is a limit to the patience of our people, even in times of emergency. Unless better public relations can be achieved by our administrative agencies, there will be a lack of ability on the part of administration to meet new problems of society or to win the necessary acceptance of extended government. Consequently, in the matter of Federal legal procedure alone, we are in the position of having one weak link in the precious chain which holds together the whole mechanism for the administration of Federal justice.

This is not the place to go into further detail. It will suffice for the moment if I tell you that, after long study and consideration, I propose to introduce in Congress, immediately upon my return to Washington, a bill to provide general rules of practice and procedure before Federal agencies. With essential differentiations, this bill is modeled after the statutes of 1934 and 1938 which implemented a similar purpose in the fields of civil and criminal procedure in Federal courts. It is my hope that by enactment of the legislation which I propose we shall demonstrate that we are capable of having total justice—that our determination to unify and simplify practice and procedure can be successfully applied throughout all our instrumentalities of justice, including the administrative agencies. But it will be no

simple task. It will test our best legal judgment and ingenuity. It will be a creative undertaking of high order.

Of course we shall have doubters and some opponents, as well as many who will be indifferent. They will be well-meaning folk, no doubt. But, in some part at least, they will consciously or unconsciously reflect various common attitudes against law, against congressional legislation if it does more than appropriate money or grant powers, against the idea of simplicity or uniformity, against anything which may limit administrative authority to operate as it chooses. There will be talk that we need more justice and less law, that the project will be too difficult or too expensive, or that it will place administrative agencies in a "strait-jacket." The answer to most of these arguments and fears is simply that all will depend on how well the job is done. Far more difficult undertakings have been proposed in Washington during the last 15 years, and none have been rejected because execution would pose serious problems. Indeed, what I propose is a minor challenge compared with the problems of administration in uniform minimum wages, registrations for security issues, maximum commodity prices, limited agricultural acreage, and so on.

But I did not come here to persuade you to support this latest project of mine for improving the administration of justice. Of course, if you have a vote in the Senate or House of Representatives, I shall be glad to have you vote for my bill. If you do, it will not be a vote for me but for the concept of justice—of total justice, as I call it, perhaps ineptly. In case you have no such vote and but little contact with your Congressman or Senators, I shall nevertheless welcome your consideration and your views. If what I have said causes you to think even a little bit about our legal system and the pulling and hauling which makes it grow, I shall feel well repaid for my travel and effort.

The objective end of all law is the rendition of justice, even to the most lowly human being. If law takes not its spirit from the fountain of all knowledge, then it, the law so-called, falls short of total justice. In no phase of the law is there more impingement with man in his every-day activity than in the operation of administrative law. Here we have human effort brought before the state to have its rights assured and its wrongs redressed. Thus we are confronted with the question of the care and accuracy which must precede judgment or conclusion.

The people must be assured of the righteousness of the arbiter and the uniformity of the rule applied. So you may appreciate our anxiety to set the law of administrative procedure down so that he who runs may read; and, reading, know the truth expressed by his eminence James Cardinal Gibbons, of happy memory, when he said, "The law is not the people, the people is not the law. The law is the spirit of justice governing the people, and its application to individuals, to associations, to every form of civil life, must be so hedged round with reverence and security that the civil courts in an hour of popular passion may protect all the people from the tyranny of what might be a lawless majority."

In this hour of social and political revolution, when law is loose and unstable, when individual human liberty is lightly dealt with, when property rights are precarious, when God, the source of life and law, is dared and denied, your Nation at the head of the nations of the world must hold high the torch that will shed light into the dark places of legal procedure, must meet the onslaught of lawlessness by assuring to the world and to our people the rights that God intended for those who bear his image and likeness.

Tribute to Vice President-Elect Barkley by Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, January 17, 1949

Mr. O'MAHONEY. Mr. President, among the well-deserved tributes paid to Senator ALBEN W. BARKLEY, Vice President-elect, at the Town Hall dinner in his honor at the Waldorf-Astoria Hotel in New York City on December 15 was one by former Postmaster General James A. Farley. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I consider it a very great compliment to be invited to participate in this program of the Town Hall dinner honoring my good friend, Vice President-elect ALBEN W. BARKLEY, and I am delighted to see so many old friends and admirers of Senator BARKLEY's present this evening. I have known him intimately for over 25 years, and my affection and esteem for him have grown with the passing of the days.

He is one of the most able leaders ever developed by the Democratic Party, and he is one of our country's most faithful servants. For over a half century he has been in public life, serving his State and country. For 35 years of that period he has been in the Halls of Congress and in the United States Senate where he has demonstrated outstanding leadership in times of economic and military crises. In his roll as leader of his party in the Senate he has been a maker of history and a servant of the world. And, during all the years, while he has been at all times a great Democrat, he has been far beyond that, a great American.

Senator BARKLEY has always fought to advance freedom at home and abroad, and has steered his course by the principles of the party which was born with the country, and which will ever be a beacon light of liberty. I know of no man of this day or generation who has given greater devotion to his party and his country, and his love for both has been equaled only by his labors. It can be said, without fear of contradiction, that few men in the history of this country, and very few living today, have made any greater contribution to their party and country.

I was extremely happy when Senator BARKLEY was named by his party as their choice for Vice President, with President Harry S. Truman, and I was overjoyed when on last November 2 he was proved our country's choice for the second most important office in the world.

We are still living in a very perilous period of the world's history. The United States is recognized as the leading Nation of the world today. That leadership must be maintained if we are to have peace and order. President Truman is the world's leading Chief of State, and it is God's providence that his strong right arm in his courageous leadership will be this great American character, ALBEN W. BARKLEY, whose ability, integrity, and forthrightness are so enduring. At an age in life when most men would retire in ease and comfort around their firesides, this splendid American, full of vigor and vitality is ready to assume greater responsibilities than ever before in his long political career. Senator BARKLEY's optimistic point of view has always enabled him to cope with any problem and to proceed on the theory that diligent effort properly directed would lead us out of our difficulties both at home and abroad. He will measure up in every way.

Senator BARKLEY, I congratulate you, and from my heart I express my best wishes for your good health and happiness. I know of no man who is better equipped to express a viewpoint on the outlook for 1949.

The Jewish State in Palestine

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, January 17, 1949

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I issued on last Saturday on the state of Israel at the present time, pointing out, as I see it, certain inconsistencies, incongruities, and injustices which are being perpetrated on the state of Israel by the British Government.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Americans of all faiths joined in the upsurge of thanksgiving that followed the United Nations resolution of November 29, 1947, sanctioning a Jewish state in Palestine. This resolution had followed exhaustive investigation by a special committee and a special session of the General Assembly, after Great Britain had abandoned its mandate under the League of Nations to facilitate the Jewish national home. The United Nations, the highest tribunal for peace and justice in the modern world, thus placed its seal of approval on the 2,000-year aspiration of dispersed Jewry for freedom and dignity in their own land. This was the first new state created by the United Nations, a great step forward in international statesmanship and brotherhood.

Every right-thinking person has cheered the tiny state of Israel as it established its governmental machinery and welcomed and made homes for thousands of new settlers, while fighting off the unprovoked aggression of five invading armies. Because the United Nations had no international force to back up its decision, that burden fell on the fledgling state and its people. By their heroism and blood, they well redeemed the birthright of their fathers and the mantle of statehood conferred by the United Nations. After more than a year of fighting and intensified diplomatic activity through the United Nations and otherwise, the last invader was driven from Israel's soil, and even Egypt, the most recalcitrant of the Arab states, had expressed willingness to enter into the armistice and peace talks so long sought by Israel and the United Nations mediators.

Great Britain chose this decisive moment, when the prospect of peace in the Middle East was brightest, to throw new military forces and aircraft into the troubled Palestine area. Peace-loving America stands aghast at this cynical move in the game of power politics. Israel has no designs whatever on the territory of any of its neighbors; it seeks only the vindication of its cherished right to rebuild a homeland for a great people, who are pouring into the country at the rate of 30,000 a month. Britain, on the other hand, after placing every obstacle in Israel's

path, now appears to have embarked on a well-planned provocative policy to accomplish by brute force what it has hitherto failed to do by other means. Such provocation is a direct threat to world peace. It is a denial of the principles of justice, fair dealing, and peaceful world reconstruction.

Britain's friends throughout the world cannot understand Britain's blind opposition to Israel, particularly in the face of the cordial friendship and understanding that evidently exists between Israel and leading members of the British Commonwealth, including Canada in the Western Hemisphere, and Australia, New Zealand, and South Africa in the region beyond Suez. As a stanch supporter of the loans to Britain and the European recovery program, financed by American taxpapers, I am utterly unable to square Britain's action with those programs to promote world peace and security in furtherance of UN objectives.

It is greatly to be hoped that Britain will bring its policy into line with the spirit and program projected in the resolutions of the United Nations, so that lasting peace may be established in the Holy Land for the good of all mankind.

Counting of Electoral Votes

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, January 17, 1949

Mr. LODGE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD some facts which I have collected regarding Senate Joint Resolution 2, the proposal to amend the Constitution so that the electoral votes for President and Vice President will be counted in proportion to the popular vote.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. HENRY CABOT LODGE, JR., OF MASSACHUSETTS

In this pamphlet you will find all the essential arguments on a proposition so vital that it actually underlies your whole system of government.

It is Senate Joint Resolution 2, which provides for a constitutional amendment so that the electoral vote for President and Vice President will be counted in proportion to the popular vote.

After many years of study, this proposition received favorable reports from both the Senate and the House Judiciary Committees during the second session of the Eightieth Congress. It has been reintroduced during the opening days of the Eighty-first Congress. In the House it is embodied in House Joint Resolution 2; in the Senate, it is Senate Joint Resolution 2.

In the Senate, this constitutional amendment has the bipartisan sponsorship of Senator LODGE, of Massachusetts, together with Senator MCCARRAN, of Nevada; Senator FULBRIGHT, of Arkansas; Senator HOEY, of North Carolina; Senator SPARKMAN, of Alabama; Senator STENNIS, of Mississippi; Senator NEELY, of West Virginia; Senator KEFAUVER, of Tennessee; Senator SMITH of New Jersey; Senator MORSE, of Oregon; and Senator FLANDERS, of Vermont.

The 1948 Presidential elections are still fresh in our minds. We remember our feeling of worry and frustration on election night when it seemed possible that we would enter the year 1949 without an elected President—which would have been a grim reality had Governor Dewey carried any two of the States of California, Illinois, or Ohio. We recall how a shift of a few thousand votes in a few key States could have elected a President who had less popular votes than his opponent. We saw dramatized in at least one State (Alabama) how the obsolete and preposterous electoral college machinery can be legally maneuvered so as to prevent the voters from casting their ballots for a duly nominated candidate of a major political party. We saw how in one instance (Tennessee) a member of the electoral college can cast his vote for anybody he pleases, regardless of the popular vote. Many observers commented on how our present electoral machinery grossly magnifies the victory of the winner and exaggerates the defeat of the loser, giving the impression of a sweeping triumph in a fairly close race when measured by the results of the popular vote.

These lessons of the 1948 elections impress upon us all again the need for reform—a reform upon the merits of which every citizen has the chance to express his or her approval. By expressing your interest to your Senator and Representatives you have it in your power to make our Presidential electoral system thoroughly honest and thoroughly democratic.

SUMMARY

To summarize this proposition:

1. It provides that in electing the President and Vice President of the United States the electoral vote be counted in proportion to the popular vote. The electoral college is abolished. The office of Presidential elector is scrapped. The electoral vote is retained—purely as a counting device.

2. It offers protection against a source of real potential danger which stems from the present possibility that the candidate receiving a minority of the popular vote would receive a majority of the electoral vote. (This has already happened three times.)

3. It ends the present system whereby the winner in every State effectively gets credited with all the votes, including those which were cast against him.

4. It ends the present practice of concentrating Presidential politics on those States having the largest population and consequently on the voting minorities in those States.

5. It would, for that reason, be a deterrent to fraud and chicanery.

6. It means that the votes which a candidate receives in one State (even though they may be a minority in that State) will be added to the votes he receives in other States—instead of being all given to his opponent in every State where the opponent is ahead.

7. It spreads the Presidential campaign and any subsequent Presidential political activity into all the 48 States.

8. It tends, therefore, politically speaking, to break up so-called solid or one-party areas.

9. It preserves completely the rights of the small States (who still retain the two-vote credit for their two Senators.)

10. It recognizes that the electoral college system has never functioned as originally conceived by the framers of the Constitution. The so-called electoral college has become a rubber stamp—and an inaccurate rubber stamp at that.

11. It discourages the tendency to select Presidential nominees only from among the residents of those States having a large electoral vote.

12. It avoids the possibility (exercised in 91 cases) that State legislatures might intervene and deprive the people of their rightful voice in the selection of the President.

13. It eliminates the need for throwing a Presidential election into the House of Representatives where each State, regardless of size, has only one vote.

14. It dispells the illusion that a relatively close election was in fact a landslide.

15. It prevents individual electors from casting votes because of whim or impulse. Under our proposal the electoral vote is retained simply as a counting device.

16. It gives our citizens a legal voice in the the choice of their President instead of a mere expression of preference as under the present system.

17. It confers no partisan or sectional advantage.

HISTORY

1. The present system is neither fair, honest, accurate, certain, nor democratic. Let me give a few historic illustrations:

In 1912 Woodrow Wilson, with 42 percent of the popular vote, received 82 percent of the electoral vote. In 1936 Roosevelt, with 60 percent of the popular vote, received 98 percent of the electoral vote. In 1940 he received 54 percent of the popular vote and 84 percent of the electoral vote. In 1924 John W. Davis received 6,000,000 popular votes which brought him no electoral votes, while from 2,000,000 other popular votes he received 136 electoral votes. In 1932 Hoover received 15,800,000 popular votes, and over 13,600,000 of them brought him no electoral votes. In 1912 Wilson received one electoral vote for each 14,500 popular votes, while Taft received only one electoral vote for each 435,000 popular votes.

2. An undue influence is given to minorities by the present system.

In 1884, in the State of New York, Cleveland got 563,084 votes while Blaine got 562,001 popular votes. A bare 1,000-vote majority in popular votes gave Mr. Cleveland all of the electoral votes of the great State of New York. Thus, a change of 600 votes in New York would have elected Blaine President. Should a similar situation again arise, as well it might, the Communist Party in the State of New York alone could determine who was to be President of the United States.

3. Three Presidents have taken office who had a smaller popular vote than did their opponents—Adams in 1824, Hayes in 1876, and Harrison in 1888.

In 1824, 460,000 popular votes were cast. Andrew Jackson led his nearest opponent, John Quincy Adams, by about 50,000 votes, but because he lacked a majority over his three opponents, Jackson's election was thrown into the House of Representatives. As a result of the manipulations of Henry Clay, Adams—the minority choice—was elected over Jackson for President.

In 1876 there occurred the famous Hayes-Tilden contest. In that election, 8,336,888 popular votes were cast. Of these, Hayes polled 4,036,298 and Tilden 4,300,590. But because of the archaic electoral-college system, Hayes had a margin of one electoral vote which gave him the Presidency, even though he had received 264,292 less votes than Tilden. In this case, only wise counsel, to which Tilden patriotically contributed by his course of moderation, prevented uprising and possible violence.

In 1888, Grover Cleveland lost the Presidency in spite of the fact that he received more popular votes than Benjamin Harrison. In this election there were 12,000,000 popular votes cast. Cleveland received 5,556,543, while Harrison got 5,175,582. Again the minority candidate took office due entirely to the illogical operation of the electoral-college system.

OTHER ARGUMENTS

Few objections have been raised against this proposed amendment and most of them appear to rest on misconceptions. Because in discussing them one gains greater familiarity with this reform, the more frequently mentioned ones are listed herewith:

1. The proposed amendment, some have claimed, would impinge upon State political power.

In reply, it should be emphasized that Senate Joint Resolution 2 in no way disturbs the jurisdiction and authority of the States over the franchise and elections. The proposed amendment in no way meddles with State sovereignty or the right of the States to specify the qualifications of its voters or the manner in which they shall vote or have their votes counted. We leave the purity of the ballot box entirely within State control.

2. The argument has been made that the proposed amendment would encourage "splinter" parties and increase the influence of "pressure" groups.

It can be emphatically said that Senate Joint Resolution 2 would in no way disturb party organization, responsibility, or authority. The proponents of this reform are strong believers in the two-party system and are opposed to anything which would threaten us with a multiplicity of parties. Indeed, this constitutional amendment should greatly reduce the present weight of splinter parties and special pressure groups, for it deprives such groups of the bargaining power they now possess by virtue of their ability so often to swing all the electoral votes of key States to one or the other major candidates—as witness the 1948 elections in New York.

Furthermore, this reform would definitely encourage the two-party system in the so-called one-party sections of the country.

With the exception of the President and Vice President, we elect all our public officials by popular vote. If there has been no proliferation of splinter parties within the several States for local, State, and Federal offices under a direct popular vote system, there seems little likelihood that they would flourish on a national scale under the proposed amendment.

3. Some claim that Senate Joint Resolution 2 does not go far enough; not only should the electoral college be abolished, but we should also scrap the electoral vote system and elect the President and Vice President by Nationwide popular vote.

To this objection there are several answers. To do away with the electoral vote and substitute instead a direct popular vote would make national campaigns a matter of complete national control; it would obliterate State lines altogether in Presidential elections. For example, the State of Georgia has an 18-year voting age. All States, to be on a parity with Georgia, would have to reduce their voting age to 18 years under an absolute, direct, popular vote. Again, under such a system, sectionalism would be aggravated rather than ameliorated. In a sectional controversy it would become a contest of gathering up the greatest volume of votes in a particular area for the purpose of outvoting some other particular area. Furthermore, the direct popular vote would open up the small State-large State controversy. As a practical matter, no such amendment would ever secure ratification by the necessary number of States because relatively small or sparsely settled States far outnumber the others. These States would not give up the slight advantage they have through the number of electoral votes accorded them under the Constitution.

4. Some have questioned the provision of the proposed amendment which reads "The person having the greatest number of electoral votes for President shall be President" because it does away with the present requirement that a majority (rather than a plurality) of electoral votes is necessary for election.

In meeting this argument, one must keep in mind the fact that election by plurality is the general rule for election in this country. We elect local officials, State legislatures, governors, Representatives, and Senators by plurality. Indeed, students of this subject have pointed out that in actuality we elect our President on a plurality basis, because a plurality of the people in any given State decide which candidate shall receive all that State's electoral votes. History shows that, in terms of the popular vote, elected Presidents were plurality—and not majority—choices in almost half (14) of the 32 elections for President held between 1824 and 1948. (In fact, the 1948 elections are a case in point. The official returns show that President Truman polled slightly less than half (49.5 percent) of the popular vote. He received 24,104,836 votes, while his opponents polled a total of 24,575,688.)

We must also remember that as we make the electoral vote more exactly reflect the popular vote, the margin of difference between the candidates—in electoral votes—will grow smaller. As a result, we must expect that few candidates will receive a clear majority of electoral votes under this proposed amendment. To insist upon a majority to elect would mean frequent and inconclusive elections. The only way this could be resolved would be (a) by a run-off election, which on a national scale would be expensive, delaying, confusing, and highly volatile, or (b) by an election in Congress—an almost universally condemned procedure.

5. It has been said that because the electoral college has been a part of the Constitution ever since its original adoption we should be most reluctant to abolish it.

The answer to this objection is in the history books. The electoral system we now have is based on the eighteenth-century idea that each of the States would name its outstanding citizens to join with similar leading citizens from the other States in selecting the President. The people were not trusted to choose their own President—hence it was to be done for them by the "electoral college." This obsolete and undemocratic conception has, of course, been in complete discard since the days of Andrew Jackson, but the machinery of that era continues in use. As a matter of fact, as far back as 1798 the former Massachusetts Senator George Cabot, writing to Timothy Pickering, said:

"MY DEAR SIR: I have been unable to comprehend the motives which influence the Federalists to neglect the infinitely important subject of electing the President and Vice President. The defect of the Constitution in this particular is so obvious, and the inconvenience and absurdity of it so much felt, that I should imagine a proposition to amend it could not fail of success."

If it could be said that the judgment of the electoral college was a particularly wise judgment, its frequent failure to conform to the popular will might be tolerated. But the fact is that the verdict of the electoral college does not reflect the opinion of a selected group of especially wise citizens. The members of the college in modern times are—and are meant to be—rubber stamps for the popular vote. If they are not accurate rubber stamps, there really is no use for their existence.

Federal Spending Facts

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. REED of New York. Mr. Speaker, is it possible that a few States have been singled out to bear the major burden of the boondoggling program of the New Deal? What States are to be raided to obtain the $41,900,000,000? Here they are:

California	$3,486,080,000
Illinois	3,301,720,000
New York	6,486,120,000
Ohio	2,442,770,000
Pennsylvania	3,251,440,000

Under leave to extend, I am inserting a statement which shows how the taxpayers of the 48 States will share the cost of the President's $41,900,000,000 spending budget for fiscal 1950. This does not reveal the extent to which the boondoggling program will be carried, especially when the pay-roll taxes creating trust funds for various groups are levied—did I say trust funds? I should say the funds that will be collected under that name, but which will flow into the Treasury to be spent in addition to the $41,900,000,000:

We know that there is no wealth to be taxed by the Federal Government that is not already within the boundaries of the 48 States. This fact was recognized and stated in those very words by the Indiana Legislature in January 1947 in its now famous Indiana resolution opposing the extension of Federal subsidies.

Every dollar of the record-breaking peacetime $41,900,000,000 Federal spending budget proposed by President Truman for the next fiscal year must be raised by direct and hidden taxes exacted from the people and businesses in the 48 States, District of Columbia, Alaska, and Hawaii.

The tabulation which follows shows the proportionate share to be borne by the taxpayers of each State if Congress approves $41,900,000,000 of Government expenditures for next year.

In every State the Federal tax take will be found to exceed the total amount of taxes collected this year for the support of the State government and all its municipalities, counties, and school districts combined. In most instances Federal taxes will be two, three, or four times as much.

It must be borne in mind that the $41,900,000,000 spending budget which the President submitted to Congress on January 10 does not cover all the expenditures which the Government expects to make next year. The President has said he will make additional requests of Congress over the coming weeks which will add considerably more to the $41,900,000,000 total. The final figure may reach fourty-four billions or more.

So the figures in the attached table will represent the absolute minimum which the people of each State will pay for Government at Washington in the fiscal year beginning this July 1—unless they themselves urge their Senators and Representatives in Congress to act to reduce the amount of this all-time high Federal budget and call upon the executive branch to cut down on extravagant and wasteful spending.

What the proposed $41,900,000,000 Federal budget for 1949–50 will cost the taxpayers of each of the 48 States

(Allocation percentages are based on a 3-point formula comprising income and payroll tax collections by States (55.53 percent), income payments (23.70 percent), and 1947 Census Bureau population estimates (20.77 percent))

State	Percent allocable to each State	Amount allocable to each State
Alabama	1.14	$477,660,000
Arizona	.34	142,460,000
Arkansas	.64	268,160,000
California	8.32	3,486,080,000
Colorado	.81	339,390,000
Connecticut	1.73	724,870,000
Delaware	.40	167,600,000
Florida	1.29	540,510,000
Georgia	1.41	590,790,000
Idaho	.30	125,700,000
Illinois	7.88	3,301,720,000
Indiana	2.23	934,370,000
Iowa	1.48	620,120,000
Kansas	1.16	486,040,000
Kentucky	1.17	490,230,000
Louisiana	1.12	469,280,000
Maine	.45	188,550,000
Maryland	1.70	712,300,000
Massachusetts	3.57	1,495,830,000
Michigan	4.68	1,960,920,000
Minnesota	1.85	775,150,000
Mississippi	.65	272,350,000
Missouri	2.57	1,076,830,000
Montana	.32	134,080,000
Nebraska	.88	368,720,000
Nevada	.13	54,470,000
New Hampshire	.29	121,510,000
New Jersey	3.25	1,361,750,000
New Mexico	.26	108,940,000
New York	15.48	6,486,120,000
North Carolina	1.57	657,830,000
North Dakota	.34	142,460,000
Ohio	5.83	2,442,770,000
Oklahoma	1.07	448,330,000
Oregon	1.01	423,190,000
Pennsylvania	7.76	3,251,440,000
Rhode Island	.58	243,020,000
South Carolina	.72	301,680,000
South Dakota	.33	138,270,000
Tennessee	1.33	557,270,000
Texas	4.03	1,688,570,000
Utah	.33	138,270,000
Vermont	.18	75,420,000
Virginia	1.48	620,120,000
Washington	1.58	662,020,000
West Virginia	.86	360,340,000
Wisconsin	2.06	863,140,000
Wyoming	.16	67,040,000
District of Columbia, Hawaii and Alaska	1.28	536,320,000
Total	100.00	41,900,000,000

"Doughfaces" a Peril, Says Ex-Colonel—Pro-Europeans Are Assailed

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Tribune of January 2, 1949:

"DOUGHFACES" A PERIL, SAYS EX-COLONEL—PRO-EUROPEANS ARE ASSAILED

(Col. Charles L. Hall, son of an Army officer and author of the following article on modern doughfaces, was graduated from West Point in 1908. His entire service was with the Corps of Engineers. He served on the general staff in France in World War I, receiving the Distinguished Service Medal and the Purple Heart with oak leaf cluster. During World War II, he served as engineer for the Ohio River district. He retired for age in 1947, but remained on active duty until retired for disability in 1948. He was district engineer at Rock Island, Ill., from 1927 to 1930.)

(By Charles L. Hall, colonel, U. S. Army, retired)

In American history, a "doughface" was a northern man with southern principles. The doughfaces controlled both political parties from Harrison's death in 1841 to the break-up of the Whig Party in 1855. Six years later, at the outbreak of the Civil War, they vanished from public life. The modern doughfaces are American men with European principles. These men have controlled both American political parties since Hoover's defeat in 1932. The purpose of this article is to suggest their peaceful elimination from public life.

The policy of Great Britain since the time of Queen Elizabeth has been to prevent any integration of the continent of Europe. Such an integration was feared because the whole continent united would clearly not stand for Britannia's rule of the waves. The serious threats of Spain under Philip II and of France under Louis XIV and Napoleon were conclusively defeated.

UNABLE TO MEET 1914 THREAT

When a threat from Germany was made in World War I the British were unable to meet it, even with the assistance of half of Europe. With the best will in the world the American doughfaces of 1914 could not bring the American people into war on the argument that any loss of England's power would be dangerous to the United States.

A sufficient number of Americans felt certain that a reasonable degree of militarization would protect our country from any conceivable German menace at a smaller net cost than that of a bitter war in Europe. Accordingly the doctrine was proclaimed that a submarine attack on an enemy passenger vessel was unlawful if any single neutral was aboard it. This doctrine has since been laughed to scorn by writers on international law. Our Navy paid no attention to it in World War II. However, it was sufficient to enable our doughfaces to make the fuss about the *Lusitania* which led us into World War I.

During the interval between the two great wars democracy in continental Europe broke down. Three types of government took its place, except in France, the Low Countries, Switzerland, and Scandinavia. There was Fascist (Nazi) totalitarianism, communist totalitarianism, and rule by soldiers.

DIFFERENCES OF DOCTRINES

The principal differences between Fascist and Communist doctrine were that the latter had no racial rules and consequently had missionary influence, while the former did not necessarily involve the elimination of the existing educated classes and was consequently more efficient. The rule by soldiers had no ascertainable doctrine, though it governed all the countries on the frontier of Russia from Latvia to Rumania, as well as Yugoslavia and Greece.

The British finally decided that Fascist totalitarianism had a better chance of succeeding than communism. Accordingly, under standard British operating procedure, the Fascist states, as the most powerful, became prospective enemies.

Although the British and French between them had more people than Germany and controlled half the world outside Europe, they never dreamed of winning the war by themselves. They first tried to get the assistance of the Communist states, but without success. They did gather in such military dictatorships as were available. Indeed, an attack on one of these, Poland, was the formal excuse for the initiation of World War II. If there are any survivors of the Polish Government of 1939, one may perhaps be permitted to wonder what they think of the subsequent course of events.

LED BY ADMINISTRATION

Needless to say, the American doughfaces, this time led by the Administration, were right on the job from the opening day. It was perfectly evident to any student of modern military history that an all-out war would leave the vanquished crushed and the victors weak.

It was also clear to any student of general history that a balance of power without Germany could only be established with American aid. Consequently, unconditional surrender clearly meant either the rule of the strongest survivor (obviously Russia) or continuous American interference (at high cost) in purely European questions. While the majority of men in public life in our country were perhaps too stupid to see this, there were plenty who were bright enough. They were, however, as helpless as the northerners of 1850 who pointed out that the fugitive slave law could only be enforced if not too much fuss was made about it.

A great, complex national issue can only be fought out if the two parties collide on it. In 1939 as in 1850 the doughfaces controlled both parties, and the last thing they would tolerate was an objective study of the problem.

MADE FALSE CLAIMS

Since most of the doughfaces were sincere it is interesting to determine just what were the contents of their brains. They could point out that Great Britain, more or less unwillingly, had been a shield for the United States for about a century. They could also point out that if the Nazis won, Great Britain could no longer act as a shield by itself. They never were able to show why the United States, with all its population and resources, could not defend itself; and hence why repair and maintenance of the British shield was not a useless expense.

Since in the end we actually carried the whole alliance on our back economically, and carried the western half of it militarily as well, it is not surprising that the doughfaces could not prove their point. Indeed, using hindsight, it seems hard to believe now that they held any such opinions themselves.

However, whatever the war aims of the doughfaces, they were unable to bring our country into war on the ground of British necessity. In 1916 Wilson won an election on the plank that he had kept us out of a war, which we entered a few months later. In 1940 both parties promised, with equal insincerity, that our troops should not go abroad again.

FORCED WAR ISSUE

The lend-lease law, an obvious hostile act, could not bring us into war. But, in the Pacific, we had a genuine opponent whose expansionist aims collided with our ambitions. By a neutral policy in Europe we could, of course, have isolated the oriental problem. The scheme of the doughfaces was to combine the European and Asiatic difficulties into one package, force the issue, and thus get us into the European war through the back door. No responsible writer any longer denies that this was President Roosevelt's aim. The fact has been clearly indicated by his former Secretary of War, and has recently been established by the work of our country's foremost historian, C. A. Beard, now, unhappily, dead.

If the object of the war was to destroy the German menace, it was entirely successful.

If its object was to improve the international position of the United States, it was a hopeless failure. Three years after the end of hostilities we are threatened with a third world war. Almost all the aspects of this threat could have been foreseen by any serious student of history.

From the standpoint of this author, the important thing is to indicate the responsibility of the bipartisan policy, operated by doughfaces. The business of an opposition is to oppose. If it fails to do so, it cannot effectively criticize the subsequent course of events.

INTENDED TO DESTROY POWER

The opposition was given notice by the Casablanca statement (fight to unconditional surrender) that it was intended to destroy the balance of power in western Europe. It was given notice—though not very explicit notice—after Tehran and Yalta that—for the first time since the wars of religion—the vanquished were to lose their private property, and that about 7,000,000 people were to be expelled from lands they had occupied for eight centuries and squeezed into an already overcrowded rump Germany. They also were advised that prisoners of war might be retained indefinitely. Under the doughface bipartisan foreign policy, none of these decisions was subject to partisan attack.

It is incredible that the Americans should have so completely lost their regard for their own religious ideals and their own past that they would have accepted this set of horrors if they had understood them. But whether they would have accepted them or not it is certain that they would not have agreed to a foreign policy which meant that 3 years after a successful war we would have had to mobilize our money and some of our men to protect a wholly bankrupt western Europe from one of our allies. This is what we are doing now.

END WAS CERTAIN

Moreover, the end was certain from the day unconditional surrender was promised. The Germans would not surrender unconditionally until they were pulverized. If they were pulverized they would be useless customers. Without German customers, most of western Europe could not make a living. With a helpless Germany, there was nothing to prevent Russian control of western Europe except American strength.

All these things it was the business of an opposition to foresee. Moreover, if the members of the opposition could not have prevented it, they could at least have insured that the conduct of the government was clearly examined and that after its inevitable postwar failure, people who supported the policy would have had the same political standing that men who voted for the Kansas-Nebraska Act had in the North after 1861.

But now look at us. The doughfaces are not in the least apologetic. Having allowed a ridiculous arrangement to be made in Berlin, they now tell us that it must be supported at any expense, and that those who question it endanger national solidarity. Having destroyed the balance of power, we are now told that it is incumbent upon us to reestablish it regardles of expense. Having been led into this horrible mess by a foreign policy not properly criticized, we are now told that the bipartisan policy must be preserved. A small matter will illustrate this.

PAID FOR DISMANTLING

There could hardly be anything more inherently ridiculous than the destruction of German factories while efforts are being made to set Germany on its feet at American expense. When a Senator tried to stop this nonsense, he was jumped on from both sides of the aisle. The doughfaces explained that the existing arrangements could not be altered without upsetting our agreed foreign policy. So we continue to pay for the destruction of factories which we are later to pay for replacing.

And it does not look as if we would get any respite from doughfaces. It seems that a Republican doughface is already selected as our next Secretary of State. The writer is no isolationist. He is in favor of compulsory military service and a strong policy in the Pacific. But anything is better than what we are going through now. History, however, gives us one faint gleam of hope from the last century. When a very distinguished son of Michigan, Lewis Case, the most eminent of all the doughfaces then living resigned office in December 1860, he said:

"I have been governor of my home State when it was a Territory and again when it was a State. I have been a Member of both Houses of Congress. I have been a general officer in war. I have been Secretary of State. I have been my party's candidate for the Presidency. And now, if I wanted to be a hog reeve (an officer whose duty it is to impound stray hogs.—Webster) there is no community in Michigan which would not think itself disgraced by choosing me."

Preservation of American Private Enterprise System

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 17, 1949

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Preservation of the American System of Private Enterprise," delivered by me at a meeting of the Virginia Medical Society at Richmond, Va., on January 15, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PRESERVATION OF THE AMERICAN SYSTEM OF PRIVATE ENTERPRISE

In inviting me to address this group of distinguished doctors, I am sure that my good friend, Mr. Henry Johnson, did not know that my first and earliest ambition was to be a doctor. When I was a boy in Lynchburg, Dr. William B. Thornhill was our family physician. I loved and admired him so much that I desired to follow in his footsteps. But I loved and admired the grandfather for whom I am named even more, and when during my high school days he suggested that I should study law, that settled the issue for me. It is a source of satisfaction to me, however, that my youngest brother, Churchill, chose the medical profession.

Since many doctors in Virginia and elsewhere in the country are of the opinion that pending health proposals are calculated, either immediately or ultimately, to impinge upon private enterprise in the medical field, I have been asked to discuss for you today the preservation of the American system of private enterprise. One cannot do justice to such a subject in the time at my disposal. The discussion should include a definition of our system of private enterprise, an outline of the trends both here and abroad to other economic systems, and a comparison of the relative merits of capitalism, socialism, and communism. I cannot adequately cover such a broad field but I do hope that what I say today may stimulate your own thinking on the subject and possibly lay the foundation for a full and more detailed analysis of what I frankly regard as being one of the most critical issues of our day and generation.

It is critical because the so-called American standard of living is at stake, and it is critical because the successful functioning of our democracy will have a definite and vital bearing on whether or not the current conflict between capitalism and communism eventually results in another global war.

I must confess to you that by heredity, environment, and training, I am a fundamentalist. By that I do not mean I am wedded to the status quo. On the contrary, I always have believed that change is an immutable law of nature and that either we go forward or we go backward. But, as a fundamentalist in religion, I believe God decreed that men must work to provide the three essentials of life—food, clothing, and shelter. I also believe that the fewer impediments placed upon the individual's opportunity to work, the better he can produce.

And, as a fundamentalist in the realm of political science, I believe in the wisdom of our founding fathers, who at a convention in Philadelphia in 1787 drafted our Constitution, which the English statesman, Gladstone, said was the most wonderful work ever struck off at a given time by the brain and purpose of man. I believe in the plan of government provided by that Constitution to implement the immortal Declaration previously framed by Thomas Jefferson, in which he declared that life, liberty, and the pursuit of happiness were the inalienable rights of mankind.

Our Constitution deliberately provided for the protection and safeguarding of both human rights and property rights. The provision in that Constitution for the protection of property rights is known as the capitalistic system and one of the basic institutions of a capitalistic system is freedom of enterprise. So when we refer to "the American individual enterprise system" we indicate, as one writer has said, "that in our economic system the production and distribution of goods and services are characteristically performed by private individuals or privately owned organizations operating under rules and regulations designed to realize the basic ideals and objectives of the people." The term also stands for private ownership of what is produced, as well as the instrumentalities of production, and it emphasizes that the production and distribution of goods and services by Government are limited, as determined by individuals through their freely elected representatives, to those fields in which such Government activity is essential for the accomplishment of public policy.

In other words, when the Continental Congress adopted the Declaration of Independence it went on record for unfettered human beings in all their human relationships. And while the founding fathers placed in our Constitution a general-welfare clause to provide for future unseen contingencies, they stressed the fact that the burden of proof rests upon those who propose governmental restrictions that would limit individual initiative. Their intention to limit the power of the Federal Government was reemphasized when, at the insistence of Patrick Henry and others, the first session of the Congress adopted 10 amendments, including one which expressly reserves to the States or the people all powers not specifically conferred on the Federal Government by the Constitution.

Although our Government has been in existence less than two centuries, it is now older than the present form of government of any other nation in the world. It falls to the lot of this day and generation to face as grave a

crisis for its perpetuation as was faced by George Washington and his followers to initiate it. This crisis, involving a conflict between the Christian religion and materialism, individual liberty and state domination, was touched off by the effort of the German Kaiser in the second decade of this century to dominate Europe and ultimately to impose the so-called German kultur upon the world. A quarter of a century later a similar effort was made by Adolf Hitler. Democracy and the friends of freedom, at the price of blood, sweat, and tears, won both of those contests only to find that democracy now faces a third and perhaps more serious contest with the materialistic and anti-God ideology of communism.

Speaking in Moscow on the thirty-first anniversary last October of the Russian Revolution, Foreign Minister Molotov said: "The soil under the feet of capitalism is trembling and we live in an age when all roads lead to communism. The capitalistic system dooms those countries to instability and castastrophic slumps, to periodic shocks and revolutionary upheavals."

I now repeat what I said on a number of occasions last fall—that, barring some unforeseen incident, an immediate armed conflict with the forces of communism is not probable. But the words I have quoted from the speech of Molotov clearly indicate that the communistic leaders count on our capitalistic system being overthrown by instability, depression, and economic suffering that will lead to a revolutionary upheaval.

So, before there is a resort to force, we may expect an all-out communistic effort to wreck the democracies of the world financially. In Europe that effort takes the form of physical sabotage of economic rehabilitation. In this country it takes the form of creating discontent, stimulating demands for public spending which are extravagant even though they are not directly socialistic, and infiltrating our national life by Government action and competition which either is socialistic or which inevitably will hamper individual enterprise.

Without impugning the motives of many of those who are advocating so-called social legislation, therefore, I think it may be in order for us to examine the possible effect on our way of life of some current proposals.

On January 10 the President recommended to the Congress a budget total of $41,858,000,000. The President's message estimated that his recommended expenditures would exceed estimated revenue by the amount of $873,000,000. The President's estimate of revenue was predicated upon a continuation of the present volume of business until July 1950. Should that assumption prove erroneous, the deficit, of course, would be increased depending upon the extent of subsequent price readjustments and the decline in volume.

If confronted with a choice between a deficit and increased taxation, I would consider increased taxation the lesser of two evils, although fully aware of the fact that taxes can be raised to the point where they threaten our system of private enterprise. A preferable solution to our fiscal problem would be to balance the budget by keeping a close rein on expenditures and, as a member of the Senate Committee on Appropriations, I shall devote my best effort toward that end.

It is proposed to double the benefits provided by the Social Security Act of 1935 and add disability and health insurance. All economists are agreed that present pay-roll taxes will not, over a period of years, finance present benefits. The last report of the board of trustees of the social security trust fund estimated that the cost of present benefits in 1960 might total $2,100,000,000; the pay-roll tax in that year might be 3.7 percent, rising to a possible 5.2 percent 10 years later. During the past fiscal year, when applied to the largest number of industrial workers in our history and at the largest wages, receipts from the old-age tax amounted to $1,616,162,000. In addition, the tax paid by employers into the unemployment compensation fund in 1948 amounted to $1,215,265,000.

In his budget message the President proposed that the rate of the old-age and survivors insurance tax be increased and that it be extended to a higher bracket of income to bring receipts up to $2,420,000,000 in the next fiscal year.

It is self-evident that this expanded social-security program will involve a tremendous financial burden, whether paid by pay-roll taxes or from the Federal Treasury.

The President also proposed a new pay-roll tax, beginning at a nominal rate, to finance a health-insurance program. As indicated in my opening remarks, some doctors have termed that a program of socialized medicine. It would be more accurate to term it a further step toward socialized medicine since we have already taken several steps in that direction and as our Chinese friends say, "A journey of a thousand miles is commenced with one step." The Committee on the Reorganization of the Government, headed by ex-President Hoover, has already called attention to the waste and inefficiency resulting from the public-health activities of 44 Federal agencies. In the brief period of the past 8 years the amount spent by those Government agencies on medical service increased from $250,000,000 to $1,250,000,000 and coverage was extended to one out of every six persons in the United States.

In his recent report to the President on a 10-year program for the Nation's health, Oscar R. Ewing said the goal was "to provide that all people shall have access to such health and medical service as they require through a system of insurance covering the entire population."

The full extent of the program has not been agreed upon and even when it is, an estimate of the cost will be little better than a guess because, in order to forecast with any degree of accuracy what a program of this character will cost in the future, it is necessary to know how many persons will be employed, the rate of their wages, how many will get sick, and how long it will take them to get well.

The health bill introduced in this Congress, S. 5, is substantially the same as S. 1320 of the Eightieth Congress. It provides for prepaid personal health service, including medical, dental, hospital, home nursing, drugs, eye glasses, etc. for all wage earners, and persons receiving old-age and survivors benefits, or any of the various forms of public assistance. S. 5 authorizes appropriation from the Treasury of an amount equal to 3 percent of all wages estimated to be received on pay rolls up to $3,600. To this would be added an appropriation equal to the estimated cost of furnishing dental and home nursing services and any further sums required to meet expenditures under the program.

Thus, the estimated cost of the medical program as indicated by this bill, which Federal Security officials say may be amended but will be the basis for their plan, would be 4 percent of pay rolls or more when it gets in full operation.

Now, if the old-age and survivors insurance tax goes to the predicted 5.2 percent and the unemployed tax stays at 3 percent and a proposed disability insurance plan costs 3.5 as estimated by the Social Security Board, that amounts to a combined rate of nearly 16 percent on pay rolls. To that must be added the cost of whatever additional benefits are provided under the old-age and survivors insurance program.

The original Wagner-Murray-Dingell bill, covering the entire program, provided for an additional pay-roll tax of 12 percent, one-half to be paid by the employer and one-half by the employee, plus a Federal contribution from general tax funds amounting to another 6 percent. But that tax was proposed before a national debt of $252,000,000,000 numbed our sensibilities concerning future liabilities.

At one hearing before the Ways and Means Committee on the subject some economists placed a total of such pay-roll taxes at 20 percent.

If the tax should reach that rate, and with Mr. Ewing's proposal that the tax apply to incomes up to $4,800, the half paid by employees would go as high as $40 a month in addition to all other taxes.

The United States Social Security Mission sent to Japan in 1947 to study a social-security system for the Japanese estimated in their report, which has not yet been published, that the cost there would amount to a maximum of 32.5 percent of pay rolls.

One major consideration in any program, of course, must be whether or not we can pay for it. Before Congress could safely embark on any such program for this country it should determine whether or not the people of the Nation can finance it without ultimate socialization of our economy.

Increased taxes on business have been proposed on income as well as pay rolls. The imposition of pay-roll taxes have a three-way effect: (1) In adding to the costs of production they will reduce the level of profit when the present sellers' market turns to a buyers' market, as eventually it will; (2) they increase the cost of the finished item to the consumer and tend to nullify other efforts to reduce the high cost of living; (3) pay-roll taxes are charged as a cost of doing business and are deducted from gross income before computing the net taxable income and thus reduce the Government's income-tax revenue, each $1,000,000,000 of such taxes resulting in a loss of about $300,000,000 of income taxes.

I realize that there is in Virginia and in the Nation a shortage of hospital beds and that one does not have to be a member of the Foreign Legion to ascertain that there is "a dearth of woman's nursing and a lack of woman's tears." The need for improvement in medical care is clearly indicated but that the health of this Nation will be better served by a Government program than by a private program is by no means indicated.

The United Kingdom now owns a fifth of all industry in Great Britain. The British injection of socialism into its private enterprise system has recently been extended to the field of medical care. If it takes a British patient as long to get well in a government hospital as it does in this country, the plan is going to be expensive. Recent statistics in this country show that the average patient spends 30 days in a Federal hospital but only 7 days in a private hospital.

What effect socialized medicine in Great Britain will have upon the quality of service rendered remains to be seen. I feel that there is no reason to assume that the abolition of the private profit incentive will not be as harmful to medicine as it has been to the production of goods and services in general. Aside from communistic sabotage, our major handicap in the rehabilitation of western Europe through Marshall plan aid has been the socialism which has permeated all of those countries. While Marshall plan dollars have stimulated an increase in their production, I understand that the average is just now reaching prewar levels. Under our system of private enterprise and with no outside aid, our production in volume has increased 75 percent over prewar levels. In less than four decades, we have increased our supply of machine tools four and a half times and are now supplying the world. We have more than doubled the hourly output of industrial workers, and almost doubled the annual income per household, while cutting 18 hours from the average workweek. In

comparing our standard of living with that of Russia, ex-President Hoover recently called attention to the fact that the 12,000,000 Negroes in the United States own more automobiles than the 200,000,000 Russians. Our standard of living is unmatched by that of any nation in the world at any time in history, and needless to say, is the envy of the world. It is the fruit of a system of individual enterprise functioning in a representative democracy under a written constitution. Let it be remembered that those who provided for capitalism and a system of private enterprise in that Constitution were well aware of the fact that the settlers both in Virginia and Massachusetts had first tried communism and in both instances it had failed, the first in 2 years and the latter in 5. Let it be remembered that as much care and thought were devoted to preserve the type of enterprise that had been developed in the Thirteen States for a century and a half and which was not duplicated anywhere else on earth as to any provision inserted in that remarkable instrument. Let us, therefore, test all proposals alleged to promote our standard of living and general well being by the formula that has produced our success.

Jefferson was a liberal and a friend of the masses. It is one thing to interpret his political philosophy in terms of twentieth century conditions. It is another to repudiate it.

By the light of a pine knot, Abraham Lincoln, the great humanitarian, read the Bible. "Root hog or die" was his paraphrase of "In the sweat of thy face shalt thou eat bread."

They believed and I believe "the fault, dear Brutus, is not in our stars, but in ourselves, that we are underlings." The record of our distinguished President, of our Chief Justice of the United States, of the overwhelming majority of those in all walks of life who have succeeded, is mute testimony to the glory of our system of individual enterprise.

I have been the beneficiary of that system and desire to preserve it for generations yet unborn.

Reduction of Federal Civilian Personnel

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. REED of New York. Mr. Speaker, I have just received a very important survey made by the National Association of Manufacturers Government Spending Committee. It recommends the elimination of excess Government employees. I commend the reading of this document to those who are interested in reducing the expenditures of the Government. Inasmuch as I have been interested in the economic operation of this Government and have opposed every boondoggling proposal presented by the New Deal I feel that the taxpayers are entitled to some consideration when it comes to considering the budget proposed by the President.

Under unanimous consent, heretofore granted, to extend I am including this survey as a part of my remarks in the RECORD:

INTRODUCTION

The recommendations for elimination of excessive Federal civilian employees set forth herein, are based on information contained in reports and hearings of the congressional Appropriations Committee during the second session of the Eightieth Congress. In most instances the specific figures were obtained by relating the lowest estimate of a department or agency's salary and personnel requirements, as determined by an Appropriations Committee to the amount finally appropriated.

Since the congressional committees do not have before them information from which they could determine the full extent of Federal overstaffing, these recommendations necessarily represent no more than a starting point for pay-roll economy achievement. The survey discloses the employment of approximately 119,457 excess personnel. There is every reason to believe that intensification of the search for excess personnel by the appropriations committees will build a record of much more widespread over-employment than can now be documented. This is indicated by the estimate of Senator HARRY F. BYRD, chairman of the Joint Committee on Reduction of Nonessential Expenditures, that there are approximately 500,000 unnecessary Federal employees.

Senator BYRD's latest monthly statement on civilian employment in the executive branch placed the total at 2,107,244 in July 1948. This represents an increase of 111,856 since the first of the year, or an average daily rise of 525.

The attached specific recommendations, however, provide the association with a means of evidencing its support of the efforts of economy-minded Members of the Congress.

CIVIL SERVICE COMMISSION

The section of Public Law 491, Eightieth Congress, prohibiting self-aggrandizement of civil-service employees in a supervisory capacity by the simple reason of increased numbers supervised, is a step in the right direction. However, many violations of its intent have been reported in Congress. The law, which now restricts the discretionary power of only the officers and employees of the Civil Service Commission who allocate or reallocate supervisory positions in the classified civil service should be broadened to cover the personnel officers in the various departments and agencies, because they initiate and develop the information upon which the Commission ultimately bases its decisions.

PERSONNEL EMPLOYEES

The number of Federal employees engaged in personnel work has increased from a ratio of 1 to 208 employees in all activities in 1938 to 1 to 85 in 1947. This compares with a range of 1 to 200 to 1 to 3,500 in leading business organizations. The House Civil Service Committee has recommended that the total Federal budget for personnel work be cut by $25,000,000 to $53,627,000, which would result in a reduction of approximatey 8,000 employees. The remaining total of 16,000 personnel workers would leave their ratio to Federal employees at approximately 1 to 130.

POST OFFICE

The sharpest increase in employees during July in any Government agency was reported by the Post Office Department, with a rise of 10,419 to an all-time peak of 508,834. The total is more amazing in view of the department's estimate submitted to the Senate Appropriations Committee of average employment of 463,000 for fiscal year 1949 based on the present volume of mail. It is suggested that the number of employees be rolled back to approximately 463,000, which is in keeping with the original departmental figure.

Following is a table of post office employment and pay roll prepared by the Joint Committee on Reduction of Nonessential Federal Expenditures.

Month and year	Personnel	Pay
July 1945	384,249	$79,890,200
July 1946	493,014	95,534,738
June 1947	471,787	93,007,872
July 1947	474,459	96,513,298
August 1947	457,619	96,117,065
September 1947	457,175	96,436,069
October 1947	461,959	99,636,207
November 1947	463,582	98,666,115
December 1947	463,741	143,459,822
January 1948	465,048	100,346,240
February 1948	471,868	98,053,953
March 1948	481,612	102,046,953
April 1948	488,059	100,842,927
May 1948	490,596	100,900,398
June 1948	498,415	102,600,386
July 1948	508,834	121,622,000

MILITARY ESTABLISHMENT

Department of the Army

The House Appropriations Committee found the present ratio of civilian employees to soldiers disproportionate. Prior to World War II there was one civilian to every four soldiers. The proposed 1949 ratio is one to two.

The House Appropriations Committee recommended a cut of 70,000 civilians from the pay roll, bringing the total down to 477,100 for a 1,250,000-man army. Its appropriation recommendation of $644,525,000 was subsequently raised to $674,525,000, pointing to the likelihood that there is still room for the elimination of 12,000 employees and a saving of $30,000,000.

This is no assurance that the remaining 58,000 employees have been, or will be, removed from the rolls. It is noteworthy that effort was made last year, through an appropriation reduction and careful cataloging of civilian personnel in each appropriate title, to remove 58,000 employees. Present information indicates that no such results were achieved.

Department of the Air Force

The budget request for $355,492,000 under "General expenses" for employment of 137,156 civilians was deemed excessive, and the committee recommended a cut of $25,000,000, eliminating approximately 11,500 employees. However, final action restored $5,000,000, indicating that 2,000 additional employees can be taken off the rolls. Restoration of a $500,000 cut recommended in the Office of Chief of Staff held another 140 civilians in their jobs.

Department of the Navy

Most disappointing feature here was the Navy's apparent inability to effect any personnel savings under so-called unification of the armed services. Rather, it requested increases for numerous activities which the House Appropriations Committee adjudged of questionable value. However, their recommended reduction of $5,000,000 in salaries, which would have cut civilian employment by about 2,000, was ignored.

VETERANS' ADMINISTRATION

The House Appropriations Committee brought to light many overlapping and duplicating services in this administration and held that if proper reorganization were effected, 30,000 employees could be dropped with a resulting saving of $90,000,000. The Administrator promised that a thorough survey would be conducted and its findings submitted to the next Congress.

FEDERAL SECURITY AGENCY

It was observed by the House Appropriations Committee in April 1948 that 20,000 persons in the Employment Service was "far in excess of the minimum essential in view of (1) prevailing conditions of high employment and (2) the promise, in 1946, that the return of the employment office to the States would result in more economical operation.

Instead of decreasing the Agency's employment rolls expanded from 31,825 in July

1946 to 34,660 at the time of the committee's report, in April 1948. Then, in the face of the economy recommendation, a further increase to 35,184 was experienced through July 1948.

The committee's recommended cut of $850,000 in salaries would eliminate approximately 300 employees at the average salary rate. Removal of the 524 added to the pay roll from April to July 1948 would save approximately $1,622,000 more.

WAR ASSETS ADMINISTRATION

Based on the Administrator's own recommendation in the process of liquidating the WAA, civilian employees should be cut to a total of 5,000 by June 30, 1949. This would represent a reduction of 10,981 from the 15,981 on the rolls as of July 1948 and would save $32,943,000 in salaries.

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Elimination of duplicating activities could produce a cut of 2,345 employees and a saving of $7,083,196, according to the findings of the House Appropriations Committee. The committee stated that the Extension Service with its soil-conservation employees and farm agents in the various localities could extend their services to the Indians. It is also pointed out that greater efficiency and considerable savings would result if the National Forest Service, the Bureau of Reclamation, and the Public Roads Administration took over the activities in their areas now performed by a division of the Bureau of Indian Affairs.

Bureau of Reclamation

A reduction in administrative personnel recommended by the committee would have produced a saving of $2,660,000 and eliminated approximately 900 employees.

Office of Solicitor

It was recommended that this Office's duties include supervision of all attorneys and adjudicators in the Interior Department. If this recommendation had been effected, their number would have been reduced from 251 to 201 at a salary saving of approximately $250,000.

TREASURY DEPARTMENT

Administrative consolidation in this Department, as outlined in House Report No. 1532, would produce a saving in salaries and expenses of $13,696,000. This, on the basis of average pay, would eliminate 3,000 employees.

DEPARTMENT OF COMMERCE

Civilian employees in this Department have increased from an average of 9,540 in 1939 to 40,523 in July 1948. In view of duplication by many bureaus of activities already performed by the Department, the House Appropriations Committee has recommended that enabling legislation for these various bureaus be restudied with a view to clarifying and codifying their respective functions. Specific recommendations in Senate hearings, which were ignored, would have reduced personnel by 2,017 and saved $5,819,467.

STATE DEPARTMENT

It is not feasible to offer any specific reductions for this Department in view of the nature of recommendations made by the House Appropriations Committee. It suggested (1) elimination of all international organizations of the Department which have outlived their usefulness because of establishment of the UN, but failed to name specific organizations, (2) a review of large-scale increases in executive and high-grade administrative personnel in the Department since 1939, and (3) elimination of overlapping and duplicating activities both internally and in the field. It is perhaps worthy of note that 1,182 civilian employees were dropped from the Department's rolls in July 1948.

ATOMIC ENERGY COMMISSION

The House Appropriations Committee expressed the feeling among its membership that this Commission has taken advantage of its strategic position to indulge itself lavishly in administrative expenses. It reduced the original budget estimate of $550,000,000 by $48,150,000, of which $4,191,952 was intended for personal services and included provision for 761 additional employees. The Senate restored $20,000,000, which was reduced to $10,000,000 by the conference committee with the provision that no part was to be used for administrative expenses. It is hoped that Congress will see that none of the amount restored is used to employ additional personnel.

JUDICIARY

The House committee held that employment of court criers was unnecessary and eliminated a budget request for $501,900 which would remove the entire 200 from the pay rolls. However, this reduction was restored in the Senate.

Specific recommendations for reduction in civilian personnel in Government departments and agencies [1]

Establishment	Personnel as of July 1948	Recommended reduction	Estimated pay-roll saving
Post Office	508,834	45,000	$92,500,000
Veterans' Administration	207,179	30,000	90,000,000
Military Establishment	877,650	16,140	40,500,000
War Assets Administration	15,981	10,981	32,943,000
Interior Department	57,218	3,295	7,083,196
Treasury Department	87,395	3,000	13,696,000
Commerce Department	40,523	2,017	5,819,467
Federal Security Agency	35,184	824	2,472,000
Personnel employees (all departments and agencies)	24,288	8,000	25,000,000
Judiciary	4,211	200	360,000
Total	1,858,463	119,457	[2] 310,373,663

[1] With the exception of the Post Office Department the recommended reductions are based on recommendations made by congressional committees.

[2] This figure does not reflect the pay increase granted Federal civilian employees June 1948 amounting to $450 for postal employees, $360 for classified employees.

NOTE.—The recommended personnel reductions set forth in this table represent no more than a starting point for pay roll economy achievement. They are based on information contained in reports and hearings of congressional committees during the second session of the 80th Congress which admittedly do not document the full extent of Federal overstaffing. For example, while it has often been charged that the Agriculture Department, the Labor Department, and other specific Government agencies are overstaffed, these reports and hearings provide no definite information from which the extent of overstaffing can be measured.

Increasing Salaries of Government Officials

REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. HUBER. Mr. Speaker, I want to point out to the gentleman from Pennsylvania that by the time his present term expires he will have accepted $15,000 of tax-free income from the Government. Is he going to turn that back?

Mr. RICH. I did not vote for that tax exemption. I did not want it, and it should never have been granted. It is something that Congress gave to itself and should never have been permitted.

The British-Israeli Situation

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, January 17, 1949

Mr. IVES. Mr. President, recently there appeared in the Washington Times-Herald an article by George Sokolsky which deals with the British-Israeli situation. This article is full of factual material and contains very valuable observations which I commend to the Members of the Senate for their consideration. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS

(By George Sokolsky)

The British, it would seem to me, are risking too much in their direct intervention in the Palestine war. Already the Israeli guerrillas (and that is the most that they can be) have defeated all the Arab armies sent against them.

They have even defeated the Egyptian Army, which was supposed to amount to something. The British have used war planes to intimidate Israel, and the Israelis shot the planes down. Then the British mobilized their Mediterranean Fleet at Malta.

These Jews will fight for Palestine. Maybe in all the complexities of modern life the simplicity of unabashed nationalism may no longer be understood. But there it is.

Zionism is not a refugee movement; it is not retaliation for wrongs done; it is not an attempt to solve a current problem. It is one of those amazing historic movements which continues, with or without reason, to reassert itself in each generation.

Take, for instance, the case of the Maccabees. At this distance, this Hasmonean revolt against the full force of the post-Alexandrian Hellenic world does not seem practical. Yet they did fight and they did succeed in their mission.

Palestine might have remained a Jewish state during these thousands of years were it not that subsequent Hasmoneans became corrupt and even indecent.

The core of Israelish civilization is religious faith, a firm belief and acceptance of God's law; and when they desert their core, they cease to possess the strength to survive, which is true of all peoples.

It is interesting to recall that old Mattathias on his deathbed realized that Israel's mission is the law—that is, natural law, the law of God. He said to his victorious sons:

"Now, therefore, my sons, be ye zealous for the law, and give your lives for the covenant of your fathers. Call to remembrance what acts our fathers did in their time; so shall ye receive great honor and an everlasting name. Wherefore, ye, my sons, be valiant, and show yourselves men in the behalf of the law; for by it shall ye obtain glory."

The same spirit prevails in the new state of Israel and it is undoubtedly carrying them through a great travail. When Israel started to hold this small strip by military power very few believed that they could possibly succeed.

Certainly few believed that they could accomplish so much alone and unaided. The general assumption was that the combined power of the Arab states, armed by Great Britain, would reduce Israel to a memory of an abortive attempt at statehood.

But that did not happen. Instead, the small Israeli Army defeated all the Arabs. This was contrary to British plan and policy.

It needs to be noted that Israel, in this war, has had the physical assistance of no country and the good will of some only after prolonged debate. Arms were purchased wherever available and smuggled past the British blockade.

The British are taking on a force that cannot be measured in numbers. Men who dare to die cannot be defeated. That is what Japan, for instance, learned in China.

It is also what we learned in our war with Japan, which we won by a food blockade rather than in actual battle. It is only when a people substitute practical wisdom for spiritual courage that the moment comes when the calculations concerning the facts lead to surrender.

That happened to the Germans twice in two wars. But it will not happen to Israel. If practical considerations governed those who dwell in Israel, they would not be there at all.

What Great Britain risks is the conclusion that its policy is not only unwise but unfair. It risks the prospect of an antagonism among many people who would like to strengthen and support Great Britain.

It risks the prospect of the defeat of aid from this country. There seems to be neither logic nor flexibility in British policy in Palestine—only that same stubbornness over an error which has marked George Marshall's policy concerning China.

It seems to me that Great Britain is risking too much over nothing that can any longer matter to the Empire. Israel is a fact that will not down.

Red Mass Sermon by the Most Reverend John J. Wright

EXTENSION OF REMARKS
OF
HON. J. HOWARD McGRATH
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Monday, January 17, 1949

Mr. McGRATH. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the CONGRESSIONAL RECORD a most elevating address by the Most Reverend John J. Wright, D. D., auxiliary bishop of Boston, delivered at the annual red Mass Sunday, January 16, at the Shrine of the Immaculate Conception, Catholic University of America.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

"God made man from the beginning, and left him in the hand of his own counsel. * * * He shall have glory everlasting. He that could have transgressed, and hath not transgressed; and could do evil things, but hath not done them."

I have taken these words from two places in the Book of Ecclesiasticus. In the name of the Father and of the Son and of the Holy Ghost. Amen.

The trials of the so-called war criminals have been subjected to thoughtful criticism by a few commentators, legal philosophers, and historians. The opinion has been expressed that they may eventually cause our Nation and our allies very real embarrassment because the courts which conducted them functioned without previous written law and with the doubtful competence of conquerors. Quite possibly, too, apart from these considerations which favorably disposed historians may consider to be of secondary importance in the special circumstances of the trials, the cases of individual "war criminals" may have involved injustices or inequities because of passion or partisanship or misrepresentation.

Whatever of all this, there was one refreshing aspect to the determination to bring to trial the "war criminals" and to demand an accounting before some bar of justice from some of those who by deliberate plan and conscious choice brought about the appalling evil that was World War II. This determination constituted a dramatic affirmation before all the world and under the most solemn circumstances of a seriously neglected truth, the truth that political, social, and other moral disasters do not merely happen. They are not the blind results of inexorable fate. Even the most complex of these calamities are not the work of irresponsible, mechanical forces alone. Just as great movements forward in the social history of mankind may be accurately attributed to the honorable actions of upright men, so the moral disasters which overtake men and nations must be attributed to the unfortunate use by responsible men of that freedom in which God created mankind from the beginning.

In the rise and fall of societies, as in the personal salvation or damnation of individual men, the old truth enunciated by the sacred Scripture remains valid. It is a law of social history as well as a condition of individual salvation: "He shall have glory everlasting who was free to transgress, but did not; who was free to do evil things, but did not do them." This is the clue to a man's perfection: "Before man is life and death, good and evil, that which he shall choose shall be given him" (Ecclesiasticus 15: 18). "Behold I set forth in your sight this day a blessing and a curse: a blessing if you obey the commandments of the Lord your God, * * * a curse, if you obey not" (Deuteronomy 11: 26–28). This is the key to a nation's progress, its use of the freedom in which God made man from the beginning: "Jerusalem, Jerusalem, thou who killest the prophets, and stonest those who are sent to thee. How often would I have gathered thy children together, as a hen gathers her young under her wings, but thou wouldst not" (Matthew 23: 37).

The determination to bring to justice the so-called war criminals constitutes, I repeat, a dramatic reaffirmation of the reality of free will and of personal responsibility for the moral consequences of individual actions. I speak of a reaffirmation because the philosophy of responsibility had lost something of its appeal, certainly in social thinking and possibly in legal thinking, in the generation immediately preceding the war.

There had always been the temptation to shuffle off accountability for moral defect. Shakespeare described and refuted it: "This is the excellent foppery of the world, that, when we are sick in fortune, often the surfeit of our own behavior, we make guilty of our disasters the sun, the moon, and the stars: as if we were villains by necessity; fools by heavenly compulsion; knaves, thieves, and treachers, by spherical predominance; drunkards, liars, and adulterers, by an enforced obedience of planetary influence." But "The fault, dear Brutus, is not in our stars, but in ourselves, that we are underlings." (Lear and Julius Caesar.)

The philosophy of responsibility in modern times has further suffered from the impersonal, collectivist theories of society and of history which found favor during and since the last century. These linked human action more often to material forces and mass controls than to spiritual personality and individual responsibility. An earlier generation of devout and God-fearing people had recognized the challenge of some environments and the limitations imposed by heredities, but they still acknowledged that the generality of men remain free to make conscious choice between life and death, good and evil. But then social theory followed new lines along which it has attempted to lead legal theory and application. As against the old philosophy of responsibility there has grown up the theory that misconduct is always abnormal, that what the law calls crime and what conscience calls sin are to be explained largely in terms of causes beyond the control of the sinner or the criminal. The philosophy of responsibility has been replaced by the philosophy of excuse.

Under the newer concept, it is no longer a question of being able to transgress, but refusing to do so; it is more often a question of acting in accordance with the characters which, without our asking, we have received. The character itself is a product of circumstances, and delinquency and crime are simply other names for conflict and maladjustment. Criminals are sick people, like the insane. They should be dealt with as sick people and far from seeing in their criminal actions anything for which they are responsible, we must learn to recognize in criminality the existence of something for which society is responsible. Hence the familiar captions under pictures of young criminals, "Who is the real delinquent, this boy or society?" Hence, too, the frequent statements of sociologists and other experts who announce. "We believe in the responsibility of society, not of the individual."

Last month I listened to a broadcast over a national network of an extremely effective radio drama. It was clearly conceived by its author and presented by its broadcasters as setting forth a profound and cogent point. Its scene was the cell of a condemned murderer. Every device of skillful radio-theater drove home the idea of the play as stated by the players: "Tonight I am sitting on the edge of a prison cot in the cell of a condemned murderer. Between him and the rope which will break his neck and choke the breath from his throat are 9 hours of tortured darkness. Soon the collective hand of society will reach out and pull the lever that will spring the trap and send his feet kicking in mid-air in the death struggle. Perhaps the collective conscience of society will permit itself a slight qualm. As I write the murderer watches me. He is nothing more than a big-boned, hulking, somewhat dull kid who continually trembles. He will die in the first light of the morning. I shall write then about the court which should have tried him. It is a purely imaginary court—a court which sits in judgment on ordinary people who lead what might be called a blameless life. A court established by a law which reads in part: 'Whereas the state decrees that no one lacking 21 full years in age can now alone be held responsible for any murder, it is ordered that a minimum of six shall then be hanged if one such minor is condemned to die.' And so this court's been called to quickly find the necessary five—for the five additional nooses which await along with the one society has decreed for the young murderer."

The five extra nooses, as the play developed, were fashioned for the necks of the boy's school authorities, his parent, a political leader in his community, a representative of organized entertainment, and an average member of the general community. The broadcast was extremely effective. It undoubtedly left in the minds of millions the impression that thus responsibility was placed where it always belongs: not with the individual criminal, but with the total society—and therefore with no one. It was a dramatic example of the philosophy of excuse as opposed to the philosophy of responsibility.

Judge John Perkins, former justice of the Boston Juvenile Court, tells how one morn-

ing a probation officer came into his courtroom and said: "I went to the prison association dinner last night. The principal speaker made a moving address. At the end of it, after describing how a parolee had committed an atrocious murder, he burst into a dramatic peroration. Raising his eyes to the ceiling and with his voice trembling with emotion he esclaimed dramatically: 'Somehow, somewhere, someone of us failed this man!'" The judge remarked ironically: "You mustn't object to that argument. As a matter of fact, it is a wonderful idea for us, too. All these cases we have been worrying about, because they turned out badly, were not our fault. We never failed. Whenever we thought we had failed, someone else had always failed us."

This is the philosophy of excuse—the philosophy of ultimate irresponsibility. For more than a generation it has undermined the moral and legal and individual social responsibilities upon which the stability of society must repose.
